Then—things never seem to stop at Wisconsin—we crossed to one of the buildings nearby, where another concert began—a piano and violin recital, given as part of their course by two members of a class in music. A young man played a violin; a slender, shy-looking young girl in a pale blue dress—especially frail and delicate she looked beside the great concert grand—played the piano. Her co-ed friends weren't sure that they cared for classical music, but she would feel it if they didn't come, and so they all went and applauded each number for all they were worth. She came from a little Wisconsin village through which my train had passed that morning—one of those little stations with a grain elevator, a few stores, and a tobacco warehouse, whence the wicked Wisconsin leaf is made into cigars named after actors—even good actors. The picture of it kept drifting across the concert program with its foreign names—Bach, Saint-Saëns, Gounod.

Many of the Wisconsin co-eds come from just such towns, some to be teachers, some because it's cheaper than the usual "finishing" school, some who would go to women's colleges in the East were their State university not so highly thought of. Many, like the one I had read about in the last number of the Wisconsin "Lit" that afternoon, came up straight from the farm:

"A solitary wagon was wending its way along a deserted road to the junction. The father was driving; the mother was imparting the usual parting advice. Mamie Doe, pretty, plain, artless Mamie Doe, was dreaming. 'Toot! toot!' went the engine; 'Good-by, little girl,' said the father; 'Write often and study hard,' said the mother; 'I will,' replied Mamie Doe."

Mamie roomed with Winifred Lillian, who owned a motor-car, and she accumulated a Chicago veneer.

"And you, Mamie Doe," continued the undergraduate philosopher, "how do you feel when you get back to the junction? You ought to help with the housekeeping. No more bridge whist after luncheon. At the junction they do not have luncheon; they have breakfast, dinner, and supper.

"No more dances! No more fussers! No more theaters! Everything is changed, is it not? Of course, you like father and mother as well as ever, but they have not been steeped in the quickening atmosphere, and you have just taken a four years' plunge into an inciting whirlpool and your spots have changed.

"And in the warm summer evenings, when you take your solitary walks through the golden cornfields just as the setting sun is washing the parental roof with colors never to be attained by sordid pot-boilers, what are you thinking about? Mind you, you have just dried the dishes. You are yearning for something; you are unhappy; all is not well with the world. Why should not you strive for a higher standard of living? Ambition is, of course, commendable, but often it can not find expression, and then—"

I do not believe that this is at all typical of the effect of university experience on the average sensible, plucky Middle-Western girl, but it is worth quoting, found in an undergraduate paper, and the half-real, half-whimsical objections to girls put forward by the clever young man who wrote it made his college seem a specially interesting place as we walked back that night to my hotel.

"Cows and Co-eds"

WHATEVER its other qualities, it is certainly not a rarefied air the Wisconsin co-eds breathe. The keynote of the place is the accomplishment of practical results. Wholly dependent on the State Legislature, it has had to show that it could give such results. And the Legislature of a Middle-Western agricultural State is not going to spend money on highfalutin bric-à-brac. The work of the agricultural school has, perhaps, been sufficiently celebrated. The undergraduates of the academic wing rear up on their hind legs at the very mention of it—"People think we haven't anything here but cows and co-eds!"

An article in the same paper from which I have already quoted, on "Why is the English Department?" charmingly illustrates, however, this same avid hunger for "results" in what is generally a far more dilettante field. The italics are mine:

"Like members of a family at their own cottage on one of the Wisconsin lakes . . ."

"When your theme makes a hit, you want to know why it hit, so as to repeat the performance. You want to know the principles of vivid phrasing, the possibilities of plot variation, the trick-work of suspense, the essentials of climax. . . . When a stude is making his first fumbling attempts at literature, what he values are *crude, concrete, constructive, hunches on the tricks of the trade.* What he gets is abstract—a comparison of Arnold's and Pater's theories of style or a line of talk on the Ultimate Motive of True Art. . . . Every literary stude has ideals somewhere in his system. . . . There intervene, however, several years during which he will typewrite hackwork to live while he is mastering the craft. It would be ample for his present simple needs to be able to make good with a short story in 'Hampton's.' He wants to know how to swing a surprise ending; how long to make his introduction. Is it a good scheme to make Basil Baskerville look dully out into the wind-swept streets for a few paragraphs or ought Basil to shout 'Marked cards!' at the start of paragraph one? . . . A timely hunch from a man who has been through the mill saves you months of this, but you get few of them from the English dep't. A managing editor or a producing magazine man can advance you more in an evening's talk than the whole English dep't in a semester."

The co-ed is here not only because such an arrangement is a natural sequence to the boy-and-girl high schools, but because it is cheaper for the State to teach both sexes in one place. As the girls said in their recent number of the "Sphinx": "Wisconsin being established for men and women on terms of perfect equality, any discussion of the *status quo* seems a little beside the mark. The men and women of the State have spoken through properly accredited representatives, and it remains for us respectively to make the best of it and the most of it."

Determinism and Dutch Necks

AND this they generally seem to do with a good sense and good humor which is part of their experience in the grammar and high schools. The girls are subject to few special regulations. Several hundred live in a dormitory with a woman dean, a hundred or so others live in sorority houses with a chaperone of their own; the rest of the one thousand live in boarding-houses. Formerly, men and girls might live in the same boarding-house, but this is now practically discontinued. They can go canoeing and driving and picnicking with each other, just as if they were at home, and there is no bother about chaperones. When a large and rather formal affair is arranged, however, a chaperone is ingenuously thought necessary. The reasoning seems to be that a chaperone is something dressed up and Eastern—very much as you "dine" when you have guests and merely "eat dinner" when alone. Calls on Friday, Saturday, or Sunday evenings are considered legitimate "fussing," but boys who are forever mooning about the sorority houses are rather looked down on as "candy-kids."

The boys assert, and with much reason, that the overwhelming preponderance of girls in, for instance, popular literature classes tends to drive men away and that it often prevents perfect freedom of discussion. With the intention of observing this at close range, I dropped in at a nine o'clock philosophy class the next morning.

The subject was determinism, and the instructor was giving a very interesting criticism of Professor James's ideas of free-will. From where I sat, his head emerged above a large black mushroom hat trimmed with lilies of the valley and pink flowering almonds, and in the same line of vision were various engaging coiffures and backs of necks. It was a delightful May morning. On a branch just outside the open window a robin was amusing himself with his liquid chirp, and the fragrance of fresh grass and leaves that drifted in from the campus mingled with more artificial and disturbing perfumes. I am afraid that my own "sphere of determinism" would have been unprofitably circumscribed by flowering hats and Dutch necks. But that, of course, was as good an argument for co-education as against it, for the young men who sat about me paid no more attention to these phenomena than to the plaster on the wall. And they drew pictures in their note-books and went to sleep quite like any undergraduates.

In the Shakespeare class, into which I next went, the power of the co-ed to destroy the opposite species was more evident. It was notoriously a "snap" course and almost monopolized by girls. The instructor, a charming old gentleman quite saturated in his subject and removed from the modern world, maintained a fatherly and rather drowsy monologue, answering most of his own questions and every now and then letting fly little whimsical and humorous sparks, which fell quite helplessly against the opaque perceptions of most of the class. He would have been a charming companion in front of a wood fire on a winter's evening, but he was scarcely the one to compel cerebration in a crowd of indifferent girls.

Having called the roll and carefully marked as "present" those who were there and those for whom some other girl, suddenly remembering instructions and almost popping out of her seat, shrieked "Here!" he opened his "Hamlet" and wondered if Miss Jones knew what "cicatrice" meant. As Miss Jones was quite too bored to reply, he went right on with: "Probably she uses the word 'scab' instead. It is simpler." Miss Jones sighed, and, turning to the girl next to her, rested her elbow on the chair arm and her head on her hand, as if saying: "What a bore the old gentleman is; isn't he, girls?"

"Well, let's continue. When was it that the Danes invaded England?" Could Miss Smith tell that?

"Oh, about a thousand years ago."

Yes, but couldn't she get a little nearer? Was it nine hundred and something or ten hundred and something? What? Did Miss Smith say nine hundred? Because if she did she would be sorry—really, it was ten hundred. And he dreamily wondered if Miss Smith had an English history in her room or did she have to go over to the library for it? She ought to have it on the shelf in her room, because if she was going to be a teacher—however. Now what did Hamlet mean about Laertes and the French bet? (No answer.) Why, Laertes was a sort of dude, wasn't he? (Unsuccessfully suppressed yawns.) He'd been spending his time in Paris, standing down there at the corner of the Boulevard San Michel and the Boulevard San Germain, where they are so terribly dissipated, eh! The old gentleman looked up with a whimsical smile, which met

no response from the placid faces of the maidens in front of him. The only thrust that seemed at all to stir them was a remark about Barbary horses. The professor asked if these were not Arabian horses—the kind the young ladies had seen now and then in circuses. This one of the young women disputed with great vigor and stubbornness, declaring that they couldn't have Arabian horses in circuses because they were "too expensive."

It is classes like this, doubtless, of which the vivacious young man whom I have already quoted was thinking when he complained in the "Lit" that the "feathered hordes" were weakening Wisconsin's pristine virility. "The recitation is a function, and the flannel shirt and the unshaven face evoke a stare, the 'hang-over' expression, a suspicion. As you enter the classroom, which is permeated with a delicate perfume, you do not walk, but tread to your seat with a stately, serious mien, and in the next fifty minutes you emulate the reticent clam. The loud outburst, the crude phrase, are arch sins; a voluntary remark is a misdemeanor. The tone of the classroom is artificial and contaminated. By whom?"

"We are perfectly willing," the girls promptly replied in their issue of the "Sphinx," "to take the blame for those faults which are ours. We are not perfect. But we decline with thanks to be responsible for the idiosyncrasies of the 'bunch' or the follies of the fusser. We don't ask to be worshiped. We have no use in the business of daily life for an aureole or pedestal. They are both troublesome to tote around. We would rather at any time be first-rate human beings than any poor second-rate goddesses. But, for goodness sake, try to be a little human yourselves and remember we can't help being co-eds, and if there are traits in our exceedingly complex characters which seem to you to need nitroglycerine blasts in order to clear them away, at all events be a little jolly about it."

Able, evidently—these young women—to speak for themselves, and in arguments like this generally to get the better of it. After all, by very reason of her comparative maturity, doesn't the co-ed often rather have the better of it all along the line? The night before I left Madison I went to a reception given to some of the Faculty at one of the sorority houses. It was, perhaps, as representative a group of Wisconsin girls as could have been gathered—girls quite able to take care of their older guests and to meet the social demands of the occasion as gracefully as the girls had met theirs in the Senior room a few nights before at Vassar.

They were ready to step from their own reception-room into almost any social position; ready, were he to appear to-morrow, to invite the Fairy Prince to rise and despair no more. But the boys at whose house I dropped in a moment later to say good-by were in quite another case. They were "bucking" under hot student-lamps, trying to get work to tide over the empty summer, worrying about what they were going to do in the world. Nominally, they met on equal terms the girls with whom they had worked and played during their undergraduate years, but it would be a long time before they could pose as Fairy Princes or, even in the same sense in which the girls were women, could call themselves men.

BUDDHA'S EYE

"The two of 'em compared it with Buddha's Eye"

Its Evil Activity, Its Malevolent Influence Over the Borrold Family, and the Part it Took in the Fate of Milly the Dancer

By JUSTUS MILES FORMAN

Illustrated by C. B. FALLS

"I'M AFRAID you've got to die, Lord Bray," says that old blighter from Harley Street.

"Then get out and let me die!" says I. "I don't want to die with you about." And so out goes old Meacham on tippy-toes, looking more than ever like an elderly sheep, and walking like a cat in papers.

Got to die? I'm rather a young one to die! Two-and twenty.

"Well, I won't deny I've been a bad lot. We've bad blood in us, we Borrolds—rotten bad. And I can't say that I've tried very hard to go against the Borrold blood.

Got to die, eh? Well, that'll give young Jerry a chance when the governor shuffles off, and young Jerry's a good lad.

He takes after the mater, bless her! We may not end so awful after all.

Got to die? I don't know as I care. Milly's gone, poor girl! Milly's gone, and, after all, now that I look back at it, it was Milly made things worth while.

Young Jerry'll grow up healthy and straight and decent, and marry some nice pink girl, and the old family'll take a fresh start—now that the curse is off it—Buddha's Eye gone back where it came from.

It was the Eye did for us all, you know.

So I dessay I don't mind dying very much. I should have missed Milly.

How d'you tell a story? Begin at the beginning, I dessay.

Well, this story begins a long way back, but I'll cut it short. Make a quick jump of it.

You see, it begins in a pleasant, jovial way with my great-grandfather looting a temple out in India when he was a young man. That is to say, he helped to loot it. He carried off Buddha's Eye, anyhow. It was during the Mahratta Rebellion.

My great-grandfather fought in that and got a wound at Nahidpore. So he was invalided home, he and a pal of his called Staines. It seems this chap Staines, while they were on their way down country, heard tell of a temple in a little village that had something special in the way of a statue of Buddha in it. So off he goes, Staines and my great-grandfather with him, to see the Buddha. They were halting that night in the village, you understand.

It wasn't much in the way of a temple, my great-grandfather said, in the account he wrote of the affair later on—the governor let me read it once when he was tight and incautious. It wasn't much in the way of a temple. He'd seen a dozen finer ones. And it was almost deserted—all the country-side was, to be sure—no priests on view, and only a half-dozen filthy, maimed beggars outside the gate. They made their way in and found the place half dark and empty, and smelly the way temples are. But, my great-grandfather said, when their eyes got accustomed to the dark, there was a most tremendous statue of Buddha reared up in front of them, with his head among the rafters. It was the standing-up Buddha, you know, not the squatting down one—the Amida Buddha with his right hand up before him and his left one down—first finger and thumb pinched together—*you* know. My great-grandfather said the statue must have stood twenty feet high. The two of them came not much above its knees. It was made out of wood, painted and lacquered and gilded, but very old and smoky.

Well, those two chaps stood there for a long time staring up through the half dark at that tremendous Buddha, and finally Staines says:

"What's that on the Johnnie's forehead? What's that on its forehead?" says Staines.

So they stared a while longer, and Staines moved about where he could see better. There was a bit more light up there near the roof and it struck down across the statue's face.

"By Gad!" says Staines, in a sort of whisper, you understand. "By Gad, that's either a lump of red glass as big as a walnut or it's a ruby worth half of India." And he began to breathe hard.

I dessay you know that those "eyes"—only they ain't eyes at all, they're a head-jewel set in the middle of the forehead—I dessay you know they're often valuable stones—diamonds, rubies, almost anything. They're held to be rather uncommon sacred, and all that, by the native Johnnies.

Well, my great-grandfather said that this Staines chap couldn't take his eyes off the red head jewel on that tremendous Amida Buddha. He went all queer—quite daffy about the thing. He wanted it, you see. There was the most wonderful ruby he'd ever clapped eyes on—or any one else had ever clapped eyes on. There it was twenty feet above him, stuck on the face of a heathen god in a deserted temple. It was a fortune, I dessay, to this Staines man. It seems to have got in his blood all in a minute. He wanted it. My great-grandfather tried to drag him away, but Staines wouldn't go, and so presently my great-grandfather left him there.

When he came back, after an hour, he found the chap where he'd left him, head back, staring up at Buddha. Staines says:

"Jim, there's a way up there. You give me a shoulder," he says, "and I can climb the rest of the distance along the drapery folds. I'm going up."

My great-grandfather didn't like the idea and told Staines not to be a fool, but the man was mad. It had got into his blood, you see.

Jewels are like that, the big ones. There's something damnable about them all.

Well, of course it ended in my great-grandfather, after they'd had a look about, giving his shoulder to this Staines chap. Then it seems he went back a few paces to watch.

It was half dark in the place, you remember—black shadows on all sides, and ugly, squatted demigods grinning out of the shadows. A fearful spooky place, you can believe! No place for me. The spookiness began to take hold on my great-grandfather, but he stepped back away and stood there and looked on while his pal climbed up Buddha's arm and then along the horizontal folds of drapery across the body.

"Either the light is very bad," says my great-grandfather, "or that statue ain't steady on its pins, Bill. It appears to me to be wabbling."

Staines looked down once, it seems, but didn't answer—just climbed on. And again my great-grandfather thought the whole tremendous great statue swayed a little on its feet, as if the man's weight was unbalancing it.

Those Buddhas wear their clothes very décolleté, if you remember—very much so. Staines got his feet on the décolletage of the statue and held himself by his left arm round the neck. He had a heavy clasp-knife open in his teeth, and he took it in his right hand and reached up and began to hack at the great ruby on Buddha's forehead.

"Look out, Bill!" calls my great-grandfather once more. "It's swaying on its feet." Staines didn't answer.

He was fair mad, you see. He kept on hacking with the clasp-knife.

Then all at once he stopped and was still, his arm down beside him.

It seemed to my great-grandfather that the place was getting darker—especially up high there where Staines was clinging.

Then quite suddenly Staines gave a most terrible and

blood-curdling shriek, and after a moment another one. My great-grandfather wrote that each of those horrible shrieks seemed to strike him in the pit of the stomach, and well-nigh paralyzed him. But for all that he ran back farther yet, away from the statue, and turned again to look. He was shivering.

Staines clung up there holding on by Buddha's neck, stiff and rigid, with his head strained back.

"It's alive!" he screamed out. "Oh, my God, its eyes are alive!" And he screamed once more for help, but my great-grandfather was frozen where he stood. You know how you are when you're frightened. Frozen, he was. Paralyzed. He stared up, and it seemed to him that the big eyes beyond Staines's head were glowing as if there might be fire behind 'em—but that may have been the queer light. He never knew.

The next thing he realized was that he was shouting: "Come down! Come down!" But he knew it was too late, for the statue had begun to fall over forward. Staines must have moved suddenly or leaned out too far. Or else— Yes, of course, it must have been Staines that did it.

He never made a sound afterward. He let go with his arms, but his feet stuck where they were, and the man and the statue came over together. My great-grandfather says that after they had begun to fall they seemed to hang there in the air for hours, just poised and still. Then they came with a rush, there was a most infernal roar and splinters of wood flying about and a cloud of dust.

Out of it all something rolled across the floor to my great-grandfather's feet, and what dim light there was in that dark place found it out, so that he said it was like a little stream of bright red blood. But it wasn't blood. It was the ruby—Buddha's Eye. And my great-grandfather picked it up and put it in his pocket. And at that instant the beggars and all came rushing in.

And they found some rags that had been Staines's, and buried 'em.

So that's how Buddha's Eye came into the Borrold family—and some rotten curse came with it that has poisoned the lot of us.

My great-grandfather was already married and had two sons when he went out to India. He lived ten years longer after he returned, you see, and had six sons more. Then he died, raving mad. His wife killed herself a few years later, and then the eight sons began to go—all violent deaths, beginning with the eldest and going straight down the line, so that it was always the head of the family that went—the earl. Seven of 'em died in twenty years without issue until only the youngest was left—my grandfather—and he lived and married, had three sons and two daughters, and then was smashed in the hunting field.

My father was the youngest of that lot, and he had married and I was half-grown before he came into the title. One of the elder brothers was drowned, the other one killed himself just in time to hush up a scandal. The less said about my two aunts the better. I fancy they're still living, somewhere on the Continent, but no one wants to know just where.

Yes, of course. You'll ask why we didn't get rid of that cursed ruby. Well, in the first place, we couldn't, because my great-grandfather had it put into the entail—or whatever the phrase is. So it was family property like the Castle or Denforth House. And, in the second place, it seems never to have occurred to any one for a long time that the ruby had anything to do with our bad luck. The heir was usually told of how the stone came into the family, but nobody else knew. You see, the thing has always been our *cachet*, as you might say. The Borrolds have been famous for the Denforth ruby. There's nothing like it anywhere, and the Countess has to wear it whenever there's a show—balls and big parties and all that. My great-grandmother wore it as a pendant, and she was a big dark woman, half Spanish, so it must have become her very much. But the fourteenth Countess (my mother's the sixteenth) began wearing it, set in the middle of a sort of big pair of diamond wings, as a corsage ornament. So my mother does, too. A fair Saxon type of woman couldn't wear a ruby half the size of a golf ball swinging from her neck. She'd look ridiculous.

I remember very well how my father began to change after he came into the title. By George, I wish I didn't remember so well! You see, we'd lived quite quietly down in Gloucestershire, with not too much money, but enough to come up to town for a month of the season, and go to Switzerland in August. And it was a far cry from all that to Denforth House and the Castle and the big income. My father didn't stand it well. He'd been, before, one of the finest old chaps I ever saw. Yes, by George, the very finest! But he began to drink more than was good for him, and his temper turned sour, and when he was in his cups he was rather a beast.

It was the curse, I'll swear to that.

The mater was broken-hearted. She did all she could, but it was no use. She lost her hold on him. They kept up a sort of pretense before people, went out to parties and all that. When I was at home I'd see them going off, my mother, with that cursed ruby at her breast, and the governor scowling.

He and I didn't get on any too well either. You see, there was some sort of a row at Eton and I had to get out. And then, after a couple of years, I was sent down from Oxford. Rank injustice, that was! And the governor turned on me. Once, when he wasn't quite sober, he called me a lying, epileptic little cad, and I never forgave him. Liar himself! I wasn't epileptic. It's just fainting spells. I've never been very strong, but he always expected me to do the things strong people can do. He never understood me, the governor didn't. He was always unjust to me.

I'd have cut my throat long ago but for the good old mater. God bless her!

Oh, well, I dessay he ain't to be blamed for it all. It was that ruby. None of us ever had a chance—no Borrold of the lot.

Except young Jerry. He's got a chance now, and he's a good clean little lad. He'll ride straight, I promise you.

Then Milly came in.

I dessay you'll have seen Milly at the Palace in those Greek dances of hers, what? She wore a little nightie and waved her arms and skipped about—like Maud Allan and Isadora Duncan, only not so good. I've heard people call Milly a bad lot, but that wasn't true. Milly was as cold as a fish and as hard as nails, and as ambitious as what's-his-name?—Napoleon, but she was too clever not to keep straight. She knew her value, Milly did.

When I first met her she was in the chorus at the Duke of York's, and no visible chance of ever getting any higher; but I made her take dancing lessons—no good to bother about singing, she'd a voice like a crow—and she worked hard, and, after a bit, we got her a small engagement at a cheap hall. That was how she started the nightie dances.

You see—well, I'm afraid I can't tell you very much about Milly, after all. I thought I could, but— The poor old girl's gone now, and when I think of what a hand I had in it, and all that—it comes hard to talk about Milly. I'll cut it short.

She was ambitious, you see. She was playing for high stakes, and at first the stakes were me. Yes, *me*—heir to earldom and all that rot. Milly'd got the fever for strawberry leaves. She worked hard, played her game all she knew, and, for a time—for a time, mind you!—I was about ready to give in. I don't deny I was fonder of Milly than I've ever been of anybody else. But I got to thinking about the family—and I couldn't quite do it. We've been a rotten lot, some of us, but we've never yet picked our wives out of the chorus, and I couldn't begin it.

Some rumors got to the mater, and she talked to me and mothered me and wept a bit, and—oh, well, I couldn't do it. I dessay it was the mater, God bless her! more than anything else.

Milly was furious, of course, and wouldn't see me for a month. I dunno just how I got through that month. But she liked to have me about. I didn't bore her, you see. And so, after a time, we went on again. I had a habit of dropping into her flat in the afternoon, and I fancy Milly missed me. So I was allowed to come back.

That wasn't her last try. Not by a good deal! There was young Horsham—silly little ass!— She almost had Horsham, but his people found it out and packed him off to the Riviera. I heard it said they bought Milly off, and maybe they did. I don't know. She came out in some extra fine black pearls just about then. She had a passion for jewelry—the only passion she owned.

Then Milly and the governor fell in with each other.

The silly old goat!

I could have poisoned him. Not on Milly's account. I wasn't afraid there. Milly was far too wise to encourage married men. It was the mater I was thinking of.

Still, who's to blame the poor old beggar? He wasn't himself, in those days.

It hit him hard, you know. It was the first time, so far as I ever heard, that he'd looked away from the mater—and Milly was a kind of new world to him. She took him off his feet.

Why she let him hang about her I never knew. That was a mystery. But she did—more or less. Just enough to drive him crazy. He talked to me about it once or twice. It turned me sick. The poor mad old beggar!

And the worst of it was that the mater found out. She'd got used to his bad temper and his drink and all, but this was one too much. It nearly broke her heart. She got thin and white, and I wanted more than ever to poison him.

We had a jaw about it, the mater and I. I tried to smooth her down—told her just what sort Milly was, and that she'd never let it come to anything serious—too clever by half for that. But of course the mater wouldn't believe me. You see, odd as it sounds, she'd never got over being in love with her husband, and I gathered that she didn't believe it possible for any woman to resist him. I could have laughed if it hadn't been too pathetic.

Just when Buddha's Eye came on to the carpet I never knew. If I remember right, I heard of it first from the governor in a maudlin sort of talk we had. He'd been raving on, thirteen to the dozen, about how miserable he was, and this and that. I didn't listen very close, but all at once I pricked up my ears because he was talking about the ruby.

He wanted to give it to Milly!

Of course he was quite mad, but even madmen can do a lot of harm. I talked to him like a Dutch uncle—called him hard names, I dessay, and he called me a few names back.

You could have knocked me over with a feather. The man was serious!

When I found out that he really meant what he said, I wasted no more time on him; I went straight to Milly's flat, and we had it out.

Well, she was mad, too. At first she laughed and denied it, then got red, and, when I put the thing to her straight off, she stood up and defied me.

She actually meant to have Buddha's Eye!

I told her that the governor had no more right to give her the ruby—or sell it or dispose of it in any way—than he had to dispose of the jewels in the Tower of London. It wasn't his. It was Denforth property—entailed. Well, I might as well have talked to the wall. You know how women are. If they set their hearts on a thing, they can't see that the law has anything to do with it.

Quite mad, she was! Her eyes, you know—all different from usual—bright and shining. Milly'd met her match at last—found her one real passion and gone

"On 'er knees before that Thing, with 'er 'ands over 'er face"

down before it. She'd have sold her soul—if she had one—for Buddha's Eye.

It seems she saw the cursed thing first one gala night at the opera, where she'd got some man to take her. My mother was there with the ruby on, and Milly spent the evening staring at it through a glass.

She seems to have been hit like that chap Staines—bowled over absolutely. She went home and lay awake thinking about it. You know how they are, women! And always, after that time, she thought about it, night and day—couldn't think of anything else—couldn't sleep. It began to seem to be the only thing in the world, and after a bit she began on the poor old governor about it.

There must have been a queer streak in Milly all the time.

No, I hit it before when I said she had just one passion, and that for jewelry. All the other passions, human ones, that she ought to have had, and didn't have, had got twisted into that one direction.

I told her that if the governor ever came to be fool enough and criminal enough to give her the Denforth ruby, I'd go straight to the police. Milly looked me in the eye and dared me to do it. She knew she had me there. She knew I wouldn't risk the scandal on the mater's account.

Then, a few days later, the governor had an inspiration. It was a nasty, contemptible one, and I hate to tell it of him, but you must remember that the poor old chap wasn't himself. I blame no Borrold for anything.

We never had a chance, any of us. I came on him one morning in his study, sitting over a table with a little foxy foreign party, and on the table between 'em was a heap of rubies and a jeweler's scale.

The governor looked flustered when I came in and then angry. Then the little foxy man went away, and I heard what it was all about. It seems there's a new way of manufacturing rubies. You take a lot of little ones—chips and all that—and fuse 'em, and make a big one out of the mess. So the thing's a real ruby—color right out of the mess. So the thing's a real ruby—color right—weight right—deceive anybody, even dealers. Only the experts can tell. There's a name for the things, but I forget it.

The governor was having an imitation of Buddha's Eye made to trick Milly with.

I gasped a bit, and I didn't like it. I told him so, straight out. I told him it was too dashed low, but—well, he was a madman. You couldn't do anything with him. He didn't see the hundreds of difficulties in the way. He only saw what he wanted.

A fortnight later the stone came. The little foxy foreigner brought it, and the two of 'em compared it with Buddha's Eye, and weighed it and pawed it over. The little man got his check for a thousand pounds (these things ain't cheap, you see), and went away. Then the governor's secretary called him out of the room and I was left there alone.

It came to me in a sort of a flash—all in a quick flash.

The two rubies were lying on a square of cotton wool together, for they'd taken Buddha's Eye out of its setting to compare 'em, you see. The wrong stone had a bit of white paper stuck on one side to mark it from the other. And the settings were there beside—the double wing thing for Buddha's Eye and a queer band for the new one, because it seems Milly wanted to wear it on her forehead, set in a band of gold.

All in a flash it came to me, and the room went round for a bit.

It seemed to me that I looked backward and saw all the horrors that miserable stone had brought to the Borrold family—all the fine, clean, decent men it had smashed, all the women it had brought sorrow to—or worse. And I looked forward and saw more of it—generations to come ruined by a curse.

And the way out was as easy as turning over your hand.

It was like one of the inspirations these Johnnies have who write poetry or music.

You see the point, don't you? Nobody'd ever know. Before this imitation stone was made, the thing was insane—impossible. If the governor had given away Buddha's Eye then, it couldn't have been kept dark for a fortnight. There'd have been a most frightful smash-up. But now, who'd ever know? The mater would go about wearing the new stone, and the women of the family after her to the end of time. Who'd ever think of testing the Denforth ruby to see if it was genuine?

As for Milly with her new ornament, people would laugh and call it glass.

I'd lectured the poor governor about doing a dirty trick. This one of mine was dirtier still, but I found I didn't care. The only thing I could think of was that maybe now the curse could go from off the Borrolds, and I could be the one to send it.

I found it had to be done and I did it. It was so easy! I wet the little bit of white paper, loosed it, and stuck it on Buddha's Eye.

And the back of my head felt cold and I wanted a drink.

Then presently the governor came back, and with him the little ruby-maker's assistant, who was to put the stones in their settings, and I got away.

No, I'm not sorry I did it. In spite of everything, I'm glad, though now I come to the part of all this that's hardest to tell. It ain't easy to tell it, but I'll get on—and be quick.

That was on Thursday, late in the afternoon, and we'd a dinner party, political, at Denforth House in the evening. The next morning rather early I was turning into Piccadilly out of St. James Street. I was going to old Lord's in the Arcade to look at some ties and things, but at the corner a newsboy scuttled past, shouting out about an "'orrible murder," and I caught a name. I had a glimpse of the yellow bill he was holding, and the name was there, right enough.

Things went black about me.

I don't remember getting into a taxicab, but I found I was in one and half way to the circus when I came to. So I must have given the address. You see, Milly had moved out of her flat a couple of months before and into some rather queer lodgings in Soho, because she said she wanted more space. She wanted a large room to practise her dances in, and she got it, and had one wall covered with tall mirrors so that she could see what she was about.

There was a little knot of people before the door of the house—just standing there idle and gaping, but I pushed through them and went in. A pair of police officers on guard at the foot of the stair stopped me, and I had to tell them who I was. Then they were very civil and made no trouble for me. I ran up the stairs. Milly's door was ajar, and the old hag who kept the place—her name was Mink—sat just inside it, rocking herself back and forth in a chair and sniveling. And she reeked to high heaven of gin.

I caught her by the arm, and she blinked up at me and her mouth fell open. I shook her and cried out: "Where is she? Where have they put her?" or something like that.

I could hardly speak.

The hag told me that they'd taken her away, and told me where. I was for rushing off, but the woman held me. She was weeping aloud. I made out that there was some horrible reason why I shouldn't see what was left of poor Milly.

And then that shaking, sniveling, gin-soaked old woman told me the most incredible tale. I don't expect you to believe it. I don't know whether I believe it or not. She told it all feet-foremost, heels-over-head, weeping and crying out and repeating herself. And I sat in a chair with my head between my hands, and tried to think I'd gone mad. I dessay one of us had—one or both.

In the first place—to put it more or less in order—it seems the governor had come there between twelve and

In the shabby village Buddha's Eye abides once more in the dark old Temple

one the night before. The woman let him in, but didn't know who he was.

"A tall, thin gentleman, me lord, with gry 'air and a gry mustache and an eyeglass. I let 'im in. It's no business o' mine 'oo comes 'ere—nor yet at w'ot 'our. But 'e didn't stop no more than five minutes!

"I took 'im 'arf wy up the stair and pointed out Miss Montmorency's door. She might a been expecting 'im, for she'd 'ad a message early in the evenink.

"The gentleman says:

"'I've brought it, Milly! It's 'ere.' An' she gives a little glad kind of ery, and the door shut to be'ind them.

"Then in five minutes, or less, the gentleman comes down the stair agyne, an' I let 'im out. 'E gave me 'alf a quid. An' his eyes was very bright. 'E looked 'appy.

"It might a been a quarter of a nour later, Miss Montmorency called to me, and I went up. She was in 'er w'ite dancin' dress with bare arms an' legs. I was fair ashimed to look at 'er. An' on 'er forred she 'ad a grite red jewel—as big as an 'alf erown—or bigger yet. Fastened there by a gold band, it was. And she'd lit a lot of candles and stuck them about the pliee, and the light of them struek on that red stone—she said it was a rooby—an' it looked like fresh blood.

"She was 'alf wild. An' no wonder.

"She stood in front of the lookin' glasses with 'er arms up, and took some dance steps, and that red rooby flashed like a—like a red signal light on the rilewy line.

"She says that she's going away to-morrow—meaning to-dy, me lord—for a week. An' then she's coming back to danee at the Palace agyne, wearin' 'er red rooby.

"So I went out and down the stair. She never even knew I went. She was staring at 'erself in the glass.

"Maybe it was a nour later. Maybe 'alf a nour. I'd dozed off in me chair—awaitin' up for Mink. There eame a most 'orrible long seream. A sort of screech, it was. And then another. 'Orrible!

"I says to meself, 'She's been and set 'erself afire with them candles!' And got upstairs as quick as I eould run. The third floor back 'e stuck 'is 'ead out and says:

"'For Gawd's sake, 'oo's killed? Call the p'lice!' But I didn't answer 'im. I opened 'er door an' went in."

The woman's face turned quite yellow there, and she began to whimper and shake. She went on, whispering:

"It was all chinged. The room was all ehinged. It wasn't the sime room at all."

I stared at the old harridan, thinking she might be drunk. But she wasn't. She was frightened half to death, but she wasn't drunk.

"What the deuce d'you mean?" says I. "How was the room changed?" And she began to whimper again, wringing her hands.

"All chinged it was," she said in her scared whisper.

"It was like—opening a door and going quite unexpected into another 'ouse—that you 'adn't never seen before.

"And the smell! A queer smoky smell—like shootin' eraekers. Maybe you smelt it when you come in, me lord? It's 'ere still."

I began to shiver a little.

"Get on!" says I.

"It was bigger, the room was—and 'igher—like as if the roof 'ad been took off. Only there was a roof, away up, because I could see the rafters. And all the candles was out. I couldn't see them nowheres. And the plice was dark—not black dark, but dim.

"And up in the middle of it, across from the door, was a *Grite Thing!*—a figger of a woman, like, as 'igh as a 'ouse, with its 'ead away up amongst the rafters. The woman 'ad short 'air all in little reg'lar knots—like a sort of cap, and a yellow fice, dirty gold color, and slanting eyes, like Chinee eyes, and ears with the lobes of them pulled down long. And she 'ad on a kind of dressing-gown, like it might 'ave been a bath-ro. . me lord, 'anging in folds, and open down on 'er breast.

"And there was a wound just in the middle of 'er forred."

I fancy I cried out, there, and hid my face. And I know that I was eold all through and shaking. I wanted to stop the hag and have done with it all—and I wanted to get away, because I was afraid. But I couldn't stir. And she went on in her seared whisper, speaking as if she saw what she told about before her. I think I could have screamed.

"There it stood, this 'ere Grite Thing—woman or wotever it was—a-towering up in the 'alf dark quite still, only its eyes were alive—like there was fires in them.

"And I couldn't move 'and or foot.

"At first I 'adn't seen Miss Montmorency at all. I thought she'd gone along with the rest of the room. But after a minute I saw 'er—just a w'ite wisp on 'er knees before that Thing, with 'er 'ands over 'er fiee.

"And onee more she cried out—trying-like to scream, but it wasn't a scream. She couldn't.

"And the Thing bent over forward, and its eyes burnt red, and it stretehed out one grite 'and, and caught 'er up in it. It caught up Miss Montmorency in its 'and like she was a little doll, and 'eld 'er in the air.

"She dangled there up over my 'ead, quite still and limp.

"And the Thing put out its other 'and and—and— Oh, my Gawd! I can't—it was like—"

I called on her to stop. I felt that I couldn't bear any more, but the hag seemed to be under some sort of a spell. She didn't seem to hear me.

"And then it dropped 'er! From away up 'igh it dropped 'er on the ground, and she lay there without moving—just like a little twisted w'ite rag. And I saw the rooby shining red on the Thing's forred where the wound 'ad been.

"And then I found I could stir at last, and I ran out on the stair, screaming, and the door banged be'ind me.

"People came. And finally the police."

There was a lot more of it. The old woman went driveling on as if she couldn't stop. But it was mostly repetition, and ealling God to witness that she'd told the truth, and what the police said, and what she'd said to them. It seems she'd had the sense not to tell them what she'd told me. I wonder just what tale she did give 'em? I fancy I didn't pay mueh attention. I was seeing horrors just then.

I asked her if she could find me a drink of something, and she brought me brandy in a glass-and-silver decanter I'd once given Milly. I drank a stiff peg of it, but it couldn't warm me. I rather think I've never been warm since.

I heard voices outside on the stair, and one of the policemen opened the door and the governor came in. He'd seen a newspaper, too, at his club, and his face was ghastly.

I eouldn't talk, but the old woman went over her incredible tale again. Her sort seem to revel in horrors. And the poor old governor covered his face with his hands and heard her through. Only once, when Mrs. Mink began to describe the "Grite Thing," the woman "as 'igh as an 'ouse," he looked up and caught my eye, and I saw him go yellow and limp. He seemed to shrivel quite literally.

We got out of the place, leaving our names with the police officers, in ease we should be wanted later, and I put the governor into a cab and took him home. I was bad enough, God knows! but the governor was worse. He was like a little bewildered ehild. I almost had to carry him into the cab, and, at Denforth House, out of it.

I got him to bed, and he stayed there for two days. We told the mater he'd had some sort of a stroke in his club.

Well, that's about all there was of it. The governor got up after two days, and he was like a man who'd been mad, but was sane again. But it had taken something out of him, you know. He was older. His bounce was gone.

We talked it over together in his study, quite open and frank. We didn't keep anything baek. And I remember that, all at once, the governor gave a ery and said:

"Good God, Charlie! d'you realize what happened? He got the wrong stone. He made a mistake. What if He finds out and comes back?" And the poor old chap began to tremble. But I shook my head.

"No, he didn't, governor," says I. "He got the right one." And I told him what I'd done.

For a minute, you know, a touch of his old temper came back and he got fierce and red. Then he sat still for a long time, and at last stuck out one hand without looking up. And I took it.

"It's gone," says the governor. "Praise God! the curse is gone. Maybe we shall have a chance now, we Borrolds."

The mater came into the room, and when she saw us started to back out again, saying:

"Oh, I'm sorry. I didn't know any one was here."

But the governor went to her and took her by the shoulders, and he said:

"Agatha, I've been a mighty bad lot—a bad husband to you, though not as bad as you may think. There's no excuse for me, but I'm sorry. D'you think you could take me back?"

The mater put her head down on his coat and began to cry, and I got out of the room.

So you see it seems to be all right again—all right for everybody but me.

"I'm afraid you've got to die, Lord Bray," says that old blighter Meacham.

All right! Who cares? Young Jerry'll be a better man than I could ever have been. I was done for long ago. A bad lot. I'm not denying it.

It's a bit young to go, but I don't think I care much about living on now that poor Milly's gone. I was fond of Milly. And yet, in a way, I killed her, didn't I?

I should like to find Milly, wherever she is, and explain that I didn't mean it.

A youth who wanted a job

Bread on the Waters

The Young Reporter and the Newspaper Man of the Old School

By PAUL ARMSTRONG

Illustrated by H. E. TOWNSEND

WILLARD, the city editor of the best daily paper in Chicago, became conscious of some one standing at his elbow. Growing impatient at last, he looked up. But it was no member of the staff, nor a boy with a galley proof, nor a grouchy printer, nor, in fact, any one who had any business to be there.

Instead, a youth who wanted a job. Four times in two weeks he had been told there was no chance. Yet here he was again—and this time he had "broken in." The city editor turned fairly about to tell that youth a few things. He knew what the would-be reporter had to say. He had heard it all at least twice. He had worked on four daily papers in Michigan. He could "get a story" if anybody else could. He knew Chicago well enough not to get lost. And so on and so on. The usual talk of a man hunting for a job. It sounded right, too, but the fact was that the city editor had about one man too many, and there was really no chance. This he was about to impress on the applicant in his own inimitable ice-cold way, when the youth spoke.

There was a flutter in his throat, and his words were not those of assurance, self-possession, or the set speech of other days.

"For God's sake, won't you give me an assignment—anything."

He could say no more. His voice broke on the last word, and he stood with trembling lips.

The words of disapproval in the editor's mind stood still. Emotion and newspaper work do not travel hand in hand. It is the beginning and the end of that game to laugh at tears, freeze pity from the heart, and mock one's soul. And the city editor had been at the game twenty years. On none of the four occasions before when the youth had called had he betrayed any emotion. Willard had rather liked him for that if nothing else, and now—and now the lad had "let go all holds," he had "quit." He was beaten.

History does not tell us that hunger was ever tried on the young Stoics of Rome. Youth will endure so long as the gnawing comes from without, but within—that's unfair. Perhaps such a thought ripped through the mind of the coldest city editor of his time—and in all climes and times city editors have been as bloodless as the stinging sleet of a winter's night. Never had Willard been moved by hard-luck stories, never had he given anything to one who had weakened. He was a part of the most merciless machine invented since the beginning of time. Hence it could not have been emotion or pity that caused him to reach toward the lead under which his assignment notes lay. No, it must have been the hand of fate. He did not even look at the slip of paper his fingers lifted from the desk. He simply handed it to the starving lad and said:

"What it's worth."

The youth could not speak. He turned away with a flush of joy that brought tears to his eyes. Some hours later he laid his copy on Willard's desk and took a seat in the outer office. An hour passed. He was told the city editor wanted him. He walked in and stood.

"What's the name?" asked Willard.

"Carter—George Carter," he replied.

"Regularly," said the editor, and turned back to his desk.

In a year it is doubtful if the two men spoke beyond the orders and brief conversation necessary between editor and reporter. He was a good man, and Willard saw to it that Carter got the top salary paid. Willard wanted to keep him. But another paper sent for him. Carter went to Willard and told him.

"Go, if you can do better," said Willard, without resentment. And Carter went. Willard realized that Carter was playing the game according to its rough and tumble, "save himself who can" rules, and, while he was sorry to lose so good a man, admired him.

Years passed. They met sometimes and spoke, and that was all. Each went his way. There was never a thank you for the first assignment, never a reference. Willard was still the city editor, Carter became a star reporter. Then something happened in the newspaper world. The sensational, "yellow" methods hit Chicago like a hot wind. To Carter it meant a better chance and more money. He was young and learned the new trick quickly. Not so with Willard. He was past forty. He had been reared in the old legitimate school of news-gathering, and he resented the cesspool and burglar methods to his last drop of blood. It could not prevail, he argued, and held to his old forms. With a stubbornness born of indignation, he ran his paper "as a gentleman should" until the circulation began to fall away. He was sent for and asked to change his methods. He refused point-blank, and was discharged on the spot.

He went forth to find a job. But the world had changed in the ten years he had been "holding down a city desk." It was the "yellow" methods, he argued, but one day an editor dropped the word "old" in speaking of him. Finally he found himself at a copy desk, but it did not last, as he would not allow sensational writing to pass his blue pencil. Then he began to drift, and "poor old Willard," as Chicago knew him, was spoken of as a relic of other days. But his soul was resolute, and the old school dignity held him together as he tore a meager living from the clutch of circumstances.

It was all different with Carter. He became a pacemaker for sensationalists. He was made assistant, then city editor of Chicago's biggest daily. Cold, merciless, without regard for living or dead, he played the game to the limit. Within five years from the day Willard had given him his first chance, he had gone as far as he thought was worth while in a town of Chicago's size. He quit the best job in town, and went to New York. And he went to work at once.

Not at as good a job as he had left, but good enough for one who could master Chicago in five short years. Within six months he fixed his eye on a certain mark, and began to climb to that.

Willard stayed on in Chicago a year or two. Then he began to drift Eastward—he and his wife. They had been pals always, and in the twenty years since he had married her, a fresh, straight thinking girl, they had known nothing but love. Her belief in him was supreme.

His attitude of mind toward sensationalism she shared as faithfully as his meager bed and board. They might starve, but they would at least keep their own self-respect. He read copy, wrote editorials, and did everything that a man of his age could do, but some way,

A thin, gray old man entered

somehow, something of his resentment toward the monster sensationalism which had robbed his profession of dignity crept in until he was put down for a crank and passed along.

Finally he reached New York. It was on the day that Carter had reached his goal. But Willard did not know; in fact, he likely had forgotten Carter. And he began the search for work. An old man looking for a job on a newspaper. Not feeble, not helpless, not incompetent, not old, really, save to a newspaper. They remembered him, some of the men in high places; some had worked with him, some for him. But he was old. That ended it.

Weeks crept by—then months. He borrowed a little money, and somehow they lived—he and his wife with the soft voice and the lovelight in her eyes.

EVERY wave must recede, and one tires of the B flat cornet as a musical instrument. Carter, in the very height of his newspaper manhood, saw the coming of another age. Sensationalism had been overdone. While it was clear that newspapers would never go back to the old methods, it was just as clear that something must be done. Why not bring back some of the old things that were good, he argued. The idea evolved as the days went on until Carter knew exactly what he wanted. And that was a paragrapher—a good, old-time, caustic paragrapher. He laid out the space for the stuff, knew exactly how it would look, and was certain it would be read—could he but get the right man. But who? It was a lost art.

And then the hand of fate opened his office door, and a thin, gray, old man entered. He stood close to the door, his hat in his hand. It was Willard, whipped at the end of five years. There was nothing of the old spirit. His wife was ill and starving, and he had "let go all holds."

"For God's sake, won't you give me something to do—anything."

The words came from trembling lips. The voice broke with despair. He did not know Carter. The years had changed him.

Carter's heart stopped at the cry of the beaten man. He reached for a copy of his paper that lay at hand and turned to the page on which he intended the paragraphs to appear. Then he picked up a pencil and drew a rude circle.

"There," he said, indicating the place. "Four columns wide, eight inches deep. Old-time paragraphs, Mr. Willard, six days a week, so long as I am managing editor here and you live."

The Automatic Senators

By MARK SULLIVAN

Composite photograph of the Senators whose names are printed in lists on this page

THE cartoon reproduced on this page has been printed before, both in the Chicago "Tribune," originally, and in this paper last week. We print it again because the voting in the Senate has now gone far enough to make it possible to give the correct names to the little "me too" manikins whom Mr. McCutcheon—with the good cartoonist's skill in putting a complicated situation into a simple picture—has represented clambering happily about Senator Aldrich's chair, the Senators who always vote as Aldrich tells them.

In the Senate discussion of the new tariff there have been upward of a score of votes in which each Senator has been compelled to go on record for or against the duty proposed by Mr. Aldrich. Many of these votes have been on minor, unimportant schedules. From among them we have selected these eight as being important and representative:

Lumber	**Sugar**	**Iron ore**	**Cotton**
Cutlery	**Lead**	**Earthenware**	**Pig-iron**

We print now the names of those *Senators who have voted with Mr. Aldrich on every one of these schedules.* In each case the *duty in question was dictated by Mr. Aldrich as chairman of the Finance Committee.* Then when the balloting came to determine whether this duty should be adopted Mr. Aldrich always voted first (the fact that his name begins with A was in the beginning one of the strategic sources of his power), and after him dutifully came all the Senators whose names are printed below, voting, *in every case*, exactly as Mr. Aldrich voted. They have had no ideas on the tariff that Mr. Aldrich didn't have first. The communities they represent have no business interests more to be considered than Mr. Aldrich's dictation. A charitable person might assume, although the assumption would cripple the law of averages, that in seven out of the eight schedules the ideas of these thirty-eight Senators, and the interests of their communities, would coincide with what Mr. Aldrich dictates; but eight times out of eight is, to borrow a phrase from the contemporary classics, "going some." The Senators who *have voted with Mr. Aldrich on every one of the schedules are these:*

Brandegee of Connecticut
Briggs of New Jersey
Burnham of New Hampshire
Burrows of Michigan
Carter of Montana
Dixon of Montana
Flint of California
Gallinger of New Hampshire
Guggenheim of Colorado
Hale of Maine
Heyburn of Idaho
Kean of New Jersey
Lodge of Massachusetts
Oliver of Pennsylvania
Page of Vermont
Penrose of Pennsylvania
Perkins of California
Piles of Washington
Root of New York
Scott of West Virginia
Smoot of Utah
Stephenson of Wisconsin
Wetmore of Rhode Island

The following Senators must be added to the list above. Their record is exactly the same except that upon some schedule each of them was either absent or "paired." (For example, Senator Frye of Maine is permanently "paired" with Senator Tillman of South Carolina. This merely means that whenever Tillman is absent, Frye does not vote.) This list is distinguished from the other merely to be technically correct. No man on either list voted *against* Aldrich on any schedule:

Bradley of Kentucky
Bulkeley of Connecticut
Clark of Wyoming
Crane of Massachusetts
Cullom of Illinois
Depew of New York
Dick of Ohio
Dillingham of Vermont
Elkins of West Virginia
Frye of Maine
Nixon of Nevada
Smith of Michigan
Sutherland of Utah
Warner of Missouri
Warren of Wyoming

With this faithful band as a nucleus, and a few Democrats on one schedule, a few other Democrats on another, Aldrich has been able to be an autocrat. *Their servility has made his autocracy possible.*

Aldrich

WE wish the insurgents were less restrained in their attitude toward Aldrich. Some of them are very much terrified by his one conspicuous power, his ever-present threat, always hinted at, but never put in execution, to read them out of the Republican party. When Aldrich called the opposition a "heterogeneous combination," Beveridge, who is among the less courageous of the insurgents, began to search his soul for sounds to tell how good a party man he is. Cummins is more debonair. Said he:

"Mr. President, evidently some of my Republican associates have been a little disturbed at the suggestion that they are Democrats. That has long ago ceased to disturb me. A certain kind of republicanism has been calling me a Democrat for the last six or eight years, and I have become so accustomed to the charge that I can bear it with unruffled composure; and I hope that these friends of mine, who seem to think that the country at large will regard that as a disparagement, will take courage, because there is an intelligence abroad now that weighs the opinions of men and determines the position of men without regard to appellations and without regard to the attempt here or elsewhere to expel men from the Republican Party because they are not willing to accept the Republican doctrine as it is expounded by those who are about us."

Nevertheless, as to most of the insurgents, the party fetich is at once Aldrich's club and his defense. If it were a matter of man to man, and the insurgents were free to say outright what they feel about Aldrich, that autocrat's power would melt to limpness. La Follette is the one man who gives his indignation free rein and defies Aldrich to his face. No well-informed person will give Aldrich credit for any higher motive than service to the organized wealth which he represents. This Senator is not a pleasant public character. His financial relations with the powerful capitalists who profited by his work in making a former tariff have already been told in print. Still later, when the Dingley bill was being made, Aldrich entered into a conspiracy with William Whitman, of the National Association of Wool Manufacturers, by which Whitman's confidential man, North, was secretly permitted to write the woolen schedule, for which North received $5,000 from the Association. During the present session Aldrich has been caught repeatedly in false statements designed to further his own ends. Where he can be, he is bullying and brutal; where he must be, as to some Southern Democrats, he is fawning and truckling.

Urbanity

SENATOR ALDRICH, speaking of Senator Beveridge, achieved this euphemism for the shorter and uglier word:

"It seems to me there are some Senators who are without imagination at all. I do not think the Senator from Indiana belongs to that class, because I think he has an inflated imagination."

Mr. Aldrich's Senators

For the proper names of these amusing little manikins, read the list of Senators printed on this page

This is characteristic of the vulgar bullying with which Senator Aldrich intimidates some of the younger Senators who oppose him. Senator Beveridge has faults of boyish zeal and self-consciousness, and even of taste, which, quite fairly, make older Senators smile at him, but there is not a more conscientious man in the Senate. Senator Aldrich's misstatements of fact have no relation to an excited imagination—they are entirely cold-blooded, intended to deceive, and part of his general determination to achieve the purposes of organized wealth.

From a Prime Minister

THE statesman who uttered these words has been dead a good many years. He was a free trader, but we would match his wisdom against the spirit that has made the present tariff:

"I shall leave a name execrated by every monopolist who from less honorable motives clamors for protection because it conduces to his own individual benefit; but it may be that I shall leave a name sometimes remembered with expressions of good-will in the abodes of those whose lot it is to labor and to earn their daily bread by the sweat of their brow, when they shall recruit their exhausted strength with abundant and untaxed food—the sweeter because it is no longer leavened by a sense of injustice."

The eloquence which lies in the simplicity of that paragraph has not been matched in this Congress.

Collier's maintains at Washington an office in charge of a legislative expert who will be glad to answer any questions concerning the work of Congress and the Government at Washington. Address Collier's Congressional Record, 901 Munsey Building

What the World Is Doing

A Record of Current Events

The Week

THERE has been no sudden flare-up among the kingdoms, nor as yet any renewal of recent hostilities. Turkey continues more placid than her enemies had hoped.

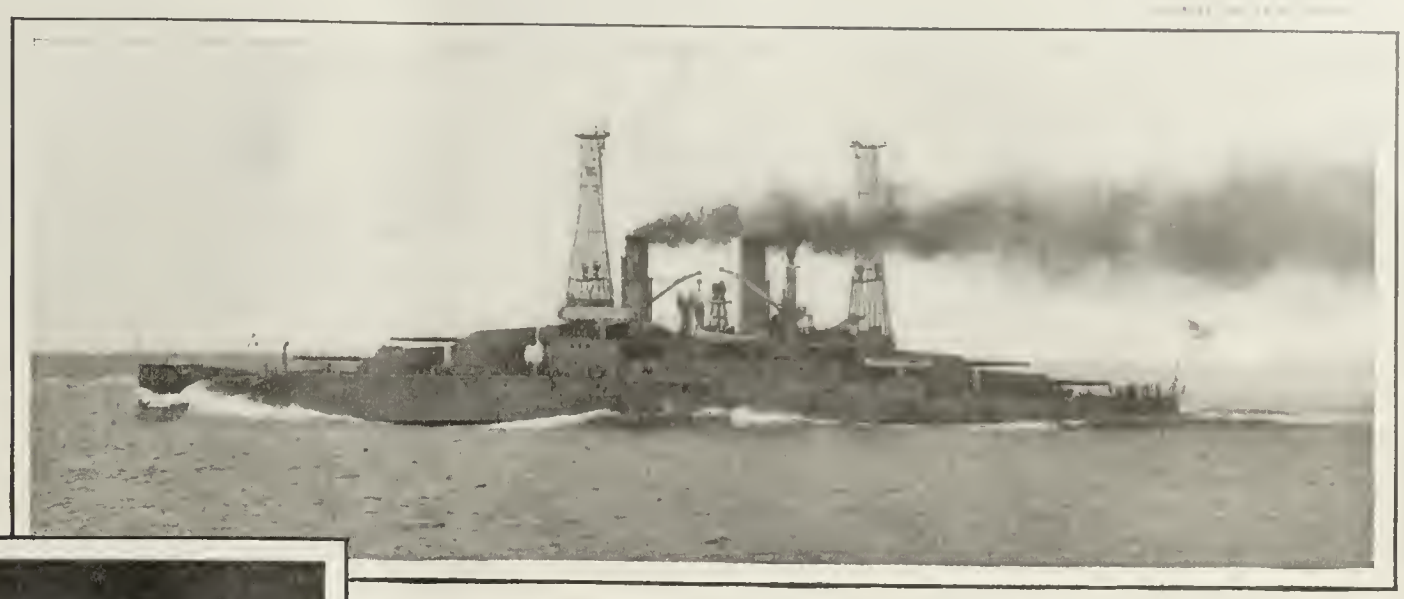
Germany, observing that Great Britain does not care to play the game of being friends, has grown irritated and even bitter in a few of the public remarks of her statesmen. Lord Rosebery's phrase of "that threatening and overpowering preparation for war" proved not to be a winsome method of wooing a neighbor.

London, and indeed all England, has been entertaining the Imperial Press Conference—threescore proprietors, editors, and managers of newspapers read by subjects of the King in his dominions overseas. Here were concentrated in one group the creators of public opinion for the Empire.

France has been eying the passing of the man who founded the great Parisian store, Magazins du Louvre, where all good Americans go when they buy. Chauchard died and was gathered to his fathers in a pompous empurpled funeral, and wearing four pearls on his waistcoat, the market price of which, so Paris thought, would better have fed the hungry or bought some joy for children. So the procession and final rites were hooted and ridiculed in the deft way of the boulevardiers. It may well become a saying in Paris to mark a *bon mot* or a merriment: "I haven't laughed so since Chauchard died."

In the home country prosperity is not only promised, but it seems assured, if crops and money are a basis for hope.

In Washington the atmosphere of the week has been in a state of liquid air—hot and moist—that has visibly depressed our statesmen. Nightly the Senate has been thronged to hear the deep and rolling voice of La Follette and the other insurgents beating themselves, like waves on a breakwater, against the high-tariff ramparts. The Wright family, all of whom fly, spent a dashing day in the capital city, and were much honored and little moved. The President looks fatigued and careworn. The job does not sit lightly on his competent shoulders.



The Wright Family in Washington

ALL through the Washington day of honor for the Wrights, that which colored every situation—the welcome at Union Station, the breakfast at the New Willard, the large reception at the Cosmos Club, the President's welcome and medal presentation at the White House—was their invincible modesty.

Four hundred people were swirling around the refreshment tables at the Cosmos Club—stout diplomats, men radiating importance, an ex-President's daughter. The Wright family were lost in that crowd. Occasionally the eye would pick them up quietly chatting with a neighbor or looking out for the sister, who was a happy little woman that day. But it was impossible to make them the center of any group. You feel that they want to get back on the job. The public fuss neither overwhelms nor exactly bores them. But it isn't what they care for. They are the sort of folks we should like to think are American, sturdy and simple. What the general public experienced in first reading of a certain kind of soap, "It Floats," each person instinctively feels in meeting the Wrights. "They Fly," and you look at them as if the chemistry of their being had properties of levitation not granted to the wayfaring man. You almost wondered if they could drift up to the ceiling by flapping their arms. And then you remembered that all they did was to pull a lever and set a motor chugging.

Mr. Taft is the first President since George Washington to give official recognition to air-flight. Washington is reputed to have witnessed a balloon ascension. It was the first whole-hearted piece of recognition for the Wrights that has emerged from the "seat of government." But all past neglect was swallowed up in the hearty, humorous appreciation of Mr. Taft, sincere as the man himself who said it and the men to whom he said it. They stood there so simply and quietly, beaming back at the President as he jested about their slimness and his heft, and then, with lowered head, they heard him say that they had probably laid down for all time the principles on which heavier-than-air navigation will proceed. That modest men of theirs finally moved the President to close his speech with a tribute to the men that, unagitated, have stood before kings.

Major George O. Squier, of the Signal Corps, says: "In the case of the Wright Brothers it is desired to associate the Signal Corps of the army publicly and officially with the present universal recognition of their work in advancing the science and art of aviation. These results have been due to the persistence, daring, and intelligence of these American gentlemen, to whom the whole world is now paying homage. It will ever be recorded that the classic series of public demonstrations first made by Orville Wright at the Government testing grounds at Fort Myer, Virginia, in September, 1908, and by Wilbur Wright at Le Mans, France, made a profound impression throughout the world, and kindled especially the patriotic spirit of the American people."

France Praises

In appreciation of the industry and courage of the people of San Francisco in rebuilding their burned city, the French people, through their Ambassador, M. Jusserand, presented to the city, on June 5, a medal of commemoration. It was received with appropriate ceremony by Mayor Taylor and other notables

The $360,000 Holbein

This portrait of the Duchess of Milan, loaned by the Duke of Norfolk to the National Gallery, was about to be sold to an American bidder, when a gift of £40,000 from an unnamed person, said to be a woman, saved the picture to the English nation

COPYRIGHT 1909 BY YOUNG, LURD AND PHOATE

Wreck of the Canadian Locks at Sault Ste. Marie

The gates at the lower locks were rammed June 9 by the steamer "Perry G. Walker." The water rushing down the locks damaged them to the extent of $250,000. The steamers "Crescent City" and "Assiniboia" were swept into the river below. It is believed that the lock will be out of commission for the rest of the season

Edward Everett Hale

EDWARD EVERETT HALE, who died in Roxbury, Massachusetts, on June 10, was a national figure because he had been able to celebrate patriotism in a fresh way. Love of country has generally been rendered in its warlike aspects as a cry to arms or a shout of victory. In "The Man Without a Country" he was unusual in revealing the sentiment of patriotism as a steady flame instead of the sudden spurt of the battlefield.

This popular story was in key with Dr. Hale's life as a citizen. He was a humanitarian, but without losing himself in that vague wash of the modern brotherhood which obliterates national and racial lines. He was a hearty lover of the race, but, unlike many modern idealists, he never offended the primitive instincts of clannishness and love of the fatherland.

Our rapid, irreverent American life has often shown itself glad to vent its kindlier sentiments on some one person in the community, advanced in years, whose life work has been honorable. Such a venerable figure for the Boston and the Washington community Dr. Hale has been.

In his two most famous stories, "The Man Without a Country" and "My Double and How He Undid Me"

Bad Air *vs.* Good Work

You can't do your best work—and you shouldn't expect it of others—in a stuffy, perhaps smoke-filled room, breathing the same air that has been breathed over and over by several people. Pure air is just as necessary as pure food. Poor ventilation produces not only discomfort and loss of energy, but greater susceptibility to disease.

The only way to get fresh air indoors at reasonable cost is to use a

STURTEVANT
Ready-to-Run Ventilating Set

Desk and ceiling fans do not ventilate, they simply stir up the stagnant air, and make you feel a little cooler. Ventilation by means of windows is slow and insufficient, and subjects you to drafts.

To produce **real** ventilation the stagnant air and disease germs must be removed and fresh air substituted. This is just what the Sturtevant Ready-to-Run Ventilating Set does.

Completely changes air in an ordinary room in from 10 to 15 minutes at a cost of only one to three cents an hour. Simple, noiseless, mechanically and electrically perfect.

Indispensable in the office, workroom, home, in the sickroom, smoking rooms, telephone booths, phonograph dictation and listening rooms, and scores of other places.

It will pay you to investigate. Write today for Bulletin 108-C.

Music For Hot Weather

Think of it! A real, practical Talking Machine for the home, **complete with 12 Finest Records for only $5.50**

This machine is not a toy remember, but a full size machine; will sing the songs, tell the funny stories, play the band music just as machines you hear in music stores. This is the greatest offer ever made. Send today for FREE Catalogue, No 6.

CHICAGO PROJECTING CO., Dept. 87, Chicago, Ill.

SUCCESS HAND VACUUM CLEANER **$15**

In one operation, cleans, sweeps and dusts. No pipes, no wires or other installation. Ready for instant use. Weighs only 8 lbs. Lasts in continuous use for years. Unconditional refund if not wholly satisfactory. **Agents and dealers wanted.** Our proposition is a whirlwind for business. Our agents making big money. Write quick for discounts and full selling plan.—Hutchison Mfg. Co., 331 Wood St., Wilkinsburg, Pa. (Greater Pittsburg).

BELLE ISLE Marine Engine

2 to 3 H.P. Bare Engine $23

Swiftest, most powerful, efficient and reliable 2-Cycle engine of its size on earth—entirely new design, improved and perfected in every detail—makes speedy little launch from an ordinary row-boat. Catalog describing all sizes FREE.

New Belle Isle Motor Co., Dept. L, Detroit, Mich.

Dr. Hale used the method of Defoe and of modern newspaper men in creating effects of reality. He loaded his paragraphs with such details as the time of day and the number of the house in the street, and by this casual exactitude and accumulation of the concrete he made his imaginative narrative proceed like a fact recital.

The man without a country is Philip Nolan, army officer, who angrily says: "Damn the United States! I wish that I might never hear the United States mentioned again."

That is his very sentence, and on navy vessels he spends a lifetime, in which, by order, no mention is made to him of his country. He learns his lesson by this slow and rather tragic marooning.

In his life Dr. Hale was editor, author, clergyman, and social reformer. He was once minister of the Second Unitarian Church in Worcester, Massachusetts, and since 1856 he led the South Congregational Church of Boston. Since 1903 he had served as chaplain of the United States Senate.

He had been editor of the "Christian Examiner" and of the "Old and New Magazine."

Among his writings are: "Ten Times One is Ten," "In His Name," "If Jesus Came to Boston." All told, he published nearly fifty books—novels, histories, sociological books, sermons, short stories. He was born in Boston in 1822.

A little late in the group, but still of the group which included Emerson, Holmes, Sumner, Phillips, Motley, Thoreau, and Lowell, Hale was a Harvard man and also a unit in the Athenian community, inhabiting and leavening Boston, Concord, and Cambridge.

A motto to which he gave international currency is: "Look up and not down, look forward and not back, look out and not in, and lend a hand."

Adam's Monument

Adam has had a long wait; but in America—where you can't keep a good man down—he is accorded recognition at last. This shaft, a monument to his distinguished services, has been unveiled by Mr. John P. Brady of Baltimore, at his country home, Gardenville, Md.

The Destroyers

GREAT BRITAIN is planning the most convincing spectacle of naval power in her thousand-year history. The greater part of the home and Atlantic fleets will draw up in the Thames on July 17, and for four succeeding days. One hundred warships will stretch from Westminster to the Nore.

Twenty-four battleships, such as the *Bellerophon*, *Téméraire*, and *Agamemnon*, sixteen armored cruisers, six depot ships, five warships attendant on the destroyers, will be among the craft riding at anchor at Southend, Marsh-End, Canvey Island, East Tilbury, Rosherville Pier, Mucking Lighthouse, Purfleet, Woolwich Reach, and Silvertown.

The Knapp Cure

THE Farmers' Cooperative Demonstration Work is an instance of taking education to the man on the job and luring him into the better way. It is instructing the Southern farmers, by practical demonstrations on their own farms, in the best methods of soil cultivation. A subdivision of the United States Department of Agriculture, and conducted by S. A. Knapp and his son, two men who have had twenty-five years of familiarity with Southern agricultural problems, the work aims at these final results:

1. The emancipation of the farmer from the bondage of debt.
2. The ownership of more and better tools, teams, and stock on the farm.
3. The improvement of the land.
4. Better rural school buildings and more months of schooling.
5. Better highways, rural-mail delivery, and telephone service.
6. Contentment with the life of a farmer.

A man familiar with local conditions, a practical farmer, is sent around to the farmers in his community. "Use five acres in the way I advise you," he says, "and I will give you the seed for nothing."

The farmer complies, and cotton, say, or corn is planted and cultivated by the best modern methods.

There is a system of three sorts of agents. The local agent comes from the neighborhood in which he is going to do his work. He receives $75 a month. He drives around day by day through the different farmers, makes these suggestions for new methods of planting, and then returns from time to time to see that they have been carried out. He has absolutely no expenses, because he uses his own horse and team and the farmers put him up for nothing. If he were to go to a hotel he would be at a remove from the sources of information, but when he goes right into the family he is able to convince his host of the best thing to do in planting. Over him is the district agent, who receives $100 a month and expenses. These expenses are the railway fares which he has to pay out in traveling from county to county where his men are at work. Over the district agent is the agent for the State, who receives from $125 to $150 a month.

The department has 325 such traveling agents. It watches their careers by a system of gaudy-headed pins which are placed in a map and moved about from town to town as the agents make their rounds. Oftentimes the locality will vote part of the salary for the agent because it sees the large benefit to its local needs. Sometimes a community will give $100 a month to a district agent and the department will then add $25. The Government gives an appropriation of $225,000 a year, and the General Education Board gives $102,000 a year.

This demonstration system began with the fight against the boll weevil of Louisiana. The campaign was then taken up in Texas, and since then has spread through Oklahoma, Arkansas, and Mississippi, but not only has it been a campaign against the Mexican boll weevil, but also the other local needs have been considered and the work has extended itself over into Alabama, Georgia, Florida, South Carolina, North Carolina, and Virginia. These demonstrators are preaching to their locality the need of raising supplies of all sorts at home, and of cultivating cotton intensively as a cash surplus, by raising corn and the other supplies on the same farm. The one-crop idea has been disastrous to Southern prosperity. The great central West made itself independent by raising its own supplies of every sort, instead of sticking to the one-crop idea.

The Easy Doctor

A STRONG and intelligent section of the community is desirous of a rigid enforcement of the immigration laws, and some desire an extension of the statutory power of exclusion. The following item states that the Queenstown examination of immigrants sailing to America was wholly inadequate on a certain day.

It is an extract from the unpublished report of the Sub-committtee of the United States Immigration Commission.

"The Sub-committee of the Immigration Commission, consisting of Senator A. C. Latimer and Representative John L. Burnett, to whom was referred the territory of northern Italy, France, Switzerland, and Germany, on the European trip, respectfully report:

"Memorandum of Commissioner John L. Burnett of his trip from London through England, Scotland, Wales, and Ireland:

"August 29—I arose early and went down to the dock where a tender was to carry the emigrants to one of the ships sailing to America.

"I did not make myself known, and directly the third-class were ordered aboard. The doctor stood at the gangway, as the employees said he would do, and I stayed till every one of them had gone on, and not a single eye or head was examined, nor any other examination made. I visited Mr. Culver, the American Consul, afterward, and asked him about the examination at the gangway, and he said they were very rigid. This did not conform to what I had seen, although I did not let Mr. Culver know that I had witnessed it. The Consul is an honorable man, and had his deputy at the gangway where the third-class passengers were being examined, and no doubt thought it was properly conducted, but I fear he is being imposed upon. The Consul informed me that the emigration from southern Ireland to the United States and Canada was considerable, and that it practically all passed through Queenstown."

Until the Summer is Over, Bid Your Oven Good-by

Next winter go back to home-baked beans, if you will. But have some of your summer meals ready to serve. Let us bake your August beans.

It requires sixteen hours of soaking, cooking and baking to prepare a dish of home-baked beans.

That's why you don't serve them often in summer. You are seeking for dishes that require less heat.

But let us have the heat, the work and the worry. We will send you the meals all ready to serve.

And we promise delicious meals. They will be the finest baked beans in the world. We will try to please you so well, if you try us for a month, that we can keep your trade forever.

Baked pork and beans, when the beans are digestible, make an ideal summer dish.

Don't judge them by home-baked beans—beans that ferment and form gas. They form, it is true, a severe tax on digestion.

But Van Camp's do not. They are baked in steam ovens. We apply twice the heat that you can in a dry oven.

The heat breaks the granules so digestion acts instantly. There's nothing easier to digest than a dish of Van Camp's beans.

And Van Camp's are delicious, for every bean is left whole.

None of the crisped beans that you get in home baking. No beans that are mushy and broken. They are mealy because they are perfectly baked, and nutty because they are whole.

Then our tomato sauce is baked into the beans, giving a delicious blend. Everyone likes Van Camp's pork and beans. One never can serve it too often.

Good beans are 84 per cent nutriment. And one-fourth of that nutriment is nitrogenous. This is Nature's choicest food.

And beans, as you know, are cheap. With more food value than the choicest beef, they cost not a third as much.

And they are ready to serve if you buy Van Camp's. Every can in the pantry means a meal without cooking.

So we ask you to try them for August. Don't spend summer hours around a hot stove. Now is the time to learn what this dish means to you—to learn how your people like it.

And don't buy from hand to mouth. Have them on the pantry shelf. Always buy a dozen cans.

Van Camp's PORK AND BEANS

BAKED WITH TOMATO SAUCE

More people are using Van Camp's beans than all other brands together. For nobody ever wants common beans after once tasting Van Camp's.

Some time try to bake beans as Van Camp's are baked —having them nutty, mealy and whole. You will realize then what a science this is. We have spent 48 years in learning it.

Nobody ever yet has baked beans that begin to compare with Van Camp's.

We use only the whitest and plumpest of Michigan beans. Every bean is picked out by hand. They cost us four times what some beans would cost.

We use only vine-ripened tomatoes, to get a sauce with sparkling zest. It costs us five times what some sauce would cost.

But we have an enormous business staked on this single dish. So we make it without regard to cost—make it as people like it. It will pay you to insist on Van Camp's.

Three sizes: 10, 15 and 20 cents per can.

Van Camp Packing Company, *Established 1861* Indianapolis, Indiana

Gillette Safety Razor

SLIP a Gillette Safety Razor, Pocket Edition, into your vacation grip.

You'll find it the most useful single article in your whole outfit. The GILLETTE has solved the shaving problem for summer, winter and all the time.

Whether at the mountains or seashore, hotel or cottage, on the trip or in camp, you can always be sure of a clean, satisfying shave with the GILLETTE at hand.

No stropping, no honing. Any man can use it. It insures a perfect shave, no matter how tough the beard or tender the skin. It is the one safe razor and the only razor that can be adjusted for a light or a close shave.

No matter where you go—at home or abroad—you'll find the GILLETTE in use and you will be able to supply yourself with GILLETTE blades.

The New Pocket Edition is about the handsomest and cleverest little device you ever saw; pocket case is made in gold, silver, nickel or gun-metal. Plain polished suitable for the engraving of initials or monogram or richly engraved in Renaissance or Floral designs. Handle and blade box each triple silver-plated or 14K gold-plated.

Prices $5.00 to $7.50, on sale everywhere.

You should know GILLETTE Shaving Brush—a new brush of GILLETTE quality—bristles gripped in hard rubber: and GILLETTE Shaving Stick—a shaving soap worthy of the GILLETTE Safety Razor.

The Guest That Tarried

(Concluded from page 15)

and Norah and the old people would have none of it. The sick seldom realize the drag and drain made upon them who nurse and serve them, and Mrs. Brennan would hear of no one touching her save Norah or Nolan; and Norah flamed out at any stranger from Askatoon, which had so cruelly treated them, entering the sick-room. A little help—very little—was accepted for the kitchen and the garden, but the burden and the watching and the wearing care of the sick-room remained their own portion.

Another spring came, and then the early summer—the first of June; and then the end came like a sudden gust of wind in a still valley, which whirls the dead leaves and lifts old branches from the ground, and while yet the valley is all tremulous and disturbed, the gust becomes a gale, and the floods break loose, and villages are swept away.

The end fell suddenly—but not like that. There came to the door of the house of Brennan one bright morning a man bearded and big and buoyant. He had in his hands a canvas bag, such as postmen or fishermen use, and in his eyes was a light of humor and eagerness and anxiety all in one. He knocked at the lintel of the open door and entered. As he did so a figure came slowly from the other room, bent and feeble and gray-haired. At sight of the bearded stranger the old man stood still for an instant, bewildered and troubled, and then with a moan of joy he stumbled forward.

"Terry—Terry—Terry, me own boy!" he cried, and was caught in the strong arms.

The old man convulsively clutched the man's hands and kissed his cheek. "Shure, God wouldn't let me die till I'd seen you once again. *'Now let Thy servant depart in peace, according to Thy Word,'* " he added. Then, after an instant, he said: "Let me break it to her—to your mother, Terry. Oh, God, be praised! 'Tis just in time you've come, for you'll set things right—Terry, Terry."

But the quick ears of love had heard; the ears that had listened so long had grown acute beyond all usual measure. They heard the voice of the old woman calling from the bedroom.

"Terry, my son—oh, my son, my own son!"

A moment later her arms were round him, drawing him close—her arms were round him, for thus much had Norah and Nolan done. They had brought her back from the moveless life, to the use of all her body again, albeit feeble and uncertain: and her face shone as she held her boy's hand in hers, and she told him of the months that had gone, and of Nolan and all he had done, of Norah and all she had suffered. And the strong man shook with sobs as he heard the tale, and looked at these two beloved beings brought back from the brink to the height of land where the feet are firmly placed.

"There was a piece in a newspaper—I got it down in New Orleans," he said at last. "Lifted out of a sermon preached at Askatoon it was, and I came as quick as I could. I ought to have come before, but—"

He paused, for some one was entering the room—the ghost of a man, as frail and worn as one that has come back from the desert, its famine and its thirst. The hair was no grayer, but the face was sunken and the eyes were like caverns in which great lights glowed. He moved with an effort at briskness—a pitiful attempt to imitate the days that were gone.

"Oh, 'tis you—'tis you—and in good time!" he said feebly, and in a voice husky with weakness. "You can take my place, Terry, for I'm not feelin' so well as I might; but 'twill be all right in a day or two if you'll take the shift. Turn and turn'll do it."

The strong man put an arm round him, drew him into the other room, and seated him peremptorily, yet gently, in the great armchair.

"Yes, 'twill be all right now, Nolan," he said with a voice blurred.

"She'll need good care yet," Nolan said; "they'll both need watchin', but the worst is over, and they're steppin' out into the sun—out into the sun."

" 'Tis fifteen years since you stepped in out of the rain," said Terry. "I met Norah and the Doctor on the road here, and they told me all I wanted to hear. I wouldn't let 'em come back with me."

"But I've earned me bed and bread this past year and more. Shure, I can say that, Terry. 'Tis all I *can* say, I owe thim for the rest."

"Owe them—God's love, owe them! I tell you what, man, I owe you two lives as dear to me as my own, and I mean to pay you for them, one way or another."

"How d'ye mean to be doin' that?"

"Well, first, I'll be settin' you up in any business that you like—when you're filled out again, and look like a man and not a disembodied spirit."

"Settin' me up in business? How'd ye be doin' that?" He looked at Terry's bag on the floor. Terry's clothes were not especially fine. He did not look flush.

"With a few thousand dollars, Nolan. Listen now. I came here—I'd a fancy to do it—pretendin' to be as poor as when I left. But it's little *they* think of that—" he jerked a thumb toward the other room. "It was me, only me, they wanted. Well, there's my baggage"—he kicked the bag on the floor—"but here's my wallet," and he drew forth a great pocket-book, opened it, and took out a handful of thousand-dollar bills. "Nolan, my boy, I'm a millionaire—twice a millionaire—and in fifteen years. Mines—railways—mines again, and then a newspaper—and that's a mine too! There you are, Nolan." He chuckled and slapped Nolan's knee.

Nolan did not show surprise. He did not seem greatly moved by the sight of the money. There were other things in life.

"Shure, what else but a millionaire would you be wid your head, Terry? There was niver a head like yours; and I said that when I stepped in here fifteen years ago. You'll be doin' a lot for them, I suppose," he nodded toward the other room, "and for Shannon and for Norah?"

"They'll have everything and anything they want."

"Norah's a fine woman—oh, the finest and finest! To think that I've come into sich a family! Put ye're hand behind ye're ear, Terry, and hear the news I've for ye. Norah's to be marryin' of me when we can lay hands on a priest—if ye think I'm not too old for her," he added innocently.

"Too old? Norah? Why she is—" Terry stopped short and changed the sentence. "Norah is the pick of the bunch; and the two of you are the best of the basket."

"Well, if I'm not too old for her—"

Terry smothered a laugh. "What kind of business shall I start you in, Nolan?"

"Shure, I think a stage 'twixt Askatoon and Cowrie would do. Four horses to the stage, and ten altogether—that'd mean a change and two for accidents as well. An' the stage painted red, and a horn—there'll not be a railway that way for ten years. Then there'd be breedin' of a few horses—I larnt about horses in Ireland and I cared for them in Injy—bedad, I did care for them there. Shure, that's a life to keep the blood stirrin'—a fine stage painted red, and a horn, and four horses forninst it, rattlin' the whipple-trees! Would that be too much, d'ye think, Terry? Could ye stand it now?"

"Well, of all the blasted—" But Terry turned away to choke back his tears!

A week later Nolan sat in the sun on the maple stump in front of the house, singing to himself:

"Did ye see her with her hand in mine the day that Clancy married?
Ah, darlin', how we footed it—the grass it was so green!
And when the neighbors wandered home, I was the guest that tarried. . . ."

"What's that you're singin', Nolan?" said Norah's voice behind him.

Nolan started, as from a dream; then, with the resource of a resourceful race, he said with an air of delicate confidence and a candor quite inimitable:

"Oh, just a little anthim of the happiness that's comin' to us, Norah, dear." But he winked slyly to himself.

She laid a warm, kind hand on his head and looked down at him with a rich, low laugh, bubbling from her mouth.

"It's a fine tooth ye have in your head, Norah, girl," he said, glancing up at her, the rogue in his eye.

Her face flushed with pleasure. "That's what the Young Doctor said," she answered; and what the Young Doctor said had carried her on through many a dark day and night, not forgetting the help of Nolan Doyle.

"Oh, the Young Doctor—him? Shure, he's the best breed of Inniskillen. We'll ride a steeplechase yet together, him and me, same as we did beyand—under Calladen Hill."

And they did. They drive the finest horses in the Far West, importing the brood-mares from under Calladen Hill near by to Inniskillen.

PURITY ESSENTIAL

In no other form of food is Purity so absolutely essential as in milk products. Richness is also necessary, as without richness, milk is of little value as a food. Purity and richness are the embodiment of Borden's Eagle Brand Condensed Milk. As a food for infants or for general household purposes it has no equal.—*Adv.*

Summer Weight—Fashionable Shades

More Than Merely "Guaranteed Hose"

They Look Neat and Feel Good on the Feet

Everwear
TRADE MARK
Hosiery

For Men and Women

Don't make the mistake of thinking all guaranteed hose are alike. Many brands not half as good as Everwear are "guaranteed."

Don't think because Everwear sell at the same price as other guaranteed or ordinary hose, that Everwear are coarse, heavy and awkwardly made. For Everwear are *more than merely guaranteed hose*. They embody all the best features of the finest imported hose, though they cost much less. Everything that constitutes the making of a really superior hose,—yarn, workmanship, colors, etc., goes into them.

So make sure you get Everwear. Some merchants might try to sell you something they claim "just as good." For your own protection see that the name "Everwear" is on the box and on each pair of hose.

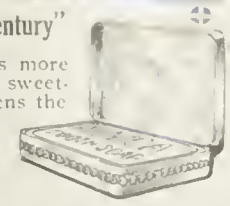
If your dealer cannot supply you, send us your order stating size, kind and color wanted. Enclose price and we will send you the hose express prepaid. If you have worn other guaranteed hose and they were not satisfactory, you should order a box of Everwear at once. You will never really enjoy hose comfort, satisfaction and economy until you try them.

Six Pairs of one Size in a Box Solid or Assorted Colors

Men's Silk Lisle—$3.00 a box. Colors, black, tan, champagne, burgundy, lavender, purple, gun metal, light and dark shades of blue and gray, Hunter Green and Reseda Green.

Ladies'—$3.00 a box. Light weight. Colors, black and tan.

Men's Egyptian Cotton $1.50 a box. Light or medium weight. Colors, black, black with white feet, blue, green, and burgundy; light and dark shades of gray and tan.



Ladies'—$2.00 a box. Colors, black, black with white feet, and tan.

EVERWEAR HOSIERY CO., Dept. 12, Milwaukee, Wis.

STRONG'S ARNICA TOOTH SOAP

"Supreme for a third of a century"

THIS wonderful soap does more than cleanse the teeth—it sweetens the breath and hardens the gums. Ordinary dentifrices often injure the tender gums which in turn affects the roots of the teeth. The teeth can never be healthy under such conditions. But with **Arnica Tooth Soap** the enamel is left sparkling with cleanliness while the gums are soothed and nourished. The teeth remain sound for years.

The package is the most convenient ever put out. The cake fits snugly into a metal receptacle covered with a hinged lid. There is no glass nor box to break and let the liquid out. There is no powder to spill and waste. You simply wet the brush and rub it over the cake of soap. Then apply to the teeth and the effect is that every impurity is instantly removed, the teeth gleam like ivory and the breath is sweet and delightful.

Try a single package. Compare it with any other similar article—powder, paste or liquid—then you will forever ask your druggist for only **Arnica Tooth Soap** at 25 cents a box.

STRONG'S ARNICA *JELLY*

BEAUTY consists of more than graceful outlines—it means a perfect skin. Pimples and eruptions indicate an unhealthy condition of the skin. Sunburn can be avoided during the hot summer months and chaps prevented in winter by a little care of the skin. All that is necessary is to apply **Strong's Arnica Jelly** with the finger tips, rub it gently into the pores, and the skin becomes as soft as velvet and as smooth as silk.

This soothing ointment now holds a place on the dressing tables of all who have tried it once.

Try a package this week. It comes in collapsible metal tubes which are unbreakable and add greatly to the convenience. Ask your druggist for the genuine **Strong's Arnica Jelly** at 25 cents a package.

NOTE: If your druggist does not have these goods, send the price to us and we will mail them without any charge for postage.

Guaranteed under the Food and Drug Act, June 30, 1906. Serial Number 1612

Here's the Knife that You've Been Looking For

This combination is absolutely new and thoroughly practical. It's simply an answer to a large and insistent demand for such a knife. Already it has proved one of our greatest sellers. *Immediate approval by dealers has prompted us to bring it to the attention of the general public.* It's another sample of the fine grade of cutlery, made in a thousand varieties, you can secure when you purchase a knife guaranteed by our trade-mark, which for over 35 years has stood for the highest quality in cutlery and tools.

The illustration shows this knife actual size. It is made in America—is strong and very useful, and with proper care will last a lifetime. It has a stag horn handle with German silver bolsters and shield. The temper in each of its four blades is specially adapted to the purpose for which it is intended, as shown by the straw color of its leather pouch blade—the Harrison patent—made of best quality tool steel—it will cut with ease a perfectly round hole any size up to ½ inch.

The large cutting blade of Wardlow's Crucible Steel will hold a razor edge. Its screw driver blade will turn any rusty or resisting screw, while the can opener blade is of a quality of finely hardened steel rarely put into an article used for the purpose. If you camp, hunt, fish—use belting or harness or do anything that requires a reliable, handy toolkit, you'll certainly like this knife.

Remember—every article sold under the OYB trade-mark is strictly warranted. If your hardware dealer does not have it in stock, send us his name and address, or on receipt of price we will forward one direct by registered mail.

Ask for this knife today and cut this advertisement out as a reminder.

Beyer & Williams Co., Dept. 51, Buffalo, N. Y

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

The Foremost French Pioneer

A Story of Samuel Champlain's Voyages Which Are to Be Celebrated in a Series of Pageants on Lake Champlain Next Week

ELEVEN years before the Pilgrim fathers landed on Plymouth Rock, the foot of an adventurous Frenchman had trod many miles into the interior of this continent.

In July, 1609, Samuel Champlain discovered and gave his name to the beautiful lake which lies between New York and Vermont. While New England still remained uninhabited by white men, and the English colony at Jamestown hugged the coast, looking to the mother country for food and protection, Champlain gazed upon the great lakes, crossed Huron and Ontario, and penetrated into the center of New York State.

Unlike most of the early pioneers who came to Canada, Champlain was neither a priest nor a fur-trader. He had many of the qualities which go to make up the soldier of fortune: the disregard of danger, the indifference to privation, the ardent love of adventure, but he was not the coarse, cruel, grasping soldier, lustful for blood and gold—he was the *preux chevalier*, gentle in time of peace, forgiving toward his enemies, generous and deeply religious. He was a captain in the royal navy during the reign of Henry IV, and, becoming tired of the perpetual warfare of the Old World, Captain Champlain resigned his commission to explore and colonize the new.

Suggestion of the Panama Canal

THE expedition which led to the discovery of Lake Champlain was by no means his first voyage to America. As early as 1599 he had gone as far south as the Isthmus of Panama, and had described the advantages to trade which would result in *cutting a canal from the Atlantic to the Pacific.*

In 1608 the Sieur de Monts received a grant from the King of France of all the territory between the fortieth and forty-sixth parallels of latitude. With a stroke of the kingly pen, De Monts was made feudal lord of a territory reaching from the neighborhood of Philadelphia to Cape Breton Island. Three years later James I of England granted to the Plymouth Company the right to establish colonies in this same region, paying no attention to the French King's claim, but this is also a kingly prerogative. De Monts selected Champlain to go and build a settlement in his new domain, and in doing this he chose one of the ablest of the early makers of America.

Champlain sailed from Honfleur in May, and, going up the St. Lawrence River, he built a few huts where to-day stands the picturesque old city of Quebec. Of course, he and his men had a hard winter. It was so severe that more than half of them died of scurvy. The Indians, who, like summer insects, lay by no store for the future, came to him and begged for food. They were literally starving, and fought among themselves for the carrion with which the Frenchmen had baited their traps. Champlain received them with great compassion, and gave them food from his own scanty supply. The generosity and humaneness with which he always treated the Indians won from them an enduring friendship. They never faltered in their trust in him, and never once betrayed his trust in them. Had it not been for this friendship on their part, he could never have performed the wonders he did in the way of exploration.

The March upon the Iroquois

THE spring of 1609 found him in good health and courage, planting his garden against the necessities of the winter to come. At this time a young Algonquin chief came to him and made just the kind of a proposal that would naturally appeal to the adventurous soldier. It was to join the allied tribes of Canada—the Algonquins, Hurons, and Montagnais—in an expedition against the Iroquois of New York. In return for the favor of his alliance, the Indians promised to take him, at some future time, to the Great Lakes and to show him where there were copper and other wealth dear to the heart of the European. Champlain agreed at once, and in May he set out, accompanied by eleven of his men and his Indian allies.

The party went up the St. Lawrence as far as the Richelieu River, which is the connecting link between the St. Lawrence and Lake Champlain. Here they found that they could not navigate the smaller stream in their shallop, and nine of the men went back in it to Quebec. Three-fourths of the Indians deserted at this point, leaving Champlain with two white companions and sixty Indians to invade the Five Nations of the Iroquois—the fiercest, most ruthless warriors on the American continent. The Canadian Indians would never have dreamed of such an invasion if they had not had a sublime confidence in "the man with the iron chest," as they called Champlain.

They had a difficult journey up the Richelieu River, and coming down the western channel, past the islands of La Motte and North and South Hero, reached a point where the full expanse of the lake lay glistening under the July sun. If we eliminate the summer cottages which now dot the islands and shores, Champlain looked upon the same scene which the traveler who goes there on a pleasure trip sees to-day. On the left were the Green Mountains, whose summits of white limestone Champlain mistook for snowy peaks; on the right were the Adirondack Mountains and forests, then the favorite hunting grounds of the Iroquois.

The original plan of the Indians was daring enough to satisfy the love for the wildest adventure. It was to traverse Lake Champlain, go through Lake George, make a portage of a dozen miles, and, striking the Hudson, glide down that river to the sea, borne along by the absolute belief in the omnipotence of three muskets and three steel breast-plates. As will be seen, this plan was interrupted, but had it not been, Champlain would have antedated Henry Hudson's discovery by a few months, or, possibly, as traveling was a slow process in those days of Indian ambuscades, Champlain, going down the river, might have met Sir Henry on his way northward.

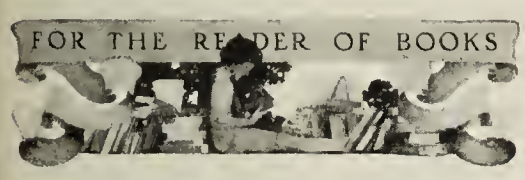
When the invaders reached the southern extremity of the lake, off a rocky promontory where Fort Ticonderoga was afterward built, they met the Iroquois, who, having got wind of the invasion, were coming to seek it. The first meeting was at night while both parties were in their canoes, and by common consent they agreed to wait until daylight before beginning the fight.

The inhabitants of New York State were very disdainful of the Canadian Indians. Having no information as to the great power which was concealed in their ranks, the Iroquois wondered at the temerity of their northern foes, and watched them closely during the night, to see that they did not run away without giving battle. Both sides spent the time in shouting boasts as to what was to happen as soon as it was light, but the Canadians were silent as to the secret of their courage.

At sunrise the Iroquois began the attack, and, as they advanced with more military precision than was usually shown in Indian warfare, Champlain took time to admire them: two hundred stalwart braves, in stature more majestic than any he had ever seen, and with three chiefs at their head, wearing a rude armor of wood bound with thongs.

Champlain Turns the Day

HAD it not been for the presence of Champlain the allied Indians would have turned tail and run. As it was, they became very anxious and called loudly upon their champion. Clad in light armor, with shining breast-plate and a plumed casque on his head, Champlain stepped through the ranks and strode forward until he was thirty paces in advance of his party. The Iroquois stopped short with astonishment. Here was an apparition to strike terror to the bravest heart, because it was the unknown and the mysterious. There were a few moments of silence; the Algonquins behind him were too intensely wrought by excitement to utter their shouts of defiance, and the Iroquois in front were too much astounded to move or speak. Champlain quietly raised his arquebus, and taking careful aim, as if he were shooting at a mark, put a bullet through the brain of one of the chiefs. Instantly pandemonium broke loose. The allies yelled like so many fiends; the Iroquois also yelled, but with a less certain note; then, with a valor which deserves to be chanted in their war-songs, they rushed toward this terrible foe, who, armed with a thunderbolt (which he had reloaded), launched it again in their faces. The two other white men, who had been concealed under buffalo robes in canoes nearby, suddenly opened fire. This settled the fight. No courage was proof against such odds, and the Iroquois fled in consternation, while the allies followed them to complete the victory.



Since that day Lake Champlain has been the scene of many a bloody conflict. Fort Ticonderoga was taken and retaken during the French and Indian and Revolutionary Wars, the hills reverberated

with the thunder of cannon when Mac Donough defeated the English fleet, but Champlain's shot, killing the Iroquois chief, was the first explosion of gunpowder to awaken their echoes. It won the day, but it kindled in the breasts of the defeated Iroquois a rage which did not become extinct for years—not until they had burned the villages of their enemies and practically annihilated the Huron and Algonquin tribes.

When the ceremonies attendant upon this victory were completed, the Canadian Indians were satisfied to return home, taking their hero with them, in triumph.

Six years later he made his longest and his last voyage into the interior of the continent. With a dozen white men and a band of Indians who were always eager to avail of his prowess against their Iroquois foes, he ascended the St. Lawrence and Ottawa Rivers, crossed Lake Huron and Lake Ontario, and came down into New York State as far as Canandaigua. Here he found a town of the Senecas which was fortified by a stout palisade thirty feet high and defended by a large force of warriors. Nothing daunted by this obstacle, Champlain and his men built a wooden tower with huge shields, capable of sheltering several men. When this was finished three or four of his men climbed into it, and two hundred of his Indians dragged it forward, very much after the fashion of the famous wooden horse which the Greeks employed at the siege of Troy, only in this case the vehicle rolled up in broad daylight, accompanied by the yelps of painted savages. From this portable fortress a raking fire was poured over the stockade. The ruse might have been successful if the attacking Indians had possessed more patience, but in their exultation they exposed themselves too recklessly and met with serious losses. Champlain himself was wounded by an arrow, and, although he drew it out and wanted to continue the fight, his allies suddenly became discouraged and drew off, carrying him with them. They were kind enough to him, nursed him in his wounded condition, and finally brought him safely back to Quebec, but he had lost prestige among them, for they had discovered that the man with the iron chest was not invulnerable.

He made many voyages between France and Canada, visiting the court at Paris, being fêted by King and nobles, and returning to the hardships of life in New France with equanimity and pleasure, for his heart was in his work in the New World. Here, on Christmas Day, 1635, at the age of sixty-eight, he died, and at his death his country lost her foremost pioneer in America.

John Bull and His Island

IN APPROACHING his explanation of England and the English, Mr. Price Collier is attracted by the Englishman's breakfast. It is a solid repast of tea, eggs and bacon, cold meat, and jam. What you want is not refused, but what *they* like is gradually forced upon you. Thus the English govern their colonies. There is no raising of voices, no ridicule of your habits, just slow-moving, confident bulk. The Englishman holds himself at high value and, wherever and whenever possible, takes all he can get. It is done quietly, as a matter of right, with a subdued air of sanctity.

For other meals there are eggs, bacon, sole, beef, mutton, ham, tongue, chicken with potatoes, cabbage, and cheese. It is a man's diet, suited to men who play and fight hard and rule about one-fifth of the world. The Englishman likes it, sighs for it when separated from it, and those who survive are, as Mr. Collier admits, splendid animals indeed. It is washed down with a prodigious amount of malted liquors and heavy wines. In 1906 the English consumed twenty-eight gallons of beer each for every man, woman, and child. They spent over a thousand million dollars for drink, sport, and the navy.

Sport is a religion. Indeed, the English spend more, as Mr. Collier rather quaintly puts it, "on sport than they do on religion and education." Young and old play outdoor games together in a way almost unheard of here. It gives the boys manliness and poise, and keeps their elders fit. Keeping fit is a duty for these modern Romans. They never can tell when they will be called upon. When the South African war broke out, Lord Roberts, already an old man, and grieving then for the loss of his son, said: "I have been keeping myself fit for just such an emergency," and started for the front.

It is a man's country. Society is ruled by men rather than, as in America, by

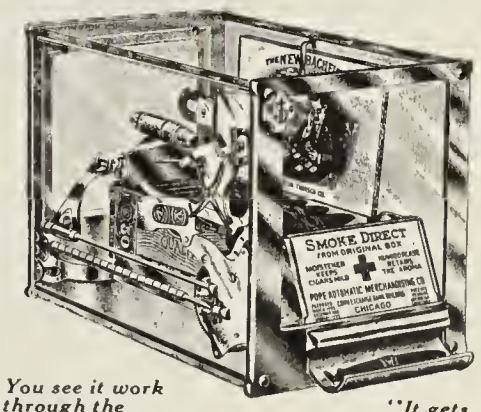
Let Pope Cigar Sellers Make You Big Profits

Of all the commodities that permit of automatic merchandising none can compare with five-cent and ten-cent cigars in quantity sold, in steady daily demand, or in big profits. No one has ever been able to make an Automatic Cigar Selling Machine that was mechanically or commercially practical until we perfected the Pope Automatic Cigar Selling Machine.

Every time you drop a nickel or a dime in the slot the machine automatically takes a cigar from the original box and deposits it in your hand.

We control and make the only Automatic Cigar Selling Machine in the world. That means a monopoly of the *automatic* selling of 9,000,000,000 (nine billion) cigars sold annually in the United States, with total profits of $200,000,000 at 2 cents per cigar.

The monopoly of the automatic end of the cigar business is too big for us to handle alone. The local territory in Chicago, which we reserve for our company, is as much as we can handle.



We are organizing a force of operators to install these machines and to control them locally in other cities and states. It takes big men with brains and push to carry out our plans. We can't afford to tie up the territory to any man who cannot develop its possibilities.

We sell no patent rights—no stock in our company. We furnish you the machines and show how to operate them to attract your share of the millions of nickels, dimes and quarters that flow in a constant stream into the cigar business each year.

Big fortunes are made from chewing gum machines that attract mere pennies. If pennies make fortunes, then 5, 10 and 25-cent pieces will make bigger fortunes from Pope Automatic Cigar Selling Machines.

Compare the volume of cigar sales with that of any other article sold or that can be sold in merchandising machines. You will then realize what vastly greater possibilities for profit there are in catering to the millions of smokers.

We will give you exclusive control in your territory of a system of Pope Automatic Cigar Selling Machines that will make you profits from eight to ten times the dividends on ordinary investments. We have complete selling plans that show you how to get into this new, big money-making business. We show, step by step, how to equip and manage the business to get the biggest possible returns on your investment.

You see it work through the Plate Glass Case

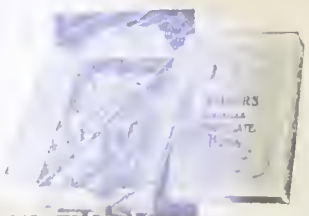
"It gets the money!"

We have already disposed of much territory. Some entire states have been taken. A $50,000 company controls a large western city. A number of $5,000, $10,000 and $15,000 companies control other cities and counties east and west. A lot of smaller cities have been disposed of on a basis of from $1,000 to $5,000. Many other important deals are now pending. If you are interested, write today.

We reserve the rights and control Chicago for our Company

Our Special Proposition "L1"

To the right man we will make a special offer that he cannot afford to pass by. Write today for our Book L1, and ask for a ten days' option to exclusively control your territory. Negotiations are closed for many cities—others are pending. Yours may be taken unless you act quickly. Write at once.

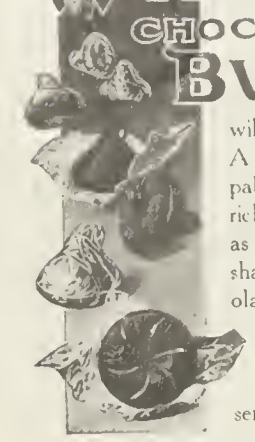


POPE AUTOMATIC MERCHANDISING CO., Dept. L1, Corn Exchange Bank Building, CHICAGO

2 IN 1 SHOE POLISH

Adds to the life of all leathers.

Takes the place of liquids and pastes.



10 cents

Every *genuine* Chocolate Bud has the name WILBUR stamped on it and the *Cupid trade mark* enclosed in its foil wrapper.

Whoever tastes

WILBUR'S CHOCOLATE BUDS

will want no other chocolate. A delight that lingers on the palate, melting and smooth as rich cream, delicately flavored as sun-ripened fruit. The shape of these little solid chocolate forms is closely imitated, but their quality is never approached. At your dealer's—or we will send a box prepaid for $1.

One sample box for 30 cents and your dealer's address.

Wilbur's Velour Chocolate—for eating only—a new thought in chocolate making—delicious aroma, less sugar. Flat cakes retailing at 10 cents.

women. Politics, not amusement, is its keynote. Echoes from the far-flung battle-line are always in the air. Fighting is going on somewhere. At London dinner-tables and clubs one is always meeting some one just setting out upon or returning from exploration, colonizing, or war.

More About an Englishman's Home

IN HIS home the Englishman is master. It is his castle, rather than his wife's. He spends a great deal of time there, and he likes to entertain and invest himself with a certain personal dignity. If he is living in a big house and loses his money, he would rather move to a small house and keep his servants than live apart and shabbily in the big house. Also, the horses for his wife's brougham will be sold before he will sell his hunters. The Englishman's domestic economy throws light upon the larger questions of British politics. The severest stricture that can be passed on a man's political course is that he neglects imperial interests for personal ambition, and the reason is that, in imperiling British interests, he imperils British incomes and thus the peace and comfort of the English home.

These are not new things, perhaps, but Mr. Price Collier, in his "England and the English," just published by the Scribners, puts them and much else in a new and especially understandable way. His own experience gives him an uncommon point of view. Mr. Collier was a student at the Harvard Divinity School in the early eighties; in 1903 he was living at Tuxedo Park and writing a book about driving. He knows Paris, Madrid, Vienna, Berlin, the City of Mexico and New York, and mentions an acquaintance with England extending over some thirty years. Toward his own countrymen his attitude is that of one who, although living in a fashionable country neighborhood from which detached but pleasant relations with Wall Street can doubtless be maintained, yet feels free to lambaste the vulgar new-rich.

He steps easily from budget statisties to French epigrams and coachmen's "hands." Yet, although decidedly a sportsman, his reticence toward a great Personage is worthy of remark. He is more inclined toward Cleveland, President Eliot, Charles Eliot Norton, Choate, and Root. He has no sympathy with Socialism nor votes-for-women, and in quite a London "Spectator" manner curtly dismisses such matters as "sentimentalism" and "effeminacy." Indeed, toward the whole altruistic tendency of to-day, Mr. Collier appears to present an almost early-Victorian opaqueness and indifference. Within the field which interests him, however, he is keen, widely-informed, and always vigorous and interesting.

The Sun that Never Sets

ALTHOUGH he deeply respects and has real affeetion for this stout, red-eheeked, honest, sport-loving old fellow, Mr. Collier is not without misgivings about his future in a new, nervous, scientific age. "Although one may praise," he says, "and praise honestly, the game he has played, and the manly way he has played it, this need not interfere with the conviction that he is being caught up with—which means, of course, ere long, left behind—in the far more scientific game that Germany, Japan, and America are now playing." Many other vistas, similarly interesting, are lighted by Mr. Collier's book. He tells who the English are and discusses their home life in town and country, sport, society, Ireland, and the way they govern themselves and others. It would not be easy to find more interesting reading on such a subject at this time. A. R.

A Transcript of Tenement Life

CHARLES FORT has lately published an unusual book, "The Outcast Manufacturers." There is no story, and its language is elliptical, consciously terse, forbidding. Read the first chapter, in which his score or so of slovenly New York tenement types are created and staged, and you'll wonder why good white paper was spoiled to picture chaos, complete and sordid. Chapter II will interest you, and you'll sit up as late as is necessary to finish the transcript. Arthur Morrison and Gissing have gone to the heart of the London slums, and have made fair stories out of their accurate studies. Fort cares nothing for his story, and he is a rampant individualist as to style, but he makes his group of tenement incompetents live under your eye. It is superb verbal photography—atmosphere, humor, the sordidness of the people and streets, brief flashes of exaltation, the by-play of politics, poignant little tragedies, are thrown upon the pages sharp-edged and convincing. In place of a story there is a slow progression of the group. At the end you'll wonder who Fort is and what he thinks about his people. The book won't even give you a hint. J. M. O.

On the Links

At the mountains or shore, at tennis, canoeing, however you may be spending the vacation days, you are bound to appreciate deeply the collar that is always nobby and fresh, that neither dust nor heat can affect.

CHALLENGE Brand WATERPROOF COLLARS & CUFFS

Delight every careful dresser who is a lover of life in the open. However strenuously you exercise, you can be absolutely certain that your collar has not suffered. In no other collar ever manufactured can you find so perfect a combination of style, good taste and economy.

Challenge Collars and Cuffs are made in the latest, most up-to-date models. They have the perfect fit, dull finish and dressy look of the best linen collars—our new "Slip-Easy" finish permits easy, correct adjustment of the tie.

Challenge Collars and Cuffs are absolutely waterproof, never turn yellow, can be cleaned with soap and water. You can't tell them from linen.

Sold by first-class haberdashers everywhere. If your dealer does not carry Challenge Brand Collars and Cuffs, send us 25 cents, stating size and style of collar you desire, or 50 cents per pair for cuffs, and we will see that you are supplied at once. Our new booklet gives valuable pointers about the correct thing in dress—what to wear and when to wear it. Let us send it to you.

"ANSCO" FILM

for pictures of all kinds; all seasons; all places; all weather

IT doesn't make any difference where you use them—you can always depend on Ansco Film producing good pictures. If you're down in the tropics, tramping in the North woods, cruising, out in the open anywhere—take along Ansco Film. It matters not what film camera you have. The keeping qualities of Ansco Film are unsurpassed.

Ansco Film render faithfully, correct color values. They exhibit a Chromatic Balance—a true color ratio as effective as the actual colors. This is best shown when prints are made on Cyko Paper. Insist on Cyko prints if your developing and printing are done outside.

Ansco Film have great speed and latitude. You can get perfect detail in the shadows. They are free from imperfections. The spools always fit.

No gray, muddy negatives. No fulling with Ansco Film. They give soft, brilliant, transparent negatives. Exposure numbers always register. Non-curling. Fit any camera. Ansco Film make successful photography. Thousands prove this daily.

Independent dealers everywhere carry full line of Ansco Film, Cyko Paper, and pure, carefully prepared photographic chemicals. If other dealers will not supply you, do not blame them. An agreement with their manufacturer forbids them. Look for the ANSCO sign.

ANSCO PHOTO SUPPLIES FILMS, PAPERS AND CHEMICALS CYKO PAPER

YOURS FOR THE ASKING! A complete photographic library in two volumes, teaching the art of making prize-winning pictures. Write for it, or ask your nearest dealer.

Ansco Company, Binghamton, N. Y.

Holeproof Hose

Made and Guaranteed For Men, Women and Children

Think of this, you mothers who must now darn hosiery every week,—and you fathers who must now buy hosiery almost every week!

If you buy six pairs of soft, light and attractive "Holeproof" Hose—the original guaranteed hose—for yourselves and the children, you must get this guarantee, signed in ink by the dealer or by us: "If any or all of these hose come to rips, tears or holes, or need darning within 6 months from the day you buy them, we will replace them free."

31 Years' Experience

The secret of the wear-quality and comfort-quality together in "Holeproof" Hose cost us 31 years of patient experiment.

We use a 3-ply yarn which is especially soft and fine.

We reinforce the heels and toes to 6-ply. In the children's stockings the knees are also reinforced in this way.

Yet you do not feel these reinforcements because the yarn is so pliable and light, and the knitting is done so expertly.

If you want the most comfortable, the most economical, the very finest hose on the market, see that the "Holeproof" trademark is on the toe.

All the Latest Summer Colors

The genuine "Holeproof" is sold in your town. We'll tell you the dealers' names on request. Or we'll ship direct where we have no dealer, charges prepaid, on receipt of remittance.

Holeproof Sox 6 pairs, $1.50. Medium and light weight. Black, black with white feet, light and dark tan, navy blue, pearl gray, lavender, light blue, green, gun-metal and mode. Sizes, 9½ to 12. Six pairs of a size and weight in a box. All one color or assorted, as desired.

Holeproof Sox (extra light weight)—Made exclusively of Sea Island cotton. 6 pairs, $2.00.

Holeproof Lustre-Sox 6 pairs, $3. Finished like silk. Extra light weight. Black, navy blue, light and dark tan, pearl gray, lavender, light blue, green, gun-metal, flesh color and mode. Sizes, 9½ to 12.

Holeproof Full Fashioned Sox 6 pairs, $3. Same colors and sizes as Lustre Sox.

Holeproof Stockings 6 pairs, $2. Medium weight. Black, tan, and black with white feet, pearl gray, lavender, light blue and navy blue. Sizes, 8 to 11.

Holeproof Lustre-Stockings 6 pairs, $3. Finished like silk. Extra light weight. Tan, black, pearl gray, lavender, light blue and navy blue. Sizes, 8 to 11.

Boys' Holeproof Stockings 6 pairs, $3. Black and tan. Specially reinforced knee, heel and toe. Sizes 5 to 11.

Misses' Holeproof Stockings—6 pairs, $3. Black and tan. Specially reinforced knee, heel and toe. Sizes, 5 to 9½. These are the best children's hose made today.

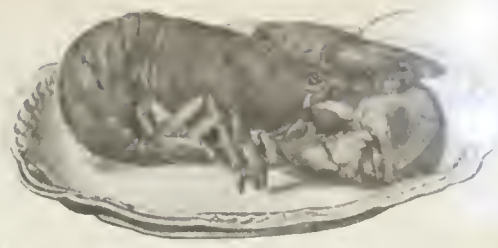
ADVERTISING BULLETIN

NO. 10

MEDICAL COPY

IT is quite generally understood that Collier's does not carry medical advertising of any sort. This, of course, excludes patent medicines. We even go farther and exclude the word "cure." Some weeks ago we received an advertisement from a man who claimed to cure by natural means, dyspepsia, heart disease, and so forth. Now, this advertiser is an honorable business man and above the suspicion of quackery, nevertheless we had to tell him that it was against our rules to accept any advertising copy in which the word "cure" was used. He wired back: "Change your rules; it is easier than to change my copy." So it would have been, but he overlooked the important fact that our readers have something to say.



We convinced this advertiser that the ruling was made, not to work a hardship on him or on any legitimate advertiser, but for the protection of Collier's readers against the hordes of quacks who solemnly promise cures for every known malady. He did not belong in their class and yet by the use of the copy he submitted he would have placed himself in their ranks. Thousands of dollars are paid out every day by innocent readers to the frauds in the patent-medicine business.

Look over our advertising columns and then compare them with the advertising columns of the large majority of other weeklies and monthlies who exercise no censorship. We are not finding fault with those publishers who will allow such advertising to enter their papers—that is their business—but we want you to know where Collier's stands, and why it is always safe to deal with any advertiser who uses Collier's. They will all keep faith with you and with us!

T. L. Patterson.

Fine-Form TRADE MARK. **MATERNITY SKIRT** Registered in U.S. Pat. Office

of great interest to

Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society — **Always drapes evenly in front and back** — no bulkiness — no draw-strings no lacing — no ripping or basting — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home

FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"**. It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively **please you — same guarantee** — Illustrated book free. Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

Editorial Bulletin

Saturday, July 3, 1909

Vacation

¶ *Next week's issue will be devoted almost entirely to the spirit of summer-time; vacation experiences and vacation thoughts will pervade its pages. Mr. Maxfield Parrish has drawn a cover for the number which he calls "The Tourist," and Mr. Charles Dana Gibson has made a double-page picture illustrating a timely theme. The characters are papa and some pretty girls. The prize-winning essays in Collier's Vacation Contest of last year will be printed in this number. In addition there will be photographs of beautiful girl graduates and other Commencement pictures. As a sequel to the article contained in the present number on "An Empire in a Fright," Mr. Palmer will contribute an article showing the Teutonic viewpoint in the same crisis, entitled,*

"The March of the Germans"

¶ *If seven German babies are born to every four British babies, and if the seven little Germans when they grow up will work ten hours a day to the Britishers' eight, which is going to win, England or Germany?*

Something depends on the number who emigrate, on how well they know their A B C's, and on keeping up the supply of jobs for the newcomers. A good deal depends, too, on the continued patriotism of German mothers.

"Where are we going to put all our sons in this crowded country?" they are beginning to ask.

"You leave all such details to me," answers the Kaiser. "Keep on doing your duty to God and the Fatherland and urge your husbands to join the Navy League."

Everybody wants those plus three little Germans if they leave their nationality behind, and nobody wants them if they bring it with them. The Kaiser insists that they shall, at least, have it concealed somewhere about their persons. Otherwise, they can never be allowed to fight and die for him and enter the Brandenburg Walhalla.

Suspicion that he means to find room for the plus three in the British Empire and give them jobs that belong to Englishmen has aroused England to double locks and patent burglar alarms.

What is the nature of the Frankenstein of the British imagination? What is the character of that navy, half its own strength, which the British navy suddenly finds so formidable?

This terrible German smiles over the British scare. He smiles as innocently as if he really held as strong a hand as the British credit him with holding. Who said that he aimed at the Englishman's job? Nobody but the English. Has England a patent on Dreadnoughts? Hasn't Hans a right to some, too?—especially as he pays for them; and he does not like that part any better than any other taxpayer.

We really know less of the real Germany than of any other great country, says Mr. Palmer. The secret of her power is her success in finding work for the 900,000 increase of population every year. How long can this continue? Either the outward pressure of her own numbers will force her to strike for more room or the German mothers will have to take a text from the book of the women of France, where the population is stationary—and that is "lese-majeste."

July 3, 1909

Is There Really Hope?

PRESIDENT TAFT'S PROMISES to revise the tariff downward were all made *before* his election. Not at any time since November 3 has he repeated that pledge or referred to it. From this nothing sinister is to be inferred. It would be more in keeping with his poise and solidity to remain silent until the time comes for performance, and then to live up to the last letter of his pledge. But this silence has given courage to Senator ALDRICH, Senator LODGE, Senator HALE, Senator HEYBURN, and the other machine Senators to insist, by word and deed, that Mr. TAFT'S promises are not binding on the Republican Party. Finally, during the last two months, to frank repudiation of the promise to revise downward, they have added open sneers for the man to whom the public justly looks for redemption of that promise. Meantime, up to the present writing, from President TAFT has come nothing—unless it be assumed that Secretary MACVEAGH speaks by his authority. Mr. MACVEAGH said:

"This Administration will be conciliatory if you do, not ask it to give up a principle or *go back on its promises.* Neither of these things will it do."

At Milwaukee, September 24, 1908; at Des Moines, September 26; at Cincinnati, September 22, President TAFT *promised revision downward.*

Mr. MACVEAGH said further:

"To argue that the revision expected is not a revision down is talking against the wind."

That is exactly what Senators ALDRICH, LODGE, HALE, and HEYBURN have *said*, and exactly what the Republican Senate machine, under the leadership of these men, has *done.*

Again, from Secretary MACVEAGH:

"The main point is to satisfy the people of the Middle West."

It is exactly the people of the Middle West who are not satisfied. From the Middle-Western States come all the Insurgent Senators. Iowa has two Insurgent Senators, Minnesota two, Nebraska two. Kansas has one Insurgent Senator and half a one; South Dakota the same. Wisconsin has one Insurgent and a nonentity. Indiana has one Insurgent and one Democrat.

Finally, this threat:

"And you and I must agree, for we can not escape the conclusion, that it might become at any time the duty of any great party leader to create for his party a new majority and control."

If we could but know that the Secretary of the Treasury spoke on behalf of his chief! When President ROOSEVELT sent Secretary ROOT to Utica to denounce HEARST, the formula used was this: "By the authority and direction of the President, I say to you."

Just a Few Figures

THE RECORD SHOWS that out of seventy-nine cases heard before the Supreme Court of California from 1895 to 1907, in which the Southern Pacific appears as plaintiff or defendant, fifty-seven were decided in favor of that company, almost four to one. Take, now, a different period. Of all the Southern Pacific cases argued and submitted in the same court *prior* to 1895, thirty-four were decided for the company, and twenty-eight against, showing almost an even break.

Who Is This Man?

FROM UNCLE JOE'S APOLOGIA:

"Another publisher, childlike in his frankness, comes direct to the Speaker's room in person with a proposition *to throw the whole newspaper press of the country* over to support any ambition the Speaker may have if he will secure just one desired piece of legislation, and the threat that he will turn this terrible engine of publicity against the Speaker if he refuses."

This statement involves two propositions:

The first (stated in so many words) that some man made this offer.

The second (by necessary inference) that the man was sane, and that he was in a position to bring "the whole newspaper press" of the United States to the support of Uncle JOE'S campaign for the Presidency.

Will Uncle JOE now name for us the man who can deliver "the whole newspaper press" of the United States? A great many people will be keen to know the answer. The general public has the feeling that they are entitled to know who are the men and what the interests that control, in individual cases, the newspapers which they read. If there is any one man able to deliver them all, that will be a revelation, indeed. Colonel WATTERSON will undoubtedly want to know who it is that can swing the "Courier-Journal." We hope he will second our effort to persuade Uncle JOE to tell. Mr. NELSON will be glad to learn who it is that can deliver the Kansas City "Star." Let everybody join hands to find out who was Speaker CANNON'S remarkable visitor.

One Source of Revenue

FOR THE SAKE of the application which comes later, we crave the patience necessary to read two rather formidable legal paragraphs:

Revised Statutes of the United States, Section 3893: "Every obscene, lewd, or lascivious . . . paper . . . print or other publication of an indecent character . . . are hereby declared to be non-mailable . . . and any person who shall knowingly deposit . . . for mailing . . . anything declared by this section to be non mailable . . . shall for each and every offense be fined not less than $100 nor more than $5,000, or imprisoned at hard labor not less than one year nor more than ten years, or both, at the discretion of the court."

That statute is still in force. Under it, on or about October 23, 1906, JAMES GORDON BENNETT, owner of the New York "Herald," was indicted in the following language:

". . . did knowingly deposit . . . in the mails of the United States . . . a certain paper, print, and publication entitled the New York 'Herald' . . . and the same paper . . . contained (among other things) . . . certain obscene, lewd, lascivious, and indecent matters in print . . . against the peace of the United States and their dignity and contrary to the form of the statutes of the United States in such case made and provided."

In the indictment against Mr. BENNETT, the following advertisements from the "Herald," among others, were set forth:

"A.—A.—Magnetic young masseuse (new assistants) gives magnetic, Swedish, vibratory, general massage, manicuring, baths . . ."

"A.—A.—Magnetic trained masseuse, with assistants, gives Swedish, general, vibratory magnetic massage; baths; Persian, French, and Western operators; select patronage . . ."

"A.—Refined, young masseuse, magnetic, massage, manicuring; Parisian operator; expert assistants . . ."

"A thoroughly competent masseuse; general massage. . . . Competent assistants wanted."

"A.—A.—Expert Norwegian masseuse; bath, massage, vibratory treatment . . ."

"EXPERT masseuse gives magnetic oil, alcohol rubs . . ."

For his offenses, Mr. BENNETT was speedily and simply convicted and sentenced, and paid $25,000 into the Treasury of the United States. For two years the "Herald's" personal columns have contained no advertisement less innocuous than "Anti-Fat."

Read now the following advertisements from the opulent "personal" columns of the San Francisco "Chronicle" for any recent Sunday:

"A.—A.—Miss ——, scientific masseuse. Open Sunday . . ."

"A.—Newly opened massage parlors; Eastern assistant . . ."

"A.—A.—Miss ——, vibratory massage . . ."

"Miss ——, Eastern masseuse . . ."

"A.—Miss ——, tub baths, alcohol, magnetic massage . . ."

"A.—A.—Miss ——, magnetic treatment . . ."

"—— ——, massage; select patronage . . ."

"Modern Rooms for select parties . . ."

Now substitute in the indictment above, for the New York "Herald," the San Francisco "Chronicle," and for "JAMES GORDON BENNETT," the name MICHEL HARRY DE YOUNG. Then guess the answer. The statutes of the United States are the same in San Francisco as in New York. The Grand Jury that indicted Mr. BENNETT, the Court that tried him, and the jury that convicted him, formally recognized the class of advertisements here set forth—as everybody in the newspaper business has long recognized them—as "obscene, lewd, lascivious, and indecent," and so described them officially. What has been held by the United States courts in New York is binding on the United States courts in California. Any citizen of that State may instigate the prosecution, as WILLIAM R. HEARST did in New York, provided the local United States attorney is not restrained, by fear or favor, from prosecuting so powerful a personage as the owner of the San Francisco "Chronicle." MICHEL H. DE YOUNG is a man of power in the land. The distinctions he enjoys have lately included a publicly announced lunch at the White House. His honors would not be less if he should divest himself of this small part of those ample revenues which make him different from the common run of men.

"And Then What?"

MR. BRYCE, who understands America so much better than many Americans, was reminded during his recent visit to California of the great ALEXANDER. That restless conqueror was describing one day nation after nation which he intended to overrun and subjugate. "And

"Well, that, what?" asked one of his counsellors, and ALEXANDER replied: "Well, I suppose we shall sit down and enjoy ourselves and live happily for the rest of our lives." To which the counsellor answered: "If that is your object, why not begin to be happy now? You already have more than any one ever conquered before; why not take your enjoyment now?" And the British Ambassador then reminded his audience—he was speaking at the Charter Day exercises of the University of California—that even were they not to slacken the pace at which they were pursuing material development, they might well reflect upon what were "the ultimate aims for which they were working." Part of the fascination of pioneer life is that a thing so "sicklied o'er with the pale cast of thought" as an ultimate aim rarely intrudes to break the spell. There is no time for it—or it is easy to think so. Because of its apparent necessity, every commonplace piece of work—clearing land, raising a roof, digging a well—becomes an act of creation. There are no other wells, no other roofs, within hundreds of miles, perhaps. So seldom can this particular emotion be enjoyed in the highly complex and endlessly divided activities of a more settled community, that people have even fallen into the habit of considering as creative work only that done by writers and artists. As if merely because it is set down on paper by one man, unaided, some perfunctory magazine story were any more "created" than the orchard which some skilful and imaginative pioneer makes to grow in a desert.

The Ultimate Aim?

YOUTH and the golden age can not last forever, however. There comes a time when it is no longer necessary to grow food in order to live. The bakeshop and grocery store are just round the corner. The old Middle-Western régime, "to raise more corn to feed more hogs, etc.," can no longer be adapted in terms of irrigation ditches and citrous orchards to California. The Golden West is growing up. The ultimate aim *must* be considered. Mr. BRYCE makes several suggestions. The Californians, with their marvelous land and climate, should stick to the country and not degenerately flock to the cities. There are cooperative methods among cultivators worth their thought. If they insist on the city, let them make it beautiful and well-governed—certainly there is a field in San Francisco. Let them give a little more thought to things of the mind—why may not a new and distinctive type, perhaps of landscape painting, perhaps of literature, grow up in this extraordinary State, so strikingly an empire in itself? Californians already have an individuality. Their mountains, gigantic trees, and splendid sunshine seem to have produced an exuberance, a light-hearted worship of pagan beauty, quite different from anything found in the East. The Bohemian Club's summer gambol and outdoor play would be impossible in New York or Massachusetts, no less because of differences of temperament than because of the lack of a redwood forest. A surprising number of Californians write stories and help to fill Eastern magazines and newspapers. Whatever development may come with the increase of leisure, it is a fact that in another generation the question, "What next?" will become very pertinent all the way from the Cœur d'Alene country down to Yuma and the Salton Sink.

Wheat

FAR-STRETCHING FIELDS of waving grain will soon cover the infinite prairies. The harvest days will come when, despite the problems of the unemployed, the rancher will call in vain for the hands with which to gather the spoil of the reaper and the winnowed wealth of the thrasher. It is a great industry, this tickling of the vast plain to feed the craving appetite of a nation. More enduring it is than that other great industry of the West which explores the fissures of the earth for treasure. The men who sweat and moil under the hot blasts of the prairie sun earn their wage. The nation whose blood is renewed by the yield of their labor is their debtor.

The Goddess of Noise

By WALLACE IRWIN

THEY have done her in bronze and in plaster,
Sweet Liberty, saint of our land;
In ponderous bronze have they cast her,
A giantess guarding our strand.
The blood-muddled French call her "Reason"
(Which very near shattered her poise)—
But now in the Firecrack Season
Let's call her the Goddess of Noise.

BEHOLD how she calls to her people!
The little toy cannon's a-load,
Old Glory streams over the steeple
And havoc begins to explode;
Staid nerves may be torn from their sockets,
But the battle's the thing for the boys,
And the midnight is splendid with rockets
High-flown to the Goddess of Noise.

AH, Glorious Fourth! though endurance
Be strained by the things that you do,
Though you baffle the laws of Insurance
And knock all the echoes askew,
Yet we'd burn half the barns in creation
And scorch all our thumbs for the joys
That spring from one mad salutation
To Liberty, Goddess of Noise.

CAN'T you hear the great soul of it calling—
The deep-throated Voice of the Day;
How the blood that is blessed in its falling
May trickle again in our clay?
For back of these loud salutations,
If idle and meaningless toys,
Is *your* faith and mine and the Nation's
Blazed forth by the Goddess of Noise.

Are Reveries Obsolete?

REMINDED BY IK MARVEL'S death that our copy of "Reveries of a Bachelor" had gone unread for ten years, we fell upon those mellow paragraphs once again. Time has not chilled them, though it has made them seem quaint. It sets a city man to wondering if bachelors have reveries in these days of severe office work and multitudinous social engagements. Club-life, a winter with five nights in each week devoted to public or semi-public banquets; unmarried women, perfectly understanding that the benedick is not in earnest, willing at all times to eat or drive or see the play in company with his lack of intention—these are the elements of modern city life. What room is there for firelight moping and the architecture of the fancy, when a telephone will reduce the evening to a definite plan for bridge whist or a Barrie play? Melancholy is gratuitous when the receiver is already off the hook. It was pretty to play with sadness and to let the thoughts flicker around dead or wedded or unattainable beauty—the might-have-beens in the gallery of heart's desire. But the old mood has passed. That gentle sadness does not lend itself to midnight dashes on motor-cars.

The Girl in White

MIDSUMMER nights when shrubs and trees breathe perfume, and when Japanese mats and sofa pillows are brought out on the front steps. Under leafy arcades trolley cars whiz by, leaving an impression of hair ribbons, bare arms, and starched linen. Beau BRUMMELL once said something very complimentary about starched linen, but what he said applied to men. Has any poet yet satisfactorily put on paper the exquisiteness of duck skirts and white shirtwaists? Possibly BEN JONSON had the summer girl in mind when he wrote:

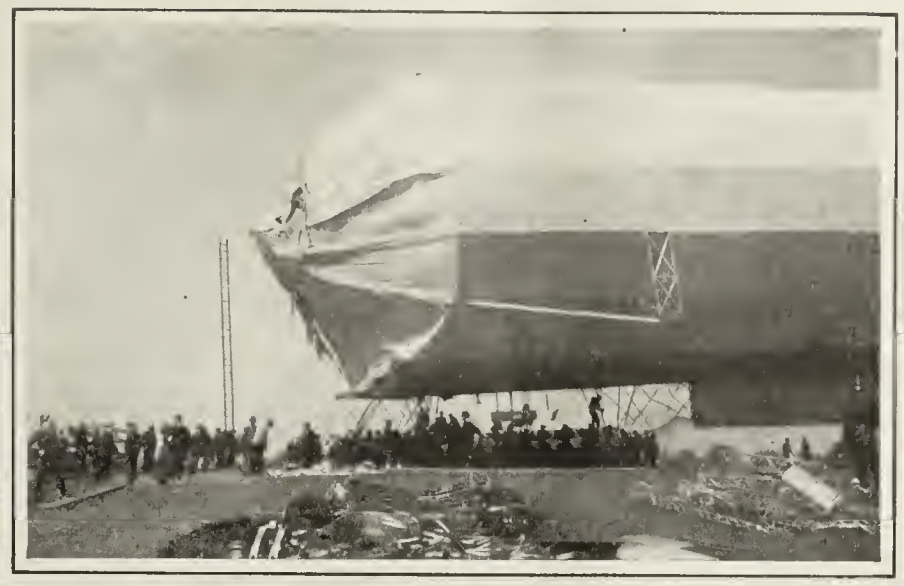
> "Give me a look, give me a face
> That makes simplicity of grace."

Who can resist the whiteness and freshness of newly laundered linen, piqué, or duck? Angels themselves are not more fair. Hair adorned only by ribbons, and flowing in the breeze; bare arms a little sunburned, and just brown enough to contrast with the snowy white of the shirtwaist; little white shoes side by side, like a pair of doves; like a pair of very small, slim doves. Her destination, if it is not the summer theater, is, like as not, the soda fountain, where the red and green lights of the drug store glow alluringly. Her young face uplifted at the soda fount—it is like a rosebud at dawn. A little laugh as she makes a dab after a recalcitrant berry, a droop of eyelids, and home again—the summer's evening is over.

One Summer Trip

FOR HIM WHO, putting the care and heat of the East aside, turns his face toward Seattle's Alaska Exposition this summer, much is in store. He is going "where rolls the Oregon," and where but a little while ago, in the calendar of the years, that noble river "heard no sound save its own dashings." Now he will find that region quick with the best of American life and industry. Nowhere can he travel in our country with less of summer discomfort. He can select no other outing and see on his way so much that is educational and interesting. He may visit Denver, Colorado's beautiful capital, set in the clear atmosphere, a mile above sea-level; the Garden of the Gods; Pikes Peak, the City of the Mormon Saints, the waters of whose great lake are a pleasure and a tonic. If he wish he may break his journey between Salt Lake and Portland by a stop at Boise, unique among mountain cities; and when he has reached Portland and until, on his return, he sees the mammoth copper mines of Butte, the red fire of whose smelters splotch the sky, he will be in a belt of matchless summer weather. Portland, Tacoma, Seattle, and Spokane will each give him, as an American, a thrill of pride. He will see how our Western spirit builds cities, selecting the best in modern architecture. He will find no extreme poverty and few, if any, slums. And if he has the time he may visit the Yellowstone National Park, for he passes within a few miles of its Golden Gate. For broadening culture and informing sightseeing, here is a trip worth while.

The Nightmare of Great Britain's Press



The big Zeppelin dirigible airship collided with a tree:—

it ripped its cover and scattered a certain proportion of its ribs over the surrounding pastures;—

The nearest firemen were called on for aid;—

assisted by soldiers, they proceeded to sew up the balloon's broken nose;—

this operation being successfully completed—

the great airship sailed majestically away, and for some time afterward was laid up for repairs

COUNT ZEPPELIN'S dirigible airship *Zeppelin II* started on May 31 from Lake Constance and flew to Nuremberg, where it arrived next morning. Count Zeppelin, accompanied by two engineers and a crew of seven men, then proceeded toward Berlin, where the Emperor was prepared to greet him, but he turned backward and came down when about seventy miles from the city. After repairs, the airship rose once more and returned to its shelter at Friedrichshafen. The average speed maintained during the vogage was 25 miles an hour; while the total distance of 900 miles in 38 hours broke all airship records. This flight demonstrated the fact that Germany's fleet of eight or ten air cruisers could start from Metz and sail over Paris or London without needing to land or replenish fuel. The war panic now sweeping across England has been greatly increased by the performances of Count Zeppelin's machine. The most recent development is the subscription campaign undertaken by the "Morning Post," to raise sufficient money for the Government to purchase an airship—one that has been proven navigable, so that there need be no more time lost in frittering experiments. The "Post" declares that British lethargy upon this subject resembled madness; that England has looked inertly on, while other nations have fashioned weapons for her ruin. Earl Roberts, Lord Milner, and Admiral Lord Charles Beresford are enlisted in the enterprise, and have agreed to act as an advisory committee, in conjunction with the War Office, to determine which is the most practical type of dirigible now in service. The "Post" has donated $10,000 toward the construction of a dirigible and the "Daily Mail" has offered $25,000 to build an airship garage

An Empire in a Fright

The Phlegmatic Englishman Has Become the Most Excitable Character in Europe

By FREDERICK PALMER

WHO ever heard of a wiry, excitable Italian having nervous prostration? The worst kind of a case is that of a reserved, calm man. He lacks the safety-valve of gesticulatory expression. He explodes.

For centuries the British have enjoyed a reputation for phlegm. They are supposed never to get excited except in telling other peoples how to keep cool. Even now it does not occur to them that they are hysterical. Haven't they been living in a state of siege and suspense for six months? They think of themselves as exhibiting stony stoicism in the face of conditions which would make the mercurial Frenchman, the vociferous German, and the emotional American collapse.

London Doomed Daily

EVERY foggy morning, with face blanched but sternly set, the commuter starts for London, which he knows may sink before his eyes under a shower of dynamite from an aerial flotilla secretly made in Germany. Every foggy morning, undaunted, the milkmen enter the streets of Dover expecting to encounter a dozen German army corps landed overnight. When the weather is fair, Englishmen feel reasonably safe. They know that the Germans are too unsportsmanlike to strike on a clear day.

Let no one ask such a foolish question as why include the army corps when the flotilla will do the work so quickly and thoroughly? The more thrills the better. All suggestions for the destruction of the British Empire overnight are welcome. A farmhand who imagines he sees a dirigible is good for columns without any editorial inquiry as to how much bitter ale he consumed the night before.

It is easy for the outsider to take this, the humorous and satirical, view; and it is difficult for him to adapt his imagination to such a staggering possibility as war between these two great nations. The trade relations of all the world would be disrupted. Every stock exchange would know a panic. Millions without end would be given to powers of destruction. The naval struggle on the North Sea would eclipse the battle of the Sea of Japan as Trafalgar eclipsed the duel of two buccaneering frigates.

It is safe to say that every human being on earth would directly feel the result in his daily life. If Germany won, four hundred million people might change their sovereignty.

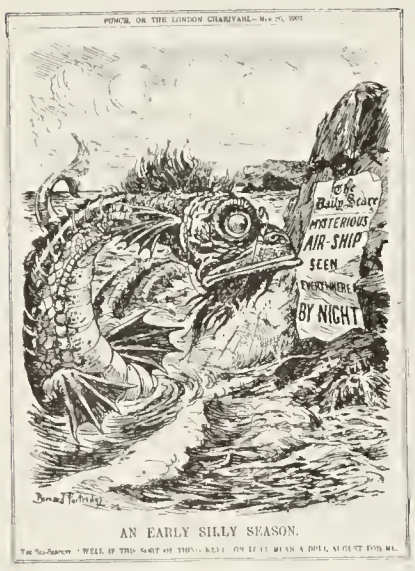
India and all her other great colonies might be lost to England, which would be plunged in debt and reduced to the rank of Italy among the Powers. If England won, Germany would lose her trade, and her people, so dependent upon exports, would suffer dire poverty.

War Alone Will Answer

SOUNDING opinions as you travel in England and on the Continent, you find few men who do not believe that war is inevitable, sooner or later. No rules except those of force will apply to such mighty disputants, you are told. England stands at the gate of her possessions and Germany advances. The two peoples are being set against each other like terriers for a mill; and it is the responsible statesmen of England who are trumpeting the alarms which the music halls and the newspapers echo.

From "Punch," April 7, 1909

"All's well!" cries watchman Asquith—the British Prime Minister—but Citizen John Bull, with his head at the window, grumbles: "So *you* say. All the same, I think I shall sit up a bit"



Armageddon is a good, strong old Biblical word—the name of the plain where the Jews suffered decisive defeats and disasters—but Mr. Arthur Balfour does not hesitate to use it prophetically in a public speech. Lord Rosebery, the only other living ex-Premier, says that Europe is returning to barbarism, and speaks of the forthcoming struggle as unavoidable. Sir Edward Grey, Foreign Minister and head of the diplomatic service, becomes bellicose before the Imperial Press Conference. Scarcely a day passes that some "eat-'em-alive" question is not asked in the House of Commons which refers directly to Germany as an adversary. Are the German merchant ships armed for action? Is the Government aware that the German waiters are all spies, with a central bureau in London?

In quarters where education should mean broad-minded philosophy, a word of praise for German civilization, regardless of race, is taken for a word of treason. John Bull, with sleeves rolled up, is shaking his fists and feinting and shouting: "Britons will not be slaves! I dare you! Come on!" From this attitude political opinion on the Continent draws the conclusion that England would welcome any action that would give her an excuse for attacking Germany.

England Now Twice as Strong as Germany

SHE is stronger now, relatively, than she may ever be again. Her navy is at present double the strength of the German. She is free to strike. No political complication can hold her back. Germany arouses the fears of Russia and France, already overweighting her side of the balance of power. Her neighbors favor any obstacles to her aggrandizement. They will not give her a free hand. If there is a conflict in the next few years, England must begin it.

But four years hence only *Dreadnoughts* will count, declare the agitators. This is equivalent to saying that all the battleships which we sent around the world will then be due for the junk-heap. In other words, even the four twelve-inch guns aboard the *Connecticut* are of no service. England originated the *Dreadnought*, all-big-gun type. She built the first one in a hurry to demonstrate her ship-building powers in defiance of Germany. Now, if *Dreadnoughts* be the only standard, both countries are starting afresh on something like equal conditions. This year the Asquith Ministry is building four. The Opposition is demanding eight. There party politics appears in a question which is above party. Balfour has fanned the "scare." The imaginary German artillery which he lands daily makes political thunder for him. The personnel of the navy, divided into the Fisher and the Beresford factions, is drawn into the game.

From "Punch," May 26, 1909

The Proverbial Sea Serpent sticking its head up out of the sea finds a newspaper poster of "The Daily Scare," which announces: "Mysterious Airship Seen Everywhere by Night!"—"If this sort of thing keeps on," muses the Sea Serpent, "it'll mean a dull August for *me!*"

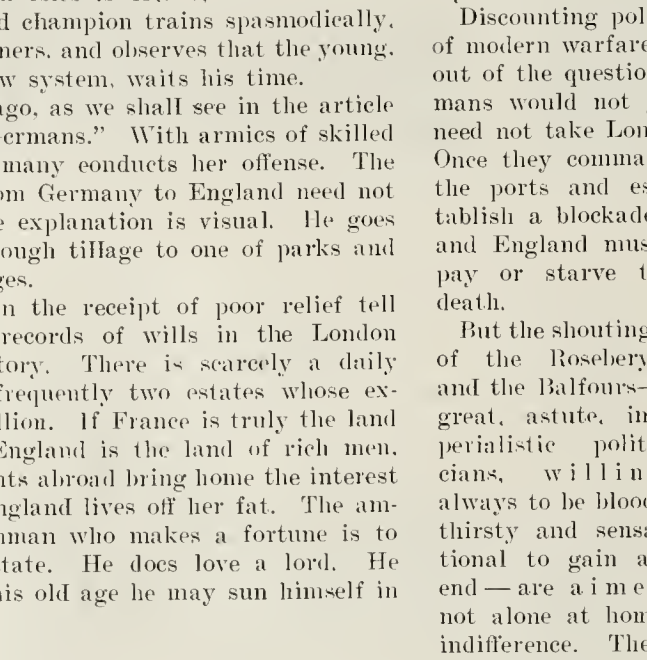
By 1913 the Germans may have as many *Dreadnoughts* as the British, says Balfour. He is a wonderful mathematician—any leader is when after votes—for the best that any one else can do is at the ratio of three to five. Premier Asquith holds that four new *Dreadnoughts* are enough for the present. Balfour has made him paint four on his banner, as the Republicans nailed 16 to 1 to Bryan's. But he says that he will lay down four more immediately the need is evident, so that they can be of the latest type.

Speed in building in this age, when improvements are so rapid, may be an asset offsetting numbers. For example, suppose Nation A has twenty *Dreadnoughts* built and lays down five, and Nation B has fifteen *Dreadnoughts* built and lays down ten. If B can build her ten quicker than A her five, B can enter the field suddenly with a numerical advantage. A more theatric and a possible situation would arrive when one country with tremendous building facilities at her command literally declared war by an immense program against another country which, whatever her wealth or resources must take a year longer to build an armada of equal power. If Germany and the United States were to lay down ten *Dreadnoughts* to-day her ten would all be off the ways months before we had one finished.

This winter the Germans decided to accelerate the progress of the ships they had under way. Then came the revelation that they could actually build *Dreadnoughts* faster than the English. This was indeed a blow out of the blue for the calm, phlegmatic man. John Bull thought that he had no master in this line. Here is the real cause of the scare. It is economic, not military.

Evidence which had slowly accumulated came to a head. England has command of the sea, the wealth of the Indies, and the mines of South Africa. Every German ship has to pass through the British Channel on its search for trade. Yet in every corner of the world British trade is suffering from German rivalry. British exports decreased $69,119,405 in the first five months of 1909. The old champion is angry and resentful. "What business have you with a navy, anyway?" is his cry to Germany. "Don't you know that the seas are mine? You are a parvenu. Stop this! It isn't according to Hoyle!" And the German says: "Gott mit uns!" and plods on. The old champion sees the young champion growing. Germany's population is 62,000,000 and increasing; that of the British Isles is 45,000,000 and almost at a standstill. The old champion trains spasmodically, finds fault with his trainers, and observes that the young, confident of his own new system, waits his time.

The war began long ago, as we shall see in the article on "The March of the Germans." With armies of skilled industrial workers, Germany conducts her offense. The traveler who crosses from Germany to England need not look up statistics. The explanation is visual. He goes from a country of thorough tillage to one of parks and grouse-shooting privileges.



Record percentages in the receipt of poor relief tell another chapter; the records of wills in the London papers complete the story. There is scarcely a daily list without one and frequently two estates whose executors confess to a million. If France is truly the land of wealth and thrift, England is the land of rich men, whose capital investments abroad bring home the interest on which they live. England lives off her fat. The ambition of every Englishman who makes a fortune is to retire to a country estate. He does love a lord. He likes to think that in his old age he may sun himself in noble company.

All England Ready for a Fight

A COUNTRY with a large portion of her population in factories or given over to attendance on wealth can not be hard except in its out-of-door classes. Poor younger sons would rather go into Government service than business; the rich man's sons are for the army and the navy. Let the subject of Imperial administration rise in the Commons, and the men who speak are affectionate masters of their subject. If it is a problem of industrialism, all the honors are with the Reichstag.

The British know that they have a "good thing." They do not intend to lose it. What—what if England should be beaten! If England—*England* should! It is nightmarish. By fighting they won their inheritance. By fighting they will keep it. Has the time arrived when they must go out and "kill something?" The readiness with which they are roused to a fever of pessimism indicates their alertness as well as their apprehension. They are not effete or effeminate. A German army corps may some day camp in Hyde Park, as they say, but we will not live to see it—and few of them will.

By "they" one means, of course, the British upper classes—"the English gentlemen"—who won Trafalgar and Waterloo, who manage India, and who rule England always in the end. They see the need of technical education and industrial organization; of conscription for other than purposes of military defense. But they begin late. Germany has a long start. The British masses are as yet little moved.

From the London "Daily Chronicle"

The Government organ pictures a serene John Bull, content with the Government's policy, in face of the panicky outcries of Ex-Premier Balfour, who demands eight *Dreadnoughts* in place of the four which Premier Asquith is laying down this year. The leader of the Opposition is accused of inciting the "scare" for party purposes. Lord Rosebery, Liberal Ex-Premier, however, is also a pessimist

Take the play "An Englishman's Home," for example. In this, as you know, Prince Yoland, commander of the foreign forces which land on a foggy morning, is the type of the unsentimental, cold, remorseless German officer who makes of war a game of chess with unerring, resistless moves against blundering, undrilled troops. The play ends with Mr. Brown, whose house is invaded, passing out between a file of soldiers to be shot, according to the rules of war, because, as a civilian not in uniform, he had fired on a uniformed enemy.

Such was the version which people of intellectual and social standing saw. They understood its deadly significance. But that type of patronage is limited. The management wished to keep the play running. With the gallery in mind they made a new version, in which Major du Maurier's point is wholly lost. Now, Prince Yoland speaks with the accent of a German farce comedian and indulges in horse-play; and the curtain goes down with the British volunteers and the British bluejackets victorious. 'Arry likes the shocks in the newspapers; he is learning to hate the Germans as mortal enemies, and he is still confident that one Englishman can whip any three foreigners—with his fists anyhow.

"I 'ope this 'ere invadin' will stop pretty soon," said a London 'bus driver in dry sarcasm. "Hit's too 'orribly 'arrowin' to the feelin's."

Discounting political objects and reduced to the logic of modern warfare, German battalions in Hyde Park are out of the question, for the simple reason that the Germans would not go to the bother and expense. They need not take London as they took Paris to force peace. Once they command the sea, they have only to occupy the ports and establish a blockade, and England must pay or starve to death.

From "Punch"

Under the title of "The Call of the Blood," Bernard Partridge pictures envious Germania gazing out over the North Sea at Britannia's latest warship—a promise from one of her colonies. Germania exclaims: "A 'Dreadnought' for Britain from New Zealand? These lion cubs are splendid! I wish I had an eaglet or two like that!" By "eaglet" Germania means "colony." It pleases the British cartoonist just at the present juncture to emphasize Germany's lack of extensive colonial possessions

But the shoutings of the Roseberys and the Balfours—great, astute, imperialistic politicians, willing always to be bloodthirsty and sensational to gain an end—are aimed not alone at home indifference. They would arouse the colonies, using the "scare" to cement Anglo-Saxon ties. Newspaper men from all over the Empire met in conference recently in London, and after frightening them with alarmist speeches and gorging them with great banquets and flattering them with social attentions, the peers and statesmen showed them the united armada at Portsmouth to prove that there was no danger after all.

New Zealand and Australia have already offered presents of *Dreadnoughts*. That is, at least $15,000,000 worth of work for British shipbuilding yards, not to mention that the German has been shown up as a wicked, designing brute who will drop dynamite on defenseless people on foggy mornings. The United States is also expected to come to British aid.

"How would you like to see Germany mistress of all the seas and of the Continent of Europe?" the American is asked. "We are your first line of defense. A victorious Germany means a war for you."

From "Punch," March 24, 1909

John Bull, as an English sailorman, is extremely disgruntled over the antics of the German Jack-tar who sings the song on which the "copyright" seems to have "expired": "We don't want to fight, but, by jingo, if we do, We've got the ships, we've got the men, we've got the money too!" "I say, that's *my* old song," growls the Britisher. "Well, it's mine now," replies the German

Let England Put Her House in Order

THE most sensible thing I have read on the whole subject is an editorial in the loyal Toronto "Globe." It said, in effect, that England was in no imminent danger of invasion, but she would do well to put her industrial house in order; and one might add that the mother country may have something to learn from the hated Germans and also from Canada.

In twenty-five years Canada will be as powerful as England herself. With her, in the end, rests the fate of the British Empire. Meanwhile she will win all the trade she can from the United States, from Germany, and even from the British Isles. That is the real modern war, in which victory is to technical education and intelligent application. Beat Germany industrially and she is beaten in *Dreadnoughts*.

Punk and Firecrackers

A Real Boy's Fourth of July From Sunrise to Rockets

By LEONARD HATCH

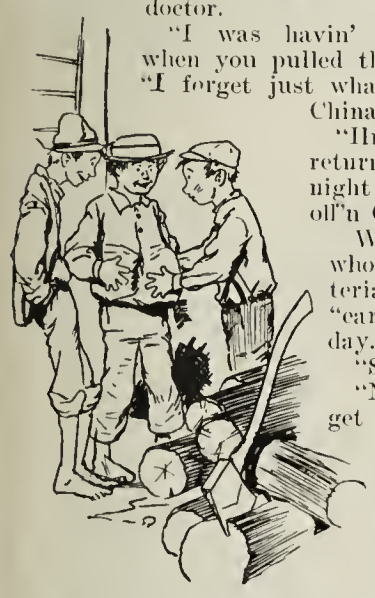
TUG! But you sleep soundly on. The cord tied to your wrist no longer trails upon the floor, but grows taut, from your bed across the room and out of the window. A steady pull gradually drags your arm from under the bedclothes, and holds it far out into mid-air, pointing in a lean and spectral way at the open window.

Still you sleep, but, under this stress, you begin to dream—a vision quite in tone with the Fourth of July. You are sitting in the family pew at church, and beside the pulpit stands a massy Chinaman. He holds a lighted firecracker as long as your forearm. You try to run, but discover that you are tied into the pew. He flings the scarlet cylinder at *your* feet. The sputtering spark has but a quarter inch more to crawl. Now it disappears into the mouth of the cracker, and there comes—

Tng!

You sit up in bed, wide-eyed and trembling. What ails your arm?—why does it stick out like that? Then suddenly your mind straightens out. You spring from the bed to the open window and peer down into the gray darkness.

"Is that you, Splint?"



"E-ah," comes back a giggling whisper. "It's us."

"Well, just wait half a second," you answer, "till I get m' clothes on."

To-day your toilet is not complex. It consists in exchanging your night garb for a cotton blouse and knee pants, the two being held together by "galluses" over one shoulder. You eschew such banalities as shoes and stockings and face-washing.

You might, if you chose, walk softly down the stairs and out the front door without waking either father or mother. But stealth and bravado are the keynotes of this morning, and on July 4 the patriot's path lies over the shed roof and down the grape trellis. Though, first of all, you balance a chair against your bedroom door, so that when Aunt Martha comes to call you she may receive a clattering greeting from the absent.

They welcome you with open arms—"Rev" Henderson and "Splint" Rogers. "Rev" is only thirteen, the son of one of the village ministers, and dubbed a "holy terror." "Splint" Rogers is a lean lad, which has earned him the nickname of "Splinter," commonly "Splint"—a two-edged abbreviation, since the boy's father is the village doctor.

"I was havin' an awful funny dream when you pulled the string," you volunteer. "I forget just what, but somethin' about a Chinaman."

"Huh! That ain't nothin'," returns Splint. "I dreamp' las' night I made two home runs off'n Cy Perkins."

Worsted, you turn to Rev, who, by weeding the ministerial vegetable patch, has "earned" his money for the day.

"Say, Rev, what yer got?"

"Now I ain't a-goin' to get 'em all out," returns Rev bluntly. "You can feel 'em through my blouse if yer want, only don't go an' break the punk."

So, with your fingers, you explore the distended girdle round Rev, and discover lumpy packages and little cylinders crammed full of silent noise. "Gee!" you exclaim.

The air is cool and mellow. In the east the stars have been gradually extinguished by the faint lemon hue which is creeping up the sky. A waking bird pipes out his morning notes. But you have ears only for the deep intermittent "thoom" from the other end of the village, where Len Hitchcock and his gang are dragging the old cannon from house to house.

The important question is—where to go this morning? Rev is for Simon Randall's, the crustiest old curmudgeon in town; Splint advocates the "Widow" Jones's. The "Widow"—a sarcastic title—is one of the ideal, vinegary old maids who lives in a square white house with a family of cats. It was she who made the remark that "if she were the only woman in the world she wouldn't get married," upon which Sam Small, the soul of the barber-shop, "cal'ated she was jest about right."

You listen to the arguments as to the respective eligibility of Simon Randall and the "Widow" Jones for the privilege of being tortured, and at last you settle the matter with the observation that Simon has a mastiff, while the "Widow" Jones has a cherry tree.

Splint begins a little rehearsal on his Devil's Fiddle. Now a Devil's Fiddle consists of a baking-powder can in the bottom of which a hole has been punched, and through this hole a string is run, with a knot to hold it from slipping. If one grasps the can tightly and draws the string slowly between the thumb and a lump of resin, there issues from that can the most raucous, nerve-shredding howl that ever ontdid a cat.

Your trio reaches the home of the hapless spinster. First of all, with Splint at the helm, the cherry tree is compelled to fling down its crimson riches. Then you creep softly up to the house. Splint makes ready his Devil's Fiddle; you light a stick of punk; and Rev gets out a four-inch cannon cracker. You touch off the fuse, and Rev flings the sputterer high into the air. "*Bang!*" Then, from the Devil's Fiddle—"*Wrowxxxx! Wrowxxxx!*"—right against the window-pane. Silence. After a pause the patriotic serenade is repeated. From an open window flies a voice, a deliciously irritated voice: "Little boy! Little boy! You stop that! Stop it this minute! Do you hear me?" The only answer is another wail from the Fiddle. Again the voice: "Little boy, I know who you are, and I shall tell of this to Mr. Simpson. (Mr. Simpson is the town constable.) "I can see who you are." (A palpable falsehood.)

The program goes on, sometimes cracker by cracker, sometimes a whole bunch at a time. You take your turn at the Devil's Fiddle, vying with the others as a virtuoso. You are not far from right when you imagine the poor "Widow" Jones writhing in impotent wakefulness. Poor old maid! And yet there is a sort of poetic justice in the fact that she, who has always mocked at marriage and its consequences, should have three of these little Consequences capering beneath her window, making the dawn hideous.

But the light is growing fast. The spruces upon an eastern hill are picked out against the sky, and over their tops the golden sun at last helps to make a Glorious Fourth.

So you wander aimlessly down the main street, picking up bands of stragglers like yourselves, just back from the front. A score of you gather at the village green to make plans for the day and compare notes on the morning's adventures. With pride you display a patch of dried blood on your shin and explain at least eight times how you got it. The chimneys up and down the street begin to smoke, and you suddenly realize that you are very empty. After making an appointment with Splint and Rev for the forenoon, you scuff toward home, with your bare toes in the dust.

At table you take your seat with some trepidation. In your family there is evidently a variance of emotions. Sally, your "kid" sister of ten, is bubbling over with curiosity to hear what you have been up to. Your Aunt Martha is disapprovingly militant. She explains how her "poor nerves were set all of a twitter" by the upsetting of the chair against your bedroom door. She also intimates what she would do "if she had the bringing up of that boy." Your mother is just the same as usual, and your father, when his sister Martha tells of finding the string stretched through the window and across the shed roof, takes a sudden and very long drink of coffee.

But after breakfast he calls you into the next room and cross-questions you sharply upon your doings. You tell him, tactfully forgetting the rape of the cherries. With mild severity he censures your cruelty to the "Widow" Jones, but when you mimic the way she said, "Little boy, I see who you are," he remembers that he has forgotten to shave, and hurries away, clutching at his lips.

So the morning is yours. First of all, you corner Sally, who has offered you her savings for the purchase of a cap-pistol, and, with brotherly affection, assist in the process of disemboweling her china cow of its coppery "innerds." Next you craftily persuade Sally—by telling her she may hold the punk stick part of the time—that several bunches of lovely red Chinese firecrackers are far preferable to a pistol and caps. Then you hunt up Aunt Martha and murmur that you had no idea the falling chair would set her "all of a twitter," and that you are very sorry, and that you have used up all your firecrackers—and that— At this point Aunt Martha relents and gives you two dimes.

You hurry away to the store whose sign says "Stationery, Millinery, and General Notions," and purchase six flaming packages of General Notions, with some punk.

At home you find Rev and Splint eager to demonstrate a few tricks in the firing off of crackers, of which they alone are masters. You give Sally the punk to hold, unlighted, for, as you explain to her, it is too valuable to be wasted. (Burning the superfluous punk is the invariable cold comfort of July 5.) So, to save it, you use instead a "punk pile" of smoldering, exploded crackers.

Splint and Rev and you have contests of throwing the crackers into the air. You bury them in dirt; you explode them in water; you make a "sizz" by breaking one open and setting it off between your thumb and finger; you prove who dare to hold a lighted cracker the longest. Your father comes out to watch, and at last takes a hand. But he demands that a whole bunch shall be set off under a tin pan—a proposition you accept only on condition that he provide its substitute. You levy on him for the nickel, and "the kid" is sent scampering off to buy another bunch.

At last into the yard comes sauntering Arthur Whitredge, the prize sissy-boy of the town, with shoes and stockings on, and carrying—a box of torpedoes. Torpedoes! They are almost as puerile as those canes you slip a cap into and hammer on the ground.

Arthur Whitredge volunteers the information that he is going to a lemonade party that afternoon with all the girls, and your scorn is rampant.

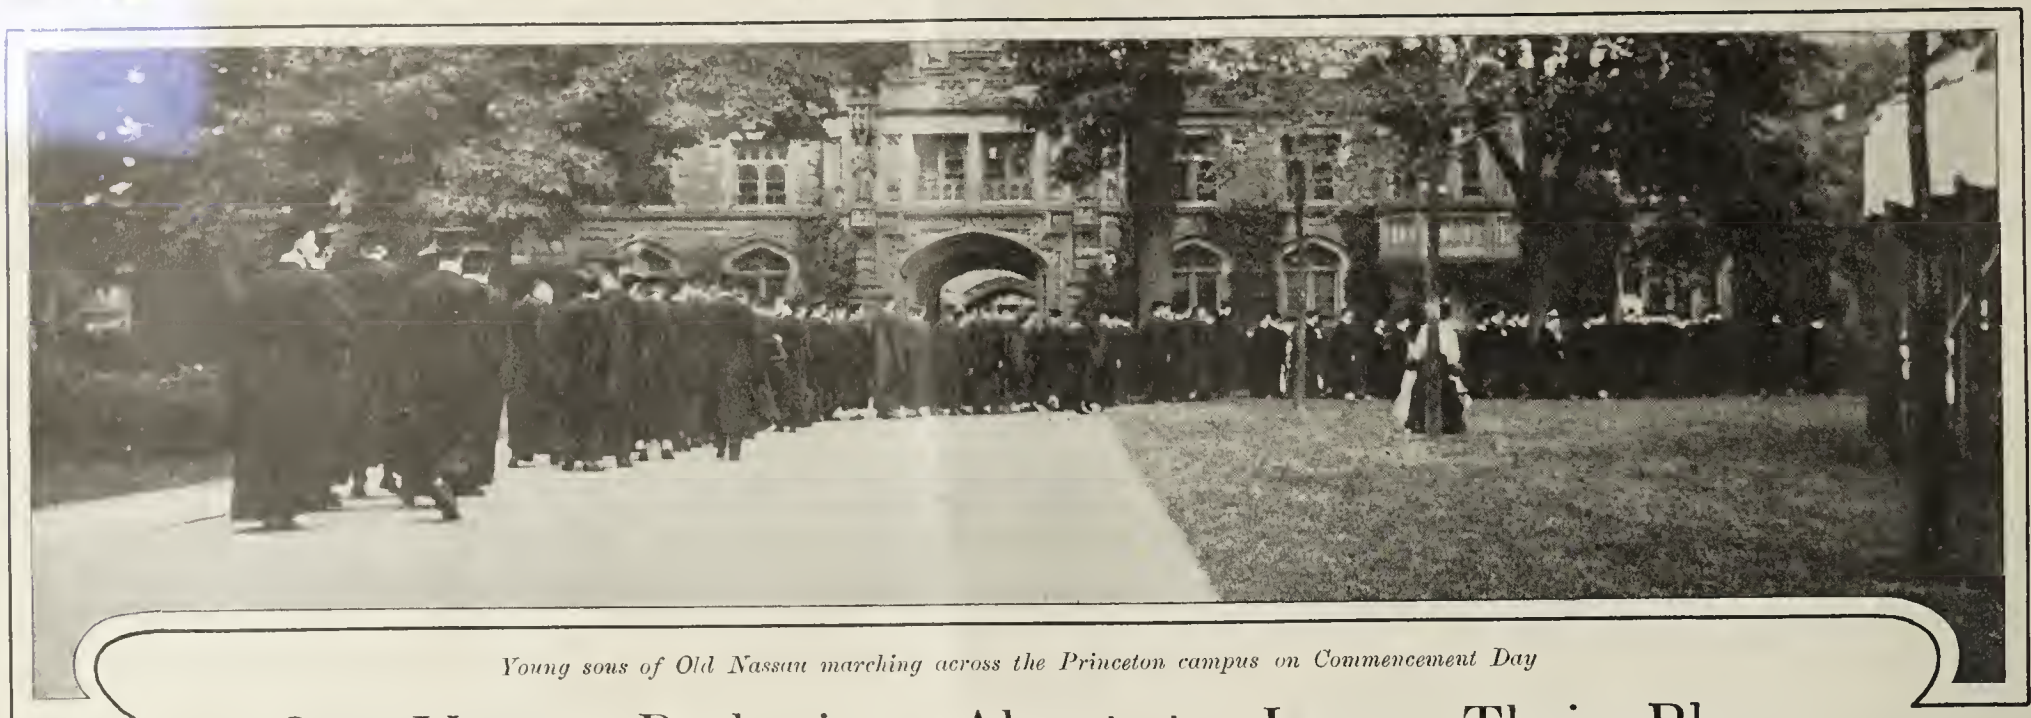
"Girls! Pfa!" says Rev.

"Girls!" echoes Splint. "Fourther July ain't no time to bother with girls."

Nevertheless, Arthur talks on about the lemonade party. This interests you not a whit. But at length he mentions the fact that Minnie Winter told him there was to be a cake with pink frosting. So Minnie told him, did she? Told *him*—that little chinless, white-eyed Arthur Whitredge. You glare at the unconscious Arthur; you feel a queer stiffening in the muscles of your throat, and you have a wild longing to jam his face down into the grass and sit on his neck. But if you did, Splint and Rev would ask you why you did it. And that would be embarrassing—very. So instead of assaulting Arthur, you say clearly, though that topic has long since passed: "E-ah; girls ain't good for nothin'."

So the morning wears by, and the crackers dwindle, until the last one has uttered its little volcanic note. And by that time dinner is ready. This is a pleasanter meal than breakfast, and you gorge yourself with salmon and new green peas; but your father is palpably nervous. In the afternoon there is to be a ball game between the married men and the unmarried men of the town, and your father is to play right field for the married men, though he has not known the feel of a baseball for ten years. You offer him your mitt, and explain to him that in right field he will get the sun full in his eyes. But this doesn't seem to make him any less nervous.

After dinner you are forced into shoes and stockings. You make straight for the ball-field. When the town has gradually assembled, the men and boys cluster about the home plate, while the women with their parasols and light dresses fill the little knoll back of third base.



One by one the players appear—the unmarried men trimly and fittingly clad, while the married men swelter in all sorts of motley rigs. Your father looks uncommonly droll in an old flannel shirt and crash trousers which were built for his waist of five years ago. The town's best baseball talent finds a place among the unmarried men. Will Langdon, who is just home from his first year at Princeton, is among them. Now he played on his Freshman class team at college, and this so alarms the married men that they insist on having him ruled out as a non-resident. Young Langdon, therefore, is relegated to the position of umpire. Smoking a cigarette in a holder, he swaggers about in light flannel trousers and a Norfolk jacket.

The game is on. Of course, you are with Splint and Rev. Splint is wildly excited, for his brother is pitching for the unmarried men. The first inning is uneventful, except that the unmarrieds make three runs by banging the ball all over the field. In the second, your father steps to the plate. Now—But no—he strikes out ignominiously without even making a foul. The last ball at which he swipes is at least six inches above his head. The crowd howls, and Splint knocks you over backward on the grass. In the next inning Splint's brother knocks a high fly which soars in a lofty parabola toward right field. The ball hangs in the air for an instant, then descends toward your hapless sire, who stands beneath it with wrists together and fingers spread like the sticks of a fan. The ball strikes one hand and—sticks there. Now, Splint!

But more distinction it awaiting your family. In the fifth inning your father is again at bat. He makes a terrific swing at the first ball, and the leathern sphere bounds slowly between short and third, while your father lumbers down to first. You race round to him, and in a hoarse whisper adjure him to "Steal! Steal!" And he hears you. A second later he is off, running like the old Concord coach. You yell: "Go it, Pa!" and he goes it. But the catcher has the ball and slams it down toward

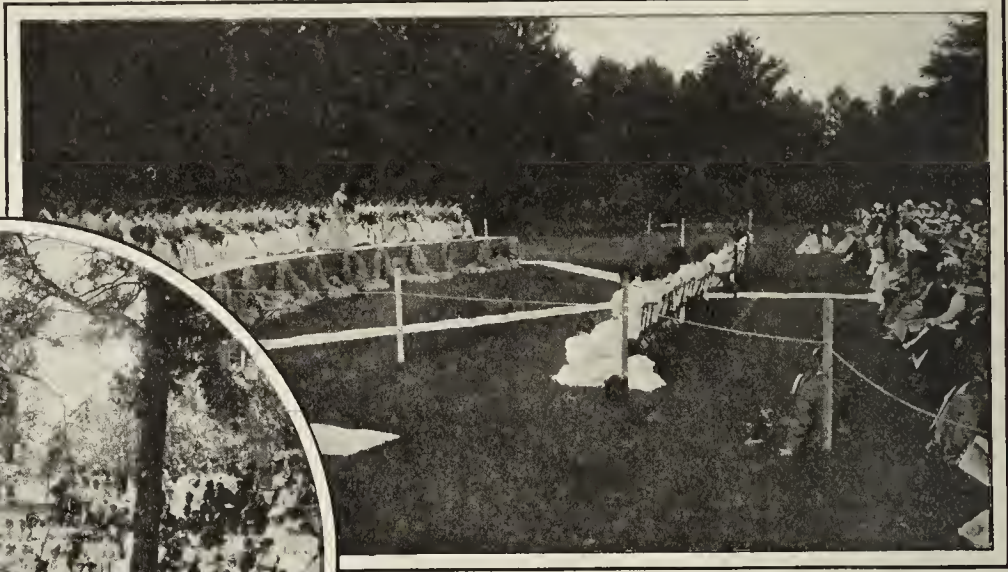
Young sons of Old Nassau marching across the Princeton campus on Commencement Day

Our Young Barbarians About to Leave Their Play



THIS year's college commencements brought out an unusual amount of frank criticism of academic methods and undergraduate life. Said President Wilson of Princeton: "Universities like Princeton must pass out of existence unless they adapt themselves to modern life. So far as the colleges go, the side-shows have swallowed up the circus and we in the main tent do not know what is going on." President Schurman of Cornell replied that such a description might apply to the older universities where the accent fell on literary courses and the ancient discipline, and whose social prestige was such that they attracted young men less interested in intellectual training than adventitious social advantage. It did not apply to the newer State universities, which were created to minister to the needs of all classes—farmers, mechanics, manufacturers, builders, etc., as well as lawyers, doctors, and clergymen. At the same time President Lowell of Harvard contrasted the low esteem in which scholarship is held in our universities compared with Oxford and Cambridge, and suggested that competition was as necessary to stimulate the highest endeavor in mental work as it is in sport. In short, a new sense of responsibility seems to stir our academic world.

Of the four thousand students about one thousand are girls, to whom all departments of the university are open on terms equal to those provided for the men. In the academic courses the numbers of men and girls are about the same

Scientific Nature-Faking

The Roosevelt African Expedition as It Was Staged and Photographed for the Stay-at-Home-Man, With a Nickel to Spend, in a Chicago Moving-Picture Studio Jungle

PHOTOGRAPHS COPYRIGHTED BY THE SELIG POLYSCOPE CO

THE moving-picture companies, whose enterprise ransacks every corner of the earth for graphic subjects to amuse an ever-sated and insatiable public, are already showing "Roosevelt in Africa," a jungle adventure as it was staged in America, the pictures for the film being made in a Chicago studio. A real lion was brought down by the made-up ex-President of the United States, the king of beasts was tied to a long pole and carried to the Roosevelt camp, there hung up and skinned by the glow of the campfire, around which the party gathered.

Preparing the Jungle

THE great hunt happened in April, several days before Mr. Roosevelt arrived in Mombasa, Africa, taking place in the studio of a motion-picture company. The lion-hunting à la moving-picture plant was far from being free from danger during the time that the movements of the fakers were being recorded by the camera. For, "once a lion, always a lion," and when the fatal shots were fired, Leo came near making an end of the moving-picture Roosevelt and the African beaters, otherwise members of Chicago's colored population.

The beginning of the subject, telling of the ex-President's hunt for big game, displayed the celebrated American and his son Kermit instructing the beaters preparatory to the dash into the jungle. At last, all arrangments having been made, the party was off for a white rhinoceros or anything in the way of an African animal that might turn up.

It was the jungle next—a cage about sixty feet long by twenty wide, with the best jungle scenery that could be manufactured. A bellows was being operated on one side of the cage, giving the effect of a spring breeze, which agitated the bamboo and palms. The cage in which the lion was held a captive was wheeled up to the larger one and the animal admitted to the dense jungle, his native habitation. The creature did not seem to like his new home and became frightened, then bellowed, and, when prodded in the ribs with poles, sought a place to lie down back of all the vines, bushes, and other scenery.

The Home-Made Beaters Earn Their Pay

FROM the camera platform it was the most realistic thing in the world. Hardly had the lion hidden himself from view when the beaters, headed by the tracker, entered the cage, followed by Mr. Roosevelt and his son Kermit. On all fours, his sharp eyes scanning the ground, the tracker crept forward. At the sight of Leo's fresh tracks he stopped, bent closer to the ground, then, in effective pantomime, leaped straight up in the air and waved frantically to the rest of the party.

The hunters came forward on the run, Mr. Roosevelt, his son Kermit, and R. J. Cunninghame, the great English hunter of moving-picture make. The hunt was on in real earnest now. The white members of the party retired to the background, and a horde of native beaters, stripped to the skin and armed with every conceivable sort of weapon, came forward. The lion again became the center of attraction, and, as the beaters closed in upon him, wilder and wilder he grew. The creature snarled, and it was thought that the crucial moment had now arrived, but, suddenly swirling against one of the beaters, the animal dashed back into the foliage of the jungle. From his present place of hiding the beaters were unable to stir him. There was but one thing to do; desperate action was needed; Mr. Roosevelt must dash into the dense foliage and beard the lion in his own quarters.

Into the Lion's Mouth

THE producer bit his lip, and everybody took a long breath. The beaters became scared, but the ex-President was calm, and his eyes rested upon the huge form of the lion. The camera men up on their platform estimated the distance between them and the lion. Not a sound was heard throughout the big studio.

Mr. Roosevelt acknowledges the plaudits for his marksmanship

The lion coming out of the jungle, and the bearers carrying him away after he had been shot

"Are you ready?" the producer asked.

"Ready," replied Mr. Roosevelt, who was then taking aim.

Just as the outdoor American said ready the lion came rushing out of his quarters. The animal did not like the appearance of the man in khaki and came toward him. There was a puff of smoke and the sharp crack of a 303 high-power rifle. The next instant there was a roar such as no lion ever turned loose in a cage, and Leo, his left lower jaw broken by the bullet that went too low, burst out into the open and straight for the men upon the platform. The bars were twelve feet high, but the infuriated animal attempted to jump over them, but fell back, unable to make the distance because of the loss of blood. The sight of blood had now enraged him, and he charged the beaters, but two quick shots, which were not bungles, ended the animal's existence. One of the bullets hit in the right eye and the other just an inch above. Leo was killed as dead as anything Mr. Roosevelt will bring down in the real Africa. Down on the home-made jungle ground he sank and there passed from the world of moving pictures to the happy hunting ground.

"Get him!" cried the huntsmen, by this time worked up to a stage of real excitement.

The Wounded Monarch Expires

THE big native tracker, always on the job, burst through the underbrush and found the slain monarch breathing his last. Again he raised his war-cry and wrapped his arms around his naked body, snake fashion. The other natives hurried up, with Mr. Roosevelt and son in the lead and the Englishman trailing along beside.

They picked Leo up and looked him over. They counted the bullet holes and shook each other by the hands. Then Kermit wound up the jungle scene by pointing his camera at the natives.

But the realism of Mr. Roosevelt's African expedition did not end here. The game was tied to a long pole and carried to the distant camp. The beaters pranced along gesticulating and shouting. Some natives were passed, including little brown babies.

Night Comes in the Wilds of Africa

"YOU see, we've got to have the real color in such a picture as this," said the producer at this juncture, "and I believe we've come to as near doing the real thing as it could be done."

Leo, the deceased, was now hung up and skinned. It was night in the wilds of Africa, and the warm glow of the camp-fire reflected on the dark bodies of the natives. While the head tracker and the aforesaid Englishman were engaged in removing the animal's hide, the statesman and hunter, as well as writer, scribbled some notes upon his pad, which probably read:

"Perhaps another century and big-game hunting, as far as lions, elephants, rhinos, and hippopotami are concerned, will be past forever."

This hunt was voted a success. It was considered by the producer the most realistic faking that was ever done.

A Profitable Film

ALL of the participants in the hunting expedition were pleased with the events of the day, which had been recorded upon hundreds of feet of celluloid. One man who had stood by and watched the proceedings muttered discontent. He was the wild-animal man from whom the moving-picture company purchased the lion.

Although the expense of making this picture was not normal, running well above the $1 000 mark, its total sales will probably net $15,000, and more than one hundred million will enjoy this faking of Roosevelt's African expedition. Many copies of the film were made by the moving-picture company—one hundred and twenty at least—and sent round to the exchanges in the Film Service Association. Each exchange, in turn, will supply the film to the thousands of nickel show-houses [illegible] the cities and towns.

The First Great Speed Event in the Mississippi Valley—Chicago's A

Lytle filling his car and making a tire change in the heavy-car contest

Signal station, showing devices for communicating with the racers

By JOHN T. McCU

A SPIDER, planning to make the circuit of his web without passing over any transverse strands, would not be more perplexed than were the promoters of the Western Stock Chassis Races, when they tried to find near Chicago a course free from railroad crossings. Illinois was finally abandoned, and it fell to a Committee on Diplomatic Relations to steal across the line and prospect Indiana. Suitable roads were found near Crown Point, forty miles from Chicago. The committee "diplomatized" the town, the county, and the State. The Lake County court-house at Crown Point—a hitherto respectable old edifice standing in a square surrounded by an iron rail, to which the farmers hitch their horses of a market day—assumed a frivolous, if not quite dissolute, aspect; half automobile club, half garage. General Executive Frank H. Trego diplomatized his way into the sheriff's private office and presently diplomatized the sheriff out. So it was that Chicago took Crown Point. Crown Point was glad to be taken.

Though no speed records fell in the Indiana races, the contests were sensational, the most striking feature of the meet being the victory, in both events, of low-priced cars. In the Indiana Trophy Race (232.74 miles), for light stock cars, some of the aristocrats of American motordom fell before a stock "30" Chalmers-Detroit, driven by Matson at an average speed of 51.53 miles an hour. When it is recalled that Strang's average with the Isotta in the 240-mile Briarcliff race was 46 miles an hour, and that Hilliard, in the Lancia car, won the Savannah light-car race at an average speed of 52.6 miles an hour—a shorter race and an infinitely superior course—it will be seen that the little Chalmers's time was excellent. George Robertson, in a "30" Locomobile, was second; Monsen, in a Marion, third; Florida, in another Locomobile, fourth.

The roads of the Crown Point circuit (23.27 miles) are narrow. Passing is difficult. There are some bad turns and several miles of heavy going. One driver in the Cobe Cup race said he was forced to slow down to five miles an hour on one part of the course where the sand is deep. The light cars lacerated the roads, making the second day's event more difficult. The race for the Col Cup (39 miles) for heavy stock cars stands.

Chevrolet's driving finish—crossing the line in the victorious Buick, while Starter Wagner, at the left, waves the flag which signals "Your Race is Run." Chevrolet covered the 395-mile course in 8 hours, 1 minute, and 39 seconds—1 minute and 5 seconds ahead of his closest competitor, Bourque, in a Knox car, who crowded him hard clean up to the last moment

The Quick and the Dead—Miller passing by the dreaded Graveyard Turn

The excited grand stand—uncertainty marked the Cobe Race to the very end

Matson making his phenomenal dash with the Chalmers-Detroit—winning the Indiana Trophy and defeating sixteen cars. on's time averaged two miles an hour faster than that of Chevrolet in the heavy-car race. The circuit was guarded by bers of the First Regiment of Illinois militia. Estimates of the attendance vary from 250,000 to 300,000 people

with the single exception of the Grand Prize race run by high-powered racing cars at Savannah last year, as the longest road race ever held in the United States. It was a grueling grind for cars and drivers, a broiling sun adding to the torture. Toward the last the men were absolutely dazed. Only five of the twelve entries were running at the end.

When George Robertson half fell from his machine at the end of the Cobe cup race and reeled toward the garage, with eyes swollen shut and hands and face a mass of blisters, an Indiana farmer of the comic-opera type, including the proper allotment of chin whiskers, stepped up, peered at him, and, turning to a friend, remarked with the most perfect nasal twang conceivable: "Thar's one o' them thar dare devills." At which poor Robertson was obliged to laugh and crack his blisters.

A Buick, driven by Chevrolet, limped in first, winning at an average speed of 49.3 miles per hour. Borque, in a Knox, was second: Robertson, in a Locomobile, third: Hearn, a Chicago amateur, in a Fiat, fourth, and Englebeek, in a Stoddard-Dayton, fifth. It will be noticed that the average running time for the big-car race was approximately two miles an hour less than that of the light-car race. The large cars made better time in the stretches than the small ones, but the added length of the race and the deterioration of the roads combined to cut the average down.

The light-car race was not well attended, nor was the grand-stand more than half full on the second day. Many cars were, however, parked in the fields about the course, and some thousands of enthusiasts who came by rail were stationed at the turns, which had been widely advertised by the Chicago papers. The "S" turn proved tricky, somewhat after the manner of the Jericho turn on the Vanderbilt Cup course. The drivers took it carefully, and the crowds which gathered there, in the hope of seeing a bad spill, were disappointed. Likewise the luridly named "Graveyard Turn" and "Death Turn" exacted not a single victim. Though there were several accidents to competing cars in both races, no drivers or mechanics were injured, nor were any of the spectators seriously hurt by racing cars. Most of the accidents which occurred in connection with the race resulted from the racing fever which got into (Concluded on page 19)

Wilmarth sat back in his deep chair—he looked quite shrunken and old

The Straggler

The Man Who Was Left Behind by the March of the Army of Youth

By KATHARINE HOLLAND BROWN

"DAD."

No reply.

"I say, Dad."

Wilmarth, his finger on the case of the People *vs.* the Westover Mills, looked up with some impatience. Wilmarth, Jr., perceived the impatience. His level, thick-lidded eyes beneath their thatched brows did not waver; but his square, boyish face reddened.

"Sorry to disturb you. I just had a long-distance, calling me to New York. I'm off now. Back to-morrow. Too bad I can't hear your speech at the Somerset to-night."

"Going to New York again? What's up?"

"I don't know. They just said for me to come." Wilmarth, Jr., parried the father's question so placidly that it seemed an unwitting evasion. There was not a shred of diplomacy in young Thomas's make-up for that matter. He was as blankly ingenuous as a wooden Indian. Yet Wilmarth shrugged his shoulders. He was distinctly curious; and he was distinctly aware that his curiosity would avail him nothing whatever. For all his blunt stodgy cubbishness, Tom knew how to keep his own counsel. It was not a bad trait in a fledgling lawyer. However, Tom had a tedious trick of carrying this tongue-tied policy into unofficial relations. For instance, this trip to New York would be the fourth in a fortnight. And he had never vouchsafed one word concerning their object.

"Who's your New York man, son?"

There was an indefinable pause.

"Baxter, Hollister, Varick & Baxter. That Broad Street crowd."

"H'm. That young firm? Of Yale men? They're attorneys for the Child Labor Association, I believe?"

Thomas did not reply. He stood poring over the telephone directory. His face was guilelessly intent; his lineaments as rock.

Wilmarth frowned. He resented his son's taciturnity all the more because it implied such tranquil indifference to his own momentous opinions. One would suppose that the boy would turn constantly to his brilliant and successful father for advice. But Tom never turned to anybody. He went his own road, stolid, content. It was a good road enough; straight, level, glaring open to the eye. But its very openness baffled. Surely there must be some hidden goal beyond that broad, unshaded expanse!

Whatever and wherever that goal might be, Tom would undoubtedly get there. Tom always got there. And without half-trying. The ease of his boy's successes was another thorn to Wilmarth. His own work had always fagged him, drained him, body and soul. But Tom took everything in his Colossus stride. Sometimes he seemed less a human being than a big splendid machine, moving in unerring accord with some vast, mysterious power behind him. It was as if all eternity were backing his cool, unhurried plans.

"They're the Child Labor attorneys, you said?"

Tom put down the directory deliberately.

"Yes, sir."

"H'm. I understand they're working up a lot of litigation concerning the Colonial Mills disclosures. Rather sensational methods for a firm of any dignity."

Thomas did not reply.

"Baxter himself has worked along those lines for some time. Trying to get Congressional legislation to back up the State laws. Clever chap, Baxter. A bit of a fanatic, though. There is such a thing as unconstitutionality."

Thomas listened respectfully. His gray eyes looked levelly past his father, out upon the autumn park, across the broad avenue. Through its misty reds and golds there shone the deeper glow of bronze, the white gleam of a lofty pedestal.

"Well, Baxter is all right, I dare say. A good fighter, too. But he's like all that reformer breed. He may start out in all sincerity to better his cause, but in the end he'll find himself doing more harm than good. You've got to weigh facts. Property rights; the legitimate powers of the manufacturer—"

Thomas's eyes drifted deprecatingly toward the clock.

"What train, Tom?"

"The 2.10."

"Well, your cab is waiting, isn't it? You can spare two minutes. There's something I want to speak of. Sit down."

THOMAS sat down with an effect of imperturbable assent. The chair, a massive carved-mahogany piece, huge and costly like every other fitting of the room, creaked as he settled into the leathern seat. The boy himself was even more massive than his surroundings. Even this lofty, sumptuous room gave an inadequate perspective for his husky young magnificence. He demanded a horizon not just a background. And this twenty-two-year-old stripling had presence, not just mere bulk. When he stood before his father, he towered. It was easier to talk to him sitting down. Even then he was formidable. Wilmarth was a big, florid, handsome man, yet he always felt dwarfed beside his son. And he could never shake off the grotesque conviction that the boy, clumsy lout though he was, yet never felt himself the inferior in his father's presence. They two met man to man. As Wilmarth fretfully phrased it, eye to eye, like duelists. Yet Tom's speech and manner were invaryingly deferential. Whatever antagonism hung between them was the intangible antagonism of temperament. Intangible—and inexorable.

"Thayer and Westcott were talking to me yesterday," Wilmarth began. "Concerning you."

He paused, significantly.

"What they said was a complete surprise to me. And a most gratifying one. As, undoubtedly, it will be to you."

He paused again. Tom listened, silent.

"They both spoke in highest terms of your work on the Bradbury case, and of your share in the Easton Hills suits. Thayer especially was—ah—enthusiastic. Quite. Even Westcott expressed unqualified approval. Also, they announced that they had been considering you for some time. Also, they wished to state their willingness—their *cordial* willingness—that you should be taken into our firm."

He looked at the boy.

"And at once."

Thomas's level glance did not flicker. But he stirred slightly in the great chair.

"It is an amazing opportunity for so young a man." Wilmarth's voice rasped a shade. "An inexperienced youngster, out of college barely a year. I said as much, and frankly. I declared you were far too untrained, too superficial. My colleagues, however, waive all that, and insist."

He stopped, his eyes on the boy's impassive face. His fingers clicked angrily on the chair-arm.

"A most extraordinary opportunity." His voice was harsh, with mingled pride and exasperation. "I am glad that you can consider it so—ah—coolly."

Tom looked back at his father without reply. This slow, pondering stare of his was a habit which bored Wilmarth intensely. It was a sort of elemental judgment. His heavy jaw clinched; his heavy-lidded eyes brooded, unseeing. At length he spoke.

"This is most kind of you, sir. And of Mr. Thayer. And Colonel Westcott." He spoke slowly, in the deep, mellow voice which always came as a surprise from his hard, young throat. "I appreciate this, sir, indeed."

"I'm glad to hear you say so," said Wilmarth, with a caustic laugh. "Then I have your permission to accept?"

Tom hesitated. A shadow of reserve crossed his face. Again he glanced through the window upon the autumn park. Half-hidden by the vivid trees, his eye caught that gleam of bronze, that high pale glimmer of marble. He stared at it, unblinking, as if the great imperial statue were clear to view.

"Well?"

Tom stood up. His eyes turned again to the clock.

"I'd like to talk it over with you further, sir," he said, apologetically. "There's a few points— But it's mighty good of you and the firm to consider me, Dad. I surely realize that."

"H'm. Sorry that you must put us on probation. Hope you can keep us in mind while in New York."

The boy fumbled with his coat, silent. He did not seem to hear the affront. Only he seemed to loom. His presence gave a sort of vibration. Again he was less like a sentient thing than a big, pulsing force, the embodied youth and virility of him were so strong.

For the thousandth time Wilmarth's querulous eyes studied him. Black, heavy hair, with odd reddish lights; gray, thick-lidded eyes, steady and intent; high forehead, forehead of the seer, the dreamer, and balancing it, truing it, the grim, inexorable chin. There was little of Wilmarth in that face. But, had he glanced from the window, he would have seen the boy's replica in the bronze and marble of that great heroic figure, framed in its autumn trees. There, mounted high like a conqueror, at the head of the city's proudest thoroughfare, it stood: the famous statue of Wilmarth's father, the first Thomas Wilmarth. Of all her treasures, the city held this sculpture her dearest possession. It was not only a master-work of art: it marked a civic shrine. It was the homage paid by the Commonwealth to her noblest son. And, by quaint irony, here it stood, in its calm splendor, on the very spot where the man himself, leader of his forlorn, obstinate Abolitionist band, had been mobbed, insulted, spit upon: a spot held to-day as sacred ground by all his nation.

"Well, I'm off. Good-by, Dad."

"What's your address?"

"University Club. Good-by."

Wilmarth watched him stride away. The room seemed suddenly large and empty. He bent to his desk. At length he sprang up, impatiently, and began pacing to and fro.

The broad, dim mirror above the fireplace revealed

him—arrogant head: full, powerful mouth: dark, sullen eyes. He was thinking over that talk with his colleagues. He could see their faces: Thayer, lean, sharp-tongued, politic, with his cool narrow eyes, his smooth insistent voice: Westcott, red, pulpy, clamorous.

"Really, Wilmarth, you underestimate your son. Young, yes. But sagacious, balanced. Why, he'll double the efficiency of the firm."

Then Westcott's fat squeak. "Confound it, Wilmarth, you think he's a lumpy cub, hey? Well, that lumpy cub of yours can give you forty yards and beat you at a canter. Stupid? By George, sir, he's a dynamo, I tell you, a dynamo. You're the only one who can't see it. You think he's so commonplace, so normal. By George, sir, it's because he's so normal, so level-headed, that he's such a wonder. Can't you get that into your head?"

Perhaps Westcott was right. Certainly, Tom was normal enough. And he was balanced, body and mind. On that score he surpassed even his seer grandfather, standing there in his grave majesty. Wilmarth scowled.

This resemblance between his own father and his son had always irked him. It left Wilmarth himself so unconcernedly out of the game. Wilmarth's father, the first Thomas, had been the epic character of his tempestuous day. He was a daring antislavery leader, a man of power, and charm, and spirit. He had belonged utterly to his generation. He had lavished himself—life, property, traditions—on this cause that he adored. Wilmarth thought of his father always with a queer, half-resentful ruefulness. Never in sympathy with his soaring ideals, he yet owned a grudging admiration for the man himself. He recalled him as he had lived: handsome, chivalrous, the aristocrat born, yet the lover of humanity; his eager, exquisite face, his deep voice, mellowed, resounding—Tom's voice: the fine radiance of his nature, through failure and poverty and evil report, unconquerably golden and serene. True, Tom lacked these riper graces. However, Tom had other traits, more solidly reassuring.

"Thanks be, there's no slavery question nowadays. Else he'd probably take to soap-box-and-pine-knot oratory, just as father did," grumbled Wilmarth.

Wilmarth himself had never strayed into his father's lawless road. On the contrary, his career had been supremely sensible. A boy of twenty-one, he had stepped into the working world in the mid-seventies, just as the nation started on its long upward rebound, after the dragging war years. Alert, resourceful, a born opportunist, he had succeeded from the start. Of late years he had devoted much time to the Colonial Mills, a corporation unpleasantly well-known for its frequent collisions with laws governing the employment of minors. As their chief counselor, he had steered their somewhat devious course past the rock of opposing statute, and through the veering currents of public criticism. He had not enjoyed the work. While never narrowly puritanical, he had his standards, and the Colonial Mills were certainly a bit messy. Each year he had planned to step out. But they needed him badly, for an impertinent legislature and an unabashed press continually pried upon their most sacred reserves; and nobody but Wilmarth could bluster away these unterrified marplots. Moreover, his fees were enormous, and they must be enormous. Wilmarth's tastes were never ascetic. And he wanted Tom to know no stint. Although, as he irritably reflected, that lout had never half appreciated either his eminent father or his eminent father's liberality.

"Oh, blazes!" He brought his foot down with a fretful stamp. "It's a relief to know that the cub is going into the firm. There he'll be anchored. And it's a good thing, as Westcott says, that he's so absolutely normal. If he wasn't, I'd hardly know what to expect."

TOM did not return for five days, instead of two. He and Baxter had taken a run down South, he explained. Yes, it had been a pleasant trip, he assured his father with bovine maddening candor. No, nothing interesting. Stopped over in Washington, and had a planked steak at the Friars' Grill that was fit for the gods. Why was it a fellow could never find a decent steak in all New England?

"What points did you wish to discuss with me?" Wilmarth finally drove the question home.

"Points of *what?*"

"Our—ah—partnership."

"Oh, you mean—"

"Our offer to you. Perhaps you recall it?" Wilmarth's tone soared.

"Oh." Tom considered. "I don't know that I wished to say anything—especially."

"Then you go in with us—unconditionally?" Wilmarth's gratified smile took the sting from the words.

Tom stood up, rubbing his big hands through his hair. His face wore its brooding look. His gray eyes dulled with undecipherable thought.

"I don't know how to express my appreciation, Dad," he said, finally. "I surely would like to come in." He paused, hesitant, yet not embarrassed. "But I've decided—not to accept."

"Not to accept!" Wilmarth's book crashed on the floor. He sat gaping, incredulous.

"No." He thought a moment. "Perhaps I'd as well come out with it, flat. I'm going in with another firm."

"Another firm!" Wilmarth's florid face was imbecile with bewilderment.

"Yes. Baxter's."

Wilmarth reared in his chair.

"Baxter's! Those fool, hare-brained agitators! That visionary, sensational gang!" He spluttered the words out, gasping. Then sheer rage mastered him. "*Baxter's!* You impudent young pup! You great blithering loon! So our partnership is not good enough for you, hey? We're rated a tolerably sound firm, let me tell you. We stand second to nobody in the State. That is, in the eyes of our associates. Though, perhaps, your requirements are more exacting!" He plunged to his feet, and stood, blazing. His powerful voice rang shrill. "So you'll go in with Baxter, hey? So you'll identify yourself with that bellowing, muck-raking crew! 'Leaders of Labor Reform,' they call themselves. Leaders of Labor Ruination, they'd better put it. Of all the loud-mouthed, canting blackguards! And you, the third Thomas Wilmarth, to take your stand with such a gang!"

Tom heard him, unmoved. Not a muscle flickered in his smooth, stolid face. His hard jaw set: his gray eyes, behind their half-dropped lids, stared somber and unflinching. His silence redoubled Wilmarth's rage.

"So you're so confident you're right that you won't stoop to defend your position! You're so confoundedly assured that you won't bore yourself to make explanation to your own father. You'll take all the advantages I've poured on you, and step out without so much as a by your leave. You'll abandon an opportunity that would have given you prestige and success from the first day. You'll throw down the finest chance a man ever had. And for what? For a share with a mob of shysters that no decent lawyer would face in a court-room. You lubberly young whelp! I always knew there was nothing to you. But I kept on spending on you, I kept on banking on you. Because I thought, with the blood that was in you, you might come to something. I might have known—"

His furious voice lagged suddenly. The savage red ebbed from his face. He gaped at the boy with a startled, curious stare. Yet Tom had neither moved nor spoken. He stood, erect, impassive, on the great tiger-skin before the fire. His enormous body seemed to grow granite as he listened. His father's storming voice washed over him, futile as angry surf.

Wilmarth's lips parted again. Then an odd constriction tightened his throat. A dazed wonder assailed him. Would that dumb block never open his mouth? Could no taunt rouse him? A chill of misgiving ran icy through his veins. Then his passion flared high.

"Oh, I dare say it's just as well. You'd never have made good, anyway. You'd have bogged and floundered, straight through. Yet I was fool enough to bank on you—"

Again that poignant tremor shook him. He bent forward, peering, bewildered, at the boy. Tom's face had not changed.

"—And, by Jove, sir, I'm fool enough to feel like giving you the chance again!" That icy fear was gripping every heart-beat now. A blue mist thickened [illegible] eyes; his voice sounded very far away. He [illegible] laugh, unsuccessfully. "Come! Drop your rotten quixotic notions, and stay by us. I—I spoke hastily, just now. I am sure that you can make good. Indeed, you may turn out a credit to the firm. Come, now!"

Tom turned to him, slowly.

"I'm sorry, sir. I really can not reconsider."

Wilmarth's hot eyes strained to him. His mouth grew dry. "Tom, you're carrying this too far." His voice jerked. He was shaking, now, with sick, hideous, prescience. "You won't smash all your chances. And all for this infernal, sensational— Will you explain yourself, sir!" His voice leaped up in shrill, weak fury. "Why are you doing this? What damn schemes are you contriving, that you can't go in on your own father's firm? Answer me that, sir. Make that clear!"

"I would if I could," said Tom, meditatively. The contrast between his naive calm and his father's heaving passion was almost comic. His eyes turned to the great arched window. The velvet curtains had not been drawn; he looked out, across the frost-whitened drive, at the moonlit park, its red and golden trees now silver in that cold mystic light. "I've wondered how I could make it clear. I knew you wouldn't understand."

HE TURNED again to the low fire. Its flames illumined him, like votive fires before a statue. His splendid poised body: the warmed marble of his columnar throat; his cool, relentless mouth. And as he stood there, a slow light deepened and burned in his gray, half-shut eyes.

"I guess it's because I'm a born scrapper," he said, meditatively. "I do love a fight for the fight's sake. Yes, probably it is rather low-down of me. But I've always envied grandfather out there his chance at freeing slaves. 'Course he got tar and feathers and jail sentences and his head smashed every now and then. But he was right in the game, all right. And you bet he made good!" His leonine head lifted: a red spark gleamed in his eyes. "I always did wish I'd known grandfather. He was the real thing. And, as I say, I've always envied him, just as I used to envy the knights

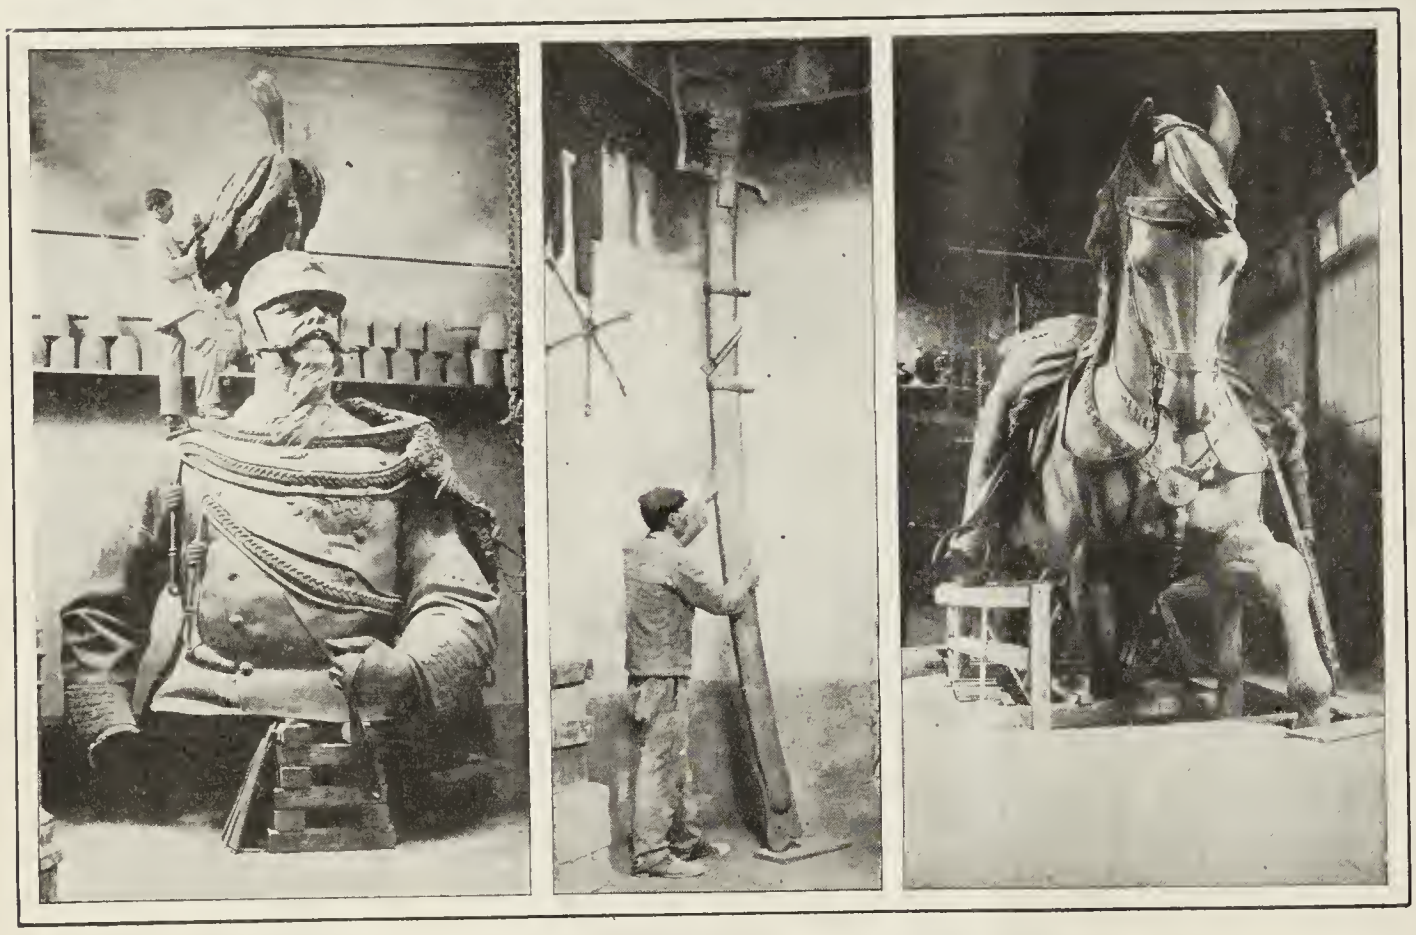
The Misunderstanding



Drawn by OLIVER HERFORD

What the World Is Doing:

Raising a Historic Wreck

Among the historical exhibits to be shown at the Champlain Tercentenary will be the hull of Benedict Arnold's schooner, the "Revenge," raised from the bottom of Lake Champlain, where it has rested for over a century

A Fifty-Ton Bronze Statue of King Victor Emmanuel

This huge casting, now being put together in Italy, was designed by Chiaradia and was made from 170 molten cannon. It is to be erected in Rome next September and will be officially dedicated in 1911 at the fiftieth anniversary of United Italy. The cost of gilding the statue will amount to over $20,000. The sword alone weighs 350 pounds and is 14 feet high; the King's head weighs 2,500 pounds; thirty people have sat at luncheon inside the horse's body

Some Little Heathens Afraid of a Flashlight

Chinese pupils at the dedication of the Imperial Chinese School in San Francisco,—the first of such schools to be started in cities of the United States. A number of the young celestials were a trifle timid about the impending explosion

This Great World

CRETE, the island famed in story, is a succulent bone of contention. Greece wishes to annex Crete. Turkey prefers to maintain her suzerainty. The affair will give the Young Turks their first chance at international statesmanship. Which way Crete yearns is reckoned of small moment.

"In the best imperial spirit" the editors of the British Empire have scattered to their colonial swivel-chairs and blue pencils—there to help raise money for *Dreadnoughts* against the day of Armageddon. "Did we really expect," asks the "Fortnightly Review," "that we could permanently keep under the British flag at a cheap price a quarter of the world?"

Dayton, Ohio, clasps hands with Washington, District of Columbia, in proving that those who make good elsewhere may return with honor to their own country and home town. Dayton's favorite sons, the Wright boys, who have discovered a new thoroughfare through space, receive a civic parade, rockets, and perishable souvenirs on June 17 and 18.

New York's budget of local news is of a rather sordid kind. Two murders, each of a subtle ferocity, have puzzled the local sleuths, and a suit for divorce, containing salacious elements, is dragging its slimy length across the front pages of the great dailies.

With the bitterness of a neighborhood fight or a Mississippi feud, the trial in San Francisco of Patrick Calhoun, president of the United Railways, has drawn to a close. Local issues of club life, society life, and political life have intruded in such ways as sometimes to make pure and undiluted justice a stranger at the feast. Heney, although weakened by his gun wound, displayed most of his famous militant energy in summing up for the prosecution.

Meanwhile, the city of San Francisco is preparing to celebrate the rebuilding. On October 19, and thence for a week, festivities will mark the community's uprising from the earthquake.

This issue will be reaching our island possessions and other friends of the farther regions on or about July 4—the day we celebrate with access of noise, sunburn, and powder stain. American eloquence will be released from a thousand platforms, while the flag of the free flutters just over the impassioned orator.

It will be pleasant when Maxim's "silencer," which makes a rifle sound like a soda-water bottle, is adapted to firecrackers, gutter torpedoes, and the other joy items of the Great Day. Boys will then feel keen rivalry in seeing who can buy the hugest and most noiseless cannon crackers. Non-detonating bombs will softly perform their mission and silently crumble away. Unostentatiously the guns will roar like a sucking dove, while entire bangless packs of fat red firecrackers modestly explode at the windows of unawakened sleepers. You will know the day by the great hush that falls over the earth from sun-up to evensong.

The Itinerant Monarchs

IT MAY be true that there is no East nor West when two strong men meet. But the meeting of Czar and Kaiser only emphasized the points of the compass and the subdivisions of geography by national and racial lines.

In the middle of June, at Pitpikas, on the Finnish coast, Nicholas and Wilhelm chatted about the future of Europe. Knowing that the Czar was planning a series of visits to President Fallières, to King Edward, to the Pope and Victor Emmanuel, and to one or more of the northwestern countries, the Kaiser inserted a call at the beginning of the imperial tour. It is believed that the German Emperor desired by his urgency to weaken the fellowship of Russia with Great Britain and France.

King Edward of England recently completed a pacifying tour, where his infallible tact was never in better oiled condition.

The theory of sovereignty used to be the static. "I sit. I teach," said the New England sage. And it was the old-fashioned idea of kings that they were immovable on a golden throne. Seated like Javey, they dispensed justice from the center of rest. But to-day, to stay at the same point, they sometimes have to run at the top of their speed. A modern king is a bit of a commercial traveler.

The Sultan is said to have caught the idea, and packs his grip for a jaunt through Europe in the autumn of 1909. He will call on England in December.

Weston's Astonishing Walk

FOR three months now this infinitely minute microscopic ant of a Weston has been crawling steadily westward across the continent. On June 10, in southwestern Wyoming, he clambered over the continental divide and started the down trail toward San Francisco. All sorts of difficulties, in addition to those which would naturally oppose the attempt of a man seventy-one years old to walk across the continent in one hundred days, beset him in this deserted country. He was following the Union Pacific tracks. They are high up in the air in these parts—seven thousand feet, more or less. There was rain, wind, and hail; the stations are scarcely more than signboards; often he was unable to get proper food, sometimes no proper place to sleep. Yet he kept on. On June 16, at some lonely telegraph station near the Utah line, he wires about a chill and threatened lumbago. The next morning he is up and off again as good as new, apparently. And

A Record of Current Events

piloted by some of the railroad people, he tramps interestingly through the Aspen Tunnel, a mile and a quarter long. Next day he falls, a bottle breaks, and cuts him severely in the chest, and he returns greatly disturbed. The railroad people examine him, decide that he is not seriously injured, and away he goes, again rejoicing. The hoboes who tramp the tracks and steal rides "don't look good" to him. "I am now carrying a revolver," he wires, "but for what purpose I hardly know, believing that if I were attacked they would also take my gun." Childlike, indomitable, he plugs along, his legs, wind, and pluck sufficient for each present moment as it comes. It is an extraordinary performance. Whether or not Weston succeeds in covering the distance in one hundred days, as he hoped to do, it is still an extraordinary performance. It is something which ought to help every man who feels inclined to whine about getting "old" or to yield cheaply to cold or hunger or fatigue. Blow winds, beat rain, and do your worst—at least, we're men and captains of our souls.

Recent Pranks of the Sugar Trust

THE Sugar Trust continues playful. Indeed, it is revealing an unsuspected genius for achieving the limelight. Three times running all the lights have been turned on while it was pursuing its coy and saccharine pranks in the pantry. With the jam on its face and gluing its teeth together, it is holding its peace. Its whimsical extra-legal ways were most recently shown in its settlement out of court of a thirty-million-dollar suit brought against it by the Pennsylvania Sugar Refining Company.

The terms of settlement are said to be two million dollars, canceling a loan of one and one-half million dollars, and returning certain securities.

The Pennsylvania Sugar Refining Company had accepted a loan from Gustav E. Kissel, a secret agent of the Sugar Trust. The loan was secured on a majority block of the Pennsylvania Company's stock, and Kissel inserted the playful proviso that he, the lender, should nominate the directors till the loan was paid. Then clever Mr. Kissel elected himself and three Sugar Trust clerks as directors, and forthwith closed the new refinery of the Pennsylvania Company, ruined Adolph Segal, the head of it, and drove the president of a real estate company—connected with Segal—to suicide.

The whole performance from the Trust's point of view was thorough, swift, and mirth-provoking. But it has had a nasty look to the general public, and prosecution by the Government may result.

Grilling the Newspapers

NEWSPAPERS sometimes think themselves the movers and shakers of the world forever, it seems. Then some swift abuse will be passed out to them, and they grow humble-minded for a little. They have just been in for both treatments.

Lord Rosebery has been saying:

"The power of a great newspaper, with the double function of guiding and embodying the public opinion of the province over which it exerts an influence, is immeasurably greater than that of any statesman could be."

Then spake Sir Hugh Graham of Montreal to the British journalists, indirectly smiting America's scribes:

"They know that, as a rule, you (journalists of Britain) are not publishing inspired nonsense to help your Government. They feel sure that you are not the paid megaphones of financial buccaneers."

And the final touch is laid on by the special committee of Governor Hughes, which has spent a half-year in Wall Street. It reports:

"A large part of the discredit in the public mind attaching to 'Wall Street' is due to frauds perpetrated on the small investor throughout the country in the sale of worthless securities by means of alluring circulars and advertisements in the newspapers. To the success of such swindling enterprises a portion of the press contributes.

"Papers which honestly try to distinguish between swindling advertisements and others may not in every instance succeed in doing so; but readiness to accept advertisements which are obviously traps for the unwary is evidence of a moral delinquency which should draw out the severest public condemnation.

"So far as the press in the large cities is concerned, the correction of the evil lies, in some measure, in the hands of the reputable bankers and brokers, who, by refusing their advertising patronage to newspapers notoriously guilty in this respect, could compel them to mend their ways and, at the same time, prevent fraudulent schemes from deriving an appearance of merit by association with reputable names."

When Sugar Met Oil

IT WAS night. Without, the rain was dropping in fierce gusts. The great hall of the club was rich in warmth and light. The two old cronies met in front of the blazing red hearth.

"Hello, Oil," said the round, fat, little fellow. "Bad night out. Let's have one."

"Say, Sugar," said Standard Oil, menacingly, "we are friends no longer. Out of my sight."

"Cruel, cruel words," said Sugar Trust, grieved to the heart. "What have I done?"

"You have committed the unpardonable offense of being caught with the goods on three times running. Three times is Down and Out. You are a disgrace to trusts. You might have been a criminal in a large

(*Continued on page 22*)

The First Baseball Game at Night

The contest held under electric lights on the National League Grounds of Cincinnati, June 18, was an experiment so successful that the experts of the country have declared that night baseball may possibly have come to stay

WITH sincere and wholesouled flattery the English "Sphere" for May 8 lifts the clever cartoon of the "Scientific American" of March 27. The American sheet pictured the folks coming and going. The cultured thief of England has them going and coming. The caption of the "Scientific American" cut reads: "Receipts and expenditures of the United States Government for the fiscal year ending June 30, 1908."

With easy grace, the "Sphere" alters and says: "Our national income for the year 1909-10—whence the money comes and where it goes."

A Good American Idea Adapted to English Use

Launching the "Half Moon" in Amsterdam

"De Halve Maen," a replica of the vessel in which Henry Hudson discovered Manhattan Island, in 1609, and sailed up the river, which now bears his name, has been rebuilt in Holland, and will be brought across the ocean to take part in the Hudson-Fulton celebration, from New York to Albany, September 25-October [illegible]

Who the Insurgents Are

By MARK SULLIVAN

ON THIS page, last week, were printed the names of the thirty-eight Republican Senators who have voted uniformly with Aldrich on all the important schedules of the new tariff bill. They constitute the faithful band, by means of which he has been able to dictate the Senate bill.

Below are printed the names of the Republican Insurgents—those Republican Senators who have voted against Aldrich on a majority of the important schedules, who have been able to embarrass, though not to defeat, him. In determining what Senators belong on this list, the same test is made as was used in fixing the status of the thirty-eight regulars. In the Senate discussion of the new tariff there have been upward of a score of votes in which each Senator has been compelled to go on record for or against the duty proposed by Mr. Aldrich. Many of these votes have been on minor, unimportant schedules. From among them these eight have been selected as being important and representative:

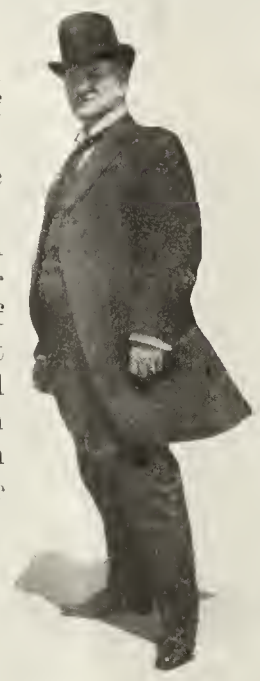
Lumber	Sugar	Iron ore	Cotton
Cutlery	Lead	Earthenware	Pig-iron

Senator Cummins of Iowa, who has voted and worked against Aldrich on a majority of the tariff schedules

The thirty-eight regulars are the Senators who supported Mr. Aldrich on *all* these votes; the Insurgents are the Republican Senators who have voted *against* Mr. Aldrich on a substantial majority of these schedules, and have maintained, generally, an attitude hostile to his determination to revise the tariff upward. Stated in the order of their insurgency, so to speak, they are:

La Follette of Wisconsin	Bristow of Kansas
Clapp of Minnesota	Beveridge of Indiana
Nelson of Minnesota	Dolliver of Iowa
Cummins of Iowa	Burkett of Nebraska
Brown of Nebraska	Crawford of South Dakota

La Follette of Wisconsin is the greatest Insurgent of them all. He has voted against Aldrich on seven of the eight schedules named—on all except cutlery.



Clapp of Minnesota, like La Follette, voted against Aldrich on all the schedules named except cutlery; on the earthenware schedule he refrained from voting. He has been Insurgent in temper.

Beveridge, Bristow, Brown, Cummins, and Nelson all voted exactly alike. They voted *against* Mr. Aldrich on lead, lumber, iron ore, pig-iron, cotton, and sugar; and *with* Aldrich on two schedules, earthenware and cutlery. Dolliver voted *with* Aldrich on lumber, earthenware, and cutlery; and *against* Aldrich on the other five schedules.

Burkett voted *against* Aldrich on five schedules and *with* Aldrich on three—earthenware, sugar, and cutlery.

Crawford of South Dakota voted like most of the Insurgents, *against* Aldrich on five of the schedules, and *with* Aldrich on two—earthenware and cutlery. He did not vote at all on the cotton schedule.

Having named the Regulars and the Insurgents, there remain nine Senators who fall within neither class. Senator Gamble of South Dakota voted *against* Aldrich on four schedules, lead, lumber, iron ore, and cotton; he voted *with* Aldrich on the same number of schedules, pig-iron, earthenware, sugar, and cutlery; Gamble is a near-Insurgent. Senator Du Pont of Delaware voted against Aldrich on two schedules, lumber and iron ore. McCumber of North Dakota voted against Aldrich on lumber only. Borah of Idaho voted against Aldrich on iron ore and pig iron, and did not vote on the cotton schedule. Johnson of North Dakota voted against Aldrich on lumber and sugar; Jones of Washington voted against Aldrich on cotton and sugar. Bourne of Oregon and Richardson of Delaware have been absent when most of the votes on the various schedules were taken.

Senator La Follette of Wisconsin, the chief Insurgent of them all. He has fought Aldrich at every step, and voted against him on seven out of eight schedules

A Remarkable Senator

NO OBSERVER of the tariff debate in the Senate can fail to be impressed by Senator Thomas Gore of Oklahoma. He is alert, well-informed, and effective in expression. Senator Gallinger of New Hampshire was making sarcastic mention of one of those numerous Democrats in the Lower House who, for home consumption, delivered a bombastic oration against the tariff—and then voted for a tariff on lumber. The following passage then took place—one of those unusual interludes which relieve the debates and recall an older generation when classical allusion was more common in the Senate:

"MR. GALLINGER—In another body not long ago a distinguished gentleman said: 'The tariff bill is nothing short of an outrage. The witches whom Macbeth met on the heath never brewed a hell broth half so vile as this legislative compound.' Then that gentleman plunged his hands into the caldron of broth and pulled out a prize package inscribed 'Lumber' and voted for a duty on it.

"MR. GORE—Mr. President, I remember something else from the tragedy of 'Macbeth' where Macbeth himself had occasion to exclaim:

> "'And be these juggling fiends no more believed,
> That palter with us in a double sense;
> That keep the word of promise to our ear,
> And break it to our hope.'"

The aptness of the allusion, the fact that Senator Gore's quotation came from the same play that Gallinger mentioned, his speedy response with the best description in English poetry of a double-dealer, all constitute a remarkable bit of repartee. The Senator who accomplished this has been blind since he was eleven years old. He never *read* "Macbeth" or anything else—he has only heard them. No other Senator has shown either such memory or such command of classical allusion or such mental agility. Most men who, like Senator Gore, were blind and poor at eleven are now in indigent asylums. His career is an inspiration. "I strive against adversity," was the motto of Edmund Burke.

The Moral Issue

MONEY of Mississippi, Bailey of Texas, and Dolliver of Iowa, are the only Senators who see the tariff as a moral issue, or who care to say that they so see it. Senator Dolliver's words are these:

"As the result of my observations upon the different tariffs of the world (and I do not pretend to be wise or deeply read about the matter), I find that wherever there is a protective tariff it has built up a system of morality of its own, and I never found that its rules of morals were in accord with any other rules of morals, religious or secular, ever framed in this world. It has built up a system of morality in this country that not only is wicked, but it allows to be done, by authority of law, what the man who does it would never do in his private capacity as a citizen. It permits a man not only to covet his neighbor's goods, but to take them away from him by force of law. When we consider that we collected a little over $300,000 000 last year, and the people of this country pay in taxation to these protected interests $2,100,000,000, I think it is about time we are considering whether we are not taxing the American people a little too far."

Senator Dolliver of Iowa, who has led many of the debates against Aldrich, and has opposed him on a majority of the schedules of the tariff

All those millions which go, not into the United States Treasury, but into the pockets of wealthy manufacturers, can fairly be called by no other name than graft. And so long as this goes on under color of law, it is hard to keep the moral stigma upon all those other allied forms of acquisition which go by the same name, but are not sanctified by statute. When the *meum* and *tuum* distinction has been lost as between classes, it is hard to maintain it as between individuals. Senator Bailey has done more than any other one Senator to keep this aspect of protection to the front.

Perhaps the Churches Will Help

THE Episcopal Diocesan Council of Lexington, Kentucky, a purely ecclesiastical body, last week resolved that:

"Being a branch of God's church . . . we feel deep concern over conditions created and being perpetuated by alarming, if not revolutionary, legislation, whereby the necessaries of the lives of the needy are disproportionately taxed."

Perhaps the churches may some day come to see the tariff as a moral issue. Many a clergyman preaches his Sunday sermon upon subjects involving less fundamental righteousness. Aldrich and his machine are proving that they do not fear the press which, big and little, is substantially unanimous in denunciation of the Senate tariff bill. Possibly they would defy the church, too. We should like to see an organization of consumers' leagues, based upon the effective lines of the Anti-Saloon League, for genuine tariff reform.

283 Days

FROM the date of this paper, it is 283 days until any change can be made in the complexion of the present Lower House of Congress. The second Tuesday in April, 1910, is the first day when any American citizen will have the opportunity to cast his ballot for a Member of Congress pledged to vote against CANNON for Speaker.

Collier's maintains at Washington an office in charge of a legislative expert who will be glad to answer any questions concerning the work of Congress and the Government at Washington. Address Collier's Congressional Record, 901 Munsey Building

Chalmers-Detroit "30"
$1500

Touring Car
Roadster
Pony Tonneau
Landaulet
Coupe
Limousine

Here's Our Larger 1910 Model For Our $1500 Car

On May 12th, we sold the last Chalmers-Detroit "30" in the model of 1909. That completed our output—2,500—of these remarkable cars

There were 800 people left disappointed. There were orders amounting to $1,200,000 which we could not fill.

Now we announce these new models. Every Chalmers-Detroit dealer will have them on show in July.

1000 Extra Cars

This season our output of "30's" will be 3,500 cars. And those 1,000 extra cars will be produced without adding a dollar to our overhead expense. That means a great saving per car.

They will also be made with last year's tools and machinery. So this great expense will not be repeated. The new cars are not altered in mechanical ways. This year increasing the bore of our cylinders to four inches and making slight changes in the exhaust valves gives us considerable more power, but we still rate the motor at 30 h. p. Otherwise the chassis could not be improved.

Every cent of this saving will be given to you in the shape of a sightlier car. Our profit remains the same as last year—exactly nine per cent.

As a result of these savings, we offer this season—at last season's price—this amazing car.

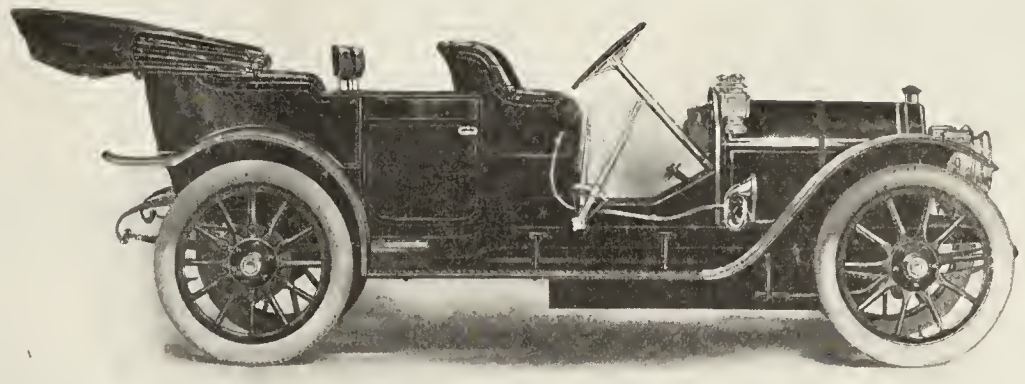
neto, a Prest-O-Lite gas tank and two Atwood-Castle new style gas lamps, all for $100 extra. The cost of these extras at regular prices would be $175.

We will furnish our "30" with a Lenox mohair top for $75 extra. This is the very best top we can buy. Don't be satisfied with the ordinary top when you can get a mohair top from us for $75. The regular price of this top is $125.

On our "Forty" the Bosch magneto, the gas lamps and gas tank are all included in the price of $2,750. But we will supply with our "Forty" a $150 Newport mohair top for $125 extra, and we will supply two extra seats—for $75 extra.

These extras are all figured at a very small margin of profit over cost. We give to you all the enormous advantage we get through quantity buying.

The Records of 1909



One of the Chalmers-Detroit "30's has covered 32,000 miles, and has just completed a path-finding trip from Denver to Mexico City. Never has any car, at any price, made an equal endurance record.

We have been paid for replacements on 1909 cars exactly $2.44 per car. No other car has a record like that.

On a long distance speed test this car has averaged 50.2 miles per hour. On an economy test, made during Carnival Week in New York, this car ran 25.7 miles on a gallon of gasoline.

Never has a car, at any price, proved so satisfactory. Never did a car of similar size show such low cost for upkeep.

That's why we make no mechanical changes. No man dreams of a better car than our "30" of 1909.

The Chalmers-Detroit "Forty"—$2,750

Two Extra Seats $75

Roomier, Handsomer Car

The 1910 Chalmers-Detroit "30" has a 115-inch wheel base. That's three inches longer than our "Forty" of last season.

Its wheels are 34 inches, while last season's were 32.

The hood is longer and higher—the tonneau more roomy; and the lines are like the costliest cars on the market.

Yet the price remains $1500. By increasing our output, and retaining our chassis, we save enough to make these improvements.

Extras at Low Cost

Here is an additional policy adopted for 1910; that is, to furnish the following extras at the lowest possible cost—much cheaper than you could possibly buy them unless you bought them from us.

We will fit our $1500 car with a Bosch mag-

Here is our "Forty" for 1910—with a 122-inch wheel base. That is ten inches longer than last season. The wheels are now 36 inches. And the car seats seven.

It is upholstered in hand-buffed leather, and fitted with Bosch magneto, gas tank and gas lamps free.

We will equip this car with a $175 Newport top for $125 extra. The two extra seats will be furnished for $75. That's because of our new policy—extras at nine per cent profit.

So this 7-passenger car, when fully equipped, costs less than our 5-passenger "Forty" of last season.

This is our "Forty's" fifth season. It is known far and wide as the best medium-priced car on the market. Scores of the best experts we have in America have selected it for their personal use.

This season's model has all the size, style and appearance of the costliest cars that are made. All that a higher price can buy is unneeded power and higher cost of upkeep.

Made as Touring Car, Roadster and Pony Tonneau.

New 1910 Catalog Free

—Demonstrating Cars in these new models will be in the hands of all Chalmers-Detroit dealers this month. Deliveries to users will begin August 1st.

Get our catalog now and make your decision, for orders will be filled in rotation.

The tide of automobile demand has turned to these medium-priced cars. The day of extravagance is past. A modest price and low cost of upkeep are sought by men who know.

The Chalmers-Detroits are the most popular cars on the market. The demand this season, as it did last, is bound to exceed the supply. For not another make on the market begins to give so much for the money.

By ordering now you will have five months' use before the car's year begins.

Please mail us this coupon now.

$350.
For a Name
QUICK!

Read this story and hit upon a name that will appropriately mark the greatest and best-valued line of popular-priced underwear in the world. Just a good, practical, sensible name that everybody will be able to pronounce and easily remember. Here are the facts:

The Company wanting this name is the

Utica Knitting Company

Starting twenty years ago with a capital of $20,000 and one small factory, this Company has steadily grown into a concern operating seven great mills which produce over $4,000,000 worth of underwear goods each year. This growth has been due entirely to making better goods at no higher prices. The Utica Knitting Company cards its own materials, spins its own yarns, finishes every garment with the best machinery and handiwork in existence, and ships all its products in boxes made in its own paper and lumber mills. Nothing is overlooked from beginning to end that will save an outside profit, and *every bit of this saving goes into the quality of the Utica Knitting mills products.*

Now read this over until you understand the matter thoroughly.

The Utica Knitting Company makes many different styles of underwear for men, women and children, in winter and summer weights, selling at 50c. to $1.50 per garment, or double per union suit. These different styles are now highly known throughout the trade under various trade-mark names. Following are a few of the most noted of these names:

Lambsdown — For men, women and children

Vellastic — For men, women and children

Unitee — A patented combination garment for boys and girls

Olympic — Coat cut, knee length, KNIT summer underwear for men and boys

Standard Fleece — For men and women

Oriskany — For men and women

and many others.

These various names are now used and will continue to be used over the following shield design, in this space, as for instance:

What is wanted *now* is one name to go into the shield in this central space to be used in combination with each and *all* of the other names.

There are many different kinds of silverware, each having its own name. The word "Sterling" goes with all these names to show the highest possible quality. We want a name that will go with all our different styles of underwear—just as "Sterling" goes with different styles of silverware.

For the name we decide is best, we will pay: **$200**

For the second best we will pay: **$100**

For the third best we will pay: **$50**

If more than one person sends in the winning name, the prize will be divided equally. This rule applies to all three prizes. All names must be mailed on or before July 10th. You have, therefore, only a few days, but this is to your advantage, as the best ideas come from the quickest and hardest mind-work. Simply write the name or names you suggest on plain white paper, with your own name and address, enclose in an envelope, and mail to

UTICA KNITTING COMPANY
Contest Bureau 366 Broadway New York City

Read the above story over and over—let your mind play on it and the right name will suggest itself. Go at it now—and go at it to win the $200.

DO NOT FAIL TO WATCH FOR THE RESULTS OF THIS CONTEST TO BE PUBLISHED IN THESE COLUMNS AT THE EARLIEST POSSIBLE DATE.

impersonal way: but instead of that you're only a blunderer."

Sugar stumbled out through the darkness and melted into the wet, gusty night.

Blessed Peace

ENGLAND, like a swelling schoolboy, is preparing to show its biceps to Christendom on July 17, when it marshals the long-drawn line of destroyers, one hundred strong, on Thames River. She has just given a full-dress rehearsal of battleships—forty-three of them—to the Colonial editors, who have been enjoying the pleasures of London for a season before returning to quill-driving in the Provinces.

Of course the veiled purpose of the Imperial Press Conference was to win the colonies overseas to England's war program. To proclaim danger, to clamor for aid—that was the predestined scheme to try out upon the visiting editors.

Lord Rosebery created the effect. "Dead earnest was his mien."

Said he: "There is a hush in Europe—a hush in which you may almost hear a leaf fall to the ground." To him this hush is "ominous."

He asked the scribes to return to their communities "missionaries of Empire, missionaries of the most extensive and the

Vassar's Bowl

The bowl is of silver and enamel, and was given to Vassar college by the Baroness Uriu. This bowl had been given to her by the Empress of Japan at an audience, and when she, the Empress, learned that the Baroness was coming to America and would visit her college, Vassar, she granted the Baroness permission to give the bowl to Vassar. At the bottom of the bowl is imprinted the Royal crest, the chrysanthemum. It is of great beauty

most unselfish Empire which is known to history."

Prompt as an echo came the answer from Sir Hugh Graham of Montreal:

"The people of the colonies are anxious for a rightful voice in determining what the strength of the British navy shall be. They regard the British navy as a form of Imperial insurance under a blanket policy, covering everything that you and we possess that is worth possessing."

And the like harmonious rumble is heard across the water. Says the Montreal "Daily Star" editorially on June 12:

"There is a new question to the fore; and that is Colonial cooperation with the Mother Country in the defense of the Empire. The day of drawing apart is over; and now the problem is how best to draw nearer together for mutual defense."

Then comes the companion thought:

"The movement for a Canadian navy is not anti-American in origin"—so says the Toronto "Daily Star." "It is a result of a desire to pay our own way and to keep control. Our land forces are not maintained as a result of fear of, or hostility to, the United States. We all hope that Canadian and American soldiers may never meet on the battlefield except as comrades."

The Reformers at Work

THE "New Knighthood," their lyrical friends call them. "Muckrakers" and "Parlor Sociologists," their cynical critics call them. More exactly, they were the fifteen hundred social workers, gathered in Buffalo, New York, during the second week in June, in the National Conference of Charities and Correction. They are a part of that army of humanitarians, philanthropists, settlement workers, officers and helpers in charitable institutions, whose far-flung battle line extends from nearby cities to South Sea islands. They draw a little closer each year to the ills and dangers that beset us in city and State and nation of overwork and congestion, child labor, tuberculosis. No medieval crusade had half the vigor of their advance.

With accurate methods of research and observation, with wise selection of reform and remedy, with good-humor, they go on their way against disease and poverty and

The Howard Watch

DOWN on the Big Ditch at Panama is a worse place for a watch than Suez or the Coast of Indo-China: blazing days—severe nightly drop in temperature—humidity 87°—and months of tropical rainfall.

All along the Panama Canal—you find "HOWARD time" the recognized standard—as in all big undertakings for the last sixty-seven years.

The HOWARD Temperature adjustment is *permanent*. Unaffected by the severest heat or the most violent changes.

The HOWARD is the finest practical watch in the world, and the strongest. Its special hard-tempered balance cannot knock out of true with the jolts and vibrations of rough use in the field.

A HOWARD Watch is always worth what you pay for it.

The price of each HOWARD Watch, from the 17-jewel in a fine gold-filled case (guaranteed for 25 years) at $35.00; to the 23-jewel in a 14-k. solid gold case at $150.00—is fixed at the factory, and a printed price ticket attached.

Drop us a postal, Dept. A, and we will send you a HOWARD book of value to the watch buyer.

The Portable Wireless Telephone

Although the development of wireless telephony is still in a primitive state, the United States Government is promoting constant experiments toward perfecting the system. Not only has it been installed for a try-out in the war vessels and forts, but the Government is actively testing the possibilities of a movable instrument. The accompanying illustration shows a portable radio-telephone and telegraph outfit. There is no great difficulty in locating other instruments on vessels or elsewhere with this apparatus, provided the range does not exceed the power of the storage battery

graft. Already in the brief term of their organized existence they have let the light into dark rooms, given work to the unemployed, turned the fight against consumption, diminished child labor. There is less misery in the world because of their sane efforts. They are sincere and effective. In time they will learn how to make their knowledge attractive to a careless, busy public.

Little was heard of the Pittsburg Survey, for instance, that grueling of a modern city, which reached its very vitals, till Ida Tarbell picked up the welter of tragic fact and shaped it into a missile. Their other defect is an overseriousness of demeanor. As yet they take themselves and their work with a seriousness that is sometimes irritating and sometimes amusing. They are fighting for position and recognition, for an established place in an indifferent or hostile community. As with individuals in the act of becoming "self-made," their assertiveness and conceit are often the thin shell that coats over much tribulation and struggle.

Time will deal gently but radically in clearing them of these lesser imperfections, which impede the reception of their "message." When they add humility to efficiency, and infuse a human appeal into the academic data of their investigations, they will make citizens of wide influence. They will be dominant in the coming church. To such as they the future will belong.

It was fitting that this powerful body of workers should elect Jane Addams of Hull House, Chicago, as president for the coming year. For her it is the adding of one more burden and honor to overwhelming responsibility. Deep in the waters of an infinite fatigue, she sometimes is almost overborne before her work is done. It is to be hoped that with the large new duties she can be saved some of the wear of other work. The people have need of her.

Garden Spots

DOWN in the lowlands of southeast Missouri, where the Little River flows, they are now working on what is said to be the largest drainage project ever undertaken in the United States. During the next four years it is planned to drain and reclaim over one million acres in the seven counties to the south of Cape Girardeau. This alluvial land is said to be extremely fertile, and its nearness to Eastern markets, compared with some of the projects in the Far West about which so much has been said, ought to interest farmers. Also, the work is organized by 1,200 landowners of the district, working without help from State or National Government. It is believed that an average tax of not more than $8 an acre will cover the cost. There will be 600 miles of dredged ditches, 500 miles of floodways, and 1,200 miles of levees. Needless to say those interested in the scheme believe that the Little River lowlands will be "as productive as the lands along the Nile"—people always drag in the poor old Nile. Twenty-nine dipper dredges are scooping out mud now and hydraulic dredges are to be used later on. A vast lot of garden truck, not to speak of corn, cotton, wheat, and alfalfa, ought to come up from the Little River country one of these days.

It's the Wonderful Flexible Cement Compound

that makes the Carey Roof so entirely different from other roofs—so much more serviceable and enduring under all conditions. It is a combination of asphalt and other time-proved materials, scientifically prepared and tempered by the Carey special process. With this compound is formed that compact, impervious inner sheet which gives to the whole body of Carey Roofing its lasting flexibility and long life. Extreme heat cannot blister Carey Roofing or make it run—Extreme cold cannot harden it. It never loses its plasticity — Soaking rains, snow or ice do not affect it.

Carey's Flexible Cement Roofing

is absolutely standardized. It never varies in weight, thickness, quality or width. Always uniform, year in and year out.

Twenty years of service has proved it the ideal roof under all conditions in any climate—for flat or steep surfaces.

An interesting booklet, fully describing Carey's Roofing and containing information of importance to buyers of roofing material, is now ready. Write for a copy, also for a sample of THE CAREY ROOF.

(Concluded from page 15)

the blood of some of the spectators, inducing reckless driving to and from the course.

The policing arrangements were perfect. The first regiment of the Illinois militia was effectively distributed about the circuit. The crowds were orderly: in most cases wire fences were enough to hold them back. It would be interesting to know how far a cartoon by John T. McCutcheon, which appeared in the Chicago "Tribune" the day before the race, was responsible for the good behavior of spectators. The drawing represented the Idiot—familiar to those who have attended races in the vicinity of New York—who stands out in the course to see the racers coming. McCutcheon's Idiot was directly in the middle of the road, pointing his finger at an onrushing car and announcing with a maudlin grin: "Here it comes!" The laconic caption for the picture was: "For further particulars see obituary column next Sunday." That cartoon did yeoman duty. No one wished to be the Idiot.

On the second day several cases of sunstroke developed, to keep the field hospitals from being idle. The grand stand was uncovered, and many of the seat-holders retreated to spots beneath the trees.

"Paper! Paper! All about the horrible wreck!" cried a grand-stand newsboy. A scarlet-visaged gentleman, carrying a Japanese parasol and wearing a handkerchief over his head and another tucked around his neck, glared at the boy, savagely demanding: "Anything personal?"

It has been generally felt that in many of the so-called "stock car races" of the past, specially built cars have taken part. The authorities of the Western Stock Chassis Races made an unprecedented effort to assure the genuineness of all entries. Members of the Technical Committee called at the factories of all entrants to see that at least ten other cars exactly like those entered in the race were either in stock or in course of construction. All parts in the racers were marked, to insure against replacement. The gasoline used in each car was sampled before and after the race to preclude the possible use of ether or other agents which increase explosive force. It is safe to say that no stock car race has ever been conducted more strictly or more legitimately.

The Indiana farmer was not slow in learning to profit by the arrival of the hungry hordes. Like his Long Island prototype, he reaped a golden harvest. Cots in the houses adjacent to the course went at prices which would cause New York hotel-keepers to gasp, and semi-barbarous meals were served at rates which made one wonder if Raisuli had not moved to Indiana.

After the finish of the Cobe Cup contest, a solid stream of cars moved toward Chicago through the night. It was not like the return from the Vanderbilt course, because the roads were narrower and the cars were forced to run single file through clouds of Indiana dust. Indiana dust is worse than other kinds. It is deep and fine as talcum powder. It sifts through goggles and clothing, filling the eyes and lungs and soul, and making one admit to one's secret, sleepy self that automobile races, forty miles from home and bath-tub, aren't so absolutely necessary, after all.

✣ ✣ ✣

No Place Like Home

THE Wright Brothers got three medals each—one from the nation, one from the State of Ohio, and one from their own town of Dayton—at the Dayton home-coming celebration on June 18. They also made speeches, and although Orville restricted himself to one sentence, "I wish our work was commensurate with the honors that have been heaped on us," Wilbur almost made a regular speech. He said that they were very glad to get the medals and that they had had plenty of sympathy all along. If $1,000,000 would bring another Shakespeare or Tennyson, the money would be forthcoming in this country within five minutes, Wilbur thought. If poets and inventors didn't get their dues, it was because the public didn't know their needs, rather than because they were indifferent.

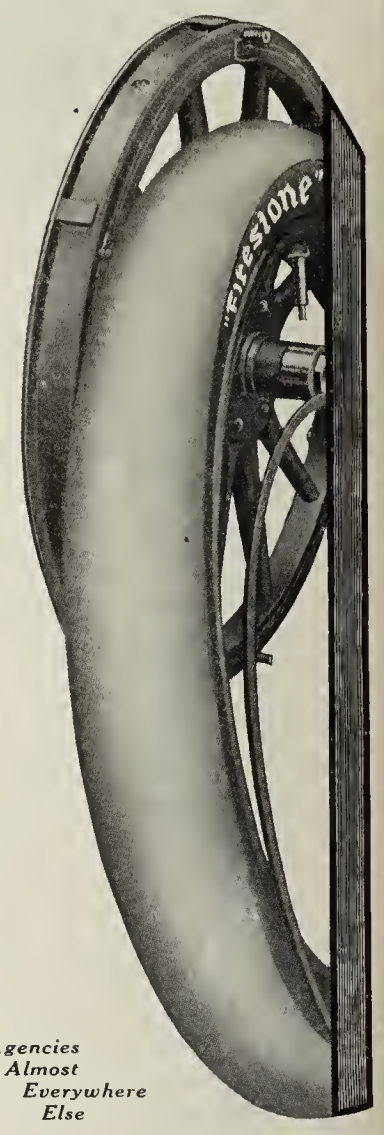
There was a pageant of floats depicting the development of transportation from the Indian runner up to the Wright aeroplane. There was singing and speeches and galloping fire-engines, and between times the brothers Wright ducked into and out of their workshop, packing up preparatory to going to Washington.

The last word in quick and easy tire-changing is the NEW

"Firestone"

DEMOUNTABLE RIM *(for all Quick-Detachable and Clincher Tires)*

Does away with road tire-repairing and vexatious delays; makes tire-changing a quick and easy operation at any time, anywhere.



AND; this Rim with any quick detachable tire abolishes the nuisance of fitting short-stem staybolts, so objectionable a feature of demountable rims for clincher tires only.

ALSO; may be fitted to practically *any* car, new or old, without changing from *present* tire and rim equipment.

FURTHERMORE; the Firestone Demountable Rim requires no special tools; has no narrow wedge shapes, no complicated parts, no sharp angles to rust and stick fast. It is so easy to operate you cannot try it the wrong way.

Thoroughly tested in great racing events and in every-day use, the Firestone Demountable Rim is now offered to the motoring public a *completely proven success.*

Fully illustrated, described and priced in our "DEMOUNTABLE RIM BOOK" which will be mailed free upon request, stating sizes of tires and kind of rim you are now using.

COLLIER'S

416-430 W. 13th Street, New York

Cleans Everything and Everywhere

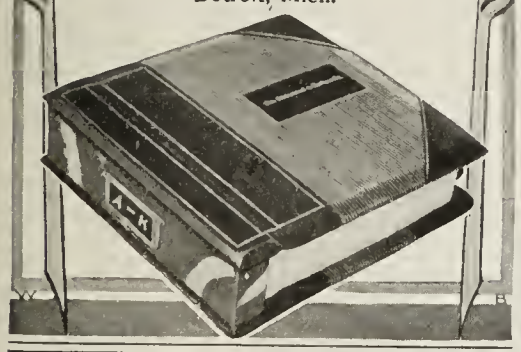
The vacuum cleaner for the home has proved such a valuable aid to housekeepers,—it has become so popular that a number of hurriedly made, poorly constructed, machines have been rushed onto the market.

The idea is right. Vacuum cleaners are one of the greatest advantages perfected in years and they have come to stay. The point is to get a cleaner that will clean.

THE **CYCLONE**

VACUUM CLEANER

has gone through the experimental stage. It is built on scientific principles that have been tried and proven in thousands of homes.



The Cyclone has **no springs**—Large valves make **easy running.** Dust separator can be emptied in half the time of any other. **Simple construction,** means **nothing to get out of order.**

Be sure to get the Cyclone—the machine that works, the machine that is made **for the home** and **at a home price.** Write for free book.

Punk and Firecrackers

(Concluded from page 11)

second. Your father is almost there. "Slide!" you bawl. He hears you, sits down while going at top speed, and his toes touch the bag a quarter-second before the second baseman thumps the ball against his ribs. A minute later the postmaster, who is at bat, knocks out a hit over the center-fielder's head, and home trots your father, reeking with dust, sweat, and glory.

It matters little that he muffs two flies after this, and that the unmarrieds win the game by a score of 27 to 8. Your father made a hit and stole second. That is enough to fill your day.

The crowd scatters, and you saunter slowly back through the village. As you pass the house of Mr. Winter, the village druggist, whom do you spy but Minnie Winter herself, sitting under an apple tree. You pause tentatively.

"Hello!" you venture.

"Hello!" This from Minnie with an assumption of indifference that cuts you a little. But you go in among the fruit trees to her side.

"Say," you begin modestly, by way of breaking the ice, "I'll show yer a trick mos' fellers can't do."

And you catch hold of a bough and proceed to "chin" yourself nine times in quick succession.

"Huh! That's easy enough," says Minnie, and she tries it. But she can't pull herself up even once, whereat she looks at you with frank admiration.

"Say, Minnie," you ask, "why ain't you at the lemonade party?"

"Oh, I was goin', until—"

"Until what?"

"Oh, nothin'."

And not another word can you get out of her, although she seems rather to like your questioning.

The orchard grows more golden with the approach of sunset. You must go home. The announcement of that fact is your only leave-taking. As you turn to go she stops you.

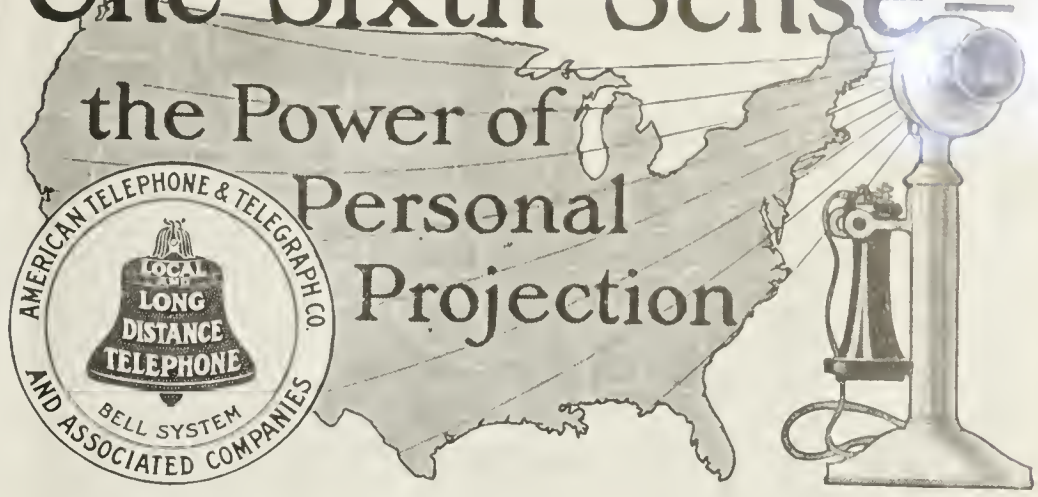
"Say, do you *really* want to know why I didn't go to the lemonade party?"

With a fine show of mature nonchalance you make answer: "N-no—I don't care."

"Oh, well, if you don't care, then—" But she goes on. "Well, the reason why I didn't go—the reason why I didn't go was because—I heard you weren't goin' to be there."

And with this she turns and runs into the house while you stand rapt in a cloud of strange exaltation. What a queer creature, you reflect. To rush away like that! An' she couldn't chin herself even once. Had you been wasting your time?

With supper your day of license ends. That evening you are in the custody of your family. There are to be fireworks on the lawn of Mr. Winthrop, the owner of the shoe-shops. You are ordered into a clean shirt and throttled by a necktie. Then, with father, mother, Aunt Martha, and the "kid," you walk sedately down the street toward Mr. Winthrop's house. Your father moves with a limp which he got when he slid to second. But he seems somewhat comforted when you commend him, with filial judiciousness, for his afternoon's performance.



The street is full of the rigs of farmers, with their wives and children. Except for an occasional cracker there is little noise, for every one has used up his money. As you pass the minister's house, Mr. "Rev." himself invites you all up to watch the fireworks from his piazza. There you find your crony, likewise washed and brushed into somber respectability. As the first rocket hisses upward and blossoms into flame at the zenith, you can not—any more than Sally—suppress that ecstatic "Ah-h-h!" which bursts from your lips. And then come Roman candles and mines and silver fountains and more rockets and pinwheels and Catherine wheels and more rockets. And last of all comes the event of the evening—a great set piece representing the Father of his Country.

Scarcely have the features of the great man hissed and sputtered themselves into oblivion, before there sounds the rumble of thunder overhead. This thunder shower is the invariable concomitant of every Fourth, you know, only your mind doesn't phrase it in just those words. Rev. Senior lends your father an umbrella, and you all hurry home just in time to escape a wetting.

You kiss them all good night, and go up to bed, lamenting the fact that three hundred and sixty-five days must pass before you can have another day like this.

To-night again you dream. This time it is no adventure with a Chinaman, but an entrancing riot of pictures which jumble together most thrillingly all the events of the day.

The Sixth Sense—the Power of Personal Projection

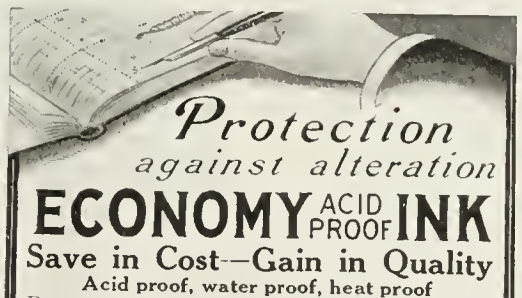
An American's sense of projecting himself far beyond the skies and hills of his forefathers is largely responsible for his self-assurance—for his mental vigor and the progress which this has meant.

The Sixth Sense—the sense of projection—is due to the telephone. It is due to the *Bell telephone system* which at any instant conveys *his personality,* if not his person, to any part of the country. It carries his voice with *directness* to the ear of the person wanted. Carries it with its *tone qualities* and *inflections*—things which are *vital* to the expression of personality.

Bell telephone service is more than a mere carrier of messages. It is a system of sensitive wire nerves, carrying the perception-message to the nerve centre and the return message simultaneously. *It is the only means of communication which thus carries the message and the answer instantly.* While *you* are projecting *your* personality—the strength of your individuality, to the distant point, the party at the other end is projecting *his* personality, at the same instant and by the same means, to you.

You are virtually in two places at once.

Though this service is in a class by itself, the Bell telephone has no fight with the other public utilities. Its usefulness is dove-tailed into *all other utilities.* Each of the others is unquestionably made more effective by the Bell telephone.



A telegram is delivered from receiving office to house by *telephone.* The more people telegraph, the more they *telephone.* The more people travel, the more they *telephone.* The more energetically a man pursues business of *any* kind, the more he needs and uses the *telephone.*

The universal Bell telephone gives every other utility an added usefulness. It provides the Nation with its Sixth Sense.

A business man has one important arm of his business paralyzed if he does not have a Long Distance Telephone at his elbow. It extends his personality to its fullest limitations—applies the multiplication table to his business possibilities. It keeps things moving.

The American Telephone and Telegraph Company
And Associated Companies

Every Bell Telephone Is a Long Distance Station

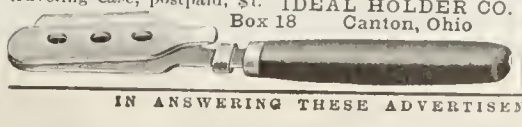
A Sea Lion Guaranteed Leather Belt running through a flooded wheel-pit.

When Other Leather Belts Fail

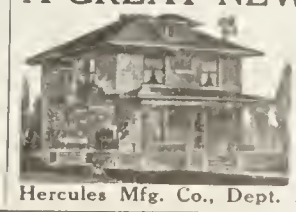
If you have had trouble getting a leather belt "to stand," you will find it worth your while to look into the merits of

Sea Lion Guaranteed Waterproof Leather Belting



It is not affected by live steam, water, the hottest or dampest climate or anything that ordinarily knocks out a belt in short order. That's because an absolutely waterproof cement is used in the construction and the leather treated to a waterproof dressing.

We also make **Reliance** belting and several other brands equally as good for specific purposes.



Write us your needs and the conditions under which your belts must run. We will tell you what is best to buy and send a book on leather belting.

All Cars Sold by Us Are Licensed under Selden Patent and Guaranteed for One Year.

28-30 h. p. Victoria Body, $3,350. Price with two bodies, one closed for winter use, $4,100

This is the accepted standard Summer car for Society women. It is the richest, most beautiful, most graceful car built to-day—a model exclusive with us

Note the drop frame chassis—see how the shell curve of the Victoria body follows it and harmonizes with it. Note the ease of entrance and exit it affords and how perfectly it is fitted to protect the most elaborate costume. These features alone have made it instantly popular with the Smart Set. It is regarded as absolutely necessary to a perfectly appointed establishment.

This drop frame chassis is not a new thing with us—it is no experiment. It was a striking feature of the Palmer-Singer 1909 Town and Country car, and has so proven its value in the hands of owners that manufacturers are attempting to copy it in their 1910 cars. This Palmer-Singer Victoria is rated at 30 H. P. Its chassis is especially constructed for town use, and for quick turning in narrow streets and easy handling in traffic. Still it is amply powered for long hard tours on country roads and is faster than most touring cars as well as being a better hill climber. It is the most serviceable car that money can buy and gives a range of service which none of the high-priced, but low-powered imported Town cars can give.

The Straggler

(Concluded from page 17)

and paladins and those fellows their chances to make things lively." He grinned, shame-faced, at this romantic confession. "I've always longed for hardware trousers and a lance and a trusty steed and all the rest of the make-up. Tommy-rot? Yes, of course. But—but when you go down there to those mills, and see—*that!*" The young laughter faded from his eyes. His grim jaw clinched. "*Then* you've got your shindy cut out for you! And you want to roll up your sleeves and get busy. You don't care whether you're dressed for the part. You don't care whether you've got an arquebus or a half a brick. You just light in."

Wilmarth did not speak.

"I knew you'd call my going in with Baxter a Quixotic scheme. Well, I don't mind hard names. Dare say. I'll make blunders, all right. I'll bag a few windmills, as you say. But what's the difference? You bet I'll bag a few mill-owners before I get through. My grandfather helped to free slaves. Dad, if you'd go down there with me, and look with your own eyes, you'd find things harder to see than slavery ever was. Those kids, those babies!" He stiffened, lion-like, from mighty shoulder to heel. He threw up his head with a furious gesture: the blood flamed to his hair. "If you'd seen what I saw, and only yesterday! Those little girls, that ought to be skipping rope and tending dolls, standing there at the looms! With their skinny little legs, and their stupid, fagged eyes with puffy black rings under 'em, and their poor little dirty bodies in rags and strings when a little girl ought to be all starch and impudence and blue ribbon! And then the boys—oh, hell!" He wheeled on his father fiercely, fist outthrust. "If you'd seen *them!* Maybe then you could see some use in our sensationalism, our blatant muck-raking! Little knock-kneed, blear-eyed dwarfs, with their pipe-stem legs and their caved-in chests and their silly, blank faces, all the life and soul and spunk ground out of 'em! When their noon-hour came, I asked one of 'em what they played. 'Played?' he said. And he stared. 'We haven't time.' 'Can't you find time for football?' said I. He rubbered up at me as if I was talking dippy. 'What is football?' What is football! Good Lord! Think of it, Dad! The poor little wretch, he'd never seen a game. He'd never laid eyes on a ball, even! *Think of it!*"

Wilmarth was silent.

"I dare say that's a clumsy explanation enough." His tense voice dropped suddenly to its slow, even tones. He reddened again, sheepishly amused at his own vehemence. "But—but that's why. You see now, Dad. That's why I've gone in with Baxter's. That's why I shall stay with Baxter's. And—that's all."

WILMARTH sat back in his deep chair. He looked quite shrunken and old.

"Then nothing can change your decision?"

"I think not." The boy glanced again toward the starlit window. "I've threshed it all out. It's me for the Child Labor crowd. That's all."

Wilmarth groped for words.

"Tom! You must reconsider. You don't know what you're throwing away. You don't realize that you're refusing what other men would give their souls for! You—" Then frantic terror smote him. His voice rose in a scream. "Tom, you don't realize what this means for me! I've wanted you, I've counted on you. To have you bolt me now—and for this damn agitator mob!"

He was pleading for himself now, wildly imploring.

"You're not going to refuse! You're not going to leave me! Tom, this is madness! *Tom!*"

Then his frantic voice sank, mumbling. Dully he looked on this, his son. Child of his body, bone of his bone, core of his soul. And yet alien as if they two stood on distant spheres.

He did see, and clearly, now. The truth was beating down on his brain in pitiless white flashes. His mouth twitched in a faint grin.

When you stopped to think, it was not surprising. He had had his own chance, and he had thrown it away. He had sneaked out of the fight. Yes, he had thrown away his chance. There would be no more chances for him. That was all.

The boy was looking at him now. His glance was an arraignment. Yet his eyes held no contempt for the elder man's cowardly share in the battle, no disgust at his skulker's treachery. Instead, he considered his father with that emotionless, indifferent calm with which he would consider any other failure; say, a bodily cripple, or a man unfairly equipped mentally. Already, to his eyes, his father belonged to the past. Very likely he had meant well enough. But he had failed. Now he was down and out. Therefore the boy judged him not angrily, but from his cool, passionless distance: from the viewpoint of his own splendid, victorious young generation.

And as Wilmarth looked back at his boy, his eyes took on the stare of one who listens. For he seemed to hear a slow, nearing thunder: the thunder of that vast approaching host, that royal young army, as it marched on, to seize, to conquer, to destroy all that was old, unclean, ill-built; to tear down the tottering walls, set on unworthy foundations; to replace them by a sounder, cleaner, loftier state.

Yes, he had had his chance. And he was the one who had squandered and thrown away. He need not whine. He was down and out. Vaguely he realized now that, through all these years, he had looked forward to his boy's companionship. He would have Tom in his offices; he would turn things by degrees into his hands. They would be partners, comrades.

THE terrible primeval hunger for a man-child, a son to carry his name when he and his world were dust, snatched at his heart. Well, his name would not perish. But what of that? This, his son, was the child of his body, never the child of his soul. For Tom would carry the Wilmarth name, not as Thomas Wilmarth's son, but as the son of that other Thomas Wilmarth, that divine, careless prince of self-forgetting, who had counted his world well lost for the sake of his dream; who, losing his life freely, a sacrifice to his fanatic hope, had found it again in the undying reverence of his nation. He saw himself the ignoble link between these two glorious lives.

"Tom, you must come into the firm. I can't give it up. If you knew what it means to me, how I've hoped, and planned—"

The boy stood motionless. He looked past his father with level, unmoving eyes. He hardly heard; his trained brain had already swung back to its crowding problems; those children, those forlorn little heart-breaking Questions, the wee girls, with their starved little ugly bodies, their wizened patient faces; the tiny boy who had never seen a football. His calm face, turned to his father, was inexpressibly cruel. It held all the blind, merciless cruelty of youth, which has untold pity for the victim, but can never pity the victim's torturer, his own most piteous victim.

He waited, courteously, till Wilmarth's passion of terror and anger and desperation had beaten itself out. Then he spoke, deferentially.

"I'm tremendously sorry that you're so annoyed, sir. I quite realize that I'm wasting a great opportunity. But we fellows will pull together; and even if we are inexperienced, I dare say we'll flounder along. Anyway—" He halted. His eyes turned again to the deep window. In that high moon radiance the grand white shape stood like a statue of light beyond its silver tree-barrier. Aloft in its eternal calm it seemed to wait, to hearken. . . .

"Anyway," the boy's eyes flamed slowly. His voice took on a deep reverberation. "Anyway, it's the only road for me. I'd fall down, hard, if I tried any other. I'm sorry, Dad. Good night."

He strode away, with his heavy, measured step, and closed the door behind him. The father heard his slow, decisive tread ascending the stairs.

Wilmarth leaned back and stared vaguely into the dim mirror above the mantel. The gray man who watched him sat there, alike impassive. At his feet the dying fire dropped away to ashes. It was as if he sat before the ashes of his days. And with that ghost, that dying fire, he sat alone.

Yet the room seemed full of pulsing life, thrilled with mysterious vibration. For it was shaken as by the feet of a passing regiment. The terrible jarring tread of that hurrying army of youth, away on its high far road, leaving its dead, its deserters, its stragglers, behind.

REDUCE THE CARES

of housekeeping. One decidedly practical way is to use Borden's Peerless Brand Evaporated Milk in all cooking where milk or cream is required. Results will be more satisfactory than with most "fresh" milk. The convenience and economy will please you. Dilute Peerless Milk with water to any desired richness.—*Adv.*

New Prizes for Vacation Stories

¶ Last September Collier's offered a small prize for the best account of a vacation experience, and agreed to buy certain other of the best little articles submitted. In the present issue "The Hayin'," the prize-winning essay, is published, as well as three other stories which seemed worthy of acceptance. These little accounts of outdoor adventure seem so well worth while printing that we are encouraged to offer more prizes this year for stories of a similar nature.

Collier's will pay one hundred dollars for the best account of a vacation sent in before October 1, 1909. For the second best article fifty dollars will be paid, and for all others that are accepted twenty-five dollars. The articles must be typewritten on one side of the paper only, and must be signed on the first page with the name and address of the sender. Good photographs that illustrate and add interest to the account should be sent as a pictorial accompaniment to the article and will really count a great deal in its favor. On its back every photograph should be described, and the name and address of the sender should also be written. Be sure to send the article and photographs in the same envelope. Manuscripts and photographs intended for this competition should be addressed to the Vacation Editor, Collier's, 416 West Thirteenth Street, New York City.

Almost all of us will be going on some sort of a vacation between now and October, and there will be so many different experiences that surely a dozen or more good stories should result that will be well worth printing. Whoever wins the hundred-dollar prize will have laid away a nest-egg for a vacation next year. The fifty-dollar prize will also be a long step toward another vacation.

As was the case last year, the present competition calls for specific stories of vacations, whether in the mountains, by the sea, on the lake, on the farm, afoot, awheel, in camp, on sailboats, in motor boats, or in automobiles—in fact, in whatever way the vacation was spent. Essays or fiction are not wanted; neither is it necessary for you to tell the whole story of your vacation. Use the twelve hundred words for a description of some part of your vacation, if this seems preferable. The more vividly you put on paper in words and in photographs the sense of joy of the summer's outing the more certainly will the story be of interest to others. Do not send sketches or drawings, these are usually unconvincing; photographs are almost always a reflection of real things.

Outdoor America for July

¶ "The Price of Bad Roads," which curiously enough casts a side-light on the price of bread, is the leading article in "Outdoor America" for next week. This paper illustrates how poor highways affect not only the man who hauls, but also the man who eats. The farmer's slow and sticky pull to market is the vent of a colossal waste—piling up into hundreds of millions of dollars a year.

¶ "The International Horse Show" held recently in London, will be described by Mr. Price Collier from a thoroughly critical point of view. American horses fluttered with official ribbons at this exhibition, and the development of the American horse is the theme of this account. Originally, we adopted everything from England, and in comparison succumbed to English steeds and methods; now, however, we return to Great Britain, with their ideas as we have expanded them, and rather concentrate the attention of the judges. But the writer points out the places in which the English animal continues to hold his own.

¶ "The Friendly Citizens of Chipmunkville" is a nature sketch by J. Alden Loring—who is at present one of the naturalists accompanying Mr. Roosevelt in Africa. He narrates an experience wherein he enjoyed chipmunks for associates and camp-mates. After a long, suspicious period, they became surprisingly intimate. Mr. Loring portrays their habits of life, private and civic.

¶ There will also be other features to round out the circle of open-air interest.

Nufashond TRADE MARK REG.

Shoe Laces

The very newest idea in shoe laces. Not a fad, but an actual necessity.

Strong. The center is tubular and doubly reinforced.

Neat. The ends are flat and tie into an attractive bow without crushing.

Durable. Outwear two or more pairs of other shoe laces.

Stay tied. The tubular part slides freely through the eyelets, and stays tied because it is firmly woven.

Guaranteed for 3 months

25 cents per pair. All silk, in black, tan and oxblood. Sold only in sealed boxes. At all shoe and dry goods stores, and haberdashers. Sent postpaid on receipt of price, if your dealer can't supply you.

Tubular laces for high shoes, 10c. Guaranteed for 6 months.

Write today for our illustrated booklet that tells about *Nufashond* and shows our complete line of shoe laces at every price.

ADVERTISING BULLETIN

NO. 11

SCHOOL ADVERTISING

AN educational institution, being on a different plane from a business organization, has its peculiar advertising problems.

Some schools feel that students' recommendations are sufficient publicity, but the majority of progressive educational institutions realize the worth of a national reputation. Many of the best-known schools in the country have gained much prestige through placing their cards in those magazines that are an indispensable feature of the libraries in thousands of good homes.

Prestige is a plant of slow growth and therefore these schools in inaugurating magazine publicity did not prepare for an influx of students from all parts of the country. They realized rather that as time passed this publicity would promote, gradually but consistently, the confidence which their names inspired.

A word about the cost of school advertising: Principally through a desire to further educational work, most publishers have established a special rate to resident schools. Collier's school rate, for example, is but half the regular commercial rate — a half-inch advertisement costs a resident school $8.75—at the rate of $1.25 a line.

From Collier's half a million homes sons and daughters go away to school every autumn. Before you choose a school peruse Collier's School Directory. It runs once a month; the July Directory is in this issue. The arrangement is designed for your convenience: Boys' Schools, Girls' Schools, Military, Co-Educational, and Camps grouped. Perhaps the very school you want has its announcement here.

Collier's School Directory is open to only the best. We admit none but those schools to which you can with confidence and pride send your boys and girls—those schools which, like Collier's, have for their aim a high, sane and cheerful ideal of American citizenship.

PHOTOGRAPH BY BYRON HARMON

Mountaineering in the Canadian Rockies

Twenty-five years ago, when the engineers of the Canadian Pacific Railway were blazing a path through Rogers Pass in the Selkirks, Sir Sandford Fleming made his camp on the height of land in the Pass, and he and his staff were so impressed by the Swiss-like scenery that they formed the Canadian Alpine Club. The idea was more sentimental than practical, however, and it was not until two years ago that mountain climbing, as a sport, was seriously taken up for the exploration of the higher peaks of the Canadian Rockies. Since that time these American Alps have attracted some of the most intrepid and famous mountain climbers of the world, and the meeting of the club this summer will be attended by conspicuous figures in the mountain-climbing clubs of England, Italy, and America. Apart from the exciting sport (for the dangers are scarcely less than in the Alps), world-renowned geologists and botanists have become interested, and have intimated their intention to accompany the Alpine Club on its next outing. The picture gives but a faint idea of the vast snowfields and glaciers of the Selkirks of which Mt. Robson is the highest peak, soaring 13,756 feet above the level of the sea. Mt. Rogers is 10,500 feet high and very precipitous. The Illecillewaet and Asulkan glaciers are broad, extremely picturesque and difficult to climb. Only a beginning, however, has been made in the exploration of these wonderful ice-clad peaks and snowfields. The Alpine Club of Canada makes its camp on the height of land adjacent to the railway, where a broad tableland of several acres is admirably suited for the purpose; but the camp will soon give way to a permanent club-house

The Moral Issue

THE PUBLIC ATTENTION has been slightly shifted. It is focused at the present moment upon an issue only partially related to the tariff. But the most important moral issue in the United States to-day is inherent in the following paragraph. It has much to do with the cost which the people must pay next year for food and clothing and the commodities of daily living. But it is charged through and through with something less tangible but infinitely more important:

"It is my judgment that a revision of the tariff in accordance with the pledge of the Republican platform will be, on the whole, *a substantial revision downward*, though there probably will be a few exceptions in this regard. As the temporary leader of the party, *I do not hesitate to say, with all the emphasis of which I am capable, that if the party* is given the mandate of power in November it *will perform its promises in good faith.*"

This paragraph is taken from a speech delivered by Mr TAFT, while asking the people to make him President, at Milwaukee, September 24, 1908. At other times and places, Mr. TAFT'S promises of revision downward were more emphatic and explicit, more surrounded with words of good faith and trust. During his days upon this earth Mr. TAFT, at Milwaukee and elsewhere, will probably look into the faces of many another American audience.

The Courts Again

THE COURTS in many Western and Southwestern States have for nearly a generation been corruptly controlled by the railroads and other large corporations. Of the largeness of this generality, we are by no means unaware. To the specifications under it which we have already given, we shall from time to time add others. Corporation control of legislatures is evil enough; corporation control of the courts is infinitely more sinister for this reason: One purchased decision makes the law for future generations. That is the way courts work—one final decision is binding upon all the judges in the same State. Every future similar case that comes up must be decided the same way. It will take several decades of honest courts to undo the wrong that has been fastened upon the people of several Western States by the judges that the railroads and corporations have controlled in the past.

The Courts and James J. Hill's Railroad

THE SUPREME COURT of the State of Washington just about a year ago heard and decided a damage suit (HARRIS *vs.* the Great Northern Railway Company). They decided it *against the company.* The railroad company paid the amount of the judgment—about $1,400. They didn't mind that much money, but they went to work to guard against ever again losing a similar suit. Their Spokane attorney, M. J. GORDON, carefully prepared another opinion, *changing the law as previously laid down by the court.* This opinion he sent on to the head office of the Great Northern Company in Minneapolis. There it was carefully read by the chief counsel of the railroad, W. R. BEGG, and by him approved as an opinion which, if once inserted in the law books, would safeguard the railroad against ever again losing a damage suit like the Harris one. BEGG, the chief counsel, having approved the opinion, sent it back to GORDON, the local Great Northern attorney in Spokane. GORDON then carried the opinion to his close friend, Judge MILO A. ROOT, who had written the first opinion in the Harris case, and *got Judge Root to substitute the opinion which the railroad attorney had prepared.* Judge ROOT subsequently admitted this, and all the facts are established by correspondence and evidence in the possession of the State Bar Association. We presume that even those lawyers who criticise us bitterly for undermining popular faith in the sanctity of the courts will not fail to feel some horror at this transaction. The opinion prepared by the railroad attorney was so worded as to protect the corporation from future losses in similar damage suits. It was filed hurriedly, so that it might govern the trial court in Spokane in another damage suit against the railroad, about to be tried. GORDON, the local attorney for the Great Northern, who was the prime mover in this transaction, was himself years ago Chief Justice of the State of Washington, and resigned that office to accept the railroad attorneyship. While he held the office of Chief Justice, he handed down a long series of opinions which astonished lawyers by their corporate leanings. One of these set aside a clearly expressed statute and deprived any one but the widow and children of a man killed by the negligence of the railroads of the right to sue for damages for his death. This made it impossible, for example, for a mother to sue for damages for the death of her son. It made it possible for the railroads by carefully employing only unmarried men to avoid any pecuniary responsibility for the safety of the lives of those who worked for them.

Brutality

THE JUDICIAL SCANDAL now disquieting the State of Washington is only an episode. So rank have been many of the corporation decisions handed down by the Supreme Courts in some Southern and Western States that the Federal Courts are refusing to follow them. Among these are decisions which deny to the heirs of a foreigner working in this country the right to sue for damages for the negligence which results in his death. Having got this judicial precedent fixed in the law books, the way was simple for the corporations: employ foreigners only, use no safety devices, kill as many as you like, and remain immune from damage suits. The discrimination against citizens of the United States in the hiring of men is a small part of this brutality. In one case in the West where a score of miners were killed through the alleged fault of one of the subsidiary corporations of the Amalgamated Copper Company, the damage suits were all thrown out of court on the theory that the widows and children of these men had no rights. Some of the Federal Courts have declared this attitude contrary to law and justice. The scandal of the Supreme Court of Colorado is fresh in the public mind. That court was increased by law from three to seven—a somewhat similar increase was recently made in Washington—and the Colorado court was packed by certain corporations whose candidates were selected by them and appointed by the Governor. It was done to secure certain decisions unfriendly to labor and to protect certain franchises by which the city of Denver was despoiled. Exactly what happened in Washington happened there—a decision against a corporation was withdrawn and changed to favor the corporation.

The Little Land League

THE LITTLE LAND LEAGUE is an organization of which we know nothing except what may be read in its published prospectus:

"The Little Land League will persuade people to provide themselves with homes and employment by gardening; to live on the land and to do business there, and by doing so to promote their development intellectually and morally. It will show them where to buy land, help them to get onto it, and teach them how to make the best use of it."

We don't know how well equipped to do all this the Little Land League may be. We fear it is a purpose in which ambition neglects some fundamental elements of economics and human nature. But if it could succeed largely, countless generations would be the debtor of the Little Land League. To throw the protective tariff god overboard would help more than any philanthropic organization ever can. We would like to have the purposes here set forth printed on the top of every Congressman's desk, and we wish the Little Land League well.

A Man Who Died Recently

QUITMAN KOHNKE IS DEAD. For some panic weeks, four years ago, he was the storm center, in a sorely beset city. As health officer of New Orleans, he had failed to inform the public he served of the presence of yellow fever until it had reached epidemic proportions. For this he was rancorously criticized. For this, perhaps, he will be remembered when his brave and honorable failure of an earlier year to compel the city to protect itself shall have been forgotten. Dr. KOHNKE was, indeed, "a prophet without honor" until his prophecy was terribly fulfilled. When, in the piping times of peace from the fever-bearing mosquito, New Orleans had lulled itself into a false sense of security, he began to preach mosquito extermination and the netting-in of cisterns. But New Orleans wasn't worrying about yellow jack in 1904. Why borrow trouble? Seven years had elapsed since the last onset. In the face of public indifference, the health officer pushed his demand for an ordinance compelling the screening of cisterns. Interest awakened, rudely roused. How much would it cost? A hundred thousand dollars, perhaps. Why not a hundred million? The proposed ordinance was swept away in a flood of inextinguishable laughter. One year later New Orleans was flying the yellow flag. Quarantine had crushed its business, strangulated its commerce. The hundred thousand dollars had been saved—for a year. That much and more went for netting and ex-

foreshadow measures—too late. No man dares say, even now, how many millions the city lost before the bitterly and valiantly fought campaign was over. In that campaign QUITMAN KOHNKE, after his first error of judgment, bore an efficient and conspicuous part. Yet at the close of it he was retired from office. He left the city to which he had given tireless and unselfish service, broken in spirit. New Orleans can afford to forget wholly his mistake. It can not afford wholly to forget the prophet of science, the "outspeaker," in advance of his time, whose very failure points the more vividly the vital lesson of prevention. Substantially, the place the mosquito began to have in popular suspicion ten years ago is now the fly's, but the public is more willing to hear the warning and arm itself.

Where the Money Goes

IN 1899, the number of riders on Pullman cars in this country was 6,000,000; and they paid $10,000,000 as the price. In 1908, a year of hard times, there were 18,000,000 riders, at a cost of $30,000,000. A good deal of what is called increased cost of living in this country is really increased demand for luxuries.

Accommodated

FROM one who signs "Subscriber," Santa Clara, California:

"Referring to your editorial on books, your issue of June 19, will you kindly print 'the best pun in the English language' therein mentioned. I inquire for to know."

It occurs in the last verses of THOMAS HOOD'S "Faithless Nelly Brown":

"His death, which happened in his berth,
At forty-odd befell:
They went and told the sexton,
And the sexton tolled the bell."

The pronunciation of final judgment on this pun does not preclude an interest in other candidates.

On Loafing

NOW IS THE GLAD SEASON of rest and vacation, when most of us overwork. After months of physical stagnation in towns, we rush to scale a mountain or play five consecutive sets of tennis, and wonder when our hearts rebel. We are such victims to the habit of activity that we know not the habit of loafing. Body and mind need their ebb as well as their flood. Loafing, indeed, is not so much a habit as an art, and not so much an art as a process of spiritual digestion. Activity after meals is supposed to cause this too, too solid flesh to melt. The soul, also, grows thin without its still-times. Truly, to loaf is to meditate, to watch the clouds trail or the water-bugs dart on the pool, while puzzling problems come right of themselves at last, and the soil of the mind, lying fallow, regains its fertility. "All great deeds," said JAMES MARTINEAU, "are born in silence." So the great man, perhaps, loafs best—though it would be perilous to affirm that all loafers are great men! It is certain, at any rate, that the mind best stocked with fancies, most keenly alive to the varied sensations that knock for admission from the outer world, from men and nature, will make the most successful loafer. The mind keyed by long habit to pay attention to one stimulus only—to business, say, the stock market, the demand for this or that commodity—will be most lost when that stimulus is withdrawn. Hence the fretfulness of so many American men by the third week of their vacation. Sometimes they fancy it is to their credit, and hymn the gospel of "action." Is it not rather to their discredit, for does it not mean a poverty of interests in this pleasant world about them, a lack of spiritual sensitiveness, an inability to let the mind and spirit lie passive while new strength pours in upon them and they slowly digest the experiences of their lives? Unless we loaf, we lose a true perspective even on our practical, from day to day, activities, for it is always the tendency of action to become mechanical, and lose its value to the will. Unless we do nothing now and then, we are fitting ourselves but badly for doing anything. And the man who can do the most things, can do nothing best, for he has within himself the greatest store of interests and the widest touch with the floating impressions of sky and earth and passing throng. If he can "loaf and invite his soul," it is because he has not been too busy to remember the address.

The Watershed

By ALICE MEYNELL

Decoration by HENRY McCARTER — *On the way from Munich to Verona*

BLACK mountains pricked with pointed pine
A melancholy sky.
Outdistanced was the German vine;
The sterile fields lay high.
Through swarthy Alps I journeyed forth
Aloft; it was the North, the North;
Bound for the Noon was I.

I SEEMED to breast the streams that day;
I met, opposed, withstood
The Northward rivers on their way,
My heart against the flood—
My heart that strove to rise and reach,
And felt the love of altering speech,
Of frontiers, in its blood.

BUT oh, the unfolding South! the burst
Of summer! Oh to see
Of all the Southward brooks the first!
The traveling heart went free
With endless streams; that strife was stopped.
And down a thousand vales I dropped,
I flowed to Italy.

Furnish the Documents

THE NAVY LEAGUE of the United States includes among its officers General HORACE PORTER, ex-Secretary of the Navy TRUMAN H. NEWBERRY, J. P. MORGAN, Jr., ex-Assistant Secretary of the Navy HERBERT L. SATTERLEE. In a recent pamphlet, soliciting money from the public, it states among its purposes this:

"The Navy League undertakes to combat certain treasonable movements intended (*a*) to prevent enlistment, (*b*) to encourage desertion and dissension in the existing personnel."

Further along, the pamphlet says:

"The attention of the members of the Navy League is being called to the literature circulated among our sailors and soldiers discouraging enlistments and encouraging mutiny and desertion."

This talk sounds hysterical. We should like to see some of that literature.

Sun and Shade

SEASONABLE WARNINGS of the solar peril are now in order. "How to Avoid Sunstroke" will presently be predicated, explicated, and syndicated in the wiseacre corner of several thousand newspapers. Time was when we ourselves oozed well-meant advice upon the subject. But that is over. Henceforth we

"Fear no more the heat o' the sun,"

and exhort all others to a like redemption from the recurrent bugaboo. Not that sunstroke is wholly a myth. Indubitably there have been unfortunate folk who, overcome by the heat, have passed, from a bodily temperature which was the wonder and admiration of attendant doctors, to the cold waters of the Styx at one bound. But they are so rare and distinguished that they claim a headline to themselves, even in overcrowded metropolitan journals. In the tropics, sunstroke is almost unknown. Nobody thinks about it; therefore nobody suffers it. So, in our own latitudes, he who goes forth boldly and with his pores open, to face the radiant orb, wins through the dog-days with no worse harm than a desquamated nose. It is the timorous seeker after prophylactic measures in the dim and sheltered grotto of the barroom, who, on some humid August midnight, when the sun is running to schedule on the other side of the world, curls up like a caterpillar and goes to his fathers, in an access of heat-apoplexy. Haunters of the shady side of the street, beware. Malingerers under parasols, take heed. The few who have perished of too much sun, are, by the very singularity of their death, embalmed in the immortality of print. The myriads who have died of too little sun choke the churchyards and beggar the ingenuity of the epitaph-man.

Freckles

SING WE THE FRECKLE. Golden of hue, various of form, scattered with the prodigal fantasy of the stars of heaven, it is the caste-mark of the Tribe of the Open. Men of petty minds set forth in the public prints promises to deracinate it. Fallacious promises, happily. For where Old Sol has once set that seal, no art of man—no, nor wile of woman—may elide it, save by the somewhat radical method of skinning. And, indeed, why should the recipient of heaven's favor wish the mark thereof removed? The freckle is the kiss of the day-star. It is the signature of nature, our universal Alma Mater, upon the diploma issued by the great University of Outdoors. Baldur, the summer-giver, presumably boasted freckles. We may infer that Dionysius, born of the Sun-God, inherited them from his father. And we know BOB FITZSIMMONS has 'em. They are a proud luxury. Of a superb and triumphant woman it was once said: "She is so beautiful that she can afford freckles." Some day a poet will arise to laud, in imperishable music, the seductions of a bronze fleck upon a rose-leaf skin. Look to the man who keeps his freckles in fettle. They attest him a happy and rewarded lover of the wind and the sun. Such a one you may trust for a brain blown clean of cobwebs, and a vision cramped by no walls more confining than the radiant horizon.

Vacation Days

IN the issue of September 19, 1908, Collier's invited its readers to compete for a small prize for the best short account of a vacation experience. Not the fifty dollars we offered, but vivid memories of satisfactory days away from the year's grind, evidently inspired the great majority of the fifteen hundred manuscripts we received. The exact, simple story of the vacation—lakeside or mountain camp, adventures by the way—was asked for. And stories came from every corner of the world; surely no vacation spot in this country was left undescribed. In sifting the papers submitted it was difficult to reject, for hundreds, literally, seemed good and to the point. First place was given to Mr. Brush's story of "The Hayin'," because it seemed to us that it most successfully realized the writer's desire. To get "heart," loosen the stiff muscles, lubricate the creaky joints, and win a new clearness of vision is surely a fine use of a vacation. The others—Miss Harger, Mrs. Kay, and Mr. Spears—whose papers follow Mr. Brush's, are good guides. Follow any one of them and Collier's will guarantee that you'll come back with no regrets

The Hayin'

By Frederic Brush

Winner of Collier's Vacation Days Contest

WHY *the vacation anyway? What are we wanting to rest from? Heart weariness mainly; lonesomeness in the midst of many. The thing, after all, is just to* get heart *now and then; old-fashioned heartiness is the dose needed; such impenetrable soul-insulation does the modern city grow crystal-like about its workers.*

Anse

I DEVIATED from the direct way to the family and the hotel veranda and the whist, and went round by the home farm in the Alleghanies. The Old Man came down for me, and I noted, with a builder's quiet joy, a hold-back strap I had mended still doing sturdy service. Toward evening Anse Griffiths drove along with three other men and stopped in the road for a chat. I was shocked at his appearance. Humped there in the seat, he looked shrunken, narrow, age-wearied. I had a quick vision of the old beautiful Anse coming at me naked for a rough-and-tumble on the shore of Slater's Pond.

"What's the matter, Anse?" I said kindly. "Been sick late years? You don't look much like the fellow that mopped me over a half-acre of corn stubble at Burr's raisin' that last time. I got you, though, finally; do you remember?"

"I should judge that's the last man you ever threw," said Anse, looking kind of tartly down at me. "And you wouldn't 'a' done that if I hadn't let up a second on account of the pants. What's them bran-sacks on your shoulders for? You fellers see that bunch of waddin' passing along opposite you in the store windows and think you're giants, and gettin' bigger all the time. You don't fool any one up here. You're all in, Fred; any one can see that. You're softer'n a phosphated punkin. I'll back the Old Man to handle you now."

Another team had come up and heard this, and one of those semi-maniacal imbecilities of the first day out took possession of me.

"Come down here," I said; "we'll see who's sick, anyway."

Anse looked eight feet long as he unlinked from the wagon. At first feel of his arms I thought there was some mistake—that he had petrified. His hands sank upon me with the disconcerting impersonality of derrick hooks, and forty seconds later I felt the cold ditch-water seeking its level along my spine from both directions.

"Arn't you late with the haying?" I asked next morning.

"Yes, they backed out. Don't know just what I'll do. Hard to get men now—that's any good. You in your day were worth any three I've hired since." We gazed out over the waving acres, and I saw the wistful, slightly fearful old-age look in his eyes.

"I'll start in," I said, "and you can be the boy—till we get some one. I'm thinking a little hardening sweat-out might not hurt me. Anse started before I was ready, though."

I cringe now at the memory of that first week. I rode the machinery and pitched both ways. The wash of perspiration at times endangered the cured hay. Unused tendons creaked in their slots. Ten years of office adhesions gave way one by one. Bone-ends clucked at the unwonted strains. Blisters—blisters?—a spot without them became notable. Sleep was half-ache, and about the fourth day the water and food turned against me. The weather continued exasperatingly perfect.

The sixth morning I came down resolved to quit. "Another fine day," chirruped the Old Man. I looked in his glowing face and saw that he was back twenty years, with his boy again, and the old high hopes. "We'll show 'em how to do a hayin', eh? It goes like grease. Let's tackle the barn meadow to-day. How do you feel?"

"Never better," I said, and wired the folks the lie.

A little later the tide of vitality turned. I knew it first by being pleased at a bird upon the window-sill. Then came gradually boyish sleep, appetite, and afternoon staying power. Sloughing the superfluous, ever a part of progress, physical or mental, was becoming, as

The mower

always in its later stages, a pleasurable process. I got to looking back on the man I had been as a head, a few clinkered organs and a heavy load. I was getting all alive; what remained of me was all in use.

And, best of all, the spirit kept pace, or in advance. Certain city problems seemed to solve automatically, and life lined out clearly for the coming year. The most effective thinking of years was done on that mowing machine.

At the bottom of the last load I sank the fork to the hilt and broke the handle on a fair, slow lift. The Old Man cheered from the jammed loft—and hayin' was done. Then came corn-roasts, cooning, picnics, and scrub baseball, and another week slid by. On the return from a fishing we met Anse just outside the village.

"Get down," I said. "You ought to be ashamed to have picked on a tired, train-sick man that day."

Knowing that my main chance lay in superior quickness, I dived in as his latter leg touched the ground, and rushed him back over some blueberry bushes. His feet tangled, and in a half-minute more everything was satisfactorily arranged, and I fell upon him hard. I never felt heavier in my life—nor better. His expiratory grunt was to me the choicest nature sound of the season.

"That's one all," said Anse. "Come out here like a man, on the level, and have the rubber."

I saw that his wind was better, and that he appeared to be waking up. "I'll rassle you Wednesday noon," I said, "anywhere you like." On Tuesday I returned to the city.

That was a vacation so successful as to bring the feeling of never having had one before. Back to nature? No: back to one's self and to the basic verities of life. Back down where hand swings against hand now and then, and the inequality of ability marks the only caste. Not always to do hayings or dig ditches, but to do something, preferably productive, with the hands, close alongside of plain men. The ways are various, near, inexpensive; and the principle is right—for city office workers.

On the Rockies' Western Slope

By Lois Harger

TWELVE persons—two college professors and their wives, two juniors from Yale, five college and high school boys and girls, and five-year-old Robert—out for eight full weeks of invigorating days, of crisp nights, of fishing, hunting, climbing, and the utilization of old clothes; total cost, exclusive of tents owned and railroad fare, $32.50 each.

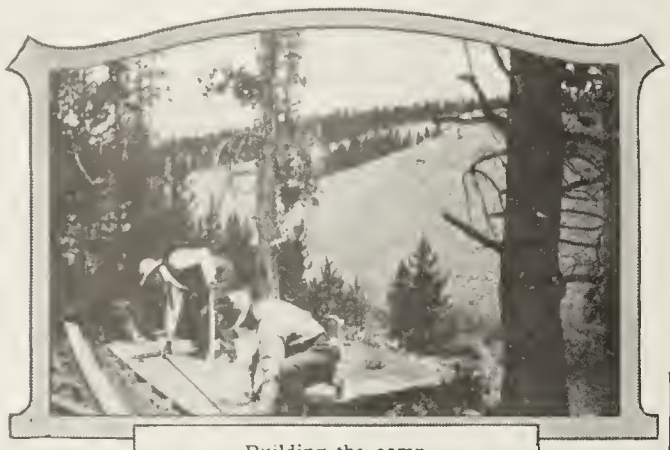
Such is the summary of our vacation spent on the western slope of the Rocky Mountains in Colorado, at an elevation of 8,350 feet, a mile from a post-office and five miles from a town.

We started July 11, and sought pleasure, not style. The outfit of two of the girls is typical of that taken by each member of the party—two large trunks, one filled with comforts and blankets, two empty ticks, a mandolin, several cushions, two camp chairs, a hammock; the other held several heavy short skirts, woolen shirts, heavy shoes with hobnails in the soles, large straw hats, a pair of rubber boots, and toilet articles.

The men went a day ahead, selected the camp site, and arranged for transportation of the party and its luggage. We pitched our tents in a meadow-like valley while a camp-ground was being prepared on the mountain-side, in the midst of majestic pine trees.

To smooth the site we built against large trees a wall of logs four feet high. Twenty feet back of that the men began digging. Earth was thrown against the wall until a level shelf was formed. On this they placed in a row three large sleeping tents: in front, a space five feet wide was left for a porch. To one side was the kitchen with wooden floor and walls, but a top of canvas: in it a stove, shelf-table, and box cupboards. Our dining-table, back of the sleeping tents, had on each side a log bench, seating six persons; a "fly" was over it. All the tents but one had served in former excursions.

An ice-cold spring, hidden in a clump of willows, was fifty yards from the kitchen. The pines provided material for our beds—the limbs and saplings made the frames, the tips of the branches filled the ticks.



Three dish-washing squads (one for each meal of the day, and each consisting of one boy and one girl) and two head cooks did the work. Provisions came by express from the city, the boys carrying the packages on their backs from the section-house where the daily train halted.

In early summer we found wild strawberries for our shortcakes, and later many rings of meadow mushrooms. We baked eight loaves of bread every other day, but when more sandwiches than usual were needed for all-day expeditions we baked three or four days in succession.

Fraser and three other creeks were near camp; each abounded in trout. Some one went fishing nearly every

Intellectual pastimes, too

A big fellow!

Nearly every evening we built on the level ground below the camp a huge bonfire. For this we carried wood from the mountain-side. Around the high-leaping, crackling blaze of sweet-smelling pine branches we danced the "barn dance" and sang college songs and camp songs to the music of guitar, mandolin, violin, and flute. Oftentimes other campers—the nearest a mile away—were invited for the festivities. For refreshments we served chocolate, made in the camp kettle, and hot cinnamon rolls—how delicious the lunch was!

When the camp-fire waned, we said good night, seldom later than half-past nine o'clock. Sweet were the beds of pine boughs and welcome the heavy blankets—for all through summer freezing temperature with clear skies was our nightly portion. We fell asleep listening to the yelping of coyotes, as near our camp as the willow-shaded spring—then dreamed until the sun came over the range and sparkled on the frost.

Toward the end we made parting visits to favorite haunts; then we began packing. Worn-out bedding was thrown away; old clothes were stuffed with pine branches and the effigies cremated at a grand camp-fire on the final night. All tents but one were down; the men slept out-of-doors. In the morning we ate and packed by stages, in order to get all the dishes in the trunks.

That afternoon, from the crest of the continent, we waved good-by to our summer's home—then down the eastern slope, taking our tents and such luggage as had escaped destruction.

MOST people spend too much money on their vacations. Usually, I spend all I have, but I make it go as far as possible. Once I walked from Utica, New York, down across Pennsylvania, Maryland, and West Virginia to southwestern Old Virginia, where I bought a skiff for five dollars and paddled down the Holston and Tennessee Rivers to Mussle Shoals, where I lost my skiff. I went on down the Tennessee to Paducah, Kentucky, and up the Ohio in river steamers to Pittsburg, and home again by railroad. The distance was more than three thousand miles, the time taken five months, twenty days, and the cost something less than two hundred dollars, all told. I camped out in woodlots, stopped rarely in hotels, sometimes in deserted barns, in log camps, and with the good-hearted mountaineers of the Tennessee and Virginia mountains. I carried a camping outfit—a little tent, frying-pan, two pails (three-pint and three-quart), ten or twelve pounds of food, some extra wearing apparel, and a camera. I worked in a Pennsylvania log camp for three days, dug potatoes one day, worked on a Holston log raft a week, on a Tennessee River raft a few days, was a river steamer roustabout for a week (there were seventeen of us, one white), visited the feud country, the corn and cotton bottoms, and added twenty pounds to my normal weight. I started out, determined to earn my way somehow, for I had only forty dollars cash besides my kit. The money lasted two months, and I was extravagant. It would not have lasted ten days in a summer resort.

Another time I bought a twenty-five-dollar skiff at St. Louis, put seven dollars' worth of grub in it, put a shotgun on the seat beside me, and rowed away to Morgan City, Louisiana, 1,200 miles distant. My river expenses were about fifty cents a day, including cost of boat. To this was added railroad fare to St. Louis and ocean steamer from New Orleans. I was on the water nearly six months, but two months of that time I was in a shanty-boat with a river gambler and a medicine man. We whacked up expenses, at a rate of about twenty cents a day each. They owned the shanty-boat, and charged me nothing for the place to sleep. Three weeks' board on a shanty-boat at Helena, Arkansas, cost me ten dollars, however.

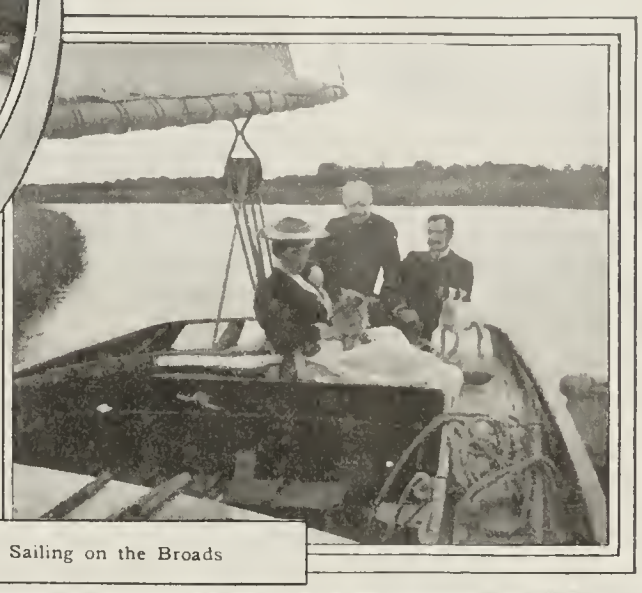
Of course, I rough it when I travel. I had a bicycle. I strapped a rifle to the frame, put a camp kit in my pack-basket, and rode along a woods trail to Adirondack depths, where I saw, but failed to kill, a deer. A week in the Adirondacks costs but three dollars for the best work-producing grub for a man. One should have a light-weight tent (I use a 6 by 9 sheet of table oilcloth), a frying-pan, two lard pails, a knife, fork, spoon, and tablespoon, with food to suit. I might specify, for two weeks, twelve pounds of flour, six pounds of cornmeal, four pounds of bacon, two pounds of sweet chocolate, one pound of salt pork, one-half pound of baking-powder, one pound of cooking chocolate, two cans of condensed milk, and two pounds of sugar. One can usually catch fish or shoot squirrels, young crows, porcupines, chipmunks, bluejays, blue herons, or young owls for fresh meat. I've eaten all of them, and they have flavors of their own—excellent, too.

I prefer my vacation at an odd time of the year, when the summer resorter is not abroad. Last February I went over an Adirondack trap-line with an old trapper friend. I toted my share and was company for him. It was on snowshoes, through the wintry wilderness. We

crossed a famous summer resort lake—now deserted, wind-swept, and frozen. We followed the trap-line along lake shore, up streams, along mountain ridge to the green timber of the Adirondacks—a tramp of fifty miles, counting loops and side-jumps. Marten, mink, deer, fishers, foxes, rabbits, grouse, jays, and chickadees—these we found or saw their tracks. The cost was five dollars, for already I had three-dollar snowshoes, a two-dollar pack-basket, flannel shirts, socks, moccasins, etc. My outfit, worth about fourteen dollars, has served many a trip.

Incidents? Fourteen inches of loose snow and a sixteen-mile lug one day up and down the mountains! I was soft, fat, and tender—on the trail I became very tired and very hungry. But after four days I was fit. Trail-hunger is an awful thing—but if one has bars of sweet chocolate in his pocket, he need not fear—chocolate is better than jerk (dried venison or beef), for it does not create thirst.

The trouble with vacation-seekers is their dependence on hotels, guides, first-cabin rates. A raw city boy of thirteen, I camped out alone. I've camped in farm pastures, in the crook of a rail fence, in an Arkansas swamp, on a Mississippi sand-bar, and beside a public highway. It's all outdoors! If one has the courage, he can make a little Lewis and Clark expedition of his own. All he needs—all I ever need—is a sheet of oilcloth, a pail, a frying-pan, an ax, or a blanket, and a few pounds of things to eat, in a three-peck pack. On a river, a skiff or canoe or raft must be had. And experiences? I was mired to my neck in a Mississippi mud-bar, sneked over a wing dam on the Tennessee, suspected of being a detective in the feud country, and traveling in a gamblers' river den is one continuous performance of experiences from a family row to a sheriff's raid. A bit of independence gave them to me.



gay with all manner of craft. On either side appeared fields covered with crimson poppies or golden hay, thatched cottages, browsing cattle, red tiled farmhouses, stately homes, and magnificent trees.

Soon we entered Wroxham Broad, and as we caught the breeze the skipper hoisted extra sail to show us what the *Fast and Furious* could do. A larger boat with scarlet canvas overtook us. Her flaunting sails were like the proverbial red rag to our helmsman, and, with glinting eye, he tacked across her bow, took all her wind, and scudded across the Broad before her indignant captain guessed his purpose.

As we reentered the river a wherry hove in sight, a craft peculiar to Norfolk, which sails closer to the wind than any boat afloat, and varies from twenty to seventy

A Holiday *on the* English Broads

By Ella Darrell Kay

LET no one think unlimited time and purse are necessary for a vacation on the famous English Broads, or "river lagoons." Our holiday was limited to five weeks, and we started for the Norfolk "playgrounds" via Montreal. Three days on the St. Lawrence, a glimpse of Quebec, and six days on the ocean, with an occasional iceberg in the distance, brought us to Liverpool.

There we took a through car on the Great Central, across country to Norfolk, passing the cathedral towns of Peterborough and Lincoln. We changed at Norwich for Wroxham, the center of yachting activities on the Broads. Here our yacht, the *Fast and Furious*, awaited us. Thirty-nine feet long and cutter-rigged, she drew three feet nine inches, and had a "jolly" or center-board dingey swung at her stern. The crew comprised a skipper and assistant, who not only navigated but cooked and did the "housework." The yacht was completely equipped and had accommodations for four people besides the crew. The rent was $40 per week, which included the men's wages, with an additional shilling a day for tobacco, and a tip of a sovereign—$5—at the end of the cruise.

On July 15, after stocking our larder from the Wroxham shops (the supply was supplemented later at numerous villages en route), we hoisted sail and threaded our way down the river Bure, which was crowded and

tons, carrying one tall mast and brown sail. The wherry, which lies so low in the water that it appears to be sinking, is a popular houseboat with our English cousins, and has the advantage over the usual kind, that it can move without assistance.

A run of seven miles brought us to Horning Ferry. As we passed the quiet old village with its picturesque windmill, dozens of children greeted us, singing according to ancient custom:

> "*Ho! John Barleycorn. Ho! John Barleycorn,*
> *All day long I raise my song*
> *To old John Barleycorn.*"

Their day-long vocal efforts bring them many pennies from passing yachtsmen.

Afternoon tea, served by the skipper while Jack took the helm, was most acceptable, for the strong breeze had given us an appetite, and we were equally hungry for dinner when we reached Acle, where we moored for the night. We read on deck by the long twilight, and at ten o'clock the men put on the boat's stout canvas night-gown, which kept us warm and cozy in the cabins.

On nearing Stokesby the next day, the skipper furnished us with some excitement. He was [illegible] to "quant" in order to get the yacht past a "tick[illegible]" spot of the river, when, on driving his pole too deep [illegible] mud, he was left suspended on the upper end [illegible] boat sailed from under him! The villagers on the bank yelled with laughter; I shrieked with fear, and the skipper tried to bring the boat around. The boy, meantime, swam ashore, and we picked him up a few minutes later.

At Great Yarmouth, which King John created a free borough, we had fresh, fat bloaters for supper, and nowhere else are they so good! We took a hasty look at the fine piers, the enormous fishing fleet, the old church of St. Nicholas, and then started across Breydon Water, the best bit of sailing in our trip. Breydon is the union of the Bure, Waveney, and Yare, and we had to take several reefs in our mainsail before we covered the eight miles to Lowestoft.

For the next fortnight we cruised on the Broads of Oulton, Hickling, Horsey Mere, Hoveton, and Womack, all equally attractive. Every morning we had an invigorating plunge before breakfast, and every evening we took the "jolly" and gathered water lilies or canvassed the farmhouses for milk and eggs. We visited the ruins of St. Benet's Abbey—built in Canute's reign—and many of the ancient churches whose spires towered above the lowlands. At Ranworth we saw the wonderful fifteenth century rood screen and the oak reading desk, both famous throughout England. And every day we gained in health and happiness from the tonic of the air that blew direct from the North Sea!

The banks of the Broads blossom with wild flowers and feathery grasses, and the landscape is dotted with twirling windmills. The hayboats are curious, apparently floating stacks, but propelled by a solitary oarsman, almost hidden by his cargo. The eel-fisher's hut, wedged into a creek, reminds one of Noah's Ark. The eel man, mending his nets in the sun or stringing worms with which to ensnare his prey, is a familiar and interesting character on these waters.

From a distance the numberless yachts on the Broads look like low flying birds, owing to the flatness of the land and winding rivers. Their hulls can not be seen for the banks, and the water, except at close range, is hidden by the rushes.

We took little luggage on our trip, and only warm clothing, including "sweaters" and caps, necessary for both ocean and Broads. Our holiday was perfect (we tell our friends that no one can know beautiful England until they have cruised on the Broads), and did not cost so much as five weeks at a popular mountain or seaside resort would have done.

The International Council of Women at Toronto, June 15-26

The President of the Daughters of the Empire of Canada, Mrs. Norheimer of Toronto, appears at the left. In the center is a view of the delegates at the door of the University Convocation Hall—Lady Edgar of Toronto stands at the right of this group. The right-hand picture shows Mrs. Edwin Grey, one of the most prominent of the English visitors. Every important nation in the world was represented, and the question of international peace was one of the leading subjects under consideration

Rev. Dr. Anna Shaw of Boston, President of the American National Suffrage Association

The lower group on the left are American women—Mrs. W. J. Waterman of Cleveland, editor of the "Searchlight," faces the others. The Swedish delegates are seen in lower right-hand corner. The large picture in the middle of the page is that of Her Excellency the Countess of Aberdeen, reelected President of the International Council. She is accompanied by her physician, Sir William Thompson. Lady Aberdeen in her opening address declared that if the homes of different countries could be brought in touch with each other so that there could be mutual understanding and sympathy, there would then be no more war

The March of the Germans

The Imperial Rise of the Teuton, and the Reasons for His Encroachment Upon the Ease of England

By FREDERICK PALMER

THE great German policy is the rabbit policy. Numbers count. While the suffragettes of London are belaboring M.P.'s with their parasols, the suffragettes of Berlin are singing lullabies. For every four British babies seven German babies are born. Each little boy means another soldier of war and industry; each little girl becomes the mother of more soldiers. You need only a compound interest table to figure out the future of Europe for yourself.

Any feminine skepticism as to how the plus three are to be fed and clothed is *lèse-majesté*. It is interfering in a problem which appertains to My Imperial Responsibilities. Remember, my daughters, that twins are no less welcome to me than to My Never-To-Be-Forgotten Ancestors. Continue to do your duty and urge your husbands to join the Navy League.

War Lord, is it? The Kaiser is the Incubator Lord. Unlike the old woman in the shoe, he knows—so the British think—precisely what he is going to do. He will use part of the surplus birth-rate in capturing London and supply the surviving portion with jobs belonging to Britons.

Eventually, the outward pressure of numbers must force a blow for more room, or else Germany, which regulates everything for everybody in the empire, will have to put a speed limit on the mercury-footed stork. No doubt he would obey like a good German subject, adjusting his gait to Imperial needs. Thus far, however, the beehive system, bulwark of the rabbit policy, worked out on scientific principles by experts in spectacles, has succeeded amazingly well.

Before '66 the Austrians and before '70 the French laughed at the experts in spectacles. Since Sedan the great armies of the world have all been patterned after the German. Germany has been a living threat of war, with war far from the minds of German statesmen. Being always ready, she has gained point after point without striking.

After '70 the spectacles began preparation for the victories of peace. Now it was the British turn to laugh. This armed camp was all very well for Sedan, but it must not think it could compete in trade and commerce with British mastery of the seas and with cheap food. The British are learning their mistake gradually, while the French had to learn it abruptly. For their system, the Germans say, is the system of all nations in the future. It applies equally to all affairs by land or sea.

A German Mother and Her Seven Soldier Sons

This photograph is unusual—not necessarily, as our German correspondent notes, "because a father and seven sons are serving in the army at the same time," for there are many whole families in the service of the Kaiser, but because, in this instance, all eight are in the same company of the same regiment. The soldiers' name is Shroeder, from Schierstein, and they are enrolled in the Kasteler Engineers Regiment

William *versus* Edward

IN DIPLOMACY both Delcassé and King Edward ought to subscribe to its merits. Both tried to beat it. Delcassé is admittedly the cleverest man in France. As Prime Minister he was in the way of the march of German policy. Germany waited her opportunity. When she was being called the mischief-maker in Moroccan affairs, she turned on France, saying that she would show who the real mischief-maker was. She reviewed Delcassé's career as a Foreign Minister, which was a record of deliberate, shrewd maneuvering with Germany as its object. Was this friendly? Germany asked. France did not want war, nor did Germany. Russia, the French ally, was sick from revolution and defeat. Germany knew the power of the cards which the mailed fist laid on the table. Her legions were ready. Delcassé retired.

King Edward is an amiable, rotund man who likes good company and everybody to be friendly, except the Kaiser. Though he has no constitutional right to do so, Edward has been framing England's foreign policy. He went about Europe smiling and handshaking and passing Berlin by. He made an alliance with Russia and with France and became exceedingly thick with the Italian King, while the best that the Kaiser could do was to paraphrase Beau Brummell by asking: "Who is your fat friend?"

It was a great stroke for peace. Now would this terrible Germany stop browbeating her neighbors and that poor, innocent British Empire? Now would she see the fruits of her wickedness and repent? To add to England's satisfaction came the Kaiser's interview incident.

William II does not like Edward personally, and, besides, he feels what any clever player, training hard, laboring under handicaps, must feel toward any rotund, elderly gentleman who is successful. He said some very savage things, which he felt, at the time, anyway, as most of us do when we get cross. A shout rose in the land: "*Lèse-majesté yourself!*" thundered the 62,000,000 Germans. "Stop talking!"

They are erratic, these royal Hohenzollerns, but they have the gift of yielding and of wisdom in great crises—the gift which has carried them from petty Counts of the Brandenburg principality to empire, with the eye of restless ambition on greater prizes. You remember how Frederick the Great told the owner to remove the windmill which interfered with the view from the palace of Sans Souci.

"No, your Majesty," said the miller.

"I'll buy you another windmill," said Frederick.

"No."

"But I am King of Prussia and I'll make you take it down."

"No, you will not, your Majesty. There is law in Prussia."

In the same spirit the German people said to the Kaiser: "Hep! Hep! Hep! Majesty, you're out of step. When old Fritz lost his temper and raged up and down no reporters were around. Therefore, we make a new law in Prussia." The Germans are fond of old Fritz and fond of the miller. Do not make the mistake that they are not fond of William II. He is their Emperor, and they have an affectionate pride in his abilities as a leader. They were simply correcting him. As a member of the "system" he took his medicine like a man—and on his first appearance in public read the prepared speech Von Bülow gave him. And he sticks to Von Bülow; for Von Bülow is a great Premier. You can find a royal precedent for almost anything, and William found one for this schoolmastering. Hadn't the Never-To-Be-Forgotten Grandfather accepted the dictates of the great Bismarck? For the present the Never-To-Be-Forgotten Ancestor, Frederick, is on the shelf. William II is in a sweetly constitutional spirit.

Six months ago Germany seemed to be effectually isolated. The British were enjoying her discomfiture and the Kaiser's when the Balkan crisis offered Von Bülow his chance to get even.

A shovelful of earth may be enough to endanger the nice equilibrium of the European balance of power. Consider the effect when Austria annexed Bosnia and Herzegovina, which was as large as a Texas county!

From the "Irish World"

This picture is entitled "J. B.'s Dire Forebodings," and as a caption is added a quotation from the London correspondence of the "Sun": "Before the British public has had time to recover from the scare caused by the revelation that in 1912 Germany will have as many 'Dreadnoughts' as Great Britain, the aeronautical correspondent of the London 'Times' raises a fresh alarm by announcing that Germany in the same year will be in possession of more than enough airships to make short work of at least ten British 'Dreadnoughts.' In that year, we are told, Germany will have twenty-four mammoth Zeppelin ships, each capable of over-sea excursions and probably speedier than any naval vessel. In the present year she will have four Zeppelins, and the magnificent factory at Friedrichshafen, endowed with over fifteen million dollars by the German nation, will be able to turn out at least eight vessels a year this autumn. Thus by 1912 Germany can have twenty-four Zeppelins, and her other military dirigibles will number at least a dozen." The English have been aroused by these facts to the point of assisting their own Government by a popular subscription, so that it may keep pace with Germany in aeronautic development

From "Lustige Blaetter," Berlin

On the deck of this heavily armed battleship, which is labeled "The Fear-Nothing" ("Dreadnought"), the English admiral may be seen reading a document labeled "Plans of the German Navy." The admiral is then made to exclaim: "Oh, Lord, how frightened I am!"

From "Simplicissimus," Munich

Under the title of "Fleet Panic," King Edward of England is shown in a padded cell, tied to his chair in a sort of strait-jacket, while he sees Zeppelin bugs buzzing in a ring about his head and German "Dreadnought" rats romping about his feet

Germans Hear the Call of Blood

SERVIA called on her mighty Slav patron for help, which it is said Russia promised. Of course Austrian rule in the two little countries meant progress and prosperity, just as British, French, or German rule would in place of Turkish. But the balance of power when the scales are dipping does not consider such a minor detail as this. Austria was mobilized and Servia when three million German bayonets heliographed a message to the Czar which said: "Amend the Berlin Convention and grant Austria her demands."

The Russian army was scattered and disorganized; the German legions ready to mobilize swiftly over the network of railroads, according to the method that leaves nothing to the "heroes" or brilliant individual improvization. Probably they could have gone to Moscow. Russia was too poor; she was in no mood for war on Servia's behalf, as Germany, not wanting war, well knew; and Russia yielded.

Down came Edward's house of cards. The wicked nephew was in the ascendent again. German statesmen regard Edward as a valuable enemy; they welcome every outburst of anti-German feeling in Great Britain. When Bismarck founded the empire the world prophesied its dissolution. The different States could not be held together. "You are all Germans," was his watchword. Foreign opposition when it takes the form of racial bitterness unites them. Not only this, but the Germans of Austria also hear the call of their blood. The Hungarians and the Czechs of Austria have been bitter against German

What WISHING DID

The Dismal Artist, the Lovely Lady, and the Jinnee

By *Stephen French Whitman*

Illustrated by FRANK CRAIG

IN THE rear of an old house which fronted on the Rue d'Assas of the Latin Quarter, a pretty young man was leaning out of an open window, gazing up at the stars, sniffing the June breeze, and contemplating suicide. His studio stripped of everything save rejected paintings, his rent badly in arrears, his stomach empty, and his love affair in ruins, he was at that pass where poisons no longer suggest cramps, nor the river chills, nor hanging an unpleasant shock for the scrubwoman in the morning. Truth is, he had already made such a mess of everything that he cared not two pins for any additional mess that might be incident to his departure from the world.

And yet, how beautiful a world was this upon which he gazed out! Midnight; a velvet heaven full of stars; the roofs, with their innumerable skylights all aglimmer, transformed from the wastes so prosaic by day into a half impalpable, enchanted coverlet, beneath which Paris, a tender smile on her face, was falling into dreams. In such a place, at such a time, surely it was the part of a young, healthy, breathing, pulsing, thinking creature to throw out his arms, turn up his eyes, and cry, ecstatically: "Youth! Life! Joy! Paris!"

But not so Gilbert, draped dolefully across his window-sill, and wavering between the river and a rope. The subtle witchery of night was baffled by his pessimism; he was determined to respond to no touching or amiable influence whatever; and when from the open window over him issued a burst of laughter and applause, envy disfigured his almost too handsome features.

"Confound them!" he ejaculated, bitterly. "How happy they appear to be!"

It was a party getting, as one might say, its second wind in the studio of the artist who lived over him—a successful artist, a prosperous and respected artist, a brazen impostor of an artist, who had somehow inveigled the world into smiling on him while yet not worth, so far as honest talent went, Gilbert's little finger. Glib, impudent quack of the provincial fair variety that the fellow really was! Yet hark to his reward: gay choruses, popping corks, clattering piano, screams of laughter. Yokel of a world, then! Well, Gilbert was about to take ample vengeance on the world—he was going to deprive it of a genius.

Overhead, a waltz commenced; the music floated sweetly out into the darkness; the vocal babble died away; the ceiling creaked rhythmically. And Gilbert had no choice but to imagine ladies with half-closed eyes, with parted lips, with temples daintily moist and irridescent (as if flecked with powdered mica), slowly revolving in the arms of fatuous admirers. Listening to that palpitating, languorous, heart-wringing melody, Gilbert forgot his empty stomach for his empty heart. Ah, lovely lady without mercy—would she not feel even a little sadness in the morning? He groaned, drew in his head, lit a candle, seized pen and paper, and, drooping against the mantelshelf—yet even in that dejected pose remembering to be as graceful as an Antinoüs—prepared to write his farewell.

"Rosemarie, adieu . . ."

A knock at the door! His heart stopped beating; all manner of extravagant thoughts flashed through his brain. Had luck changed at the last moment; was it relenting fortune that stood waiting there, or fame long delayed, or love repentant? His voice trembled as he uttered:

"Enter!"

An undersized, homely, untidy, perspiring youth in a blue apron staggered into the room beneath a vast wicker hamper.

"From the confectioner's, for the party!" And rich odors of baked meats and pastry instantaneously perfumed the place. A sharp pain stabbed Gilbert in the midriff; his mouth watered; his jaws ached.

"Get out!" he roared, hoarsely. The youth, by a miracle, escaped with his hamper right side up; Gilbert slammed the door. Fifty times he fumed up and down the studio before he could summon enough philosophy to say: "After all, where I am going they may not want to eat." Forthwith, he hurried back to his letter.

"Rosemarie, adieu . . ."

And the memory of the roast turkey and the rich tartlets slowly faded. "Oh, Rosemarie; oh, star-eyed maid of ice; oh, cruel fair . . ."

The door opened: a frowzy, honest head—a porter's head—appeared.

"Is it here that the champagne is to be delivered?"

"No!" bawled Gilbert, and rushed forward to kick the door shut. He was struck motionless by what, in the dim light, he saw outside. A crusader in chain armor was embracing the wine porter with glad cries; a Chinese mandarin was pursuing down the steps a Watteau shepherdess. This pair—a whirlwind, as it were, of pink satin, purple silk, pigtails, and ankles—disappeared with a rumble down the dark chasm of the staircase. The crusader, for his part, dragged the porter bodily, all his bottles clinking, to the floor above. A ringing shout of delight signaled his arrival there.

"Devil take it!" cried Gilbert, almost in tears. "Is this the proper environment for a suicide? The size of it is, in order to do it quietly, decently, and with dignity, I shall have to make use of the river after all." And he pictured to himself the accounts in the newspapers: "Through the mysterious shroud of night a muffled splash . . . some faithful fellows rushed forward, but, alas, too late . . . afterward recovered, the unfortunate young victim was identified by—"

Gilbert paused to look himself over carefully.

"Was identified by what? Ah! By a curious ring which he wore on his left hand: an iron ring of Eastern workmanship, with a line of Arabic scratched round it, that had been given to him once on a time by an old model from Algiers, for good luck."

There Gilbert, holding up his hand, was moved to address that trinket with ironical admiration.

"Invaluable amulet, what good luck you have brought me! Or wait; is it perhaps I that have been at fault? Maybe I have not used you intelligently. Does it take an incantation to start your talismanic properties? Is there a jinnee attached to you—a Jinnee of the Ring, as in the Arabian Nights: should I rub you and command him to appear? So! Jinnee of the Ring, appear! What—nothing? Louder, perhaps; he may be asleep in a grotto of crystal in the Black Isles. Very well—"

And out of sheer perversity, indifference to common sense, and general light-headedness, he struck an attitude and bellowed at the top of his voice:

"Jinnee of the Ring, appear!"

"Here I am," answered a deep voice from the doorway.

In the doorway stood a gigantic figure swathed in amethystine robes, girdled with simitars and daggers, crowned with a conical white turban and an aigret, decked out with necklaces, earrings, bracelets, and anklets that sent forth, in the candle-light, a blaze of multicolored rays. This resplendent creature was of vast yet lean frame, swarthy, and incredibly ugly—with a marvel of a hooked nose, protruding eyes, a long chin, and ears like sails. Yet there was nothing ludicrous about him, but rather something strangely imposing—as if, being the sum total of all ugliness, he obtained for that reason a unique, startling sort of grandeur. Gilbert, in fact, was overwhelmed.

This apparition, with a magnificent gesture, closed the door behind him. In sepulchral accents, he announced:

"You perceive in me the Jinnee of the Ring, the slave of him who holds the ring, ready to obey that person in all things. For this purpose I have instantly flown hither over Ispahan, Caschan, Coam, Moussoul, Damascus, Grand Cairo, Bagdad, and a variety of other interesting places; and the reason why you had to call twice—for which I ask pardon—is that I collided, while in full flight above a desert in Persia, with the fairy Maiounè, who was bent for the Kingdom of Deryabar."

Gilbert plumped down upon a stool.

"My brain!" he gasped.

"Compose yourself," replied the jinnee graciously, "and reflect seriously on what you most desire. For I have to tell you this: the virtue of the ring is limited; three wishes you may have granted, but no more than three. To forget that is to make a serious mistake, as I shall demonstrate. May I sit down?"

Gilbert sprang up in a twitter.

"A thousand pardons!" he stammered. "Be seated, pray, Monsieur—"

"My name is Katapapoum," boomed the jinnee, arranging himself on a broken-backed chair. The candle flame, flickering in the breeze, made his lustrous robes, his simitars, his bangles, and his jewels so beautifully shine and flash that it was as if, indeed, the personification of profitable wizardry sat resplendent in the midst of the dilapidated studio. Gilbert was half-inclined to believe himself awake.

"Observe, now," resumed this Katapapoum, hitching up his amethystine robes, crossing his legs, and wagging a long forefinger—"observe, now, the danger in forgetting that one may have but three wishes of the ring. The Rajah Bhava, whom I had the satisfaction to serve and see buried two thousand years ago, flown with a violent ambition, used up his last wish in encompassing the rout of the Bahelkas, near the seven mouths of the Indus. The next year, when he became enamored of the daughter of the Sassanian king—to which lady, I may tell you in confidence, the Peri Banou stood godmother—he could not get her to look at him, and so briskly pined away and died. The Mogul Jahan's last wish was for something in the shape of the Taj Mahal. Twenty years building? A hundred thousand lakhs of rupees? Fiddle-dee-dee! He rubbed the ring; I took in my belt, and knocked the Taj together for him overnight. But later, when he was languishing in prison, did he not curse the day when he had been seized with architectural ambitions? How many more shall I cite? Boabdil, who squandered his three wishes without dreaming that the Kingdom of Granada was going to collapse about his ears? The Sultan Achmet nd Din who, after a life of great magnificence and the most picturesque debauchery, was drowned in a camel trough, blurting out: 'Spendthrift of wishes, well served!' Ah, the arrogant conquerors, the superb kings, the beautiful sultanas, all at some unfore-

In a spacious chamber full of shadows sat a beautiful star-eyed figure

seen extremity, wailing for help, for Katapapoum, for one more wish! They gaze at me piteously out of the past; they seem again to approach me on their knees, but now united in their supplication, like a great host reaching from the horizon, glittering with crowns and murmuring like the sea. Their voices haunt me. Hark!"

The jinnee slid swiftly into a grotesque listening attitude. And, on the silence, there stole a vague murmur, a murmur that seemed to come from overhead, from underneath, from out of doors, in short, from everywhere—a rustling, a pattering, a whispering, a crying: "Where is he? Where is he?" And finally, voices echoing, voices ringing, voices screaming and shouting: "Katapapoum! Katapapoum! Katapapoum!" The air throbbed with that eery outcry which, in a moment, as mysteriously and suddenly as it had risen, died away.

Gilbert's hair rose; chills fluttered round his spine; his eyes goggled at the jinnee, who, with a reassuring smile, said kindly:

"I will not offend you by believing it to be that supernatural trifle which affects you. Rather, I shall do justice to your modesty by supposing you abashed to find yourself in the boat which so much royalty has occupied. Dismiss your trepidation; consider that he who holds the ring is to me, his slave, as royal as the finest, and that many a king was not a king when first I appeared to him. So then, perk up, explore your desires, trust in me, and fire away with your wishes. So saying, the jinnee put on the most competent and promising look imaginable.

"I am not dreaming?" stammered Gilbert. "And you are not having a joke on me? Ah, Monsieur Katapapoum, that would be a sorry joke, with me at this extremity!" Whereupon, moved by something glimmering among the jinnee's ugly features—something that seemed almost like pity and kindliness—Gilbert turned himself practically inside out: revealed his whole career in failure, his final plight, and the fatal determination he had taken. "And," he concluded, with a wild laugh, "I am at such a desperate pass, and you come upon me so neatly at the last possible moment, and there is something in the night, the hour, and your aspect which so strangely moves me, that I am inclined to throw my brains to the winds, become as crazy as you seem to be, and take you up!"

"I ask nothing better," stoutly returned the jinnee.

"Well, then," cried Gilbert, drawing a deep breath, "the three wishes! First, I wish for wealth."

"For wealth, of course," repeated the other calmly, checking the item on his fingers.

"Second, I wish for fame."

"Naturally, for fame," echoed the jinnee. "But look out! Only one wish remains. Will you not remember my advice and save it for a rainy day?"

"Never! I wish that she may love me and accept me."

Katapapoum dropped his hands in his lap.

"Ho, ho! Wealth and fame are abstract things, but here is a concrete lady. I must have particulars."

"Particulars! Why, she is a rhapsody of pink and white and gold, a Helen setting fire to hearts instead of towers—'her fair hair shines like golden threads; her forehead is whiter than the lily; her eyebrows are arched like small crossbows; her face has the beauty of the morning, for it is both white and vermilion; her lips are ardent with bright color; no spice can be compared with the sweet breath of her mouth!'"

"A Peri! I see her, and am dazzled by the sight," declared the jinnee. "But now, her name and station?"

"Her given name is Rosemarie. She studies singing; she aspires to be a prima donna. She lives all alone in the Boulevard Raspail. But how she moves on her business through the hubbub of the Quarter, aloof, above, with calm gaze fixed ahead, like a Diana through a rout of Maenads! Oh, unattainable! You must know, I have been begging her for a year to marry me."

"Is it possible! And she is able to resist you?"

"She puts her hand on mine, looks down into my soul, smiles sadly, and says: 'Poor Gilbert, if only there were not a mysterious something lacking in you!'"

"Perfectly!" exclaimed Katapapoum, clapping his great palms together. "I understand. I will fix it. She is yours. You shall see your three wishes granted in six months."

"Six months!"

"To the day."

"You swear it?"

"By Danhasch and Caschcasch, the Familiars of Solomon, by the beard of the King of the Jinn, by the flying cloud which is the ghost of Camaralzaman, I swear it!"

"Ah!" ejaculated Gilbert, overcome by such an oath. And while he was still gasping, the jinnee towered suddenly to his full height, salaamed, embellished the gloom with a last swish of his lustrous robes, with a final flash of his ornaments, and vanished through the doorway. The door slammed shut. In the silence, there rustled to the floor, as if dropping from the ceiling, a little flurry of bank-notes.

"Money!" sobbed Gilbert, precipitating himself upon this treasure. "Yes! No! Yes! I am awake! It has begun!"

Suddenly, from overhead came an outburst of joyous shouts.

"Gay dogs, how happy they appear to be!" murmured Gilbert, gazing upward with a generous and sympathetic smile.

II

IT WAS midwinter: the roofs were strewn with snow; slowly across that gray expanse the dusk was stealing, like a falling of tenuous gauze veils, dun-colored, fold settling on fold. In the shadowy studio of Rue d'Assas, Gilbert, gazing out, sighed wistfully, like a growing child still taking pleasure, against his better judgment, in a fairy tale.

"Six months. Oh, incomparable Jinnee of the Ring! Will you not return now, at last, to view your completed work and take my thanks?"

"Behold me!" answered a deep voice behind him. And Gilbert, whirling round, was barely able to perceive in the obscurity, hovering just below the door-top, the incredibly ugly yet imposing features of Katapapoum.

That personage, for six months associated in Gilbert's thoughts with turbans, caftans, simitars, and jewels, was disguised in frock coat, light trousers, and top hat, in which habiliments his gigantic frame appeared as awkward and bizarre as would the figure of an ordinary mortal in a masquerade. With a deprecatory smile—which made his homeliness positively stupefying—he apologized:

"This get-up is necessary, I find, in so materialistic and skeptical a capital as Paris, where I have been posting hither and thither, this half year, on your affairs. At first, I confess, I believed I could fly round as freely in my natural state as in the Kingdom of Ebony, for instance, where I assure you the appearance of a jinnee would hardly block the street. But here, not only is my proper attire too striking, but also my ordinary means of travel seem too spectacular—consequently I have even had to come down from clouds of cabs. Ah, dear young man," sighed Katapapoum, "hereabouts I have put off many comforts for your sake. But I have saddled myself, in exchange, with some delicious vices. For instance—" And, with an extraordinary flourish, he offered Gilbert his choice from a fat caseful of regalias. Gilbert, indeed, needed something to calm his brain, which had begun to reel, as it did on that June evening.

"And yet," cried Gilbert in trembling tones, while peering earnestly up at the other, "I must be awake, and really see you, or else why are my three wishes granted?"

"Ah," said the jinnee, "that is the point. Are you satisfied? How about fame?"

"Fame!" Gilbert threw out his arms. "Beyond my dreams! All my rejected paintings were spirited away; they blossomed in the show windows of the most exclusive art dealers; critics came galloping to fall into ecstacies before them; the journals fought for the privilege of praising them; there appeared at my door a host of reporters, servile tradesmen, estranged friends, dilettantes, collectors, and veiled ladies; there poured through my letter slot like a Niagara, invitations, declarations, requests for autographs, photographs, and biographies, commands for portraits, orders for the mural decoration of town halls—a thousand solicitations. I was on the line in the Salon. I shall be in the Luxembourg. I have a cigarette named after me. Clubs discuss me. Lecturers in the schools interpret me. Dear jinnee, I myself am a School!"

"Good! And now, what about wealth?"

"Can you ask?" Gilbert snatched a match, [illegible] and the studio burst from the shadows—a studio transformed and splendid.

"Look round you. The Genoa velvet on the walls, the silk rugs, the Chinese porcelains, the stands of armor, the carved episcopal thrones, the ivories, the enamels, the Greek marbles! Money, money, money! And when I remember to whom I owe it all, he is no longer awesome or terrible—an aura of benevolence envelops him, beautifies him, and makes him veritably lovable. Ah, Monsieur Katapapoum, is it in etiquette to embrace a jinnee?"

"Why not?" cried Katapapoum, with something glittering in his eyes. "But the last wish? The lady?"

"When finally I came to her thrilled with success, burning with energy and ambition, she said: 'Now I can see in you, at last, that something which you lacked so long!'"

"As I foretold. And you?"

"I immediately slipped on her finger the enchanted ring."

The jinnee stepped back, as if that possibility had not occurred to him.

"The deuce you did! Then she is now, by rights, the one I serve. This complicates matters. Wealth, fame, love—those are simple things; but who knows what a woman is going to wish for? Well—" he shrugged his titanic shoulders—"Kismet! You must present me to her regularly; I never descend through the ceiling, in a cloud of smoke, upon a lady."

"At once!" exclaimed Gilbert. "I shall be only too glad to show her that being she thinks is only a pleasant fantasy of mine."

He clapped on hat and greatcoat; they sallied forth into the snow, and briskly set out for the Boulevard Raspail.

The snow was melting; a mist filled the street; through this vapor all lights seemed diluted and enlarged, so that their uncertain radiance, and the vague appearance of pedestrians, groups seated before cafés, and moving cabs, contrived a scene as if out of a shadow world. The air was heavy with that intoxicating redolence peculiar to Paris; the mingled odors of wood smoke, of violets, of absinthe, of perfumes. As the jinnee and the young man marched, Gilbert could not prevent himself, while sniffing this metropolitan scent, from bursting forth, in a transport:

"The air—ah, the Paris air, Monsieur Katapapoum! Is it, in your vast experience, like the air of any other place? Does it not more delightfully go to your head? Do you not get from it the most unruly little mental quivers; do there not dance up and down before your mind's eye, as if in a perverse kaleidoscope, charming, chic, wild, sweet visions? It is reprehensible, this air; it should be apprehended somehow—but never mind. When I sniff it now, I smell absinthe, cigarette smoke, and mignonette—I am filled with all the gay impulses of a François Villon . . ."

"And when," Katapapoum continued for him, "with your exceedingly discriminating nose you smell the especial aroma of the Boulevard Raspail, you contain the good ideas of a fiancé."

"Ah," ejaculated Gilbert, somewhat crestfallen, "certainly I do! But now and then, for a moment, youth—"

"With wealth and fame to incite it—"

"And Paris to abet it—"

"But Paris—does it, after all, contain anything but one house, and that on the Boulevard Raspail?"

"You are right!" cried Gilbert, remorsefully. "How sharply you discern, beneath my unworthy badinage, the good in me! Here, then, is all my Paris." And they turned into Rosemarie's domicile.

In a spacious chamber full of shadows there rose from the piano, at their entrance, a beautiful and slender creature, star-eyed indeed, with a face behind which a pure light seemed burning, and crowned as if with an aureole of ruddy gold. With what inimitable grace she turned toward them; what princess could better have expressed, in one slow, fluid gesture, tranquil inquiry prepared to melt into graciousness?

"Rosemarie," said Gilbert, as one who presents to a queen a sovereign potentate, "here, at last, is the Jinnee of the Ring—Monsieur Katapapoum."

A smile slowly stole into her face; her eyes filled with intelligence, with appreciation, with friendliness. Moving forward, her gown floating round her—and, in that movement, seeming herself to float rather than to walk—she held out a hand to Katapapoum. He kissed her fingers, towered again, and stared at her, his features made the more grotesque by his amazement. At last, as if awaking from a trance—

"Ha!" he rumbled, huskily, "where now is the Peri Banou, and who hereafter will sing the praises of Bibi Fhamm, the Yellow Rose of Timur-leng? Lady, in this quiet room you, with merely mortal ears, can hardly hear anything extraordinary; but at this moment I can hear, rising out of the past, from the wrought marble tombs of all the sultanas of all times, a soft, sad, concerted cry—a cry inexpressibly reproachful. 'Apostate! Apostate!' utter the silvery voices of all those beauties whose slave I have been, first in service, then in tender memory. No more! They are forgotten."

Comment on Congress

By MARK SULLIVAN

TO NEWSPAPERS throughout the United States, and to individuals who happen to be in a position to test public opinion, but especially to newspapers, we address this request:

Find out and state whether the sentiment of your community favors the revision of the tariff which has been made by Senator Aldrich and the thirty-eight faithful followers who give him his power, or, on the other hand, the revision downward which President Taft promised when he was a candidate, and which the ten Insurgent Senators have tried in vain to bring about?

If there were a vacancy in any high office in your State, Governor or United States Senator—or even the Presidency itself; if Senator Aldrich or any one of the thirty-eight Senators who follow his leadership regularly were one of the candidates, and if the opposing candidate were Cummins or Dolliver or La Follette or any other one of the ten Insurgent Senators, which would get the popular vote?

We should like to see newspapers everywhere state the opinion of each community upon these points. *And from newspapers and individuals generally this paper would like to hear.* (If there is any way of getting the opinion of the country on this subject before President Taft directly, we should like to see that done, too.)

One Example

WILLIAM ALDEN SMITH of Michigan is one of the Senators who have slavishly voted with Aldrich on practically every important ballot during the present session. (Aldrich is only one man. He would have only one man's power but for the servile Senators who do as he tells them.) One of the newspapers in Senator Smith's home city, the Grand Rapids "Evening Press," has been getting after him in especially able fashion. In the course of its criticism, the "Press" says:

"As an observant public man you must have noted the fact that *Senators Cummins, Dolliver, Nelson, and Beveridge have behind them the almost solid sentiment of all the Middle States, including your own.* You must be aware that, judging by the expressions of the newspapers and of the people on the street, at least three-fourths of the people of Michigan believe that you misrepresent them in your votes in the Senate."

The "Press" limits its generalities to the Middle States. We believe that these words could just as truthfully be printed in the leading newspaper of any community in the country, with some few possible exceptions on the Atlantic Coast.

Is This Too Wild a Hope?

THE ten Insurgents in the Senate compose the only effective opposition to the present domination of national politics by the power of organized wealth. These men, as a group, are entitled to the complete confidence of the people. This can not be said of either the Republican or the Democratic organization in Congress. The Insurgents represent the sentiment of the people and put extraordinary zeal and intelligence into promoting the people's interests. Would it not be possible to have a new party with this group as a nucleus? Many Democrats, of whom Senator Gore—to mention only one—is a type, would naturally gravitate into such a group. Many more Republicans will join the Insurgents just as soon as the tariff is out of the way—they are chained to Aldrich's car for the present in order to get protection for the particular home industries of their own State. But they recognize that he is the spokesman of corrupt interests, they chafe under his rule, and the day the tariff bill is signed they will declare their independence. In the next session of Congress there will be fifteen Insurgent Senators.

The Man Who Runs the Senate

FROM the Congressional Record for June 19, page 3567:

"MR. GORE subsequently said: 'I ask that certain documents may be printed in the Record in connection with my remarks.'

"THE VICE-PRESIDENT: Is there objection to the request of the Senator from Oklahoma to print certain statements in connection with his speech?

"MR. ALDRICH: *None whatever.*"

The point of this is in the last line. Can it be beaten as an illustration of one-man power in a deliberative body of ninety-two men? Mr. Aldrich is boss of the Senate, not through any constitutional prerogative, not by virtue of any meat of personal greatness he has eaten; but solely because there are thirty-eight Senators—their names were printed on this page two weeks ago—who always vote with him. Aldrich is the accredited spokesman of organized wealth; the other thirty-eight are his assistants. Aldrich has but one vote; it is the votes of these other thirty-eight that give him his power. The people of California would hardly elect Aldrich to the Senate if he came before them; they have done exactly the equivalent in electing two Senators, Flint and Perkins, who always vote with Aldrich. The same may be said as to twenty other States.

Uncle Joke Cannon

This cartoon was drawn three years ago by the well-known Italian humorist, "Cir," who made at that time a series of six caricatures for Collier's. The portraits of Roosevelt, Taft, Harriman, and Fairbanks were published in the spring of 1907. "Cir" appears to have had the prophetic soul to foresee Cannon as a tariff-maker, and took advantage of a popular slang phrase to picture the lemons Cannon will hand the country

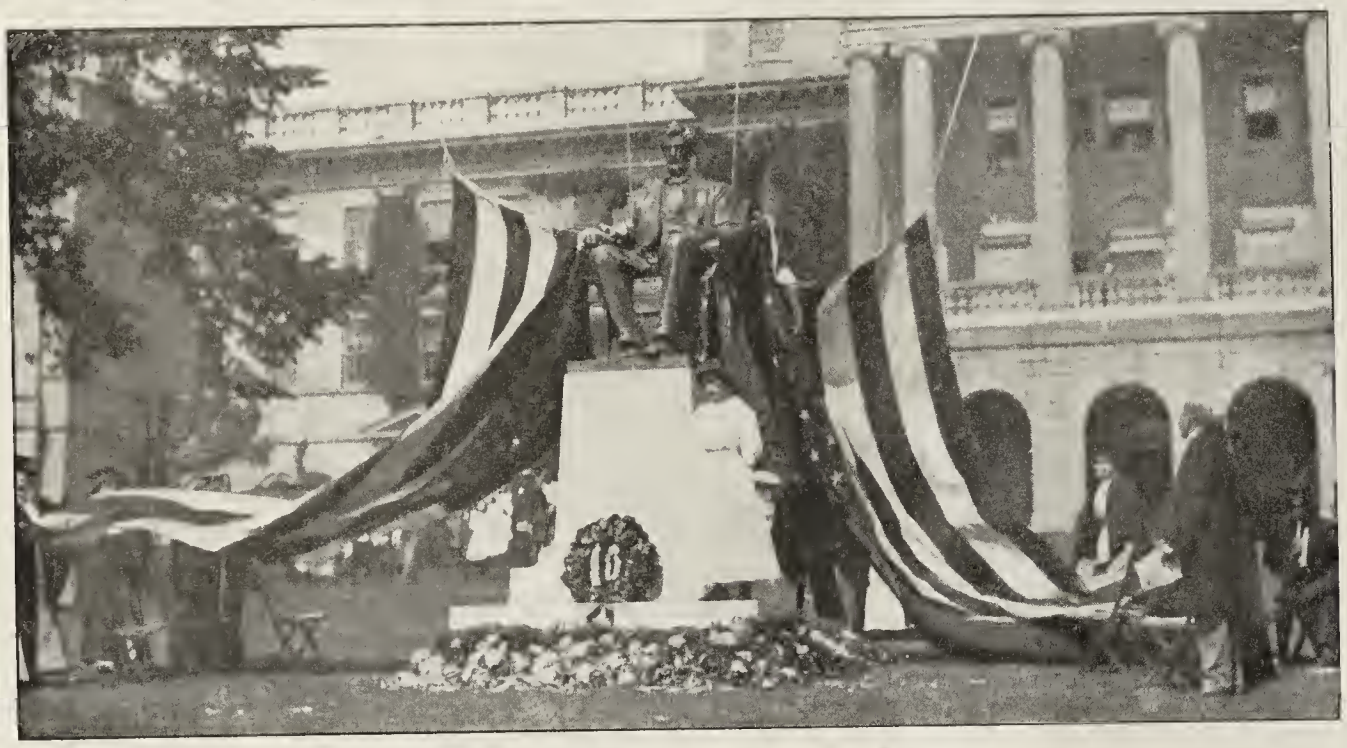
One Senator's Point of View

THE independent oil producers of Oklahoma, men opposed to the Standard Oil Company, constitute one of the most important industries of that State, probably the most important next to farming. They are extremely eager to have a duty on oil. They form the backbone of the group which has been pleading with Congress to give them this duty. They are good men, much more entitled to consideration than most of the interests clamoring for protection. Senator Gore comes from Oklahoma. By every law of politics he would be expected to obey the wishes of these powerful men in his State. In an analogous situation, a Senator from any State would count it his highest duty to work for what a powerful industry in his State demanded. That is what is done in ninety-nine cases out of a hundred—it is the very method by which the tariff has been made. But Senator Gore did not vote for a duty on oil. In casting his ballot to put that commodity on the free list, he delivered a speech no less high in its literary form than sound in political morality. That speech closed thus:

"I confess there is a good deal of human nature in me. I wish that this cup might pass from my lips. Many of the independent producers in the State of Oklahoma are my personal and my political friends. They would render me any possible service, and I would reciprocate. I would render them any possible service that I could without violence to my conscience and my convictions. Perhaps my attitude on this occasion is attributable rather to verdure than to virtue. Perhaps when I have grown older in statecraft and in political finesse I may revise both my views and my policies. Mr. President, I am not unaware that I may now be making a serious, a fatal political mistake. I am not unaware that I may be ordering a political casket. I am not unaware that I may be like the ancient queen lighting my own funeral pyre. But, sir, *I shall never demand a protective duty in behalf of a product or an industry in my own State until I am willing to concede protection to every other industry in every other State of the American Union.*"

These are patriotic words. The disappointed oil producers of Oklahoma must respect Senator Gore for them. If the governing motive of fifty Senators were the same as Mr. Gore's, what a tariff we should have!

Isn't It About Time for a Thrilling Rescue?



In this cartoon, from the Chicago "Tribune," Mr. McCutcheon shows the unfortunate consumer bound to the stake by the Senators and the tariff boosters. The man who lives beyond in the big white house near the golf course has not only to rescue the consumer, but the people's faith in his promises

What the World Is Doing:

This Monoplane Stays in the Air

On June 7, Mr. Hubert Latham, made a flight of 1 hour, 7 minutes, and 37 seconds, near Chalons-sur-Marne, France This performance is noted as the first convincing test of the navigability of the monoplane

Unveiling the Lincoln Statue at Madison

The only replica of Adolph A. Weinman's statue of Abraham Lincoln, recently erected at Hodgenville, Kentucky, was presented to the University of Wisconsin by Thomas E. Brittingham of Madison, June 22

"Joan of Arc," in the Harvard Stadium

Miss Maude Adams, as the Maid of Orleans, in the pageant adapted from Schiller's play, was assisted by a company of 1,300 persons. The performance was enacted before 15,000 people, one night only, in the open stadium at Cambridge. The scenic and electrical effects were exceedingly elaborate

The Week at Large

TURKEY has all the peace of a volcano ernsting over between performanees. "The one supreme authority is the military junta which has Shefket Pasha at its head."

England has fed the colonial editors and dismissed them full of battle spirit to their several principalities and powers. Now she spreads the board and gathers the orators for the Imperial Conference of Governors, where one more brave attempt to impart international worry may be consummated. If speeches and banquets can prevent, England has determined not to be "the conscript appendage of a foreign power."

It seems probable that Lloyd George's Budget—"the creation of a timid brain," in the opinion of the English "Review"—will be slightly sheared and maimed, and then pass the House of Commons. What the House of Lords will do to it no man is saying. "This is a War Budget," said its creator; "it is a Budget for waging implacable war against poverty."

Mr. Kipling is not favorably impressed by the Budget. In lyric bitterness he says:

"They said: Who is eaten by sloth? Whose unthrift has destroyed him?
He shall levy a tribute from all because none has employed him.
For the hate they had taught through the State brought the State no defender.
And it passed from the roll of the nations in headlong surrender."

With American money Lloyd C. Griscom, former Ambassador to Italy, has built 1,500 frame houses in Messina, in bloeks of twenty, and nearly as many more on the Calabrian shore. As the result of the relief visits of American sailors in the earthquake belt, baseball is somewhat of a sport in Sieily and southern Italy.

In Washington the fight is on with Mr. Taft's reeommendation of a two-per-eent tax on the net incomes of corporations. La Follette's "Weekly" says: "This message eame to Congress at a most opportune time to serve the fixed determination of Senator Aldrieh to defeat the ineome tax and to aid him in passing the tariff bill with its exeessively high duties, just as he wanted it." Some other observers see in it a program to put the iron hand of regulation on trusts.

New York is still shaken by the murder of an American girl in a Chinese resort. The arousal of raee hatred, the use of the discredited and gruelling third degree in rounding up evidence, and petty persecution of aliens, have all resulted from the atroeious erime. The essential deeency and kindliness of average human nature are better revealed by the funeral honors paid to the late distriet political leader, Florence J. Sullivan. He was a man with faults of his own, and the political system which he upheld is doomed. But he helped to wipe the red-light horror from his local map. He showed an unwearied generosity to his people, whieh eame from more than a politieal intent. He was curiously sensitive to the welfare of his close personal friends, and this susceptibility, unusual in so rough and strong a nature, was one of the causes of his breakdown.

This is vacation week. Seholars have elosed the dreary tomes and betaken themselves to the hill-eountry. Business men and clerks make the seaside week-end a little longer each trip. The wilted statesmen of the national city refresh themselves in twilight motor flights through Rockhill Park. Much heat and good erops are promised a gasping and hungry world. Such eities as believe in and practise swimming, of which Washington is not one, have their municipal baths erowded to the brim with all-day praetitioners, mostly young fellows. One little bath on the island of Manhattan eashed in on three thousand swimmers on the red hot Saturday of June 26. The country districts are beginning to look for men against the time of the plenteous harvests.

Miss Maude Adams at Harvard

NATURE herself, generally less gracious than sentimental theater audiences, joined in to make Miss Adams's outdoor production of Schiller's "Joan of Arc" a success. A new moon hung over the Harvard Stadium and the woods of Domrémy, and not a breath of air stirred to interfere with the players' voices. Every seat was taken by what one newspaper, with unusual diserimination, deseribed as "a vast concourse of Bostonians and human beings to the number of 15,500 strong," and so quiet did they sit that Miss Adams's clear little voice carried to all but the topmost seats.

Her company was excellent, including several of those who have been associated with her this winter in "What Every Woman Knows" and other eapable players. One hundred horses, specially trained to the peculiarities of elanking armor, were sent on from New York, and a lot more were taken from Boston.

Miss Adams used an aeting version adapted from the perennial and stirring play of Schiller. The prologue, showing the peasant girl seeing visions and hearing voices under the Druid tree, made Act I. In Aet II Joan came to the king's court at Chinon and proved her supernatural powers by picking out the king from among his courtiers. The third act showed fighting between the English and Freneh; the fourth, the king's eoronation in the eathedral at Rheims and the accusation of the Maid; the fifth, a battle and Joan's death under the banner of the conquering French army.

It was an unusual and impressive performance, and,

A Record of Current Events

owing to the vast distances, most impressive, naturally, as a spectacle. For Miss Adams, who had had the production in mind for years, it meant the realization of her heart's desire. It is interesting to see the resources of so powerful a theatrical general as Mr. Charles Frohman, absolutely at the command of one frail little woman—our plaintive, plucky, elf-like Babbie. To the adoring public, such Miss Adams is and always will be. They do not think of the will underneath, and seldom realize the astonishing power—measured in the most material terms of cash, special trains, hundreds of "supers," etc., etc.—which is wielded by such illusive, ethereal qualities as an actress's winsomeness and personal charm. Miss Adams had but to say, when the preliminary arrangements were being discussed: "And one thousand men"—and there were one thousand men and more, and no end of armor and horses from New York. When, on the eve of the performance, one of the court favorites seemed lacking in personal attendants, and the stage director explained that no ladies-in-waiting had been provided, Miss Adams had but to say: "Get them," and the next evening there they were, twelve of them, properly costumed and rehearsed. An actress whom children cry for and simple young ladies adore can move mountains and make red-faced men with thick necks get down on their knees. There is steel beneath the velvet.

Seeing the Senate

THE Senate these days looks like a garden of many-colored flowers. Each Senator is clad in his own kind of costume, from the drab hue of Root through the graceful blues of Aldrich, the shiny alpaca of La Follette, to the cream-white front of Bacon.

The chamber is brisk with fan-play, while the pages, alert as grasshoppers, lead Senator Gore in and out and carry the suggestions of the Rhode Island master to the desk.

An outsider dropping in for the week of June 22-29, say, would gain the impression that considerable of the tariff change was a revision upward, with splendid reasons for the change, in each "*par*ticular instance," as the Senator from Georgia would say.

The acrid satire of Aldrich is a persistent feature of each session. He plays around the overheated opposition with a smiling swift delivery, like a famous pitcher hurling spit-balls at a timid batsman. His mustache quivers with mirth as he hands out a wicked and low-voiced jab to his floundering enemies. In real life it is rare for one man to be allowed those pauses and hushes for elaborating his irony and punishing the inept foe. He was in capital form as he repelled attacks on the International Harvester Company, and pleaded manfully for protective duties on agricultural implements.

But both high-tariff and low-tariff advocates are making a fight of few words. So sensational an item as a Penrose amendment to put crude petroleum on the dutiable list at a half a cent a gallon was debated for only an hour, and then defeated, 40 to 34. The core of that and one or two other debates was: Will it help Standard Oil?

The Wrights at Work

DOUBTLESS there are hotter places under the sun than the drill-ground at Fort Myer, Virginia. But the newspaper men and tourists gathered to see the Wrights fly said it was the worst swelter of their life during those tedious June days while the brothers were tinkering at the aeroplane engine and the propeller blades. The Wrights worked in a wooden shed while the spies of the public camped in a clump of bushes thirty feet behind the shed. In that group there was a man from Des Moines who was using his vacation in just this way, sitting out in the tiny patch of shade for eight hours a day and day after day.

When the New York "American" man arrived, he threw all his resourcefulness into solving the drink problem. He first sent a ten-year-old for soft drinks to the "Post Exchange," where the soldier boys buy sarsaparilla. Then a member of the Signal Corps described the various twilight clubs that hover on the outskirts of the reservation for the purpose of supplying drink for men. Other of the local residents told how you could hold up the brewery wagon at 3 P. M. and roll off a keg into the shrubbery. But before he was able to prove that the W. C. T. U. is powerless to prohibit in an anti-canteen army post, he put back to Washington to the shelter that a hotel affords. For the Wrights had meanwhile decided to let one more day slip without flying.

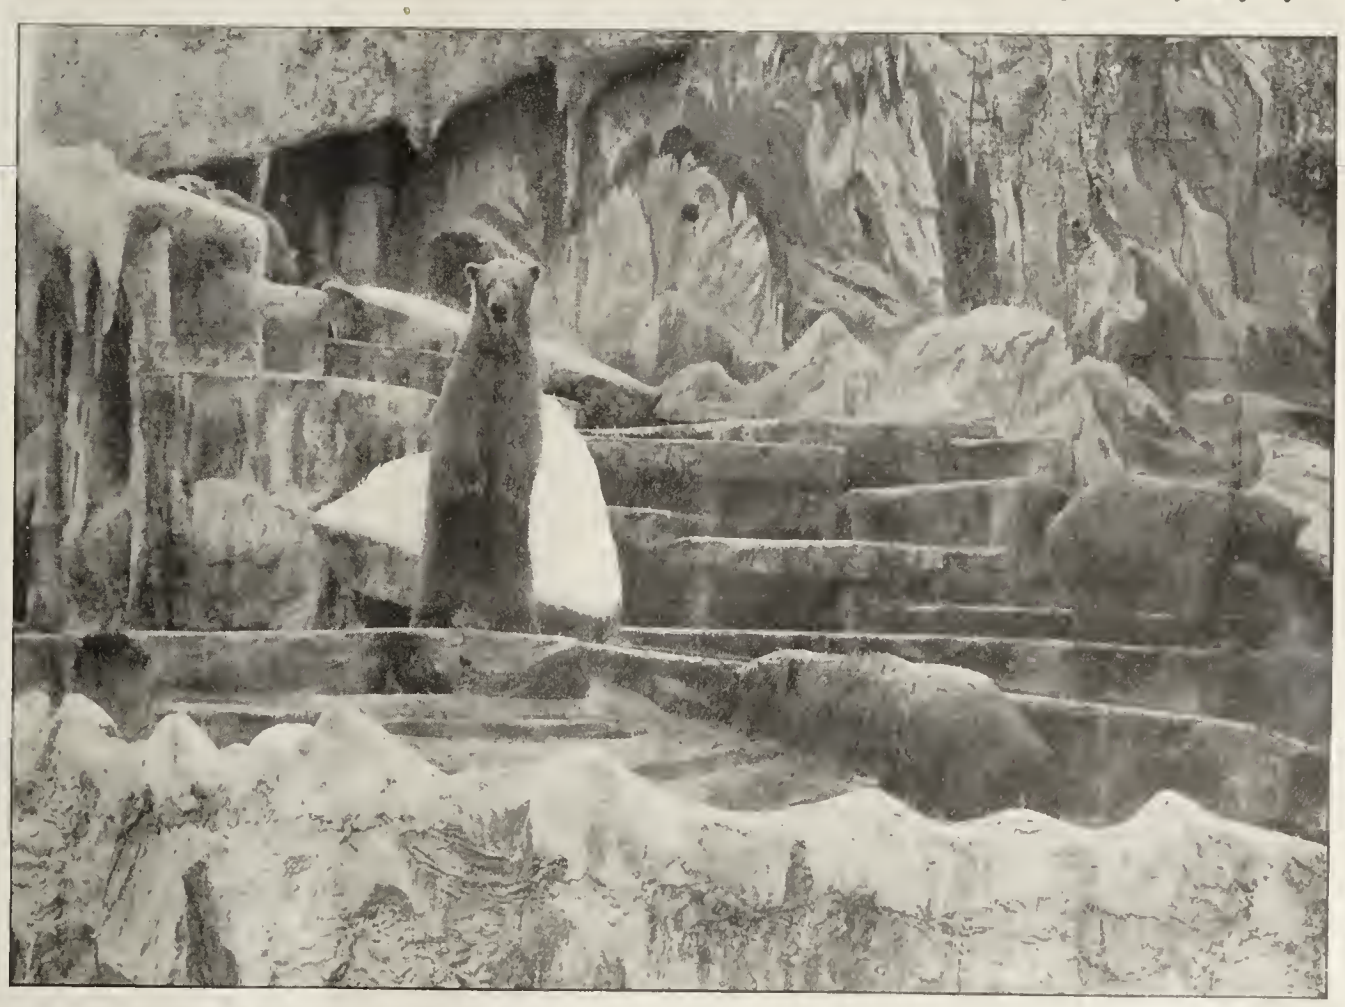
Wilbur dominated the situation. Clad in American suspenders, he drives away at the job without haste and without rest. He certainly looks like Sherlock Holmes. The sharpened profile and concentrated eye, the high lean face and satirical cast of the lips—each separate feature and then the whole effect recall happy hours with the eminent sleuth in book and playhouse.

One morning Wilbur and Orville stood outside their shed, looking to the south. A buzzard was gliding on the air without wing motion, with a slight veering from side to side.

"That's the way to do it," said Wilbur Wright.

The Nonchalant Rosebery

LIKE the Black Knight in "Ivanhoe" who saunters into the lists when the fight is nearly done, and smites down the foe, and then lounges back into the wings, while applause shakes heaven's hollow vault, Lord Rosebery picks up his forgotten prowess in the slack of summer, sets all Europe talking by a speech and a letter, and then loafs off into the background. Why be



The lions' lair, as it looks to the spectator—the background of the various "cages" is so constructed as to resemble the native surroundings of each particular group of animals in the Zoo

THREE years ago Collier's published a series of articles setting forth "Some Things They Do Better Abroad." These articles treated only of utilitarian advantages—practical problems solved—but it appears that even in amusement Europe can outdo us. Hagenbeck's Natural Zoo, at "The White City," Shepherd's Bush, London, exhibits an enlightened degree of animal captivity. No cages or bars of any sort are used, and the beasts can ramble in comfort around their earthen apartments as if they were in their native wilds. The animals are rendered securely aloof from spectators by a pit which they can not clear; while the chasm and all the doors to the dens are secreted from the front by dirt embankments, apparently casual features of the scenery. This method of exhibiting wild beasts was developed in Germany, and has been adopted in London

The invisible pit which takes the place of bars is an effective restraint, yet it leaves the captives in the open, and without the appearance of being caged

Face to face with a polar bear—the screen which conceals the breach appears in the foreground

NEVER FAIL PERFECT STROPPER

It has cost us $15,000 to perfect it, and the money was well spent because it has revolutionized the shaving problem.

You want one if this is true—
Let US take the risk

We know that if we can prove to every reader of Collier's who shaves himself—or should do so—that the **NEVER FAIL** will give a keener, finer edge than he ever saw before, **and will do it in four seconds,** he will fight before he gives it up. Just send in the coupon below, and the **NEVER FAIL** will go to you for ten days' **Free Trial** charges prepaid.

Then if you can't say with perfect truth: *"Never before have I enjoyed such Shave,"* SEND THE STROPPER RIGHT BACK.

No. 2
For Safety blades

Turn your daily shaving task into a real pleasure. You can't go on scraping painfully at your face with ordinary razor edges, and preserve that healthful, well-groomed look with which every gentleman should begin the day.

The **NEVER FAIL Perfect Stropper** is made for ordinary blades and every form of safety, including the Clauss—whether single or double edged. Just tell us the style of blade you use—we will send the stropper wanted.

Every user of safety razors knows that mighty few—if any—of his blades are actually fit to use until they are stropped. The **NEVER FAIL** will make every one of them good for from 50 to 150 perfect shaves, so it pays for itself in money as well as time saved.

Send no money, but send the coupon to-day—Don't miss one NEVER FAIL shave.

No. 1
For Old Style Razor.
Don't forget to mention the kind of razor you use.

NSWERING THE ...VERTISEMENTS PLEASE MENTION COLLIER'S

busy, energetic, full of wearing responsibilities, if you can make the welkin ring once or twice a year on a nonchalant accumulation of phrases.

What the noble lord said this time was written of Lloyd-George's budget in an open letter to the world on June 22:

"This is not a budget, but a social and political revolution of the first magnitude. It is obviously intended as one; it is one on the face of it. It will be carried over the heads of the people by the majority of the Commons without the faintest desire or attempt to ascertain the views of the people in regard to the vast changes projected. The British people will no more control them than if they were Tatars or Lapps. Surely the country must begin to see that there are vast flaws in the constitution and that the absolute rule of the party in power differs very little from the absolute rule of the individual, which is what we are used to call despotism."

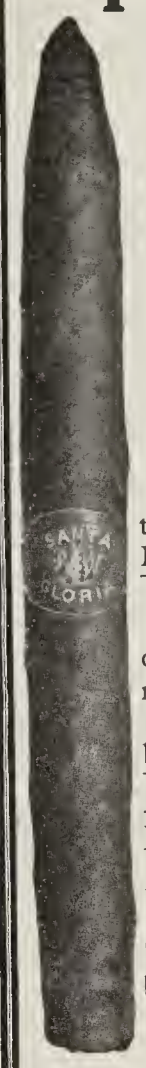
The Coast Traffic

IN SAN FRANCISCO'S Chinatown the importation, barter, and sale of young Chinese girls has been a leading industry for many years. That a few lawyers may get fat fees and a few Chinese highbinders may wear silk and avoid work, this traffic continues. It exists and thrives by virtue of a supreme law of the land. Not a direct statute legalizing the slave trade, but nevertheless a law, or decision of court, under which the direct law of the land is thwarted.

Chinese girls in the good old days gone by were cheap on the Pacific Coast. For a paltry $1,800 or $2,000 a Chinese might purchase a wife, servant, or slave. Then came, in 1892, the famous "Geary Law," which did exclude, and the price of Chinese women advanced by leaps and bounds. Any old maid was worth $3,000; a cross-eyed girl (many of the Chinese women have a cast in their eye), with big feet and under twenty years old, readily brought $4,000; medium to choice were quoted at $4,500, and a sixteen-year-old girl with small feet and flat ears became a bargain at $6,000 to $7,000 in good red gold.

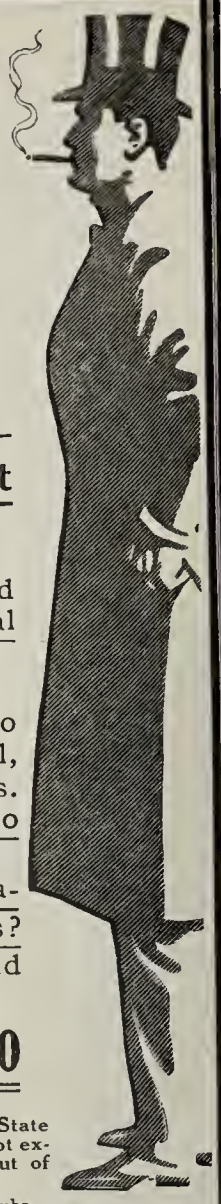
Then, like a burst of sunshine through a Dakota blizzard, came a decision of the Supreme Court of the United States. Again the highbinder paraded the alleys in silk, his finger-nails again grew long and pointed. Under the terms of this Supreme Court decision, all Chinese persons born in the United States were deemed "natives." They are known as "Supreme Court Natives." The price of young girls dropped fully ten per cent.

All Chinese, good, bad, and indifferent, return to China some day. Whether in the flesh, in good health, or embalmed and in a coffin, they all return. If a Chinese is fairly well-to-do and the father of a family born in the United States, it is not part of his scheme of life to allow his daughters to remain here. When the girls reach a certain age, or as soon as their father is able, they are sent to China to their grandparents to be educated.



Before the father rubs his daughter's cheek to his own in fond farewell and places her aboard the outbound trans-Pacific steamer, never to return, he takes her before the United States Immigration Commissioner. There, in the Chinese bureau, she is questioned and cross-questioned, tabbed and ticketed, marked and measured. Her height, weight, age, marks, scars, and physical peculiarities are all carefully noted and marked down. Her photograph is taken and attached to her certificate of departure. Every means of identification known, except the Bertillon measurements and thumb-prints, as they are not criminals, is used before the much-coveted certificate is issued by the immigration authorities.

The father holds the "certificate of departure" in his hand—a slip of paper that is as good to him as Rockefeller's check in four figures. His daughter will never return, but some other unfortunate girl in far-away China will, by virtue of that piece of paper. To find a purchaser for his daughter's certificate of return will be no trouble. He will be besieged with offers from the wealthy panders.



The purchaser of the certificate, either in person or through his agents, at once begins his house-to-house search for the replica of the "adjudicated native." Up and down the Pearl River and through the Province of Canton he roams, photograph and certificate in hand. In all probability the searcher has a dozen or more photographs and certificates with him. Looking for replicas is his business.

At last, in some poverty-stricken hut on the banks of the Pearl, he finds what he thinks is a replica for the girl born in California. The girl takes no hand in the bargaining that follows. The mother is not fully aware of her daughter's fate when she sets the price. He paints in vivid colors the wealth of her future son-in-law,

A pure Havana filled cigar for 2 cents

Yes—Pure Havana
Grown on the Isle of Cuba—
Imported by us from Cuba—
Put into this cigar by us—
Guaranteed pure Havana by us—
Is there any way to make it stronger?

Mr. Smoker—you don't have to be told that there is such a thing grown as real Havana tobacco.

You know there is.

You have tasted it. You know that no other tobacco *ever* gave you that delightful, rich, tasty, smoke that Havana tobacco does.

But the point you want to know—have to be shown—is this:

Is it possible to sell a genuine, pure Havana filled cigar of "decent" size for 2 cents?

It certainly is—most positively is—and here it is.

Santa Glorias Box 50 Prepaid **$1.00**

Exact size and shape shown. A clean, thoroughly cured York State wrapper with genuine Havana filler. A quickly rolled cigar—not expensively finished—but substantially made. Will please 99 out of 100 experienced, exacting smokers.

There's just one Havana tobacco—that which actually grows on the Isle of Cuba.

Tobacco growers the world over, have unsuccessfully tried, time and time again, to duplicate Havana tobacco—using the same seeds, same plants.

"Seed" Havana or transplanted Havana, in any shape or form, never had, cannot have, that genuine natural Havana **flavor, taste, aroma.** It takes the sun, soil—the peculiar tropical climatic conditions of Cuba—found nowhere else in the world.

The fact cannot be dodged that there is actual and gross misrepresentation about Havana tobacco among the millions of cigars offered—in stores and by mail. But here is real Havana, grown in and imported from Cuba. Our 49 years of honorable business dealing is back of that statement.

SANTA GLORIAS can be had of dealers everywhere. If you have the slightest difficulty in locating them just enclose a dollar bill with your name and address in an envelope to the makers

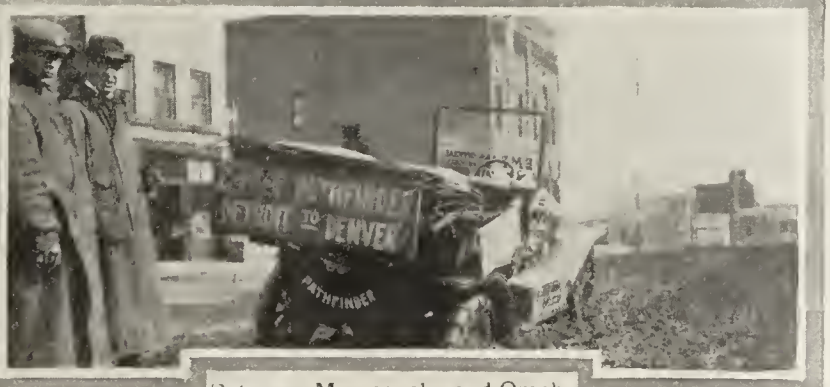
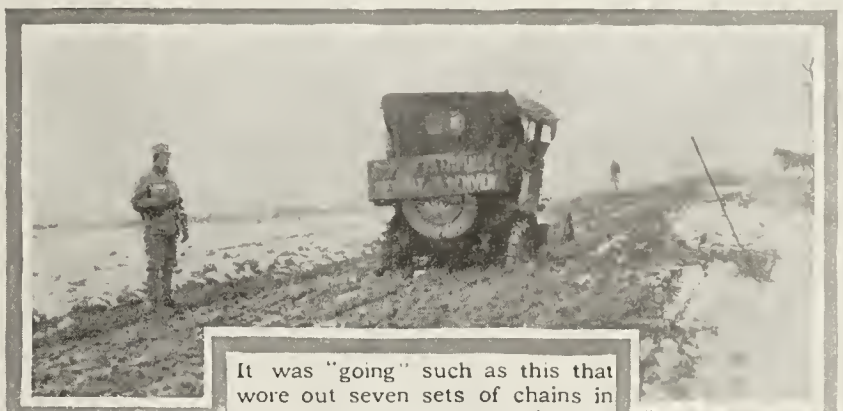
MORGAN & WRIGHT TIRES ARE GOOD TIRES

Convincingly proven by six pictures of the E.-M.-F. Glidden Pathfinding Car taken en-route, which was equipped with regular stock Morgan & Wright tires exactly the same kind as we would furnish you.



Roads found in Wisconsin

Struggling thru Minnesota



After a day's "ploughing"

Between Minneapolis and Omaha

Iowa "roads"

It was "going" such as this that wore out seven sets of chains in one day but didn't wear out the tires

The tires which stood the brunt of the grind. They ran from Detroit to Omaha on the rear wheels over roads here depicted and arrived in Omaha with the Detroit air still in them. Note that altho the sides are worn from continual running in ruts, the treads are still in perfect condition.

CAPITAL STOCK $1,000,000

Everitt-Metzger-Flanders Co

MANUFACTURERS OF AUTOMOBILES
DETROIT, MICHIGAN

June 9, 1909.

Messrs. Morgan & Wright,

Detroit, Mich.

Gentlemen:-

We are very much elated over the wonderful tire record made by the E-M-F "30" in the Glidden Pathfinding trip. We believe it is only fair that we share this elation and the credit for the splendid performance with the makers of Morgan & Wright tires.

2834 miles over roads that have hitherto been considered impassable in April and May, and using only six casings on the entire trip, is a record that never has been equalled we believe. When you consider that the car carried five passengers and about 700 pounds of extra equipment, the tire record is all the more remarkable.

Meinzinger states that he drove all the way from Detroit to Chicago, thence via Milwaukee, Madison, La Crosse to Minneapolis, and then to Omaha, with the Detroit air in all four tires. The last two days' run into Omaha was thru dried "gumbo" ruts six to twelve inches deep and caked so hard it cut the rubber off the sides of the tires until the fabric showed all around, yet the treads showed little or no wear. In one day seven sets of chains were worn out, so you can appreciate the condition of the roads. At Omaha the two rear tires were changed as a matter of precaution against a possible blow-out. Half way between Omaha and Denver one front tire was changed for the same reason. The other front tire arrived in Denver with the Detroit air still in it. Here the fourth tire was changed. One of these was cut by a jagged rock or other sharp object so it may not be practical to re-cover it, but the other five can all be re-covered.

Of course we claim that the proper distribution of weight in the E-M-F "30" car is largely responsible for this economical tire record, but it is a source of great satisfaction to us to know that M. & W. tires, which constitute our exclusive standard equipment, showed up so wonderfully under such severe conditions.

Yours very truly,
Everitt-Metzger-Flanders Co.

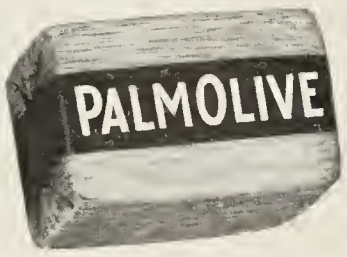
Send Us Four Cents

And we'll send you a generous sample of Palmolive—the finest toilet soap on the market.

Until you have used this superior soap, you don't know how good soap can be.

More women use Palmolive Soap than any other toilet soap selling for 10c a cake or more. When you know what they know, you'll get it, too.

Try it in any water—try it in every way—for shampoo, manicure, massage, for the bath. Bathe the baby with it. It is excellent for baby's skin, so you know it is good for yours.



We use only palm and olive oils from the Orient.

Then we use a special process and get a perfect blend. We have had 36 years of experience in soap making.

The result is a soap so delightful that you'll wonder you never used it before. Price 15c at your dealer's.

Send the 4c today. We'll send you also our free book, "*The Easy Way to Beauty.*"

B. J. JOHNSON SOAP CO.
350 Fowler Street Milwaukee, Wis.

PAY THE

Canadian Pacific Ry.

62½c Per Acre

And Take Immediate Possession of

Wonderfully Productive

Farm Land In Southern British Columbia

Yes Sir, Wonderfully Productive land for 62½ cents per acre down and 62½ cents per acre once a year for seven years—that's the maximum you have to pay us for the land.

If you select land slightly timbered you pay in addition only two dollars per thousand for the timber which you sell, all that you use on the place is free.

At these prices we are almost giving it away, but the Canadian Pacific Railway wants YOU, not your money.

As a matter of fact that first 62½ cents is all that need come out of your pocket direct, the land itself if properly handled can be made to yield a comfortable living and pay for itself. And, when fully developed, it will yield a good living and a comfortable surplus.

These lands are suitable for general, truck, fruit, dairy and stock farming.

120,112 lbs. of Vegetables From 10 Acres

Mr. D. E. Gellatley and Sons shipped from Gellatley, British Columbia, over one hundred and twenty thousand pounds of mixed vegetables in one year—all raised on ten acres of what was just such land as you can buy for 62½ cents per acre per year.

$5,030 in Fruit from 6 Acres

Mr. T. W. Stirling of Kelowna, British Columbia, sold the fruit picked in one season from 6 acres for $5,030.00.

An advertisement can't tell the whole story. But, if you men and women who are fighting a hopeless, up-hill battle will send me your names, I'll see that you get good hard facts about this country of opportunities by the thousands, enough to go round and to spare.

If you have any idea that Southern British Columbia is a far off barren waste, cold and uninviting, you were never more mistaken in your life.

There is no more delightful country to live in anywhere. Let me send you the facts.

We will satisfy you that you can enjoy life and prosper in Southern British Columbia.

Then come up here and buy a 160 acre farm for 62½ cents an acre down and 62½ cents an acre a year and the Canadian Pacific Railway will hand you back half your fare over its own line of railway.

Fill out the coupon now—You'll get the facts by return mail, and you'll then know how to fix yourself comfortably for life.

J. S. DENNIS, British Columbia Land Commissioner,

J. S. DENNIS, British Columbia Land Commissioner,
Dept. A, Canadian Pacific Railway,
Calgary, Alberta, Canada.

I want information about Southern British Columbia, and your 62½ cents per acre per year land.

who has forwarded a complete description of what the girl, who is to sit on his silken cushion and pour his tea, must be like.

When, after a careful comparison, it is found that the girls are as alike as two peas in the same pod, there is a feast. The usual method of buying is to multiply the price asked by three and then divide it by five. Thus, if the price asked be one hundred Mexican dollars, three times one hundred are three hundred, and five goes into three hundred sixty times. So it will generally come to pass that the happy mother will receive sixty or seventy Mexican dollars (worth in gold about $40), and a $5,000 slave will be secured for some highbinder in California.

The San Francisco highbinder receives word that another slave is on the way, and will reach the port of San Francisco on a certain steamer. The first thing to do is to consult his well-paid lawyer and round up the paid witnesses. The father of the girl on whose certificate the slave is to attempt landing comes first in the list of witnesses. He must be ready to meet the strange girl as a father would meet his long-lost child. He must make no mistake in his exhibition of parental affection. Of course the girl has been carefully coached. She bears the name of the girl who went away, and must know all about Goat Island, Oakland, Kearny Street, or Spofford Alley. She must be able to lisp a few words of English and stand a cross-examination by the trained corps of immigration inspectors in the Chinese bureau.

A majority of the girls landed go to a life of blows, intimidation, and abuse. Many of them pine away and die in a short time.

The Treasure Heap

THE rubbish of New York City is worth about $200,000 a year. The city gathers and carries its rubbish to the scows at the river-front. Then a contractor trims the scows and disposes of the litter. This operation costs him about $3,000 a week, or $500 each working day. For the privilege of handling the stuff, and winnowing it for goodly finds, the contractor, Celesto Di Maico, pays $1,750 a week, or $90,000 a year, to the city. This is $25,000 more than the previous contracts.

Saving Ireland

THE Countess of Aberdeen is touring the world to save Ireland. She is head of the Women's National Health Association of Ireland, which is fighting tuberculosis and infant mortality. Emigration has drained off the strong and hardy young men and women. The weaker kinsfolk have been left in the home country to fight bad drainage, ramshackle dwellings, and depleted physiques.

That which stirred all Ireland to the campaign was the cruel infant mortality, which kills off each year nearly 12,000 children under one year of age, and the ravages of tuberculosis over all ages, so that Ireland's death-rate from this disease is higher than that of England or Scotland, and is only exceeded by Hungary, Austria, and Servia.

The association was formed in 1907. It aims to prevent and stamp out consumption, to lessen infant mortality, to safeguard milk, to make healthy homes, and improve the schools. It is a combined effort to make the homes of Ireland healthy—full of fresh air, clean, containing airy bedrooms, providing nourishing, well-cooked food. The purpose is to make Ireland the most healthy country in the world.

An itinerant Tuberculosis Exhibition has been flung out over the face of Ireland. Three hundred lectures have been given. The exhibition gave a month to Dublin to packed audiences, and then in two parts made a northern and southern circuit, with a fortnight each at Belfast and at Cork, and then two or three days in the provincial towns. Eighty districts were visited, and 560,000 persons visited it—more than an eighth of the population of Ireland.

The association has dotted the map of the Green Isle with 100 branches. Further, the association has set in motion a Tuberculosis Exhibition Caravan, painted in St. Patrick's blue and drawn by horses. It is laden with lectures, limelight lanterns, and diagrams, circulars, gramophones, and charts. It preaches by mottoes painted loudly on the van sides: "Victory is Certain": "Our Enemies are Bad Air, Bad Food, Bad Drink, and Dirt"; "Our Weapons are Pure Air, Pure Food, Pure Milk, and Cleanliness." The leading van is called the "Phœnix," and the consort, carrying the crusade impedimenta, is known as the "War Wagon."

Already good has come of the crusade. More windows are being left open day and night. Wherever the trail of the van or itinerant exhibition has gone, the house and its inhabitants are cleaner, neater in dress, more careful in person.

WINCHESTER

Self-Loading Rifle, .351 Caliber, High Power

This six-shot repeater utilizes the recoil to reload itself, which places loading, as well as shooting, under the control of the trigger finger. The ease, rapidity and accuracy with which it can be shot make it a particularly effective rifle for big game hunting, where the quarry often has to be shot on the run. The .351 Caliber, High-Power cartridge has great killing power, making it heavy enough for the largest game.

Circular fully describing this rifle, "The Gun That Shoots Through Steel," sent upon request.

CO-EDUCATION

What College?

Sixty-nine per cent of those whose names appear in "Who's Who in America" are college graduates. Since less than one per cent of the total population go to college, this shows that the college gradnate's chance of making a name in the world is as 69 to 1.

Therefore the question of a college education is an important one. Scarcely less important is the choice of the college one will attend.

Any young man or woman considering college life will be interested in

"At Old Miami"

an illustrated booklet concerning Miami University at Oxford, Ohio. Dating from 1809, this is one of the historic schools of America. It is a State University insuring the highest standards in equipment and scholarship.

Because of liberal state appropriations, expenses are very low.

It is co-educational and nearly 600 students attended last year.

The Liberal Art College offers a variety of courses leading to A. B. degree.

The Normal College trains teachers. For years all gradnates have secured good positions, the demand greatly exceeding the supply.

A Sub-Freshman class offers an opportunity for students to complete their preparation for college.

The booklet and any information desired will be sent free on request to

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

What Wishing Did

(*Continued from page 15*)

Rosemarie uttered a musical laugh full of delight.

"I like your jinnee," she declared to Gilbert, linking arms with that young man.

"No longer his," the jinnee earnestly corrected her. "I am bound only to the one who wears the ring."

A little superstitious awe flashing into her face, she looked swiftly from the iron band on her finger up at Katapapoum. "But what if I have no need of any service?" With a beautiful movement, she drew close to Gilbert's side. "What if I have already everything I wish?"

The jinnee gazed round him as if stupefied.

"Oh, miracle!" finally burst from him. "Here, at last, I find contentment!" His rolling glance fell upon the piano. "But wait: if I remember, six months ago you had a career in mind—you were to be a prima donna?"

Her eyes were misty; she turned them upon Gilbert.

"I give that up," she answered. "I shall be a wife."

Immediately, Katapapoum's face was transfigured with a strange charm. And there surrounded those three—the two linked lovingly together and the one who had so joined them—a silence not unlike the hush which pervades a chapel at the benediction of a marriage.

At length, the jinnee seemed to recollect himself. The brightness faded from his face. He stepped back to the door.

"Good-by," said he. And, to their immediate remonstrance, told them:

"Jinn may not, alas, be social beings: they obey laws peculiar to themselves, and which they can not transcend. The wishes of their masters bring them flying out of the mysterious voids which they inhabit; the fulfilment of those wishes keeps them for a little while among you; but when their tasks are done they must be gone. So now I fly back to my own place, my track high above the snows and rains and winds, over Bagdad, Grand Cairo, Damascus, Moussoul, Coam, Cashan, and Ispahan, amid the tinted vapors of the zenith my frock coat melting into trailing robes, my top hat into a turban, my cravat into necklaces, my whole appearance of modernity into that aspect by which all ages, from the dawn of magic, have recognized me. But still, shall I not bear back with me into that enchanted region where all the unemployed Jinn of the world foregather, a precious souvenir? For I will tell you an occult thing—the reason for my vitality at my great age. Such sentimental deeds as I have wrought here revivify me; the smiles that I see on your two faces will refreshen me through tedious years. In bearing to others something that I may not have myself—and maybe you know what that would be—I gain felicity and health. Wealth, which I have always handled as a child handles leaves and pebbles—what is that? And fame, which I have so many times seen blown out to the bursting point, to vanish finally with a snap—does that impose upon me? But oh, that inestimable gift which I bear to and fro above the world—that casket which I carry sealed from one heart to another, and into which I may not even peep—that contains the treasure of all time, Gilbert and Rosemarie. What joy, to be at least the bearer of it!"

"Ah, dear jinnee," sighed Rosemarie, gazing up through bright tears at the unfortunate features of Katapapoum, "do not fly away! See, here is lifelong friendship."

But contemplating them as if from a great distance, slowly he shook his head. And then, while all three of them seemed still standing motionless, the latch clicked, the two lovers were staring at the closed door, he was gone!

Where the Boulevard Raspail approaches Rue d'Assas, a gigantic figure stood for a long time gazing back. Flurries of wet snow, appearing suddenly out of the upper darkness, glittered before the street lights. Every moment the snowflakes drifted down more thickly; they became like particles of some magic haze, enveloping that solitary figure, muffling it, concealing it—as if preparing it for an invisible translation.

"Well, is it not at least good to be so rich and powerful a jinnee? Of course. And yet . . ."

Now a mere phantom amid the snow, that figure turned and went away—not soaring, not in a flash, but, for a wonder, with dragging feet, slowly.

III

JUNE had come again: and Rosemarie, who sat gazing out of her window at the moonlight, was moved to melancholy by all those evidences of a budding season

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

which, pervading the soft air and filtering—as it were—through the expanded tissues to the heart, rouse, in the young and lovely, raptures far more often than sadness. Just above the roofs, amid the quiet blue, like a great golden fruit, hung the moon—the source from which, on nights like this, is disseminated so much sweet madness. But in the moonlight, the breath of spring, the silence, Rosemarie found merely a setting for the happiness of others. And yet, she was thinking all the while of Gilbert.

Six months of wealth and fame in Paris had wrought an interesting change in our young rascal. A thousand scented breezes—such as he had never felt before—had blown upon that thistledown bundle of impulses which he called his temperament—at first, no more than causing it to tremble; then driving it afield on little fluttering excursions; finally sending it off on such venturesome careers that sometimes it was nearly lost to view. In truth, fame, flattery, and plenty had gone to Gilbert's unseasoned head.

In Rue d'Assas it was: "What a world, after all—see the sunshine on the leaves, the nodding flowers, the perfect sky, the little, rosy clouds! Youth in spring: shall we let it pass without one deep draft of this elixir, one saraband on the grass, one reckless song?" And in the Boulevard Raspail it was: "An appointment, my treasure; a dinner of some very influential persons, who can do everything for me. . . . Impossible, my angel, necessary to call on the Prince of What-d'you-callem and arrange for sittings. . . . Alas, my poor Rosemarie, I must see these gentlemen, I must be at that reception—one does not slight such people. But rest assured, if there are ladies there—which Heaven forbid—I shall not think them pretty, I shall not even see them." Kisses for punctuation, and, at the period, off he goes, coattails flying, hat cocked, and a posy in his buttonhole. Rosemarie, alone, gazing out on the moon, draws quivering breaths and twists her hands together. While so employed—

"Rat-a-tat-tat!" Her heart gave a jump.

"Enter!"

A great voice rumbled:

"Mistress, you rubbed the ring?"

It was Katapapoum!

Yes, it was he, in the obscurity of the unlighted room appearing vaster than ever, and wearing again that occidental disguise which sat so strangely on him. He stalked forward: the moonlight illumined his remarkable countenance: his large, protruding eyes glistened in awesome fashion, quite as a jinnee's should; his mouth became enormous—it was smiling. And, at that smile, a thrill which had started through her died away: she was afraid no longer.

"Welcome, dear jinnee," she breathed, as if to an old friend. "And to come after all this time, just when I have, at last, such a need of magic!" She sighed. "What faithfulness! Now, by that faithfulness I know you are not mortal. And what devotion! Were you at much pains to come here?"

"From the world-encircling mountains of Kaf, straight through the Milky Way and the nimbus of the moon. But what is that? The business of a moment, when you need me." He settled into the chair she designated. For a long time he looked at her in silence, still smiling placidly, like one content to be at the end of a long journey.

"Will you have the gossip of my travels hither?" he asked at length. "Shall I inform you of the present fashions—as I glimpsed them—in the Isle of the Children of Khalidan, or of the plague of turquoise nose-rings that has fallen upon the ladies of Ludhiana, or what colors outside the rainbow the Princesses of Mahabalipur seem to be affecting? Or would you rather hear what some voices told me in the upper air as I came flying—say, how the fairy Maiounè, as she flashed past me over Turkestan, whispered, in a breath: 'One sits grieving in the moonlight, because the sunlight has blinded another's eyes?'"

"One would think that nothing in the world is hidden from you, Monsieur Jinnee," said Rosemarie, a little bitterly. "It seems that I need not recount my troubles."

"What should a jinnee be, dear Lady of the Ring, if not omniscient? Age after age, he looks through eyes, unveiled in wishing, down into hearts. Then surely, with such vast experience, from time to time he may venture a little good advice? May he not say to-night: Since only three wishes can be granted you, and so much of life still lies before you, why waste a wish on this predicament, which will pass of its own accord? Very soon, now, amid the hot hurly-burly of his carnival, a cool breath, flavored with old scents, will play upon that young man we are concerned with. Pausing on the tinsel-decked path which leads nowhere, he will gaze back,

GIRLS

with eyes blown clear of their fever, toward the serene and true vistas from which he has been rambling. Then you will hear the gasps of self-reproach, the patter of returning feet, the incoherent babbling for pardon—in short, all the goings-on of a proper prodigal. Poor boy; after all, is he not acting in the old rôle of Human Nature? Youth must touch and suffer and repent. Save your wishes; in a little while now, he will come back." And he smiled again, with the benignity of an expert old philosopher condoning the frailty of a child.

"But," cried Rosemarie, "it could not be the same. This to remember, and perhaps expect again? I should never be happy! And yet—"

Recalling all that young reprobate's attractiveness, she was in a pitiable quandary: how could she ever trust him more, and, still, how could she ever give him up? What anguish! She wrung her hands. She wailed:

"Oh, I wish I did not love him!"

Instantly she felt a little silvery concussion in her brain. Through a mist she saw the jinnee's massive hand, raised too late in remonstrance, fall with a gesture of reproach. What had she done? That question was immediately followed by a tremendous crash, reverberating through the heavens, echoing and reechoing, dying out far off in sullen rumblings—possibly no more than a great peal of summer thunder, but likelier such an uproar as should accompany the violent disintegrations and readjustment of the universe. For, as silence fell, and, in a sort of panic, Rosemarie's mind reached out to seize again upon the image of her Gilbert, at first she did not recognize it, so small had it become, so inconsiderable was its prettiness, so trivial its intrinsic worth—in total (for all its glamour of fame and fortune) so plainly was it the figure of an immature little being masquerading in the splendid robes of a giant. Then, even while she was marveling thereat, that absurd vision dwindled the more, shredded away as does the figment of a dream when one is waking, and was gone. She stared round her. Yes, the world was furnished quite as it had been: the moonlight flooded the room; a sweet breeze was blowing through the window; she still saw before her the egregious countenance of Katapapoum. He was inquiring, solicitously:

"You miss something?"

"Something is gone," faltered Rosemarie, "but I do not seem to miss it."

"Think well," the jinnee exhorted her, bending forward with a piercing look. "Many a century have I watched mortals reaching out for cities, moneys, crowns, wreaths, and kisses; but never till now have I seen one throw away with both hands the jewels out of that enchanted casket which you know of."

"But," she heard herself replying, "what if the pearls were, after all, but wax, the diamonds only glass, the whole nothing but a heap of rubble? When one is a child, a gimerack is a treasure; but when one sees at last through the calm eyes of maturity, perhaps one's hopes soar suddenly to unguessed heights, in aspiring to a great jewel of the finest water."

Sinking back in his chair, Katapapoum exclaimed, with a groan of dismay:

"Now, at last, I have a task to give me thought: where to find for her a jewel so excellent as to surpass those she has thrown away. Well, I suppose even that must be done, or what sort of jinnee am I? Mistress, to hear is to obey. Shall I flap forth post-haste upon my search; shall I be off, with a bound and a rattle, to rummage the Isle of Eligibility?"

Rosemarie smiled.

"Always the same, ready without hesitation, though serving means the scaling of the stars—and all for the pleasure of others. Oh, true jinnee of fantasy! All doubts are gone at last: you are surely what you declare yourself to be—more willing, competent, and unselfish than any mortal! And yet, my remaining wishes wished, you would fly away forever; then I should not have any more the feeling I have now—that my heart's new-found solitude is not loneliness; that there is at my call something strong, kind, and sure, in which to trust. Ah, Monsieur Katapaponm, can you not, in your infinite potency, be friend as well as jinnee?"

He opened his capacious mouth, closed it and blinked his eyes rapidly.

"At your service, Princess," he rattled in his throat. For a while they sat silent. She contemplated him in wonder.

How strange a figure, she pondered. How unreal the whole adventure which included him. How his imagination had gemmed over all their intercourse until it was like a dream. And yet, beneath his bizarre behavior, how plainly was his heart revealed; as for his bizarre face, what a light struggled through it, after all. Poor, kind jinnee! With a throb of pity, she whispered to herself:

"I wish he were not so ugly."

JAS. A. FISHBURNE, A. B., Principal, Box 203

A cloud passed slowly before the moon: the moonlight faded; a veil of shadows descended between Rosemarie and Katapapoum. And when that obscuration had passed—and she saw that he had not flown away, but was still there—his face seemed changed: ugliness was not in it so much as strength: the extravagance of its various features had melted into a queer sort of distinction—and who, at that moment, could have found fault with the expression which it wore?

"Magic!" she gasped. Rising, her head in a whirl, she leaned out of the window. The wind came hurrying to caress her cheeks: the moon poured its bewitching fluid upon her eyes: so, magic was within, magic was without, and magic was working at her heart. Dreamily she murmured:

"Tell me, Monsieur Jinnee, you who are so familiar with the upper air, what lies up there, at the soiree of the moonbeams and among the scintillations of the stars? Wonderful things, surely, since one can feel the charm of them here."

Looming above her, he answered, in a vibrant voice:

"Yes, I have indeed been thereabout; I can tell you what is there. In that place the moon serves as sun, so it is always moonlight. The stars are very near, so they hang down, overhead, like innumerable strings of lanterns looped up above a pleasure garden. And, indeed, a pleasure garden lies beneath them, swimming on billows of silvery clouds, swaying gently as the breezes make its vapory foundations oscillate—a little paradise, now wholly hidden by spangled mists of stardust, now quite revealed. That garden is enclosed with walls of mother-of-pearl, its gate is encrusted all over with great pearls, and nothing can compare with their splendor in the moonlight. Above the walls rise the feathery tops of trees, from which blows away a perfume whose sweetness I can not describe. They say those trees are inexpressibly beautiful, that their fruits are unlike any other fruits, that there are no flowers like the flowers beneath them. From the center of the treetops rise the minarets and the dome of an exquisite pavilion—a fretwork of alabaster inlaid with precious stones, so delicate that there glows through it from within a rosy light, so ethereal that it trembles with the strains of unearthly music played beneath it. They say that this dome is the appropriate crown of the edifice below. . . ."

"They say! They say!" cried Rosemarie. "Is it, then, but hearsay with you, after all?"

"Yes," he answered, "in that I have only stood without. There is the one spot that I have never entered."

Tears were upon her cheeks.

"And what do they call that place?"

"What should it be, Princess, but the Garden of Love?" said Katapapoum.

She saw the moon vaguely—it seemed to waver before her swimming eyes.

"Yet you—being bound to my service as the Jinnee of the Ring—if I desired to see that garden—"

And then remembering all that the ring had brought about, for the third time she whispered to herself:

"I wish— I wish—"

* * *

The March of the Germans

(*Continued from page 13*)

influence, but they do not forget their pockets. Austria, and particularly German Austria, realizes its debt to Germany in the Servian affair. She is preparing a Dreadnought program of her own.

When Hungary objected to this expense, Vienna answered: "But we're going to build them down on the Hungarian coast at Fiume." "Oh, ho," said the Hungarians, "we've always favored a big navy. In fact, come to think of it, we were the original big navy section of this empire!" Franz Josef in his old age sees the Hapsburgs firmly established for a long term.

Thus Dreadnoughts beget Dreadnoughts; thus Central Europe is solidified. "Who will keep in training? Who will keep hard?" as the Prussians ask. "The man who is alone, back to the wall, or the rival who goes about getting up a crowd with a view to cowing him?" Not many years ago Britain was preaching "splendid isolation." She could depend on her fleet to hold the sea; for self-protection the European countries must block one another. Was Salisbury so far wrong? Since the days of that sober old aristocrat who was not given to "scares," England has gone in for alliances in all directions; and the more she has the more the worries.

Germany does not want war with the British. She will take every possible means to avoid a *casus belli* developing.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

Through all the months that England has been "enjoying" a so-called panic, the Germans have been amused and disdainful. They cartoon Edward with outlandish conceits. They talk of blood and iron gutturally, but not nervously, and they do hope that the British will calm down soon. Why, the French have suffered frequent outbreaks, but eventually their rage has cooled, because those very peaceful Germans refused to talk back. Since the British began their jingo campaign the Germans have lost their temper only once. Then the Reichstag increased its navy program. A good many members, as they consider the $125,000,000 loan to make up the national deficit, are sorry for the outburst. However, they do not retreat. It is as hard for nations as for individuals to swallow their words of defiance.

Asquith proposes an agreement whereby the two nations shall keep their navies at relatively their present strength. In other words, you agree to let me sit on you forever—as the Germans see the offer—or you are no friend of peace. Haven't we more population than Great Britain? the Germans ask. Haven't we a great trade to defend? Don't we face foes by land and sea? Then, why haven't we a right to build a great navy? Has England any patent on sea power?

The German Privately Saws Wood

IN VAIN does one seek full information about the nature of that German fleet, half the strength of the British, which arouses British apprehensions. The mystery in which it is shrouded may be a part of its formidability to insular imagination. We have no authoritative statistics of target practise, no details of drill or battle practise; for military secrecy was not original with the Japanese students of the German system.

Ten years ago the British were saying that the Germans, having no sea inheritance, could not have a great navy. Perhaps to-day pessimism swings the pendulum to an equally foolish extreme. In a floating hell factory where every man is a mechanic, of what value is the memory of a Trafalgar fought with sails and muzzle-loaders? Yet is there any reason to suppose that the British navy, leader in the progress of naval warfare, has grown inefficient? Not to those who know it.

Drill, drill, drill, the German officers and men know no rest. They work harder than those of any other navy, all the world agrees. They work too hard, some critics say, inducing stupidity and staleness. Command is concentrated and mobilization ever complete. Politics does not interfere in naval administration. There seems no end to maneuvering and sea practise in the rough waters and chill winds of the North Sea and the Baltic. Probably staff pigeonholes can tell precisely what the Germans should do if the British attack. All you hear is the occasional confident remark—yes, these Prussians are exasperatingly cocksure — that Germany will give the world the same surprise on sea as she gave us on land in '70. Who knows till the spring is touched and Mr. Jack comes out of the box?

As I said in my article on the British side of the question, German prosperity is at the bottom of the British "scare." The Germans prosper. Their force is felt increasingly throughout Europe. You see more of them in the Mediterranean watering places every winter. At Monte Carlo they surround the tables, the management complains, playing twenty-five frane pieces at a time and driving away the American millionaires, those ideal patrons, who lose a lot in a few minutes and hurry away.

England Leans Backward

EVERY young German who is going into trade has his wander year, in which he studies languages and customs in countries to whose markets he must appeal. Raise your hand in any German railway station and you will find some one who speaks English. Waiters in Paris and London are frequently German. Which people is better equipped, the one that aims to learn foreign languages and foreign ways or the one that does not? The British have been content; the Germans ambitious to learn. The British lean backward; the Germans lean forward. And the back can be broken in either position.

Every new country welcomes the German emigrant, provided he leaves his nationality at home. But the Kaiser insists that he shall at least have it concealed somewhere about his person; else he can never fight and die in the name of the Never-to-be-Forgotten Ancestors and enter the Brandenburg Walhalla. Either return to serve your time in the army or else you may never visit the fatherland without arrest. And the youngsters on the wander year, from waiters to merchants' sons, do return. The saying that a German readily sheds his nationality is losing its force.

German subjects are protected. German push—Prussian boorishness some call

it—and German success have granted to the Germans the inheritance of unpopularity which once was British. Abdul Hamid had leaned on German influence; the Young Turks who drove him into exile were educated in Germany. A German embassy is a hive. German ambassadors encourage the business interests of German subjects. They are always on hand when chance arises, sparring for points.

German steamship companies bring the poverty-stricken Russian emigrants across Prussia in a kind of bond, which prevents the deposit of undesirables. That all-controlling Government has stopped the migration of Germans to America. We owe to it the loss of 5,000,000 good citizens in the last twenty years.

Conscription Makes German Fellowship

CONSCRIPTION ceases to be a bugbear. Germans of all classes of society say that it is the making of the Empire. It has developed a sense of fellowship which leads to democracy. Its effect is the same as if in England an English gentleman marched in the ranks with 'Arry. Both would learn something of value. In the formative years of their lives the youths develop muscles and methodical natures, making transition easy into the disciplined army of workers under the command of industrial experts.

The German idea is that a nation should be run like a great department store or a great corporation in all its manifold activities, aiming at national dividends in international conquest. Perhaps we have something to learn from Germany ourselves. Until four years ago all our budget of daily German news, from which we largely absorb our views, came through London. We heard of simple burghers haled to jail for committing *lèse-majesté* over their beer and officers running civilians through, while the German press printed full accounts of all our lynchings and disorders. Mr. Stone, of the Associated Press, decided that news should come direct hereafter from Paris, Berlin, and St. Petersburg. This was a step toward allaying the prejudices of custom and race, which are breeders of ill-will.

The Empire a Beehive

IF WE compare Homestead with Essen (the seat of the Krupp works), we see how a nation enters into the affairs of the daily lives of all the workers. It expresses the beehive system. German cities are the cleanest in the world. No one will dispute, I think, the superiority of living conditions in their poor quarters. There is poverty, but not slovenly slums. A great Labor Exchange deals with the problem of the unemployed in Berlin, and so on through the scale of human affairs. It is a kind of socialistic feudalism, with the stork ever busy making new factory food and cannon food. The old landholding aristocracy turn on the Kaiser for his favoritism to captains of industry and educational and technical leaders. Germany grows all the food she can; living is made cheap despite the tariff. A fierce competition of interests is welded together for general profit. The Germans say that growing populations foree the passing of the pioneer and the individualist; that they have a long start over their rivals in the system of organized mass, to which are the victories of the future.

We may not like the system, but we can not dispute its results. It continues to care for the plus three and set the march of growing numbers toward the Hohenzollern objective. By 1920 Germany will have 72,000,000 population against 50,000,000 for the British Isles. The increase is 900,000 a year, with a slightly decreasing birth-rate — very slight compared to England's. As a matter of defense, England might start a propaganda in Germany headed by suffragettes in association with the women of France, where the population is stationary. By 1930 the Germans will almost equal the French and the British combined.

But is the outlook so threatening as it seems to Mr. Balfour? That European balance of power has a way of adjusting itself to the ascendency of any of its particular members. Before Germany may strike England, she must have a furrow against Continental back-fires. Were she an island, the struggle would soon come. In one form or another, the rabbit policy, if persisted in, will eventually force it.

"Either Germany must burst of her own expansion in so small a compass," as an English naval officer said, "or something worse for the rest of us will happen. By the way, how would you like to see the German flag over Hongkong, Singapore, Aden, and Gibraltar? How would you like to live under the 'system' in a foreign colony?" Which is a question.

MOTHERS, BE CAUTIOUS

In selecting a food for the baby don't experiment. Baby can't stand much experimenting. Borden's Eagle Brand Condensed Milk is acted upon by the infant stomach substantially the same as mother's milk. For 50 years it has made glad mothers and started thousands of babies on life's journey with health and happiness.—*Adv.*

SPECIAL

Georgia School of Technology

AN ENGINEERING Institute of the very highest rank, in the heart of the progressive South. Advanced courses in Mechanical, Electrical, Textile and Civil Engineering, Engineering Chemistry, Chemistry and Architecture. Extensive and new equipment of Shop, Mill, Laboratories, etc.

The demand for the School's graduates is much greater than the supply. Dormitories. Cost reasonable. Climate unsurpassed.

COPYRIGHT 1909 BY P. F. COLLIER & SON

VOL XLIII NO 17

JULY 17 1909

"10 Kills Quick" "PROMOTING MURDER"

Writes one Hugh O'Neil, editor of Denver Post. Calls us "U.S. Murder Promoting Arms Co.," etc., etc., because we invent and advertise the New Savage Automatic, that shoots ten shots quick. What "Brain-swampness" to assume that pistols are bought for murder.

¶ Pistols are bought for pleasure and for protection from footpads, kidnappers, pickpockets, burglars, and safeblowers, dear Editor. And the constitution of the U. S. gives us the right to bear arms.

¶ Stop the making and selling of pistols, and we will be at the mercy of criminals, and the Japs will land on the Pacific coast, and the British on the Atlantic, and it will be exit America. For the country that would live must encourage invention in fire arms.

¶ Think what an invention the New Savage Automatic really is—so unbelievably quick, it beats every other pocket arm to the first (vital) shot. Shoots four shots per second and reloads 10 shots in a flash.

¶ You point it straight instinctively, as you do your forefinger. A novice can aim as expertly as a crack shot. Equipped with positive safety, which guarantees absolute protection to the operator. Light and compact in the pocket, though powerful as big slow revolvers. .32 cal., 6½ inches long, 19 oz. including magazine.

¶ If war were declared tomorrow, think what an advantage this weapon would give the American forces. Does the American public want to suppress inventions like that? We think not.

¶ See the Savage Automatic at your hardware store, and send for our free book, "The Tenderfoot's Turn," which tells all its new and ingenious features. Buy it from us if you can't from your dealer. Made by the makers of

THE FAMOUS SAVAGE RIFLES

¶ Send for our free Savage Rifle catalogue, giving description of all our celebrated rifles. Address Savage Arms Co., 827 Savage Avenue, Utica, N. Y., U. S. A.

The New SAVAGE Automatic

Mr. Fisherman:

We positively guarantee our FREE-SPOOL "TAKAPART" and "TRIPART" Fishing Reels to be the best mechanically constructed and smoothest running reels on the market—*irrespective of price.*

The leading and important feature of our Free Spool Reels, to be found in no other makes, is this:

The SPOOL is *absolutely independent of the handle,* and therefore entirely free and ready to instantly respond—easily and naturally when casting. As there is no whirling handle to act as a fly-wheel when the cast is made, the dangers of back-lashing and fouling of the line are reduced to a minimum. The FREE SPOOL also insures greater distance in casting.

After the cast is made you may reel in immediately as with any ordinary reel. No levers to adjust. No button to push. Nothing to fix. You JUST REEL IN. That's all.

These FREE-SPOOL REELS can be taken apart and put together instantly without tools. They are strong and handsome and will last a lifetime.

Anglers quickly recognize their merits. Your dealer will demonstrate these reels for you. Investigate NOW, before you go on your fishing trip. *Sold by dealers everywhere.*

A. F. MEISSELBACH & BRO., Makers
59 Prospect Street NEWARK, NEW JERSEY

We want to send you (free) a series of the best short fishing stories ever written. They are just off the presses. "Leaves from an Angler's Note-Book," "A Day with the Brook Trout," and others. Write for them today and you will receive them by return mail.

FREE SPOOL Quadruple Multipliers
"Takapart" Reel Capacity 100 yards $7.50
"Tripart" Reel Capacity 80 yards $6.00

When we say *guarantee* we mean it. The Standard Dictionary defines Guarantee for us thus: "To become bound to answer for, or secure the payment or fulfilment of."

You Can Now Buy a Refrigerator At Wholesale Factory Price

WE have an immense, modern Refrigerator factory. We decided to sell the entire output of that factory direct to user.

This means wholesale factory prices to you.

This means you can save from 25 to 40%—or from $5.00 to $25.00—according to size—on the highest grade Refrigerator made.

First you write for our **Free Refrigerator Book**—which gives photographs—full particulars of our Selling Plan—and wholesale factory prices.

You select a particular sized Refrigerator for your needs—to fit the space you have for it—and we ship it right to you from the factory, *prepaying freight charges*—thus you cut out jobbers' and dealers' profits—keep them for yourself.

Here's a little trade secret: Dealers in Refrigerators don't make a sale every day—and as Refrigerators take up big space in a store, big profits must be added—larger than the usual profits on other articles that sell at about Refrigerator prices.

Thus our saving to you is considerable. Yet—that saving isn't all. We give you a *better* Refrigerator than you can buy *anywhere else.*

First—the outer casings of our Refrigerators are *not* oak "finish"—but *genuine oak*—all oak—*heavy* oak—put together to last a lifetime.

The Sanitor Sold to You Direct

The *interior* of our Refrigerators is made of our own secret process porcelain enamel, which is guaranteed to be indestructible and absolutely sanitary. That's the reason why our Refrigerator is called "Sanitor."

As a test of this porcelain enamel just take a chisel when your Refrigerator arrives—and if you can chisel into any part of the inner lining, then the Refrigerator isn't as we claim it to be, *and you can send it back at our expense.*

Now that's the most severe test to which you can put a Refrigerator lining—*and ours is the only Refrigerator that will stand that test.*

We can't tell you *all* about "Sanitor" Refrigerators in this advertisement, so to get our money-saving proposition and full description, we ask that you merely drop us a line either on a postal or on the blank printed here for that purpose. We will immediately quote you wholesale prices direct, and send you our big book and full particulars.

A 3-Months' Free Trial is given with every one of our Refrigerators. If at any time during the three months the Refrigerator doesn't prove to be all that we claim it to be—and satisfactory to you in every particular—you have the privilege of returning it to us and receiving every cent of your money back.

No Refrigerator dealer sells Refrigerators on this liberal plan.

No Refrigerator dealer sells you as good a Refrigerator as ours at anywhere near the price.

Then—isn't it to your interest to write today for our booklet?

"Sanitor" Refrigerators *last a lifetime*—always keep your food pure and fresh—always protect your health—always insure greatest economy in ice bills. Our various sizes enable you to get just the particular Refrigerator you want for the particular place you want to put it.

We Prepay Freight and According to Size You Buy
We Save You $25.00
We Save You $20.00
We Save You $15.00
We Save You $ 5.00

For A Dozen Conclusive Reasons You'll Decide Upon

THE Detroit ELECTRIC

IT is not going to be so difficult as you might think to decide which electric carriage you want.

In the gasoline field scores of good cars make a confusing claim upon your consideration.

But when you come to choose an electric, a little inquiry will soon satisfy you which carriage is in the ascendant.

This is what you'll find:—

That communities which have perhaps shown partiality to other cars in previous seasons are rapidly transferring their allegiance to the Detroit Electric;

That in many cities—as for instance its home town, Detroit, the center of the automobile industry—the Detroit Electric is almost alone.

Everywhere it is gaining ground; rendering other types, as we said in a recent announcement, obsolete; and enjoying, invariably, the highest social prestige attainable.

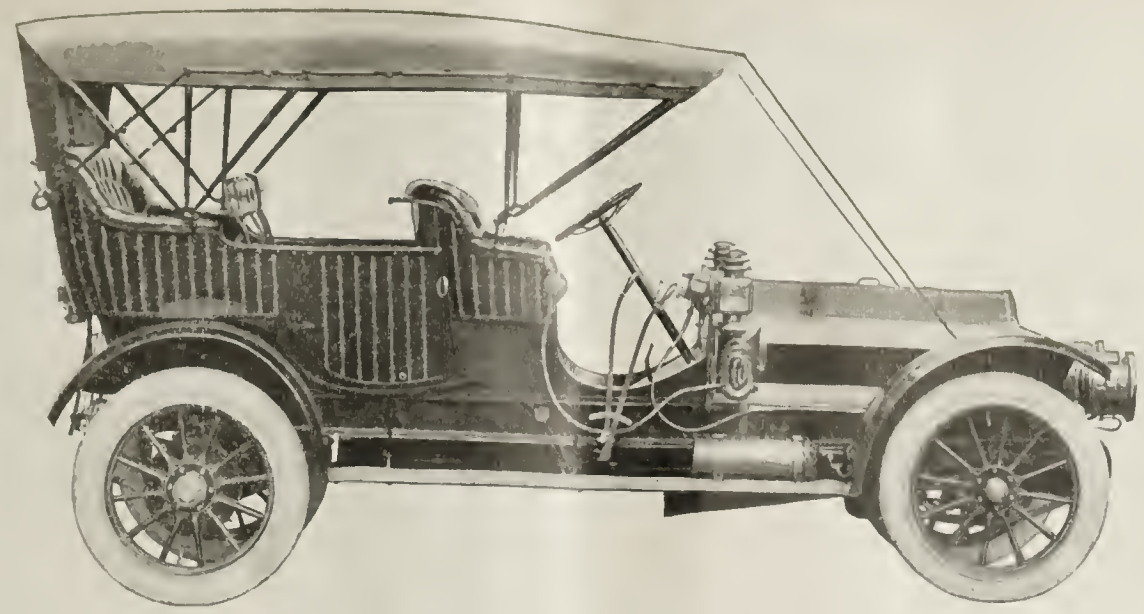
These are concrete conditions as you will find them. They are due to the simple fact that the Detroit Electric incorporates features previously unknown in electric carriages.

As it stands today it is unique in the extraordinary number of fine points contributing to efficiency, elegance, and comfort possessed by no other electric.

There are fully fifty of these features.

Here are some of the more important:—

Greater mileage, higher speed than any other electric can give—Five forward speeds; three reverse—Control of all speeds, motor brake and alarms concentrated in one lever—Cushions deeper and more luxurious—Upholstering and painting of the highest grade—Silver finish metal trimmings throughout—Larger doors and windows in the brougham types—Doors which open forward instead of back—Oval step pads instead of square with sharp corners—Large size Palmer web tires.



Your first step toward owning a Detroit Electric is to write for the literature to learn of the other features which count so much for genuine satisfaction.

The factory where the Detroit Electric is made—the largest in the world producing electric carriages. Its years of successful vehicle manufacturing rank it first in the country.

ANDERSON CARRIAGE COMPANY, Dept. H, DETROIT, MICH.

FRANKLIN 1910 AUTOMOBILES

The best answer we can make to the many inquiries concerning 1910 Franklin automobiles is to advise a visit to a Franklin dealer.

We have perfected our air-cooling system and dispensed with the front fan.

Surrounding each cylinder close to the vertical cooling flanges is a sheet metal casing open at the top and bottom with a diaphragm connecting the casings and forming with the engine boot an air-tight compartment. At the rear of this compartment is a powerful fly-wheel suction fan of new type. This fly-wheel fan draws large and equal volumes of air down through the casings around the cylinders. The air currents are accurately controlled and directed to just where they will do the most good.

This system cools the engine perfectly.

The elimination of the front fan is in itself a great improvement. Whatever reduces complication is always an advantage. Water-cooled engines require a fan, also much other complication which necessitates expert attention.

Tire sizes have been increased on all models. On Model H the rear tires are 37 x 5 inches, front 36 x 4 1-2 inches; on Model D, rear 36 x 4 1-2 inches, front 36 x 4 inches; on Model G, rear 32 x 4 inches, front 32 x 3 1-2 inches.

It will be unnecessary to carry extra tires on the 1910 Franklin.

The fact that with the average automobile there is more trouble and expense with tires than with any other part of the motor-car is not because tires are poor but because they are overloaded. We use larger tires than are generally used on much heavier automobiles. The front tires on Model H for example are the same size as used on the rear wheels of many other automobiles weighing about 1000 pounds more.

Another 1910 improvement is the elimination of the spark advance lever. In no case is the control of the spark left to the judgment of the operator. Much better results are obtained at all speeds than by any other system. This is fully demonstrated on our 1909 G. Starting on our magneto system is easier and safer than with battery.

Then comes the question of comfort. If you are a motorist you will understand what this means. If you are a new buyer you should know all about automobile comfort before you make your choice.

Comfort is a question that is in the minds of motorists now more than ever. In addition to the general significance of the comfort question women everywhere are finding they cannot tour in the average automobile—their doctors forbid it; their own good sense forbids it. But they can always ride in a Franklin.

A light-weight automobile with proper spring suspension gives the limit of comfort and touring ability. All Franklins have full-elliptic springs, laminated-wood chassis frame and non-jarring construction throughout. Franklin owners never experience lameness nor "motoring headaches."

If your luxurious limousine or landaulet lacks the quality of easy-riding it is not after all luxurious. Franklin closed cars of various types, now ready for delivery, are not only luxurious in their equipment but they have the easy-riding quality so essential to this type of automobile.

The Franklin six-cylinder 42 horse-power chassis is made with seven-passenger touring body, close coupled body, double rumble seat runabout and limousine.

The Franklin four-cylinder 28 horse-power chassis is made with five-passenger touring body, close coupled body, double rumble seat runabout, landaulet and limousine.

The Franklin four-cylinder 18 horse-power chassis is made with four-passenger touring body, six-passenger town-car, run-about with hamper, single rumble seat runabout, and double rumble seat runabout.

Model G is the only high-grade small runabout on the market.

Write for our 1910 catalogue.

9 Western Avenue Minneapolis, Minn.

A Season's Experience has demonstrated the remarkable absence of "automobile troubles" in the

Cadillac "Thirty"

The present automobile season has developed no single feature more remarkable than the absence of repair-necessities wherever the Cadillac "Thirty" is in use.

There is a sameness and unanimity about the reports received from cities all over the country that is striking, to say the least.

Thousands of these dependable cars have been in constant use for months; traveling thousands of miles under all sorts of conditions, and the record as shown by reports received from dealers and owners is invariably the same.

Repair work—the least in motor car history.

Engine troubles—almost absolutely absent.

This record, which is one of the most unique ever developed in the automobile world—is and can be due to but one thing—the scrupulous workmanship which distinguishes the Cadillac "Thirty."

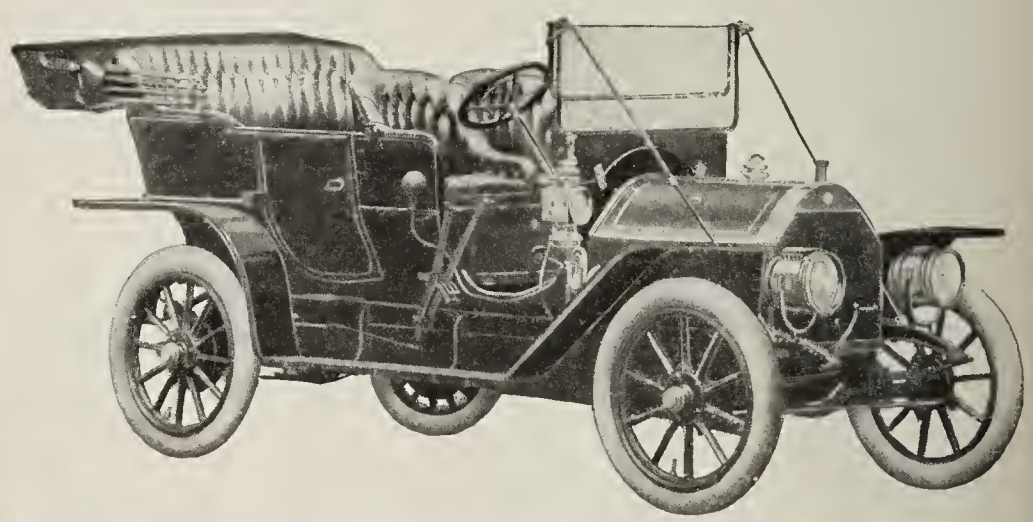
Cadillac workmanship demands a fineness of fit so absolute that it can be measured only in units of less than the thickness of a single hair.

To this precision, then, the Cadillac "Thirty" owes its almost frictionless operation.

And to this precision is due the fact that the thousands of cars now in continuous use in owners' hands have required practically no attention beyond the ordinary care which the owner should bestow on his car as a matter of course.

In no other car is friction so thoroughly eliminated as in the Cadillac "Thirty"

The Cadillac "Thirty" is furnished either as Touring Car, Demi-Tonneau or Roadster.



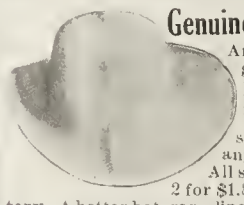
The price of each type is

$1400.00

F. O. B. Detroit and includes three oil lamps and horn.

Specifications briefly are: Four cylinders cast individually, copper water jacketed. Thirty horse power. Three speed selective type sliding gear transmission. Direct shaft drive. 106 inch wheel base.

Backed by the strongest automobile organization in the world.



Cadillac Motor Car Company Member A. L. A. M. Detroit, Michigan

We Guarantee Tire Mileage Not Promises

When we say that a King Tire will give you 5,000 or 10,000 tire miles, according to size, we guarantee it with an iron-clad guarantee. No quibbles. No argument. No strings to it—just a straight up-and-up guarantee. MAKE US PROVE IT.

ADVERTISING BULLETIN

NO. 12

TWO LETTERS

Indianapolis, Ind.
—— 28, 1909.

To the Editor of Collier's.

Dear Sir: Will you kindly tell me about how much your advertising policy costs you? As you do not advertise liquor, tobacco, patent-medicine abominations, culprit quacks or make-a-million swindles, I fancy your policy costs you several hundred dollars in a year. I should be very grateful for an estimate of what you thus sacrifice financially.

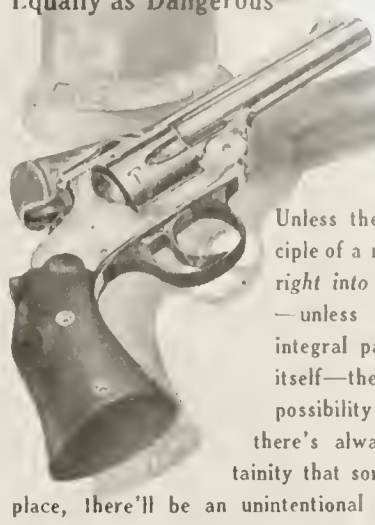
I imagine, too, that your editorial policy is not the most remunerative.

I should like to have the above information. Thanking you in advance for your courtesy,

Yours very truly,
H. G. H.—

Chicago, Ill.
—— 2, 1909.

Mr. H. G. H.—
Indianapolis, Ind.



My dear Sir: Your letter of the 28th has been forwarded from our New York office for my attention. On account of the elimination of the classes of advertising you mention, as well as all advertising in which doubtful or exaggerated claims are made, Collier's refused over $100,000 last year. I recall two contracts that aggregated over $40,000.

But I believe that this apparent loss will be in the long run more than made up by the great body of honest advertisers who thoroughly appreciate our efforts to allow nothing but the best in our columns, and who fully approve such a policy. As you say, our editorial policy has been the cause of our losing many advertising contracts. I could name three or four advertisers within the borders of Indiana who have withdrawn their advertising from Collier's on account of editorials and special articles—but we have half a million subscribers who know that Collier's can not be "influenced" by corporate interests or controlled by box office receipts.

Sincerely yours,
T. L. Patterson
Manager Advertising Department

IN NEXT WEEK'S BULLETIN—"The University of Advertising"

You Wouldn't Keep a Bomb in the House or on Your Person, An Unsafe Revolver is Equally as Dangerous

Unless the safety principle of a revolver is *built right into the mechanism*—unless it is made an integral part of the gun itself—there's always the possibility of accident; there's always the uncertainty that some time, some place, there'll be an unintentional discharge.

BUT IT'S DIFFERENT WITH THE

Hopkins & Allen TRIPLE ACTION SAFETY POLICE Revolver

You can see and feel the difference the minute you get this weapon in your hands. The Triple Action is the safety principle. It's the real and only *in-built safety principle,* just as the Hopkins & Allen Safety Police is the only triple-action weapon in existence. Go to your dealer. Have him show you a Hopkins & Allen Triple Action Safety Police. You'll understand at a glance the advantages of its exclusive safety-action.

Here's What the Triple Action Means The instant you pull the trigger the hammer cocks, then lets drive at the firing-pin straight and hard; the second it hits the firing-pin, the instant the shot is fired, the third movement instantly lifts the hammer up and above the firing-pin, *away above it,* out of all possible contact with the firing-pin. There it lodges—securely, safely—firm, fixed and immovable against a wall of solid steel. The weapon will not, cannot fire again unless you actually pull the trigger.

The New Army Grip gives a strong, firm hold and adds to the effectiveness of the revolver. 32 and 38 calibre, 4-inch barrel, nickeled finish, $9.50; blued finish, $10.00. For sale at all good hardware and sporting goods stores, but if your dealer does not have it, we will send one to you post-paid on receipt of price.

Send for our 1909 Gun Guide and Catalogue which also shows our other lines—the most complete range of high-grade, low-price firearms made anywhere in the world. Write for it today. IT'S FREE.

HOPKINS & ALLEN ARMS CO.

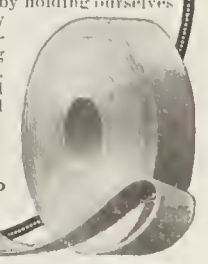
Economy in Leather Belting



Whether your leather belting costs much or little per year, it's an expense that you want to cut down as much as you can. It makes no difference how hard you work your belts or under what trying conditions you will have the most economical belt you can buy if you use

Sea Lion
Guaranteed Waterproof
Leather Belting

Made especially to run under the most adverse conditions, such as severe weather, under a broiling sun in tropic humidity or through a flooded wheel-pit. Subject it to any of the things that work hardship on other belts and you'll still get more efficiency and service out of Sea Lion Leather Belting than ordinary belts give under the most favorable conditions.

We also make Reliance, Imperial, Sterling and Dynamo, Leather Belting, each equally as good for specific purposes.

We guarantee every foot of Sea Lion and Reliance Belting perfect and protect purchasers by holding ourselves liable at all times to replace any belt defective in stock or workmanship. A trial of our belting will prove that it saves money. Write us about your belts and we will go into details and send you a book on leather belting.

COLLARS & CUFFS

FIT COMFORT

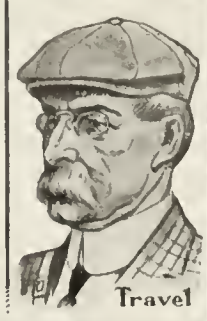
Work

Sport

FOR ALL MEN AT ALL TIMES

LITHOLIN Linen Collars and Cuffs **waterproofed,** fit every man and every occasion. No other kind so good—when at your desk, on the train, at the dance, or in the field, you'll find them comfortable, clean and in style always. No more worry about collars "wilting," for they won't. They never fray. A wipe with a damp cloth gets rid of any soil, and makes them white as new. All trouble is saved, and you do away with the present weekly expense of laundering. No **"tie-binding" with the turn-downs — there's a space.** All styles and sizes.

The same collar you have always worn, only waterproofed.



Collars 25c. **Cuffs 50c.**

Always sold from a RED box. Avoid substitutes.

If not at your dealer's, send, giving styles, size, how many, with remittance, and we will mail, postpaid. Styles book free on request.

Automobile winning Founders' Cup, Phila., Oct. '08, on Firestone Tires and Firestone Demountable Rims

No Delays From Tire

punctures, blow outs or other troubles; no need to bother with repairing or even pumping up your tires on the road.

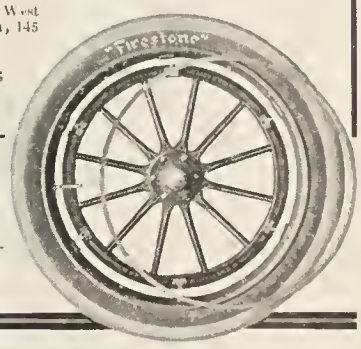
You can substitute a fresh tire already inflated and resume your journey without delay, if your car is equipped with the

"Firestone"

DEMOUNTABLE RIM

(for all quick detachable and clincher tires.)

Used with quick detachable rims, it abolishes the unspeakable nuisance of fitting tire and short-stem staybolts on a detached clincher rim, unavoidable with other demountable rims.



May be equipped to practically *any* car without changing from present tires.

Write for our handsome "DEMOUNTABLE RIM BOOK."

6% NET

For 34 years we have been paying our customers the highest returns consistent with conservative methods. First mortgage loans of $200 and up which we can recommend after the most thorough personal investigation. $25 Certificates of Deposit also for savings investors.

PERKINS & CO., Lawrence, Kans. Ask for Loan List No. 714.

STERLING TIRES

Most important of all that goes into a tire is the "intent" of the maker. Fabric, rubber and tools are open to everyone. We are building tires to build reputation. We don't care about this year's profit or loss. We are willing to take our profit in good name and goodwill. Try one Sterling against three others and see what we mean.

STERLING BLUE TUBES are made of two layers of rubber —cross-grained with a protective coating. Nothing else like them—unique in looks and service. "Ask us why they're blue."

Tell us what tires you use and where you buy them and we'll tell you how to get a Sterling Blue Tube—FREE.

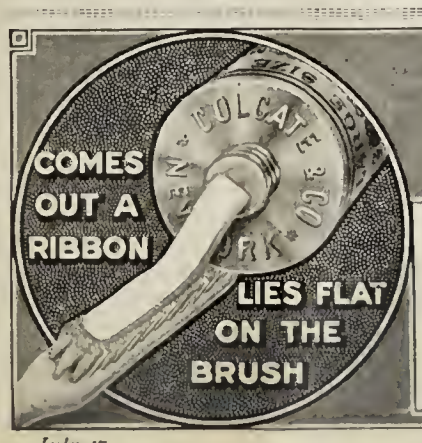
Some Good Motor Boat Advice

There are two ways of buying motor boat equipment.

One is to go to the ordinary dealer make your selection from a limited stock and pay "store prices."

The other is to buy direct from a Marine Hardware concern—where variety is offered, as well as *quality* in equipment—where a hundred cents worth of value is given for every dollar. Such an establishment is



Hopkins

"The Final Word in Motor Boat Equipment"

A BOOK YOU SHOULD HAVE

In order to know what equipment is really necessary, and the cost of those features you may wish to add to your boat, you should get the **Hopkins** motor boat book. Containing beautiful color plates, and over 1500 illustrations, this book is invaluable to motor boat owners. Upon request, a copy will be sent without charge. Also full details of the **Hopkins MAIL ORDER SYSTEM of special interest to those outside New York.** Address immediately

The South

THE SOUTH IS GAINING powerful friends. And perhaps not so much friends, whose motive is avowed sympathy, as merely clear-eyed observers who are just and have courage. By the multiplication of these will her way be made smooth. Mr. WILLIAM ARCHER completed last winter a long journey of observation through the Southern States. From his conclusions, printed in the July "McClure's," we detach two sentences:

". . . the South is in the main actuated by a just and far-reaching, if not far-seeing, instinct. I believe that the problem, far from being unreal, is so real and so dishearteningly difficult that nothing but an almost superhuman wisdom, energy, and courage will ever effectually deal with it."

We wish that these convictions were in the heart of every New Englander who hastily calls a meeting to pass resolutions on the negro problem, and every Northern editor who has a formula, long conventionalized, in which he writes, periodically, a scolding for the South. In the "Outlook," the other day, LYMAN ABBOTT spoke of his sympathy with the intense feelings of the Southern white, his "strong confirmation" of the enlightened views of President ELIOT and Ambassador BRYCE about the South's ultimate problem. To these names may be added that of THOMAS WENTWORTH HIGGINSON, survivor of the generation of Abolition leaders and commander of a colored regiment during the Civil War. In declining an invitation to attend a conference on the status of the negro, he deplored all such agitation, which makes the problem of the South only more difficult. The day may yet come when the North will formally acknowledge that the South's stubborn refusal, since the Civil War, to yield an inch of its stand in the matter of the relations of the races was an epochal contribution to the white race in America, which, under the outrageous difficulties which the North pressed down upon the South, could not have been done differently. Probably it would be impossible to prophesy a day more unhappy for this continent than the one on which the Southern white should abate one iota of his race-pride.

Courts

THE KANSAS CITY "STAR" is one of many papers whose persistent pointing out of judicial absurdities will ultimately effect their obliteration. A few weeks ago Judge GANTT of the Supreme Court of Missouri ordered a new trial for a convicted criminal because in one of the official papers the word "the" had been omitted preceding the words "State of Missouri." Now comes a reversal based on the omission of the letter "e." The despatch from Jefferson City reads:

"Judge GANTT filed in Division No. 2 of the Supreme Court, June 29, an opinion reversing and remanding two years' sentence of LEO JUDD of St. Louis for fraudulent registration in September, 1904. The case is reversed on the ground of a defective information of the prosecuting attorney. The information charged JUDD with registering under the name of Charles Cohn, but charged that he signed the registration book by the name of Charles Cohen. The different spelling of the name, the court finds, makes it an entirely different name and makes the two parts of the information repugnant to each other and the indictment defective. The case is remanded that the circuit attorney may file another information if he so desires."

Judge GANTT is not personally responsible; the judicial system of Missouri is very much to blame.

The University of Wisconsin

FOR THE SAKE of free ideals, to insure academic liberty and good teaching, the president of a university should be unconscious of authority over him, and feel as confident of his tenure as if the institution were his private property. On the other hand, the physical and financial management of several millions worth of property demands trustees or regents who shall be capable business men. In these trustees, ultimate control must always rest. If they happen to be men of aggressive personality they sometimes leave their proper domain and begin to trespass on purely academic ground, try to dictate on matters wholly educational, attempt even to color the teaching. To this course there can be but one end. Something of the kind is said to be happening behind the scenes at the University of Wisconsin. There, lately, some of the more powerful and active regents, who are appointed by the Governor, have interfered in purely academic matters. Many friends of the university believe that these regents would, if they dared, depose President VAN HISE. (They have already tried to curtail the Economics Department and alter its character.) It is true that the spirit of this university, and the graduates it has sent out, are responsible for much of the independence in Wisconsin politics, the freedom from party domination, the aggressive determination to control public utilities and conserve the State's resources. The regents in question are said to be bent upon a course which would change all this. The University of Wisconsin is a wonderful institution, half university, half the living soul of a State. Happily, the people of Wisconsin know how wonderful it is. They will take care of their University.

Some Important Facts

THE "WALL STREET JOURNAL" is a daily paper which sells for five cents. Its circulation is small, probably not over fifteen thousand. But those fifteen thousand buyers of the paper are the richest men in the United States. The "Journal's" regular daily readers have an aggregate wealth greater than that of any other daily paper. It is the trade journal of Wall Street, and it is alone in its premiership. Its contents consist of the New York Stock Exchange quotations, running comment on the day's events on the Exchange, news of corporation meetings, dividends declared, the trend of the bond market, a mass of financial advertising, and, finally, each day a few very able editorials. It is from these editorials during the past few weeks that the following paragraphs are taken. We think they will surprise anyone who does not know the "Wall Street Journal" and has read our description of it. First, about the $29,000,000 fine against Standard Oil:

"The Landis decision was the fruit of a popular state of mind brought about by methods of corporation activity of which the life insurance inquiry gave the first illuminating exposition. Corporations in those times were in many cases being conducted with an utter indifference to the laws of God and man. If a corporation were only strong enough its managers assumed that anything was right which they could bring about without actually incurring prosecution. It was thought in some financial circles proper to own the representatives of the people in State Legislatures or in Congress, and, indeed, we had established a condition so rotten as to bring about a violent revulsion of public sentiment."

This concerning the tariff which the Senate has been making:

"We have only to glance at the tariff discussion in the Senate to see how far we have fallen back, after the moral upheaval of a few years ago. The spectacle there is so base, so utterly without patriotism or principle, so far from the ideals of either party, so crudely self-seeking, and so callously ready to sacrifice the interest of an entire nation for the benefit of a small part of it, the interest of a State for a small influential portion of that State, and even the interest of a Congressional district for a few contributors to a campaign fund, that it points to the establishment of a new tyranny. This moral rot in our commercial system, so indecently displayed in the United States Senate, is one of a number of signs which should cause us to think. The spectacle at present afforded by the United States Senate is an insult to every self-respecting American. It exhibits statesmen supposed to be acting in a national capacity owned in soul and pocketbook by petty local interests, while one corporation after another shows that it can snap its fingers at the promises made by the Republican President and all his party before election, and accepted by the American people."

Finally, this about commercial and political conditions:

"There is, however, evidence patent enough to any observer that favored interests are trying to establish a return to conditions which were most properly suppressed within the past four years.

"*There is, in fact, a shameless revival of that association of selfish corporate interests with legislation and legislators, such as dared not show its head twelve months ago.*"

These quotations suggest many thoughts. Probably it is proper first to express appreciation of a newspaper which, although its clientele consists of men of great wealth exclusively, is yet independent and outspoken. We know of no newspaper, even among those that appeal to the public in general, which is so frank and forceful. In the "Journal's" contrast between conditions now and a year ago, there is an implied comparison between the present and the recent Presidents which will not down. It is a comparison, however, which does not go deeper than the relative energy of the two men in carrying out the good intentions which are common to both. Most important of all the aspects of the "Journal's" remarkable editorials is this: We believe they represent the average belief of the "Journal's" wealthy readers. *It is not the rich, but the sycophants who serve the rich, that hold us back.* It is the unscrupulous lawyers who serve corporations and carry the consciousness of their retainers into the Legislature, the judges who either have been corporation attorneys or hope to become such, the subsidized newspapers frantically eager to commend themselves to their patrons—these are the ones who stubbornly fight progress. Finally, the intrinsic truth of the "Journal's" words is important. We trust the character of their source will carry conviction where a more radical publication's utterances might be read with some reservation.

Leaving Things Alone

SOME GROW WEARY of those who constantly cry out for progress. To them are commended Mr. CHESTERTON'S words:

"The whole conservatism is based upon the idea that if you leave things alone you leave them as they are. But you do not. If you leave a thing alone you leave it to a torrent of change. If you leave a white post alone it will soon be a black post. If you particularly want it to be white you must be always painting it again. . . . But this which is true even of inanimate things is in a quite special and terrible sense true of all human things. An almost unnatural vigilance is really required of the citizen because of the horrible rapidity with which human institutions grow old."

Love on Paper

"AT LOVERS' PERJURIES," they say, "JOVE laughs," and, surely, he has the best laughs of all over the breaking of vows by those who, through their unusual faculties of speech, should be the most eloquent in making them—that is to say, Messieurs the Poets. Burns had innumerable sweethearts, though he did not favor many with epistolary protestations, which was wise, perhaps, some of these ladies being as illiterate as they were light or low. The several post-matrimonial amatory vagaries of VICTOR HUGO were tolerated and condoned with a blind indulgence by the wife to whom, during his veritably Vesuvian courtship, he had written: "Have no fear, ADÈLE, concerning the duration of a love that GOD himself could not extinguish. . . . My temperament, my pride, my ambitions, all are dominated by my love, concentrated in you alone, transmitted into one desire, one idea, one aspiration—to be forever yours. . . . For me, you are the gate of joy and sorrow. . . . You fill my soul as if I were possessed of a divine spirit." HUGO became a peer of France, and his noble English rival in poetry and light allegiance, Lord BYRON, a year before he asked for the hand of Miss MILBANKE, was on terms of this sort with Lady CAROLINE LAMB: "I again promise and vow, that no other, in word nor deed, shall ever hold the place in my affections which is and shall be sacred to you till I am nothing. . . . I was, and am yours, freely and entirely, to obey, to honor, love, and fly with you, *when, where,* and *how,* yourself might and may determine." To a second gentleman's wife, the Countess GUICCIOLI, BYRON wrote thus four years after his marriage with Miss MILBANKE: "My destiny rests with you. . . . You have ever been, since our first acquaintance, the *sole object of my thoughts.* . . . I pray of you to believe that I can not cease to love you but with my life." As to POE, the year preceding VIRGINIA'S death, she was his "dear heart," his "little, darling wife," his "*greatest* and *only* stimulus now, to battle with this uncongenial, unsatisfactory, and ungrateful life," whereas, the year following VIRGINIA'S death, he confessed to the widow WHITMAN: "For years your name never passed my lips, while my soul drank in, with a delirious thirst, all that was uttered in my presence respecting you. . . . During our walk in the cemetery I said to you, while the bitter, bitter tears sprang into my eyes: 'HELEN, I love now—now—for the first and only time.' . . . My brain reeled beneath the intoxicating spell of your presence, and it was with no merely human senses that I either saw or heard you. It was my soul only that distinguished you. . . . I saw that you were HELEN—*my* HELEN—the HELEN of a thousand dreams—she whom the Great Giver of all good had preordained to be mine—mine only—if not now, alas! then hereafter and *forever* in the Heavens." And one might go on quoting other letters from other poets, writing in other languages. But JOVE has no nationality, and therefore no prejudices. So he laughs at all, whether poets or mere people, who delude themselves with ink, commit perjury by post, love on paper to distraction for aye and evermore.

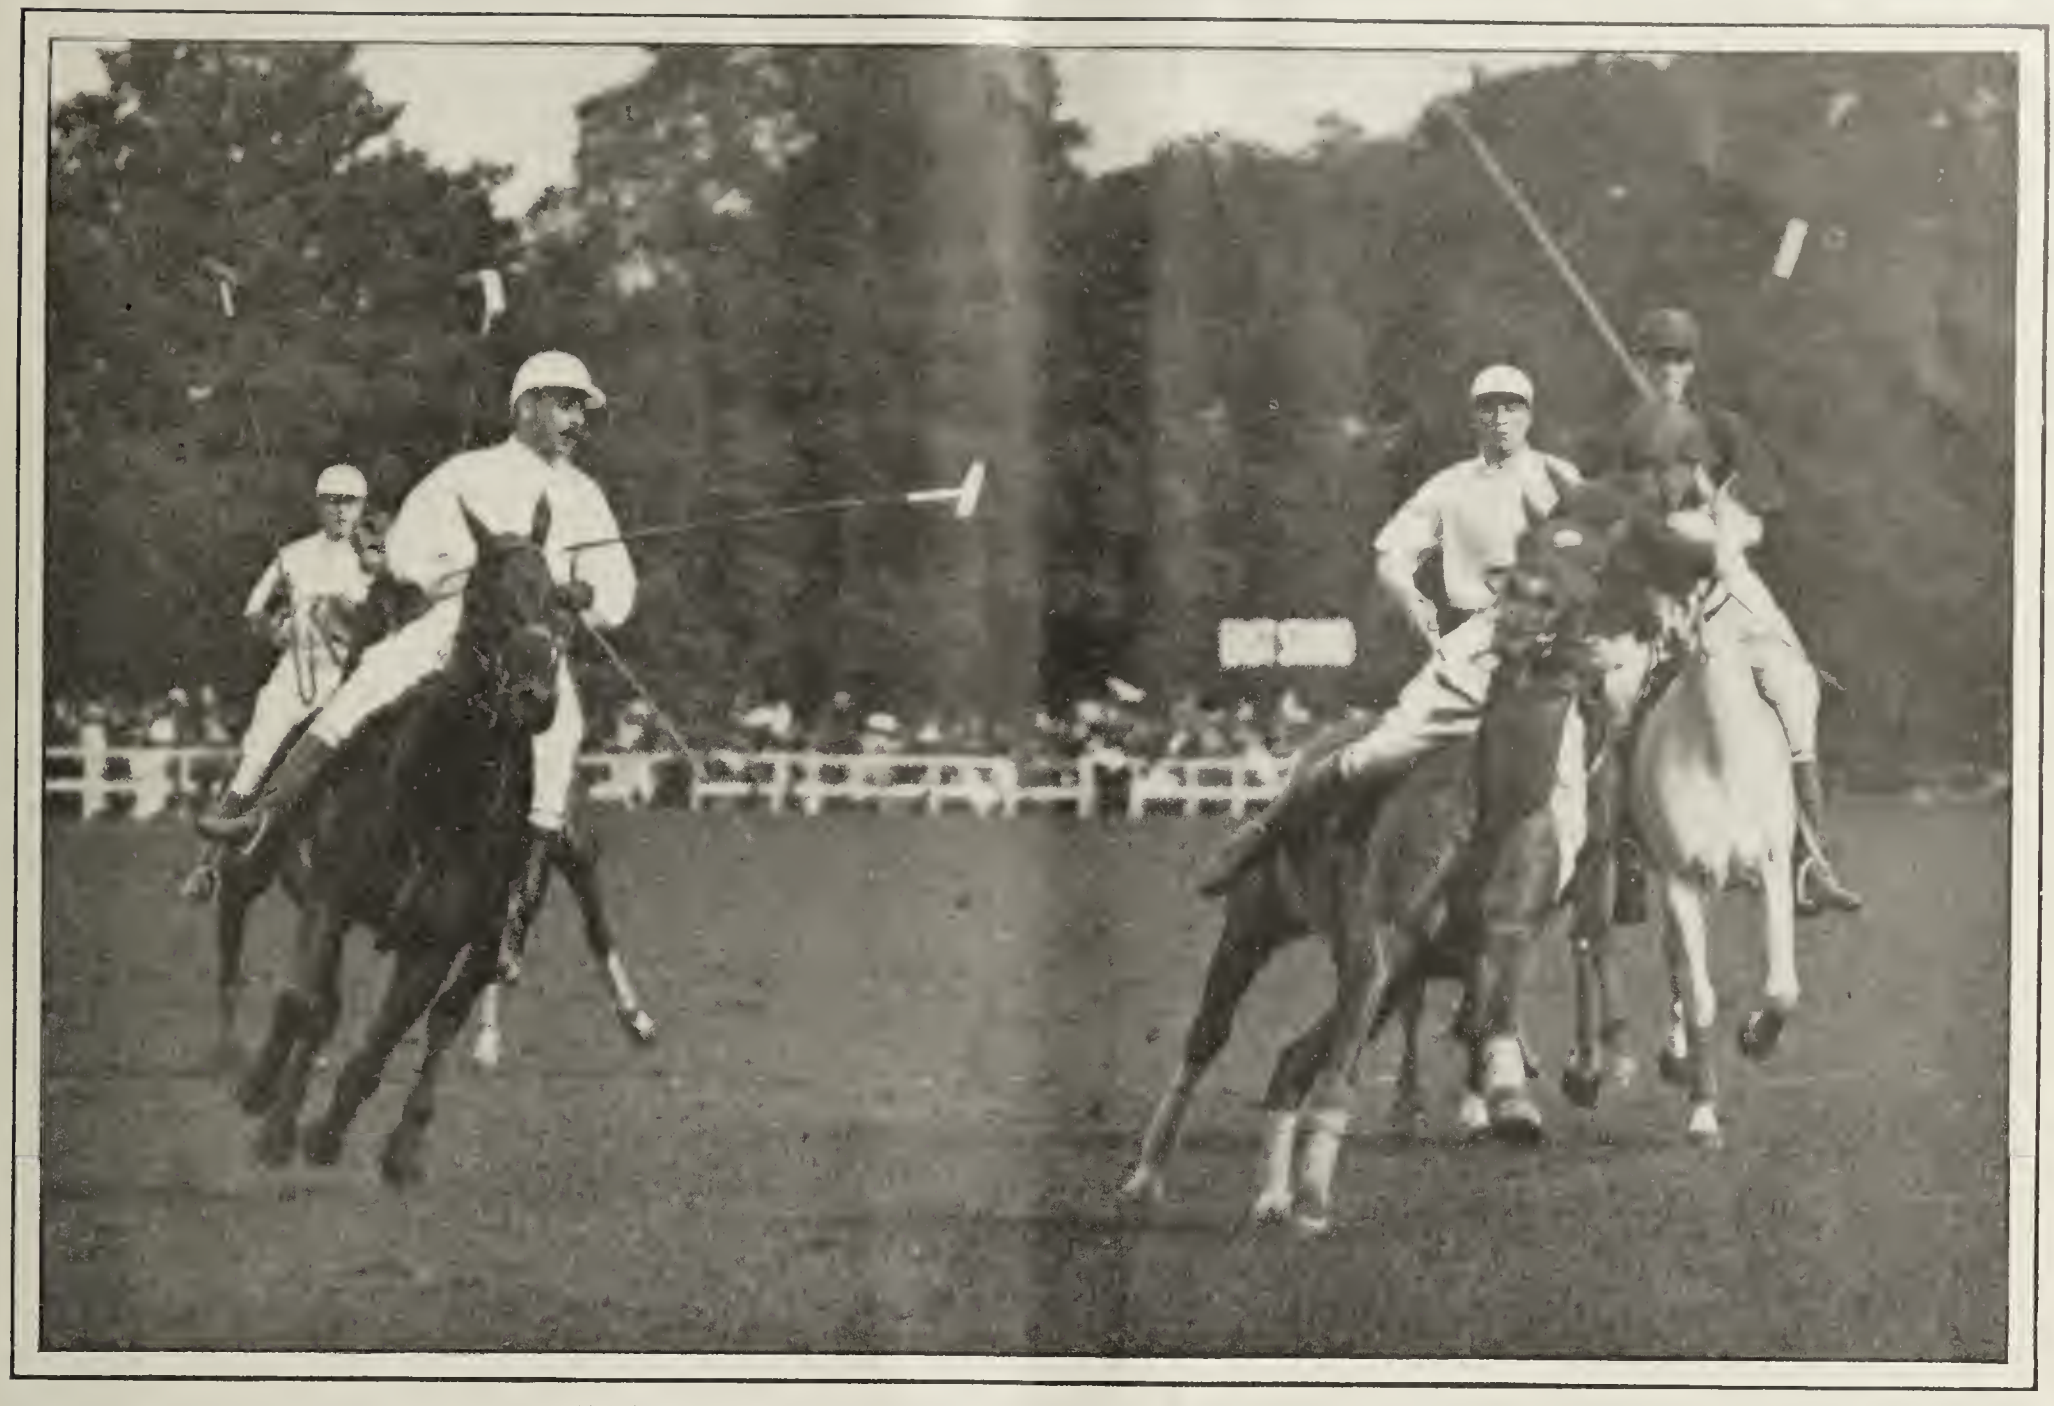
To the Creditor

A Toast

By OLIVER HERFORD

HERE'S to the Creditor! Long may he reign.
May his Faith never waver, his Trust never wane;
May the Lord make him gentle, and gracious, and gay,
Yet quick to resent the least offer of pay—
May he soften his heart, as he softened, we're told,
To the Israelites' "touch" the Egyptian of old—
And when on his last long account he shall look,
The angel will say as he closes the book:
"The Lord gives you Credit for Credit you gave!"
So here's to the Creditor—long may he waive!

The Monroe Doctrine—via Berlin



ON OPENING a package addressed to this hochgeehrte office from the verlagsbuchhandlung of HERR PAETEL, Kochstrasse 67, Berlin, we were pained to behold a fiery red book, on the cover of which a condor was engaged in tearing up and apparently eating the United States flag. The promise of the cover was fully borne out by what it contained. In the year 1920 the American army of invasion was annihilated by the South American triple alliance. The Yankees undertook a punitive expedition to Urnguay. There were 120,000 men—good enough to police Cuba and the Philippines, but nothing like the Brazil, Chile, and Argentine allies who were drilled by Germans. And besides that, the American officers were distressingly arrogant. The battle, which took place near Buenos Ayres, was extensive and sanguinary. The "sophistically enlarged Monroe doctrine intended for the bondage of South Ameriea" was broken down completely, and the spectacle after the annihilation of the Americans was so depressing that Major PAPPENHEIM, "who was not given to drinks," emptied an entire bottle of brandy. It is some comfort to know that he won his Argentine bride after the cruel war was over, and then young SPENCER, the military attaché of the American legation at Montevideo, was at last accepted by the lovely Senorita CARMEN DUGGAN. For a time her proud patrician blood recoiled at the thought of an alliance with her country's enemy. In the last paragraph of the book, war with Japan begins, and it is suggested that Nippon is about to appear at the head of five hundred millions of Chinese. We were more impressed by the novelty of Herr PAETEL'S story than by its sanity or literary charm. Silence is doubtless even more than it deserves. Possibly it was the "hochgeehrte" by which we were seduced.

Fly-Chasing

POLICEMAN SCIENCE has photographed the fly for his Rogues' Gallery. Since Dr. HOWARD, the United States Government entomologist, damned the pervasive and evasive insect with the telling epithet, "typhoid fly," it has been enjoying an increasingly evil repute. "Give a bug a bad name" and the whole world bays upon the trail. As the latest move, the Merchants' Association of New York is sending an agent to procure kinetoscope representations of the winged nuisance in its specialty of distributing filth and disease from the scientific snapshotters of Germany, who have been industriously catching the culprit in the act. These pictures will lay bare the whole private life of *Musca domestica,* with the particularity of a yellow journal scandal. They will show the germ-purveyor gathering bacteria in highly unappetizing localities, tracking them into meals, and putting all six of its mucky feet into the trough, so to speak, while sharing breakfast or supper with the family (human) of its choice. For your fly is no finicky feeder. It will take the first course, if you please, in the barn-yard, the second in the pig-sty, and the third in the dining-room. It will wash its hands over the molasses jug; it will leave footprints upon the sugar, which, though indistinguishable at the time, loom large and black in the next year's mortality records; and it will even commit suicide in your cup of tea rather than leave unfulfilled the behests of its patron-devil, Beelzebub. All this the picture films will unfold in the educational campaign of the Merchants' Association. The exhibit will be given first in the regular "nickelodeon" shows, and eventually, in the public schools. "The Moving Picture writes, and, having writ," leaves to the instructed public the verdict, which is easy to forecast. The tiny but nocuous flitter which inspired Mr. THEODORE TILTON'S muse has no place in modern society. It has lived regretted and will die acclaimed.

America Regains the Polo Cup

The American Team Defeats its English Rivals at Hurlingham and Captures the Cup Lost Twenty-three Years Ago

Freake saves the ball for England by a brilliant and daring back-hander

BY THEIR second victory at Hurlingham on Independence Day the American polo team won the international challenge cup from the English team and regained for America the trophy which has been held by England for twenty-three years. The victory was not only decisive, but it showed perhaps the best polo ever seen in England. The Americans hit harder and with more ingenuity. They were quicker on the ball, and their team play was especially effective.

The Meadow Brook team, representing the American Polo Association, consisted of Messrs H. P. Whitney (captain), L. Waterbury, J. M. Waterbury, Jr., and Devereux Milburn. The English picked team in the first game, which the Meadow Brooks won on June 23 by a score of 9 goals to 5, consisted of Captain H. Wilson, F. M. Freake, P. W. Nickalls, and Lord Wodehouse. In the second game, Captain Wilson and Lord Wodehouse were displaced by Mr. H. Rich and Captain Lloyd. Lloyd used to play for the Fourth Dragoon Guards in India, and he had been on the winning Roehampton team since 1905.

The reconstructed English team played well, but was clearly outclassed. Mr. Rich, who had been expected to rush Devereux Milburn off the ball, found the American back unflurried and invincible. Captain Lloyd played better than Lord Wodehouse, and Messrs. Freake and Nickalls were as good as before, and all the English players were better horsed, but the result was scarcely in doubt from the first. The challengers won by a score of 8 goals to 2.

The International Challenge Cup was won for England by a Hurlingham four in 1886. The American players were Messrs. Thomas Hitchcock, Jr., W. K. Thorn, Raymond Belmont, and Foxhall Keene. An unofficial American team, captained by Mr. Keene, and including W. and L. McCreery and F. J. Mackay, challenged and was beaten in one match in 1900. In 1902 a team representing the American Polo Association challenged and was beaten two matches to one. The Americans were Messrs. Foxhall P. Keene, J. E. Cowdin, R. L. Agassiz, and the Waterbury brothers.

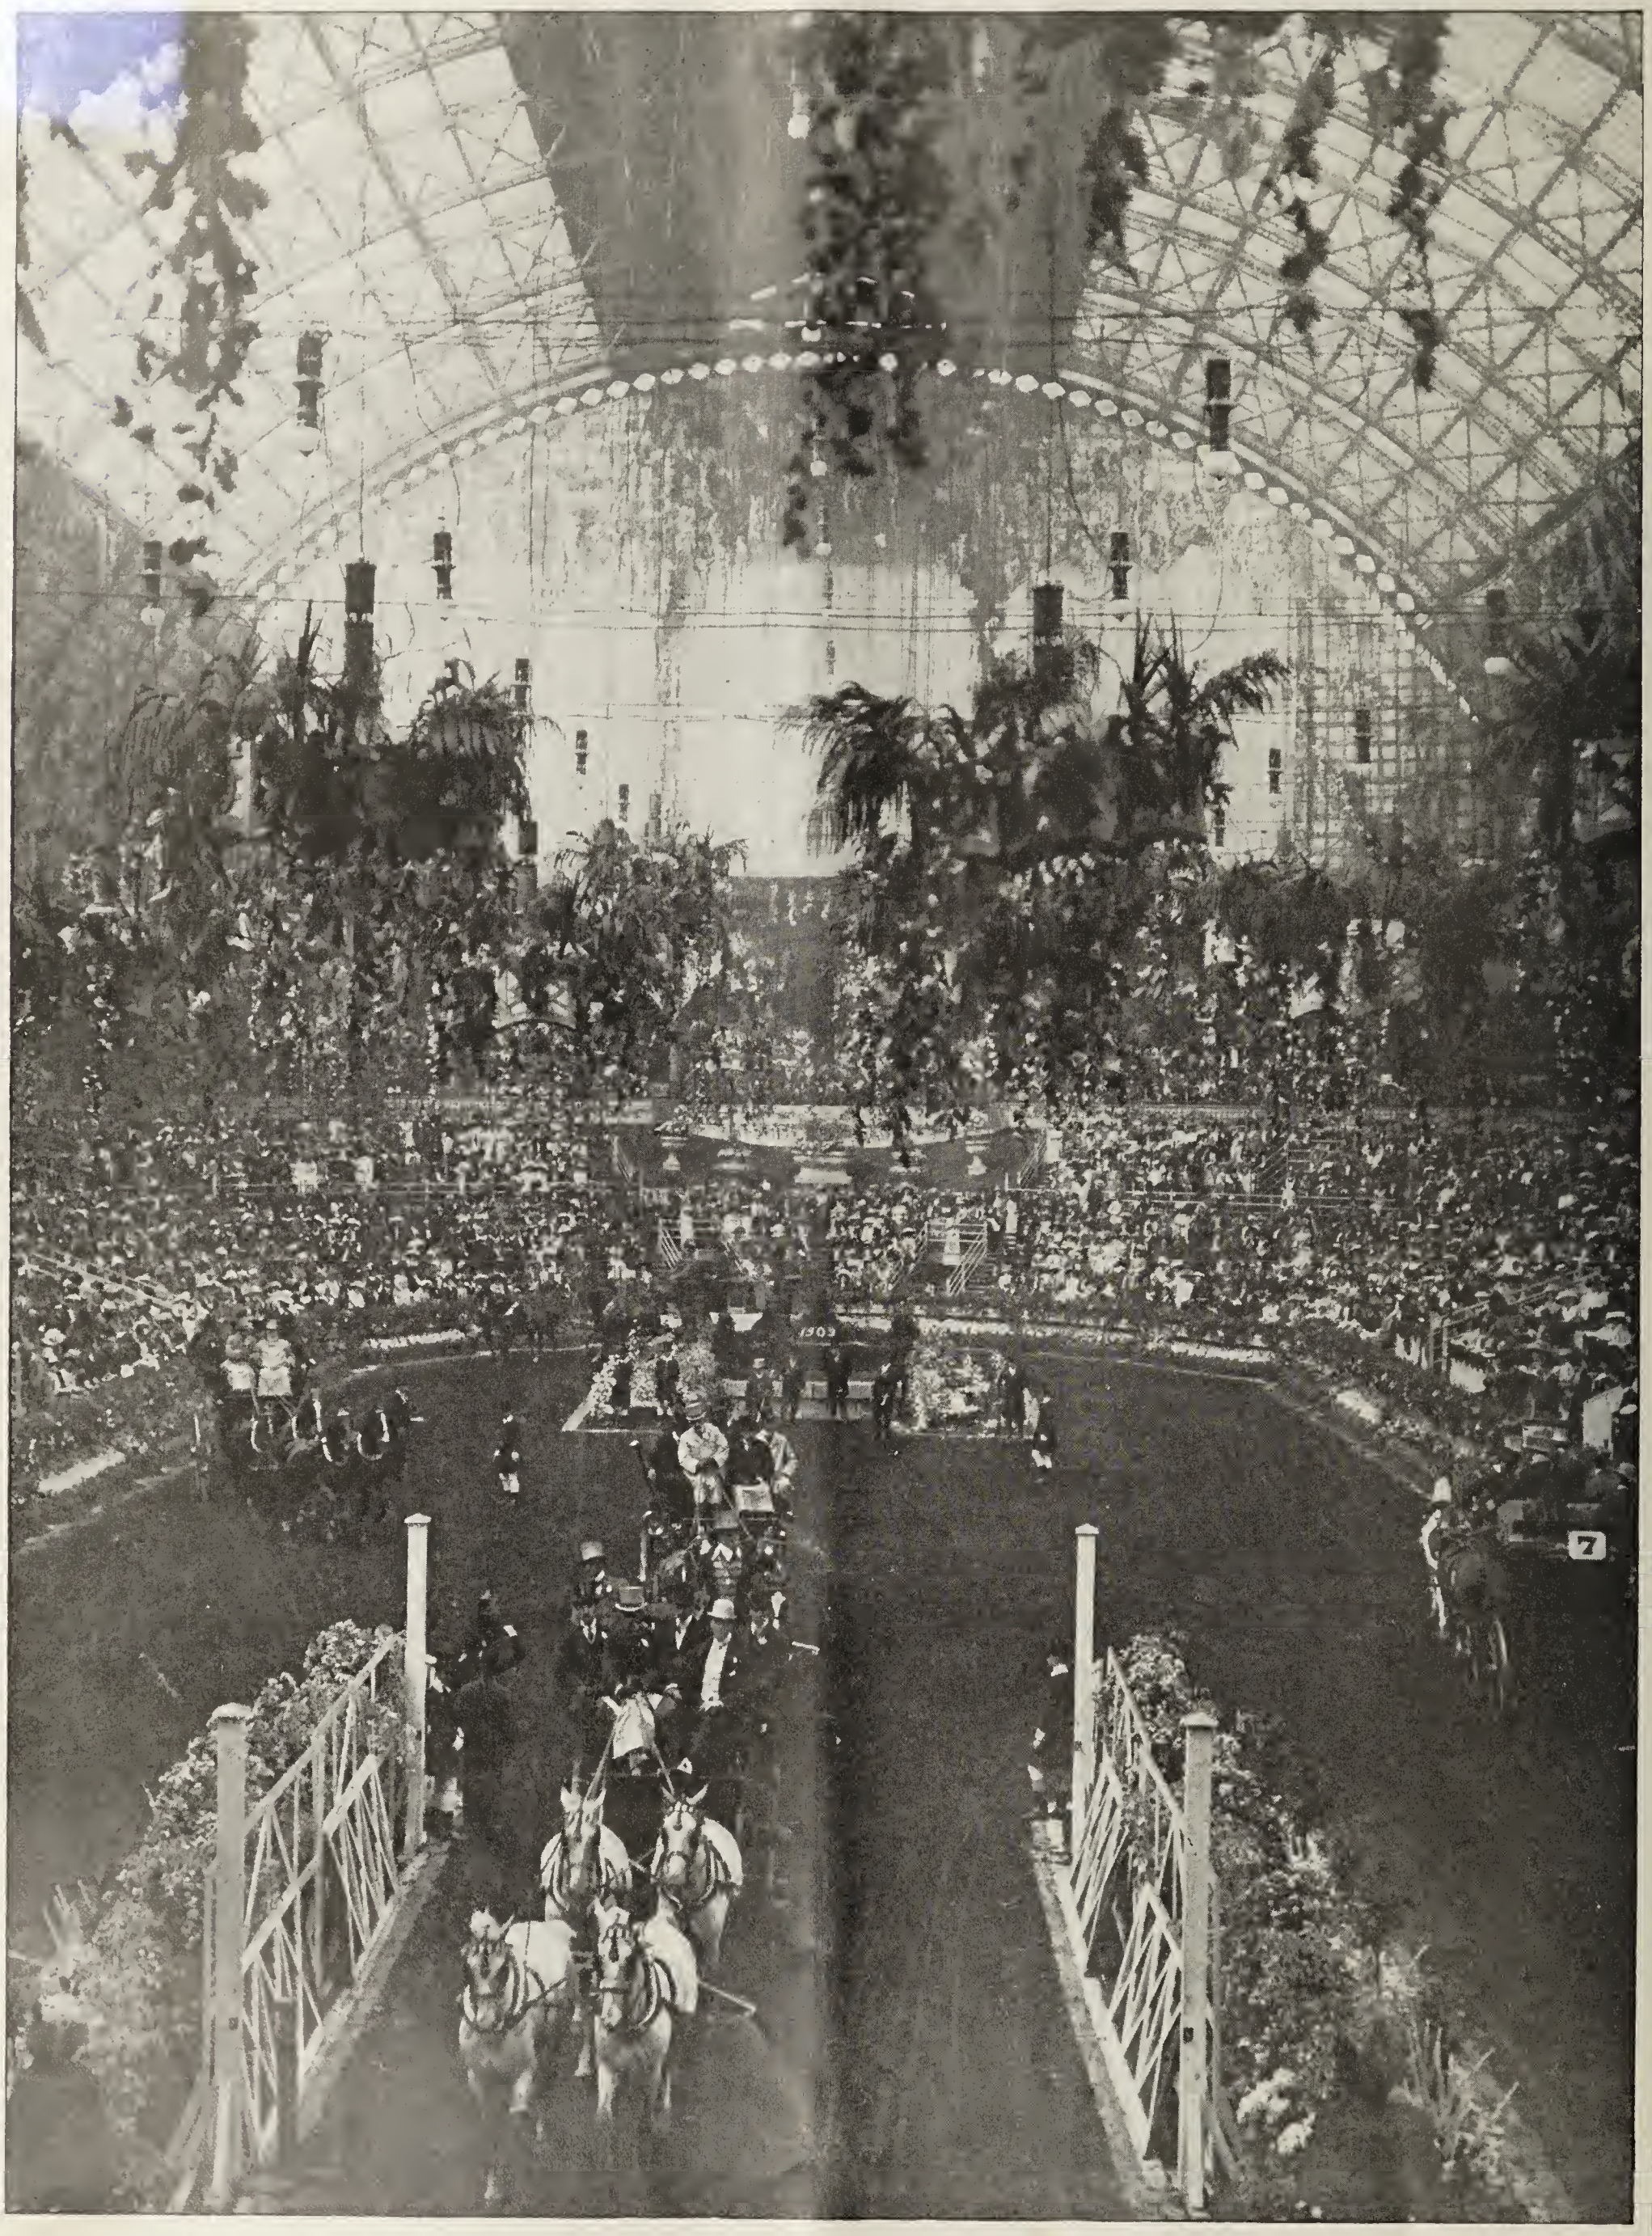
The significant feature of this victory is the suggested splendid development of team-play among the Americans. In every instance where American and English teams have met hitherto, the Americans have shown weakness in this particular. The strong element in English play during this last match was, and always has been, "playing to position." That means every man filling his especial place on the team, which sounds simple enough, but is one of rarities in all combinations of men, whatever the game. Hitherto, also, the English ponies have considerably outclassed those of the Americans. This year Mr. Whitney left nothing undone to put the challenging team in a position to at least do itself justice. To this end a higher grade of ponies was provided for the American players than ever before they sat on in international matches. While their improved mounts were a large factor in the recent success, the victory, after all, must be attributed to brilliant individual work, which merged into spirited team play, and especially to the accurate hitting and quicker, more aggressive tactics. In a word, the Americans were on the job every second. To Mr. Whitney must be given great credit for the practical manner in which he prepared for the match and for his generalship on the field. No American team has ever played on English soil in such harmony or in such spirit. Nor have any four from the New World shown such high-class polo as did these representatives of the American Polo Association.

There is the further reason for acclaiming the victory of this team, because it triumphed in the land where the best polo ponies in the world are raised and over players who were the pick of England, which means the best on earth. English polo playing form averages high, higher than anywhere else, and there are always more first-class candidates from whom to draw than America can possibly muster; for, although there are many men playing polo in America, the teams are scattered over the country and do not have the advantage of so often meeting on one common playing field as is the case in England. The same conditions that tend in England to make the average skill in boating so high apply also to polo.

Take it all in all, Americans have never captured a cup that reflects as much credit upon the victors. Not only did these challengers from the United States beard the lion in his den, but they played on turf much softer and under conditions differing from those with which they were familiar; and they won from the pick of all England—in a clean game, fought out to the finish.

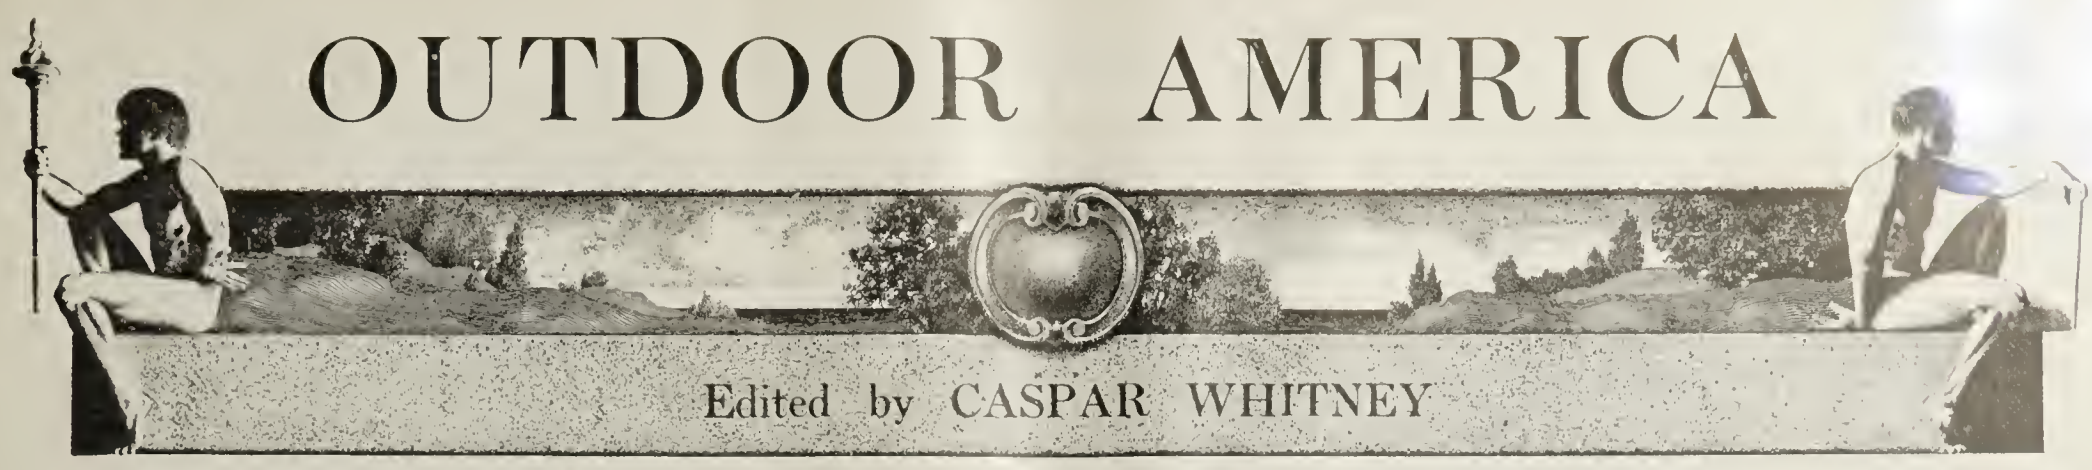
With reference to the match, J. M. Waterbury, Jr., said:

"Our game in America is much faster than England's, and we seem able to get hold of the ball better when it is on the move. We are better mounted than we were in 1902, but I think the improvement of our game over that year is largely due to the fact that the team is all so friendly. We live together and are on the very best terms with each other."



Walter Buckmaster, England's greatest player, who refereed the match, said after the game:

"The Americans gave a great exhibition. It was the best polo I have ever seen. They beat our men for dash, they were quicker on the ball, and knew what to do with it when they got to it. They richly deserve the success which I attribute to the thoroughness with which they mastered every detail of the game."



The International Champions

From left to right—Devereux Milburn, Harry Payne Whitney (captain), J. M. Waterbury, Jr., and Lawrence Waterbury, representing the American Polo Association

The International Horse Show in London

Mr. Alfred G. Vanderbilt driving out of the Olympia arena after winning the Coaching Marathon from Hampton Court—eleven miles—against twenty other starters. The honors of this show were divided between England and the United States. Of the championship cups the former won eleven and the latter eight of twenty-one awarded; France earned one of the remaining two and Canada the other. In appointment classes and in trotters American entries made a clean sweep

Athletics That Save Life

THREE little boys were playing ball the other day in an open field which slants to the Hudson River. One was batting up flies for the other two to catch. The two in the field were brothers—eight and ten years of age; the one at the bat was twelve. They were having a lot of fun, taking turn and turn about at bat; finally it came the turn of the older brother, and he sent up an unusually high ball which the youngster tried for. It went over his head and rolled down the bank to the river, where it bobbed along in an eddy of a rather swift current. Reaching for the ball, the lad lost his balance and fell in with a scream that attracted his two playmates on the bank. Not one of the three boys could swim, and the eldest, who had been first at the bat, tried to dissuade the brother from jumping in after the struggling lad who was being carried away from the bank into deep water. But the ten-year-old little hero went to the rescue, none the less—and the two were drowned within twenty feet of where the kiddie had tumbled in.

On the Sunday last before this is being written, a sailboat capsized in a squall on a small lake in Massachusetts, and two girls of nineteen and twenty and two men of twenty-five and thirty, all who were in the boat, and none of whom knew how to swim, were drowned.

There is no reason in singling out these two distressing accidents except that both are typical and illustrative.

Every Monday morning the newspapers have their lists of drowning accidents—charged to the account of sailboats capsized by incompetence; to rowboats overturned by rocking, or by passengers changing positions in the boat; to bathers carried out beyond their depth.

Parents dismiss too casually their duty in this respect. Swimming is easily learned—also it is one of the most healthful of exercises—and should be a part of the education of every boy and girl. Insist that the companions of your children on the water are also proficient in whatever form of aquatics it be.

Let us have more practical application of athletics. Of the scores of young men who drown every summer, no doubt a large percentage had a certain knowledge of athletics; some played baseball; others played lawn tennis, or drove or rode; and yet knew not how to swim. Let us have proficiency first in those branches of outdoor activity that are related to human safety. This is the kind of athletics we need.

The Y. M. C. A., which is so great an influence in the land, can add immeasurably to its good work by making swimming obligatory upon every member of its organization.

At this season when half the holiday-making world is on the water, or near the water, let no man dare take out a sailboat party unless he is qualified by experience to handle the craft should the unexpected squall blow up—of course the squall is always unexpected.

To the person of any age who rocks a rowboat a sound trouncing is due. Never change places in a rowboat or canoe when the craft is out from the bank. If you simply can't sit still, once placed, get out of the boat—*and stay out.*

To the Surf Bathers

IN THE face of being thought trite, I shall indulge myself in a few "don'ts" for surf bathers which, no doubt, I have printed every year for the last twenty, and which I shall, with as little doubt, keep on printing so long as there is an outlet.

People are drowned every year for no other reason than because they stupidily ignore their own common sense and the experience of others.

Surf bathing is exhilarating if not prolonged, but it is not exhilarating or even beneficial to all people. To some it is even harmful. If sure that you are healthful and sound there is no reason why you should not go into the surf, provided you follow a few plain rules.

First of all—never venture into the surf without knowing something of the conditions of that particular beach. Every beach has its peculiarities, and beach peculiarities are apt to bear fatal consequences. Also the condition of the surf varies: it may be safe one day and not safe the day following, on the same section of the beach. All of which means that you should know your beach, not only by the season, but by the day. This is true of all beaches, wherever they may be, and of all kinds of bathers. If you do not swim, it is imperative that you have this information. If you do swim, you will be wise also to get it, for when the surf is in its tantrums, however innocent its surface appearance, not even an expert can afford to be careless of its warnings. I stood in the surf at Fire Island when a strong-swimming, athletic young friend of mine disappeared from our very midst without any of us knowing, or indeed missing him, until we had gone ashore, fifteen minutes later.

It is only a fool that ignores the simple precaution which every one should take. If you have any organic trouble, you should not go into the surf without a physician's permission; if your heart is weak, you can save the physician's fee—and keep out of the water. If you know nothing of your physical condition, be examined by a physician before you go surf bathing.

Don't go into the surf until a good, full hour after your meal—two hours would be much better. Wet your head always as soon as you enter the water. If you can not swim and the surf is strong, or the beach runs quickly into deep water, keep close to the life-line. You may think it undignified, but it is better to suffer a little in pride than to be carried out beyond your depth—besides, suffering pride may serve as an incentive to learn to swim.

Unless you experience an exhilaration from bathing in the surf, keep out of it; and come out of it before you begin to feel cold. Fifteen or twenty minutes of surf is enough for anybody. There is nothing to which that old saw, "enough is as good as a feast," applies so forcibly as to surf bathing.

Keep your wits about you. If you can't keep them, stay away from the beach; and if you can keep them, heed these suggestions.

"It is better to be sure than to be sorry," and it is a long voyage if you slip a cog, and the eating stations are far apart.

A Boon to Dog Owners

THE Continental Field Trial Club is earning the gratitude of dog owners, by its painstaking effort to discover the distemper germ and its anti-toxin. The club is raising a fund of $2,500 for research work, which is to be done at the Cornell Medical College, and which, of course, guarantees it being done by the most scientific methods. If the research is successful, the club proposes to make its secret public for the benefit of dog owners. Certainly so worthy an object deserves support, and those who desire to contribute may do so direct to Dr. A. Schuyler Clark, No. 26 East Forty-eighth Street, New York, who is one of the club committee.

What such a discovery would mean to dog owners and breeders may be judged from the fact that sixty per cent of all dogs who do not die of old age die of distemper.

Among humans the diphtheria anti-toxin has reduced the mortality and the serious after-effects from thirty to forty per cent to less than half. Of course, a corresponding reduction in the canine world would follow the discovery of a distemper anti-toxin.

It would be nothing short of a veritable boon to dog owners and breeders. Inoculation previous to any given bench show season would alone mean a saving of thousands of dollars to exhibitors.

Unsportsmanlike Subterfuge

IT IS not to the credit of the lake yachtsmen of the United States that there will be no race for the Canada Cup this year. At the last meeting, the American defenders took unfair advantage of their position and the plain rule, and only the sportsmanship and voluntary yielding of the Canadians made a contest possible. This season, when the subject of another race was broached by the Canadians as challenger to the Rochester Yacht Club as defender, the latter amazed yachtsmen of both countries by again taking the same unwarranted position.

In brief, the situation is, that in the last race for this cup, the Rochester Club entered a defender—*Seneca*—which did not conform with the specified conditions under which the Cup was to be raced for. Had the Canadians insisted on the letter of the rule, the *Seneca* would have been disqualified. They waived their privilege, however—a most sportsmanlike act—and the *Seneca* won the Cup. Again this year, the Rochester Club, strangely unresponsive to the extreme courtesy it received from the Canadians, despite its untenable position, has sought to once more use the *Seneca*—even less eligible than last time, because now foreign-owned.

Surely, it's a pity these lake yachtsmen couldn't have profited by the sportsmanlike example of the gentlemen from across the border, and at least have submitted the matter, as requested, to the Yacht Racing Union for decision. That States yachtsmen should finish so poor a second in international courtesy is not a pleasing thought, even though the Rochester yachtsmen have successfully defended the Canada Cup since they won it in 1903. The Rochester men boorishly declined to make any concessions, and excused their course by declaring that they "don't want a race in 1909"!

Where Lawlessness Breeds

SOME of the lawless spirit we see in the United States may be traced to the national characteristic of always trying to beat the rules; and much of it is due to the multiplicity of fool laws made by time-serving legislators. Laws seem to be put on record without serious thought of their being obeyed; and, of course, a law that is not respected or can not be enforced, falls into public contempt.

So many laws on the statute books are practically dead letters that citizens have become habitually unmindful of the law, and the result is a spirit of lawlessness that can not be duplicated anywhere in the world among civilized people. During the year 1908 thirty-five thousand new laws were made in the United States against one hundred and fifty-five in England. Our record is unparalleled as a rule-maker and rule-breaker; especially in our sporting fields.

Play the Game

SCARCELY a mail arrives which fails to bring a request for my judgment as to the righteousness of penalizing a given individual for violating some one of the small playing rules of a game.

For example, to-day I have a long letter from a man who passes among his fellows as a good sort, taking violent exceptions to a too rigid enforcement of the penalty for soiling a golf club in play out of a bunker. This is a time-worn grouch. Always I am hearing on golf links and tennis courts and on other fields of play criticism of a contestant who demands that his opponent adhere strictly to the literal rules; last year at Newport considerable feeling grew out of an umpire's persistent (and entirely proper) calling of foot-faults. Nothing in my years of observation comes more frequently to notice than disregard of what may be called the less important rules of the game.

What in the world are rules made for if not to be observed? And how is a game to retain its traditions and character if rules are not obeyed? Frequently the fault is with indifferent officials. That is one of the reasons why hockey has become such a rowdy game.

A flagrant case was that of the University of Chicago, which violated both the spirit and the letter of the first-year student rule, by running on its relay team at Philadelphia this spring a member of its Freshmen class. It was only last winter Chicago was instrumental in getting this very excellent rule adopted by the Middle Western colleges. I shall expect a university with a high regard for its conduct—as I believe Chicago to have—to yield the honors it won at Franklin Field through the wrongful use of this Freshman. But the lawlessness of using him in the first instance! Somebody must be accountable, and whoever that somebody is, he ought to be severely dealt with.

Cornell's Smooth Rowing

ON THE water Harvard swept the Thames and Cornell did the same for the Hudson, with this difference—that while Cornell rowed to victory with a lower stroke than her rivals, Harvard had to pull from two to three more strokes to the minute than Yale to keep her shell moving to the front. And this fact, added to Harvard's defeat by Cornell at two miles early in the season, argues the continued supremacy of the Cornell stroke, which, losing nothing in power, yet is so smooth as to leave no jolts along its winning way.

Yale's form was as good as Harvard's, but lacked power. Columbia had splendid unison and dash, but needed smoothness—the other crews were outclassed.

College Baseball Batter Losing Initiative

THE college athletic season which closed with the boat-races on the Hudson is to be remembered for its excellence of performance. As this means wider engagement and interest among undergraduates, the result is noteworthy and in the desired direction.

The track teams East and West were, as a rule, better than the average, with Harvard, Yale, Pennsylvania, and Cornell leading, as named, in the East, and Illinois, Leland Stanford, Chicago, and Wisconsin in the West. Incidentally, R. E. Walker, the South African sprinter, proved his Olympic 100-yard form to have been accurate by twice beating M. J. Cartmell, the Pennsylvania University crack, in ten seconds flat.

Baseball, more than any other sport, showed the general quality, as well as equality. Although Yale won both the Harvard and Princeton series of two games out of three, she lost one game to Pennsylvania, which, like Harvard, as well as Yale, also beat Princeton twice. Cornell has the satisfaction of having beaten Pennsylvania and won one of its Harvard series of two; Amherst beat Yale on their single meeting, as well as Brown, which had twice defeated Harvard; and Williams triumphed over Cornell. Thus everybody gets a share of the season's honors, and the "championship" remains undecided, as is best.

In play the pitching department achieved the largest measure of prizes. Batting and base-running (improvement of which is the excuse for employing professional coaches) were from fair to mediocre, and showed no advancement over recent years. Fielding was loose and brilliant by turn. The Harvard-Yale series showed the best all-round baseball of the season, and Yale was steadier and batted better on this occasion than any other of the college teams.

As I have before said, the professional coach is destroying the batters' initiative.

The Price We Pay for Bad Roads

Hunger and Illiteracy Stalk Along Our Ill-Kept Highways

By AGNES C. LAUT

¶ Two hundred and fifty million dollars a year are wasted on bad roads in the United States. Added to loss on haul, the storage and extra food rates make the total expense one billion dollars a year. This means a tax of $12.50 on every man, woman, and child in the country. Corners in the grain markets are frequently the direct result of bad roads. In four bad-road States three hundred and seventy-five thousand people out of seven million can not read or write; in four good-road States out of six million population there are twenty thousand illiterates

Nearly a foot of mud in the street of a Chicago suburb

DO GOOD roads concern you? If you are one of the 155,000 motor-car owners in the United States, it is a fairly safe guess that you give some thought to the good-roads movement and a great deal more thought to the bad roads that exist on a system of "pig-track trails" with wallows and "thank-you-mams" and "bump-you-quicks" in the proportion of ninety-three miles bad for every one hundred miles of road.

Or if you are one of the 30,000,000 people who live on farms in the United States, it is also a fairly safe guess that you know something about bad roads, even if you do not know and have never chanced to cross the seven per cent of improved roads of the total two million miles of highway in the United States.

But if you are a city dweller, whose use of the highway consists chiefly of the street railway, does the good-roads movement concern you? That question is best answered by asking another. When the price of wheat goes up from 70 cents to $1.30 a bushel, and the price of potatoes from 50 cents to $1.25, and the price of bread from 6 to 10 cents, and the price of flour from $4.50 to $7.50 a barrel—do those facts concern you? If they do, then you are vitally interested in good roads! Take wheat, for instance! Do you know why it is possible to corner the market in wheat? First of all, because wheat is scarce—the demand growing faster than supply; but secondarily, because, owing to the condition of the roads, it is possible for speculators to get possession of the whole year's crop of wheat. The West is the great granary of the wheat supply to-day: and in the West wheat must be rushed to market in the clear, dry autumn days when the prairie roads are hard as flint. If the farmer held his wheat over, past the dry weather, in the most of counties he simply could not deliver during late autumn rains

Not long ago, Jefferson County, N. Y.

The same Jefferson County road to-day

A mire of slush on a Tennessee road

or early spring break-up when roads are a churn of mud. The result is, for three months after each crop, there is a glut of wheat at elevator, railroad, water-front. A large proportion of the crop goes in storage. These storage charges amount in a grain center like Chicago to as much as nine cents a bushel in a year. On Minnesota's wheat crop, storage charges mount up to $5,000,000; on the two Dakotas, to twice as much, and so for every grain area on the continent. The farmer does not pay those storage charges at water-front. The speculator does not—he adds those charges to the selling price; and the man who pays is the buyer—you, Mr. Town Man, who eat dear bread all because some mud road back in a hoosier State has not been graded up properly.

As a matter of fact, America's country roads are so notoriously bad that it costs more to haul a ton of wheat from farm to market than to ship that ton from New York to Liverpool. America's country roads are so bad that it costs the American farmer 23 cents to haul a ton, when it costs the English or the Belgian or the French or the German farmer only from 7 to 9 cents for the same haul. You, Mr. Town Man, and you, Mr. Farmer, pay for the unnecessary waste of those bad roads, the town man by extra cost of what he eats, the farmer by lessened profits on what he sells. The same reason explains why the town man pays $1.25 in spring for potatoes which cost from 50 to 75 cents in the autumn.

That may not be as striking a way of showing what bad roads cost as if you went out in your motor-car and ruptured a pair of $60 tires; but it affects more people.

If you want to know what bad roads cost the country as a whole, keep in mind that American farmers are paying 23 cents a ton for hauling, when European farmers are paying from 7 to 9 cents. Now, the Interstate Commerce report shows that the railroads yearly haul 265,000,000 tons of farm produce, and that the average haul from farm to market for the whole country is nine and a fraction miles. Put the cost of hauling at a round $2 a ton for the nine miles, and you have the cost of hauling farm produce at a round half-billion dollars a year. Half that cost is waste, solely owing to bad roads.

Look squarely at the facts!

Two hundred and fifty million dollars a year wasted on bad roads, which the farmer and consumer jointly pay!

The charge to haul wheat from New York to Liverpool, 3,100 miles, is 3.5 cents

An improved sand road, Massachusetts, where the percentage of good roads is high

A wet, graveled street, Los Angeles, California

per bushel. The charge to haul a bushel of wheat from farm to market, 9.4 miles, is 5.11 cents! The storage on wheat at water-fronts, 9 cents a bushel a year. Do good roads concern you?

Total up the whole cost of bad roads, the waste on haul, the storage at water-fronts, the extra price paid for food, owing to scant market in spring—and you have an expense bill of a billion dollars a year against bad roads, or, on a basis of 80,000,000 population, a tax of $12.50 a year, which every man, woman, and child pays for bad roads.

The results of bad roads are yearly tolls of $12.50 against every person who eats farm produce. That yearly waste would build 200,000 miles of A1 macadam roads every year; or in ten years would turn every country road into such a highway as the Romans' famous Appian Way, basing the cost at the very highest average of $5,000 a mile. Though macadam roads sometimes exceed that figure, owing to special difficulties of swamp or bridge work, on easy grade near the source of the rock bed, the average has come as low as $2,000; in New Jersey, for instance.

The beauty of the relentless scheme of things is when we mend our ways—in this case, mend our roads—Nature not only wipes out the deficit, she puts a plus to the account where there used to be a minus. Supposing of the 2,000,000 miles of roads in the United States, all were improved instead of only seven per cent, what would be the result to farmer and consumer? First of all, the big deficit of waste on haul, on storage, on cornered prices—wiped out! The minus goes off the national slate and the plus comes on.

Good Roads Reduce Distance

THE good road moves the remotest farm right next to the market. A farm twenty miles from the market on an all-the-year-round good road is nearer market than a farm seven miles away on a bad road. Truck farmers in New Jersey and Long Island can haul their produce to market, thirty miles, cheaper than they can ship by railroad; and that produce nets, according to well-known averages, as follows:

Fruit, $80 per acre; flowers, $2,000 per acre; corn, $8 per acre; wheat, $7 per acre; oats, $7 per acre; vegetables, $42 per acre.

Out in the Dakotas and Minnesota and Manitoba they haul their produce thirty and forty miles; but they can haul it only when the roads are dry in the early fall; and at that season the price is lowest. The farmer along the good road can command the best price by hauling only when the price is best; and he can also raise the produce that gives biggest net returns. If you would learn why a whole family can live and live well off an acre in Holland and Belgium and France, when a family often fails to live well off a hundred and sixty acres in America, study that table of farm averages in relation to the good roads.

One can hear the snort of derision from a skeptic as he asks if the inference is with good roads your Dakota farmer could grow flowers at $2,000 an acre! No, it is not; but here is the inference: With good roads, your Dakota farmer—who under present conditions drives hub-deep in gumbo mud during spring—could market his crop when prices ruled highest. Instead of selling his wheat at 70 and 80 cents in the fall, he could sell it at $1 during the winter and in the spring. (Prices of $1.30 and $1.50, which Mr. Hill predicts, I eliminate because the cornering which brings such prices is largely the result of the bad roads, which throw an entire season's crop into the hands of the speculators.) An additional price of even 25 cents a bushel would mean $15,000,000 more in the pockets of the Minnesota farmers, $20,000,000 in the pockets of the Canadian Northwestern farmer, a similar amount to the farmers of the Dakotas, and to the wheat farmers of the Pacific Coast. Purely as an investment, the wheat farming States should wake up; for only one of them has entered on the good-roads movement with vigor.

With good roads you would not need to buy your vegetables in the country. In many parts of New England small fruits and vegetables are bought from dealers who send to New York. New York gets them from New Jersey and Delaware and the South. Your New York farmer does not raise vegetables in quantities because until recently roads did not permit him to market such a perishable product in quantities. This holds good of the very place where I live in New England. The same condition exists in the cow country and the grain country. Potatoes and onions your Dakota farmer can market in quantities. Therefore he raises them; but because bad roads cut him off from the market half the year he does not raise the more perishable vegetables. Vegetables he buys from California at fancy prices—another tax for bad roads. In fact, owing to bad roads, there

How bad bad roads can be—South Dakota

have been seasons when New Yorkers were paying $1 a bushel for their potatoes and Western farmers were glad to sell them at 15 cents for pig feed and starch.

With access to market and best ruling prices, net returns increase and farm lands jump in value. It is an actual fact, wherever good roads have gone, land has increased in value from $2 to $9 an acre. In Jackson County, Alabama, a bond issue of $250,000 built 125 miles of macadam road. The selling price of land was from $6 to $15 before the road was built. On the completion, land values went up from $15 to $25. In Bradley County, Tennessee, land values advanced from $9 to $15 and $30.

Another curious but perfectly natural result of good roads is population. Buyers buy more readily when they can market easily. Take these figures.

In twenty-five counties, where there was only 1.5 per cent of improved roads, the population decreased in the ten years from 1890 to 1900 a total of 77,800.

In twenty-five counties, where 40 per cent of the roads were improved, the population increased in the same period 778,000.

The effect of good roads on school attendance needs no proof. In the five States having the best roads the average attendance is 77 per cent of enrollment. In the five States having the fewest good roads the attendance averages only 59 per cent.

With these figures on schools, it is not surprising to find that ignorance and bad roads go together. In the four bad-roads States, with a total population of 7,000,000, are 375,000 men and women, white and native born, who can neither read nor write. In four good-roads States, with a population of 6,000,000, are only 20,000 illiterates.

How the Movement Began

THE movement for good roads is so recent that it need not be retailed here. When colonists first came to America, the roads followed buffalo trails and Indian wilderness paths. As farms became fenced, roads ran along between boundaries without regard to the shortest distance or grade; and these were kept in order (or disorder) by statute labor—farmers turning out for a day once a year for a road picnic, filling in holes that ought to have been filled in months previously, tinkering and trifling away time with no special director. The results were what might have been expected. Men do not employ blacksmiths as doctors; and why should farmers be supposed to possess the technical knowledge of an engineer? During various wars, two or three good roads were hacked through the wilderness across country, from New York up to Boston along the old post road, from the Cumberland Mountains west to St. Louis, from Virginia up through Pennsylvania to Pittsburg, and when emigration began to roll Westward, from St. Louis to Oregon. With these exceptions, the highways of the United States were a system of pig-track trails.

Then came the great railroad building era down to 1880, when public roads were forgotten in the expectation that railroads would supplant them; but as population grew, the necessity for roads to link farm with market became daily more insistent. Kentucky and Pennsylvania had long had toll roads; but these were unsatisfactory; and about 1891 New Jersey began the State-aid system, followed by Massachusetts, Vermont, Connecticut, New York, Maine, and Rhode Island, until

The Friendly Citizens of Chipmunkville

An Experience in the Near-Jungle Which Showed the Native "Stripes" to be Equally as Voracious as the Far Eastern Terror and Much more Inquisitive

By J. ALDEN LORING

THE real foundation for the village of Chipmunkville was the camp established by a market fisherman who occupied it occasionally during the fishing season. Under a cluster of hemlock trees some thirty feet from the spacious tent with its plank floor and wooden frame, he had built a crude little icehouse, where he stored the fish until a goodly number was caught. By its side was a rustic table, and back of this was piled his supply of empty packing-boxes.

In the shade of these hemlock trees, on the table and around the icehouse and the pile of boxes, all Chipmunkville gathered to gossip, frolic, and fight. When hunger bade them eat, they scurried across the opening in which the camp was located, and, entering the tent through a crack in the floor, searched among the boxes, canned goods, tinware, and other paraphernalia that goes to make up the equipment of a camp outfit.

The population was composed of two species of chipmunks. The Western (*Eutamias quadrivittus*) was the most common. He was a slim-bodied, sharp-nosed, agile, and active little fellow with four white and four dark-brown stripes on his back and sides. The other, Say's chipmunk (*Callospermophilus lateralis*), closely resembled the Eastern species, save that it grew much larger. He wore shorter hair than the Western chipmunk, was robust in stature, had a round head and a blunt muzzle, and could be distinguished at a glance by one white and one dark stripe on each side of the body.

The village was quite deserted when I first entered it, for the tent had not been occupied for several weeks and the supply of provender left there had long since been exhausted. The few chipmunks running about the icehouse, and those that scampered out of the tent when I unlocked the door, quickly took refuge, for, having too often been greeted with missiles of various kinds from former occupants of the camp whenever they became too familiar, experience had taught them to mistrust human visitors. My first move, therefore, was to allay these fears as soon as possible.

Their Confidence is Won

DURING the two hours I spent in settling camp and bringing wood and water, chipmunks eyed me suspiciously from points of vantage, and when I moved away from camp they ventured out, only to hurry back with loud cries of derision upon my return.

The initiative play in a movement which eventually ended in our becoming so chummy was scattering a supply of rolled oats upon the table, where they were quick to find it. The rest was easy, for that bait of rolled oats acted like the secret greeting of two fraternity men. It had the same effect in Chipmunkville that the sudden discovery of a rich vein of gold would have in a waning mining camp.

As soon as the news of the strike of oatmeal reached the forests and the cliff behind camp, the population of Chipmunkville doubled by nightfall, and by noon the next day it had swelled to alarming proportion. I say alarming because the presence of chipmunks in a Western camp is always a heralder of trouble and damage. For the rest of my stay, from sun-up to sun-down, the two main avenues leading to and from the village, the banks of a small stream on one side and a prostrate tree-trunk that extended from the timber into the clearing on the other, were constantly thronged with active and industrious chipmunks. There was not a minute of the day that from ten to twenty and even as many as thirty-three chipmunks could not be seen from the tent door, some engaged in play and some in culinary duties of various kinds. They soon became so tame that they dodged between my feet, climbed up my legs, and skipped about my body as I sat by the table taking notes or lay snoozing on my bunk. They even helped themselves to my food with the utmost impunity, and I had to sit and guard my plate or take it with me whenever I left the table.

It was two and a half feet from the sill of the tent door to the ground, and as I sat there gazing out upon the busy chipmunk throng, those that wished to enter my domicile ran up my legs, pausing a few seconds on my knee to look about, and then continued their way into the tent. Or, while scampering about the scantling framework, they would descend the door casing half-way, then leap to my shoulder or to my head, and from there slip to the ground.

They Become Over-Neighborly

ONE little fellow discovered that I kept rolled oats in one of the outside pockets of my hunting coat, and no matter if it was on me or was hanging on a nail, he made frequent visits to it and, diving in head foremost, filled his cheek-pouches to the bursting point and then ran off into the timber to cache the find in his storehouse. It would be interesting to know how many pounds of rolled oats those chipmunks took from my hands during my four days' stay with them and just where it was all stored.

They finally became so numerous and bold, not to say aggressive, that they were really a nuisance, and it became necessary to place everything eatable not intended for their consumption on shelves suspended by wires from the ridgepole of the tent.

If I left the tent for a few moments I was reminded I had left the door open by the loud clatter of falling dishes, and on looking around I was sure to see a file of striped bodies darting through the doorway, some toting off large square soda-crackers, some struggling with chunks of fried bacon stolen from the frying-pan, and others with their pouches stuffed with oatmeal. My appearance in the doorway always sent them helter-skelter to hiding until they had time to see what was the real cause of their fright, when they would come out again and continue their mischief as unconcerned as though I were not there. Often the suddenly animated appearance of a roll of cotton-batting, that I used for stuffing specimens, would attract my attention, and, after watching a few seconds, I would see a chipmunk emerge from the very center of it, his little black eyes sparkling, his cheek-pouches bulging and cotton protruding from both sides of his jaws like a white stubby mustache. No doubt the cotton was intended for lining a subterranean bedchamber beneath some rock, log, or stump far off in the wilds.

Their mischievous nature—that is, mischievous from a human standpoint, but in reality the same natural instinct that prompts all animals to hunt for food—sometimes brought them into serious trouble, which might have ended disastrously but for help. Once I entered the tent just in time to rescue a chipmunk from drowning in the water-pail, into which he had fallen or jumped while scampering about. I fished him out and, after rubbing him dry, laid him on the grass in the sun, and he soon recovered and took to the timber. On another occasion, while snoozing on my blankets, I was roused by an unusual disturbance and awakened to find that in some manner a chipmunk had thrust his head and shoulders through a tin ferrule used to seal the top of a preserve bottle, and, crazed by fear, was rushing about the tent in an effort to extricate himself. Again my services were called into action, and after clothing my hands in heavy buckskin gloves and turning the camp into confusion, I managed to catch and free the little fellow from his perilous condition.

A table full of guests, dining on rolled oats

The Crows Cause a Panic

THESE were by no means the only ridiculous experiences my chipmunks had. A pair of Clark's crows and a magpie were frequent visitors to the camp. Their sudden appearance momentarily struck terror to the hearts of the citizens of Chipmunkville, who, ever on the alert for hawks, their worst enemy, would sound the alarm and make for the nearest shelter before really ascertaining whether or not their actions were justifiable.

I happened to be looking from the tent door one morning when one of the crows sailed from the edge of the timber into the park. A chipmunk at once gave the alarm signal, and they all tumbled over each other to get to shelter. One fellow, who was rummaging about the extinguished ruins of the campfire, seeing that he could not get into the timber before the supposed enemy was upon him, darted under a partly burned side log. The crow flew directly to the fire site and, naturally, perched on the crane just above the chipmunk. Then, seeing some scraps of food in the ashes beneath him, he innocently hopped down and struck the ground within six inches of the frightened chipmunk's shelter. With a shriek of terror, stripes darted from hiding and, screaming bloody murder at every jump, he tore across the open space into the hemlocks.

I once threw a piece of biscuit to a Clark's crow, but before he could get to it a chipmunk snatched it and made off. The crow and a magpie started in pursuit. They lined up on each side of him and darted at him, first from one direction, then from another, but the chipmunk, staggering under the weight of his unwieldy prize, dodged, twisted, and sidestepped until he managed to gain shelter under the top of a fallen tree, where for some time he was safe. Eventually the birds drove him out and harassed him until the crow finally gave up in despair, and the last I saw of the remaining pair, the chipmunk,

still in possession of the biscuit, was circling and recircling a tall spruce, while the magpie, jabbering and scolding as only a magpie can, was hopping from limb to limb in close pursuit.

One day a Say's chipmunk entered the mouth of a small sack that had contained rolled oats. The temptation was too great for me, so, waiting until he had completely disappeared, I clapped my hand over the mouth of the sack. The frightened chipmunk did not attempt to back out, but burst through the bottom of the sack with one jump, and, his body covered with powdered oatmeal, stopped, sat up, and looked back, a most surprised expression on his countenance.

In pleasant weather I ate my meals at the table under the hemlocks by the icehouse, and invariably had as guests anywhere from five to a dozen chipmunks. They were particularly fond of bacon and bacon grease, consequently the frying-pan was a favorite resort. One little fellow, who was unusually confident, insisted on eating from my plate and refused to be driven away. As often as I picked him up by the slack skin of his back and dropped him at arm's length on the table, so often would he send back under my nose. I finally learned that the only way to keep peace with him was to prepare a meal on one side of the plate especially for him.

Traits of the Two Species

MY MEALS were sometimes rudely interrupted by a pair of chipmunks, who, having entered into an altercation, would suddenly dash over the box pile and land unceremoniously in the center of the table, upsetting the dishes and scattering the food in all directions. Or they would leap from the box pile to a hemlock tree by my side and, after circling and recircling the trunk, spring over to where I sat and use my body for a merry-go-round. Consequently I had to be alert to protect my face from being scratched and my eyesight from being endangered.

It was interesting to study the actions of the two species. The Say's chipmunks were so fat and logy that they were slow and awkward, and the difference in manners between them and the graceful Western chipmunks was very pronounced. Whenever the Say's chipmunks tried to climb the table-legs or attempted to explore my camera by ascending a leg of the tripod, they slid back and finally tumbled to the ground in a most awkward and ridiculous manner.

On the other hand, every move of the Western chipmunks was that of ease and grace. They never missed their footing, could jump twice as far as their cousins, and their sharp toenails permitted them to climb up the slippery tripod legs with ease. Several times I was obliged to shoo them off the camera lest their inquisitive nature should impel them to gnaw daylight into the bellows. The only way that the Say's chipmunks could reach the camera was by jumping to it from a stone, log, or stump on which it had been focused with a view to securing a photograph whenever they got within range.

The Say's chipmunks, too, were more aggressive, but they stood no show against their more active rivals, who outwitted, outdodged, and outran them at every stage of the combat, and then returned to their luncheon as fresh and agile as at the start, while their logy pursuers, out of breath, followed with heaving sides.

The bully of the town was a fat old Say's chipmunk, who never appeared on the scene until half Chipmunkville was astir. With his tail arched over his back, and stepping almost on the tips of his toes, he stalked pompously into the feeding throng and, after thoroughly airing his importance, proceeded to do up the entire bunch. No one seemed to take him seriously, however; in fact, he was utterly ignored until

he attacked one of them, and then it was only the pursued one that exerted himself just enough to keep out of reach until he gave up and returned to the crowd and began to bully another chipmunk. After exhausting himself in this manner, he was willing to take his place with the others and feed peacefully. I tried hard to get a photograph of him in one of his proud moments, but he never got within range of my camera.

The word glutton is far inadequate to express this chipmunk's propensity for eating and stuffing his cheek-pouches—after filling his mouth by a sidewise movement of his jaws, he would work the flakes into his cheeks until his head was half again its normal size. Not satisfied with the hole that I cut in the top of the oatmeal box, he ripped off pieces of the pasteboard until he had an opening large enough to enter, then stuffed himself. I actually saw him start off to cache his load, when, noticing another chipmunk jump on the box, he came back and chased it away lest it might take a few mouthfuls of oatmeal before his return.

In comparison with the birds, the chipmunks were late risers, and the sun was always above the horizon before the bulk of them arrived. The heavy dews might have been the cause of this, for I noticed that the chipmunks avoided the wet grass and kept their coats dry by traveling over logs, stumps, and rocks.

While in a general way all chipmunks of the same species looked alike, many of them I became individually acquainted with by the different marks that they had received from nature and from accidents and fights. There was the one with the bobtail, the one with the ragged ear, and the one that had started to shed the hair on one side of its body. They all had certain peculiarities that I discovered, and I soon learned that the branded ones at least had regular thoroughfares over which they traveled in coming and going to and from the [illegible] and their homes. So well established were these by-ways that the little pedestrians stepped almost the same footprints each time. There was the log [illegible] they ran and from which they leaped to a stone [illegible] boulders, and the stump at the edge of the timber [illegible] they always paused to see if the coast was clear before making a dash across the dangerous opening to the tent.

The tramp and scuffle of feet about the icehouse door and beneath the table naturally loosened the dry earth and caused considerable dust to accumulate. Very frequently chipmunks seemed to be suddenly overcome by a "brain-storm." Rushing to the dust-pile they would throw themselves upon their chest and, by pushing with their hind legs, scrape the soles of their front feet on the ground and rub their noses and cheeks in the dust. That stage of the operation finished, they would sit up and rub off the dirt with their hands, but frequently, as

The Makers of a New Sailor Breed

The Tractable Small Boat and Its Effect on Yachting

By WINFIELD M. THOMPSON

EMERSON expresses the thought that when man invented the carriage he ceased to walk. The maritime philosopher of to-day uncouthly draws a similar figure of the effect of the power boat on sailing.

"Sailin's done for," says the Jack Bunsby to be found on any American wharf-end. "The gasoliners has got it lashed to the mast."

With due regard to the sources of these deductions, we may say of them as the original Bunsby said of his opinion to Captain Cuttle: "The bearings of this observation lays in the application on it."

Undeniably man walks less than in earlier ages, yet walking remains his most essential form of exercise. The gasoline-driven boat has diminished the number of sailing boats, but sailing remains, as it always must, the first sport on the water. In recreation the sailing boat stands in a relation to the power boat similar to that of the horse to the automobile. Machinery can banish neither horse nor sail, nor can it perform any part of their higher functions in sport.

The small yacht, the school of the Corinthian sailor, to-day is a stronger force than ever before in shaping our national character. No sport develops more surely than boat-sailing the qualities that make men and women strong and true.

Something in the sailor's close touch with Nature in her most unstable elements makes him respectful of her power and mystery, simple and direct of mind and kind of heart. Such were our old-time sailors as a class. The breed of them is dying out. Men go no longer in tall ships to the mystic East. The spirit of our old seafarers to-day is found only in our Corinthian sailors.

The passing of our sailing ships, and even of our larger sailing yachts—for they are diminishing yearly before the advance of power—makes the position of the Corinthian sailor, the man who sails a small yacht, more important than ever before.

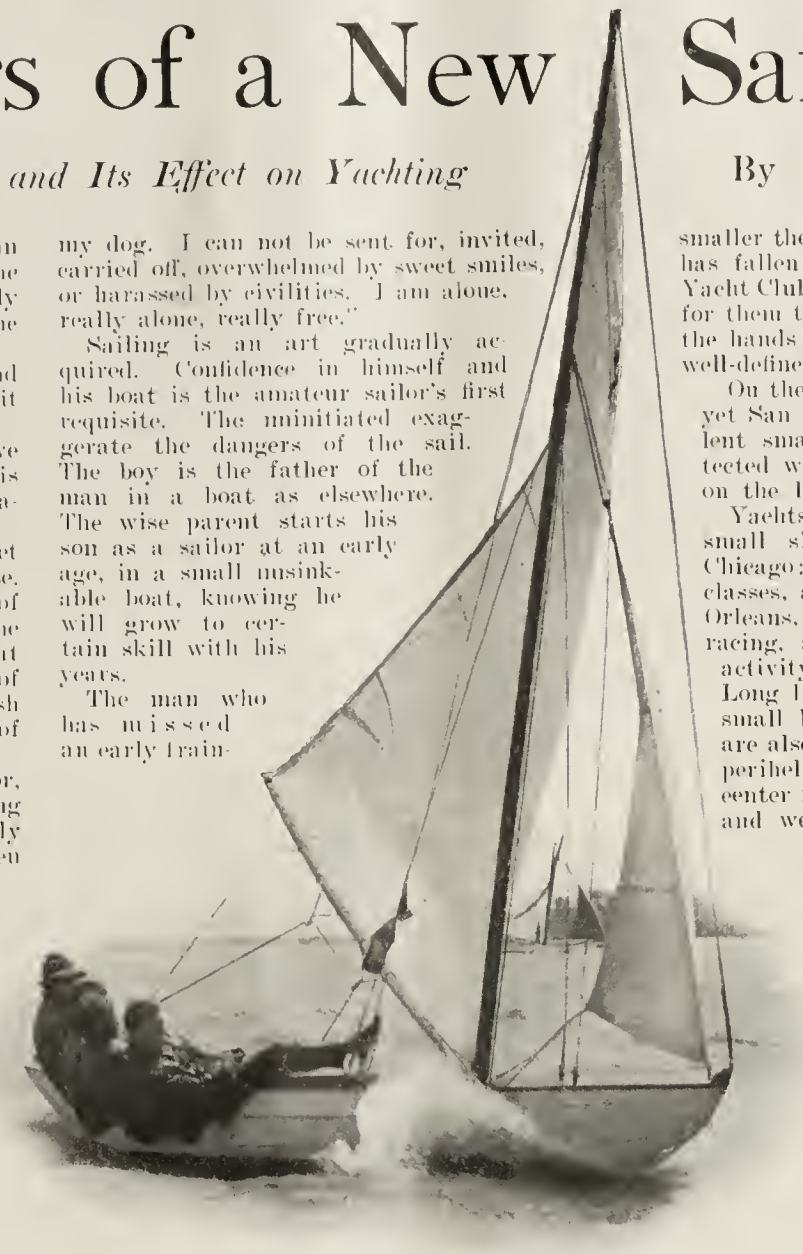
Yacht-racing in America has never relied more completely on the amateur sailor than to-day. Nine races in ten are now sailed by small yachts, and a condition more and more often imposed is that no professional shall steer a boat in a race. This is as it should be. Were such conditions extended to as important events as the America Cup matches, or the annual races off Newport, there would be helmsmen enough available from among the country's amateurs to represent it with credit.

Cruising as Good as Racing

THE importance of the Corinthian sailor in present-day yachting may be noted from the large number of ocean races, on courses from 100 to 675 miles long (to Bermuda), which are sailed by boats manned and navigated by amateurs.

Still one need not be a racing man to receive from sailing its richest gifts. The contentment of the cruising sailor, or of him who sails from his home moorings of an afternoon to return at nightfall, is often greater than the racer's.

When the breeze blows true, and rigging and sheets are taut, as the water slips rippling along the lee rail into the milky wake behind, the boat owner, feeling the pulse of his yacht on the sensitive tiller, is filled with rare content. Power may have diminished the number of sailing yachts; from him it can never filch the joy of the sail.



The Corinthian sailor of to-day has broadened with the great advancement made in the wealth of the country and the art of building small yachts. Yachting, as we know it, began in America in the early forties, rowing being then the chief sport in small boats. Racing small yachts dates from the seventies and cruising from a decade later. It is now not uncommon to find two men making a summer cruise of 1,000 miles in a small yacht, or a happy single-hander, afloat six months in the year, covering even a longer distance.

The pleasure the cruiser finds in the open is expressed by Guy de Maupassant in his yachting idyl, "Sur l'Eau."

"It seems to me," he wrote on the first morning of a cruise, "as if I had left weeks ago, months ago, years ago, the talking, busy world; I feel arise within me the intoxication of solitude, the sweet delights of a rest that nothing can disturb, neither the white letter, nor the blue telegram, nor the bell at my door, nor the bark of my dog. I can not be sent for, invited, carried off, overwhelmed by sweet smiles, or harassed by civilities. I am alone, really alone, really free."

Sailing is an art gradually acquired. Confidence in himself and his boat is the amateur sailor's first requisite. The uninitiated exaggerate the dangers of the sail. The boy is the father of the man in a boat as elsewhere. The wise parent starts his son as a sailor at an early age, in a small unsinkable boat, knowing he will grow to certain skill with his years.

The man who has missed an early train-

Hanging over the gunwale in a hard dory race

ing in a boat may acquire skill only by persistent and intelligent application. Much depends, for such a beginner, on his choice of a boat. The green hand may think a dory suited to him. Boys begin sailing very often in dories; yet there is a knack in dory-sailing men work long to acquire. It is strenuous sport. The skipper of a big boat very often would be lost in a dory. A good sailing dory costs $165, and is the cheapest form of yacht.

Two types suited to the novice are the catboat and the knockabout. The cat, shallow, broad-beamed, and "able," is the best boat for shoal water. No type is more easily managed, as it has but one sheet and one sail. The cost ranges from $250 to $1,000.

While the cat is used largely for general sailing, some of the hardest racing on the Atlantic coast is done in catboats. The centers for this branch of the sport are Barnegat, Great South, Narragansett, Buzzards and Massachusetts Bays. The latter has a superior class of catboats engaged in racing. Some of them are twenty years old. When not racing, they are used for cruising or afternoon sailing. They are the ideal poor man's yacht. A handsome catboat of twenty-seven feet length can be bought at ten years old for $400 or less. The cost of upkeep is small, particularly when the owner does his fitting out. A feature of the present racing season is an inter-bay match for catboats in Barnegat Bay.

The knockabout, a handy little sloop with deep draft and snug rig, is more fashionable, but more expensive than the cat. First cost of a knockabout is about $2,000. It has more speed than a catboat and less cabin space. Few knockabouts have been built in recent years, the newer small yachts appearing as variants of the type, from fifteen to twenty feet water-line, in one-design classes of from eight to twenty boats all built from one set of plans.

Size No Limit to Enjoyment

FROM the types mentioned the yachtsman may choose from all sizes of craft, according to his purse, until he reaches such a gigantic racing machine as *Reliance*, which cost about $250,000. Whatever craft he buys or builds, he may rely on this general principle, that enjoyment of sailing bears little or no relation to the size of the boat in which one sails. Often one finds that the smaller the boat the keener the sport. The racing of large yachts has fallen off to such a degree that, excepting the New York Yacht Club events, there are no races worth mentioning scheduled for them this year. American yachting for 1909, therefore, is in the hands of the Corinthians, and we find it grouped in certain well-defined centers.

On the California coast infrequent harbors restrict the sport, yet San Diego, San Pedro, and San Francisco have some excellent small yachts. Puget Sound, with its picturesque, protected waters, is the promising field of yachting development on the Pacific.

Yachtsmen on the Great Lakes are devoted chiefly to racing small sloops, mainly of twenty-one-foot water-line, as at Chicago; eighteen-footers, as at Cleveland, and other small classes, as at Detroit. On the Gulf the yachting center, New Orleans, has mixed types. At Hampton Roads there is some racing, and as one comes up the coast he finds increasing activity in the New Jersey bays and on the south side of Long Island until the Sound is reached. Here the racing of small boats thrives. Narragansett Bay and Buzzards Bay are also centers for racing; but one does not find the sport at perihelion until he reaches Marblehead. This, the most active center for small-yacht sailing in the world, is an ancient, salt and weather-beaten town overlooking a deep and sheltered harbor, and over a rocky neck the open bay, into which heave the free surges of the Atlantic. Here the building and sailing of boats are developed as horse-breeding and horse-racing are in Kentucky. Everybody knows all about yachting. The boy here sails a boat as a duckling swims. The summer resident here gives his son a boat and lets him follow his own devices, knowing he will soon develop into a yachtsman. Here one may see girls also, bareheaded, the wind blowing their locks about their wholesome faces, sailing their boats like veterans, the potential mothers of yachtsmen, building for the future. The same thing is to be observed at Buzzards Bay, where the young women of the summer colony are active in racing, and also at various points on Long Island.

If one drops in at a certain Marblehead clubhouse some afternoon when the midsummer series of races is on, he will find about 100 boats entered for the race, with about 400 clean, clear-eyed, and hearty people in their crews. One notices that many of the smaller boats are manned by boys, and some by girls. It appears that the club encourages entries from juvenile sailors in what the rank and file delight to term "Billy Carleton's kindergarten."

The Sonder-Boat Matches With Germany

A SONDER-CLASS boat, of which the visitor to Marblehead will doubtless have heard, is a small, fast, and compact sloop, less than 35 feet long on top, restricted to 500 feet of sail, and built to a formula that refines every element making for speed and delicacy of adjustment. Each ounce of weight is considered in the fittings of a sonder boat, which compares with other yachts as a Derby winner compares with common horseflesh.

The sonder-class boat was introduced in America in 1906, when an international match was arranged with Germany, and American yachtsmen, in a liberal sporting spirit, agreed to build three boats to the German sonder, or special class, rule, to meet three boats to be sent by Germany. America built fifteen boats, selected three, and won the match. In 1907 three American boats were defeated off Kiel. This year, in early September, another match will be sailed, off Marblehead.

These matches, now the chief international yachting events between America and a European country, originated with a Corinthian yachtsman of Marblehead, who in private life is a manufacturing chemist. His name is plain Henry Howard. When he began to work up his idea, he had to proceed cautiously, through ambassadors and court advisers, for it was the Emperor with whom ultimately he had to deal.

The Emperor, having sanctioned the matches, now considers them an adjunct to statecraft in cultivating better relations with the United States. Germany sends her best yachtsmen to sail off Marblehead. They are men of high standing and intellectual occupations, for sailing a sonder boat is a thinking man's job. The German Corinthian steps aboard his boat at Marblehead, knowing that he must rely on his own efforts, sink or swim.

Meeting him are the best small-yacht sailors America produces. They may be sons of a line of sailors, but they have left the study, the bank, or the business office to play the game. The best helmsman among them is treasurer of the Corporation of Harvard University.

The Greatest Horse Show Ever Held

An Exhibition Which Cost Two Hundred and Fifty Thousand Dollars and Distributed Sixty Thousand Dollars to Winners Among Twenty-Five Hundred Entries

By PRICE COLLIER

The United States carried off more honors in the appointment classes than all other nations combined, and Judge Moore of New York was especially prominent in the winning. This is one of his numerous entries, the blue ribbon brougham turnout

NO COUNTRY ought to be more interested in a well-conducted and judiciously managed horse show than America. There are close on to twenty million horses in America, and the Department of Agriculture puts their value at something over $1,050,000,000. Iowa, Illinois, and Texas alone have more horses between them than any foreign country; and each of these States has more horses than Great Britain.

The greatest horse show the world has ever seen was held last month in the great glass-covered arena known as Olympia in London. This is not only not exaggeration, it is not sufficient praise. This particular show dates only to 1907. In that year there were 1,842 entries, $37,370 in prize money, 124 classes, and an expenditure of $90,000. In 1908 there were 2,334 entries, $40,000 in prize money, 149 classes, and an expenditure of $114,000. This year, 1909, there were over 2,500 entries, $60,000 in prize money, and an expenditure of some $250,000, with over fifteen hundred different horses shown in the different classes.

In England $78,000,000 is said to be invested in hounds, hunters, and all that goes to make up the sport of fox chasing; hence, England breeds the finest hunters in the world. This is Sahib, the blue-ribbon hunting sire of the International Exhibition at Olympia

There were horses from France, Belgium, Italy, Canada, Denmark, the Argentine Republic, Germany, Russia, Holland, Persia, Sweden, Spain, Austri, and, as it should be, the largest and best exhibit of any foreign country, from America.

To mention the names of Alfred G. Vanderbilt, Judge Moore, E. T. Stotesbury, the Messrs. Winans, C. W. Watson, E. H. Wetherbee, R. P. McGrann, Julian Morris, Ogden Armour, Paul Sorg, T. Hitchcock, and others is enough to indicate how well American interests were cared for. The writer apologizes for citing his own experience of horse shows, but having seen horse shows in New York, Baltimore, Paris, Brussels, Dublin, Pau, Mexico, and Madrid, and served as secretary for several years of one of the best managed and charming of horse shows, viz., that of Tuxedo, he claims the right of experience to make comparisons.

The glass-covered arena is perfectly shaded, so that no one is bothered either by too much or too little light; there are seats for eleven thousand people, and every seat a comfortable one with a good view of the horses; the classes are brought to the collecting ring and then ushered into the judging ring without hitch or delay; the instructions to exhibitors, grooms, and stable men are clearly and concisely put and printed in bold type on large posters throughout the stables and posted up fresh for each day; in the jumping competitions the judge at each jump has a messenger boy at his side, who runs with his marked paper to a collector, who, after each horse's performance, deposits the various papers with the secretary. As an illustration of the promptness which characterizes the show, the decision after the jumping for the King's Cup, in which no less than eighteen competitors took part, was given out to the audience within five minutes of the time the last horse left the ring. The box provided for the representatives of the press is well placed, and everything is done for their comfort and convenience. After each class has been judged, a messenger sent from the secretary's office reads aloud in front of this box the decision of the judges; this as a special precaution and compliment, I suppose, since the winning numbers are promptly displayed in huge figures at the end of the hall after each class leaves the ring. The number of each horse in the jumping competition is flashed out by electricity on two sides of the ring and kept there while the animal is in the ring.

Display Without Vulgarity

THE arena was overhung with huge baskets of flowers, and all around the ring were growing flowers. The whole of the interior was covered with a trellis in which were entwined wreaths of real blossoms of wisteria and clematis, while fronting the balcony were hundreds of giant palms. The arena itself was planted with roses of all kinds and colors, rhododendrons, hydrangeas, camellias, geraniums, orchids, and foliage plants and shrubs in profusion. The open spaces were filled in with green turf, and the various passages carpeted with green carpet. On the day when the King and Queen were present the view looking from the stable entrance, with flowers, uniforms, and beautiful gowns, was one not to be forgotten. For freshness and subdued brightness, and as a color-scheme, I, for one, have never seen it equaled. It was like looking at a huge garden party through an opera glass. Above all, there was no dust and no smarting of the eyes or dryness in the throat after a few hours spent there.

That broad aisle of vulgarity, the promenade at the Madison Square Garden Horse Show, had no counterpart at Olympia, and I hear on the best of authority that it is to be done away with in future at home. Every American who respects his countrywomen will rejoice. At Olympia there was a broad, well-carpeted promenade clear around the ring on the outside of the seats, and this year it was lined on both sides with miniature shops advertising the wares of the principal dealers in everything connected with horses and horsemanship, from a stirrup and topboot to a scarf-pin. The stables at the end of the ring were, some of them, like drawing-rooms—flowers, thick carpets, silk-plush curtains, oil paintings, and so on; perhaps, if one were inclined to be finical, some of them might be criticized as a little overdone.

England's National Interest

THIS year the show was also a complete success from the point of view of public interest. It is no easy matter to focus the attention of London. There are so many interests, so many amusements, particularly in early June, which is known as the London season, that only a super-attraction can hope to appeal effectively. The English are slow to arouse themselves to interest or admiration, and they are, to boot, profoundly utilitarian. The country just now is awake to the need of g r e a t e r strength in both army and navy. The increasing use of motor vehicles of all kinds is making the problem of providing horses for cavalry and artillery a pressing question. That most industrious patriot, the owner of Persimmon, Diamond Jubilee, and Minoru, and the only King of England who has ever won the Derby, writes: "The King is well aware how m u c h horse-breeding in England has fallen off during the last few years, and is much concerned at the difficulty it may bring upon us." Having posed the problem, he sets to work to solve it, and the horse show profited largely by his influence and interest. The public made an overwhelming success of the show this year because they see at last, as all sensible men see, that the horse is not merely a plaything, but a dire necessity. He does much for good roads, and, therefore, for commerce, in time of peace, and he is the most practicable and absolutely necessary conveyance in time of war.

The first year of the show there were practically no entries of officers from the British army. This year they numbered over a hundred, and the jumping competition of teams of three officers for the King Edward VII Gold Cup, valued at $2,500, was the chief event of the week. Argentina, Belgium, Canada, England, France, and Italy entered. The cup was handsomely won by the French officers. The King's brother, the Duke of Connaught, gave a gold cup for British officers only, and the directors of the International Horse Show gave the Territorial Challenge Cup for jumping by a team of three members of any territorial unit. It may be seen from this that nothing was spared to aid, to interest, and to improve the horses used for army purposes. By far the largest number of entries were received for these and the other jumping competitions. The jumps were eight in number and quite different from those usually seen, consisting of a row of dummy soldiers—which, by the way, no single horse cleared—a row of railway sleepers placed on end, a wattle fence, two cannons placed muzzle to muzzle, a set of triple bars, a railway embankment with a fence on each side, level crossing gates, a "pianoforte" or rampart jump with a stone wall at its extremity. The amount offered in prizes for the jumping competitions alone was $25,000 out of the total offered in prizes of $60,000. The British officers have a lot to learn at this game, and though they were defeated, there was ample evidence that they are improving. But the gist of all this is that the International Horse Show at Olympia is being made to serve the needs of the British army. As a mere display of drawing-room horses, or self-advertising dames and plutocrats, it never would have achieved the success to which it has attained this year. The attention of London has been focused upon the show because it is doing something for England, and that, be it said, is the only way in which either king, man, or horse, or horse show gains a permanent place in London. That is the backbone of the show.

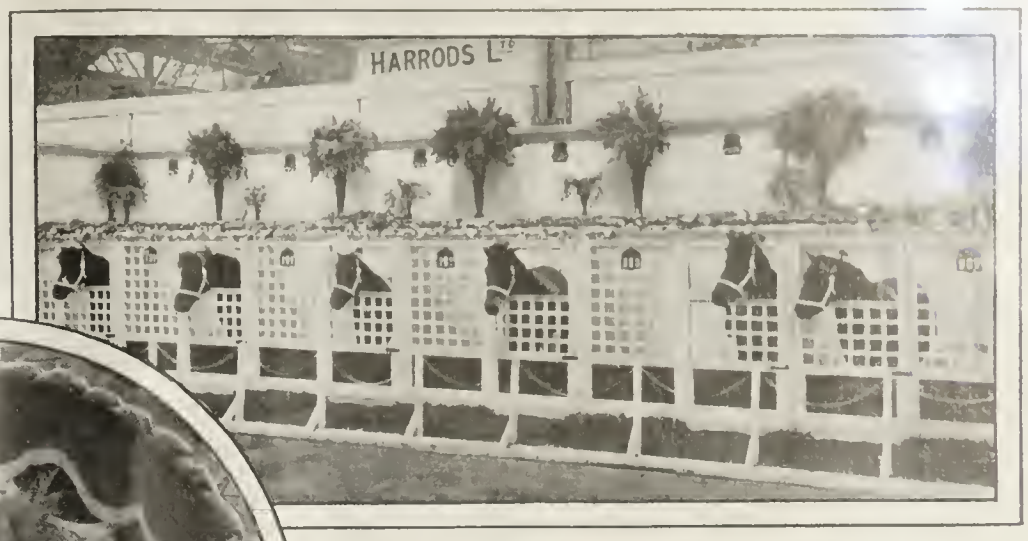
There are, however, two other aspects of the show to be considered, even when the underlying reason for its success has been named. The fashionables and the crowd both attended the show this year. To the man in the street and the woman who accompanies him, neither of whom knows when you should have leather or steel for your pole-chains, and neither of whom knows the difference between hame-straps and kicking-straps, the chief attractions were the jumping, the exhibits of ponies, and the hitherto unparalleled dexterity of the man who drove the six huge Clydesdales for a beef company. These horses weigh over a ton apiece, and were handled by their driver in the ring as though they were well-mannered, well-trained ponies. America has scored heavily with these as far as entertaining the audiences goes.

Comparing the Horses of the World

TO THAT part of the audience which attends the show through interest and intimate acquaintance with the horse, the main pleasure has been the opportunity to make comparisons of the horses shown from so many different parts of the world. If the Messrs. Winans are to be included as being American exhibitors, which is not quite fair since these gentlemen live and breathe and have their being both human and equine entirely in England, then America with Watson, Moore, Stotesbury, Vanderbilt, and McGrann, plus Winans, stands easily first in the classes for harness horses and hacks.

One of the most sporting events of the horse show was the so-called Marathon race, from Hampton Court to the show ring at Olympia. There were twenty-one entries, and this blue ribbon of blue ribbons, at least from the standpoint of coachmen, was won by Mr. Vanderbilt with his now famous team of grays. They did the little under eleven miles in forty-four minutes, and, though starting sixth, came in first looking fit enough to do another journey if necessary. This class was judged not for speed, the requirement being that they must cover the distance within an hour and fifteen minutes, but forty per cent for horses, thirty per cent for

The Winning English Farm Team



England is famed for its draught-horses, and the farmers take great pride in their outfits, even in the horse show sticking to the traditional frock coat and quaint stove-pipe hat of the British countryman

Mr. Alfred G. Vanderbilt's stalls, which were among the handsomest at Olympia, were hung with silk curtains and furnished like a choice cabinet

The Winans horses were housed in a double aisle extending over one hundred feet, which was most elaborately decorated in silk banners and bunting. Mr. Winans is an American who lives in England

The Committee spent $250,000 on the Horse Show, and a big share went into beautifying the Arena. Stall decoration was done by individual exhibitors

condition of horses on arrival, twenty per cent for coach and appointments of a road coach, and ten per cent for harness. The road from Hampton Court to the show ring was lined dozens deep by an enthusiastic crowd of spectators, and perhaps no other feature of the whole program excited so much general interest. The writer, who has driven the Hampton Court road coach one season, and, therefore, knows something of the journey, enjoyed the coach ride of his life on the winning coach. The second prize in this class went to a team of hackney-bred horses from South America: so, whatever may have been the disappointment of English coaching men, they were given a useful illustration of how well horses bred across the water are doing to keep up the reputation of their English ancestry. That this prize should have been won by an American driving foreign-bred horses, and that the Americans, Watson, Winans, and Moore, also should have made between them practically a clean sweep of all the appointment classes, proves what many visitors to England during the last few years have remarked upon, viz., that the standard of the turnouts in London has deteriorated very noticeably.

In the classes for saddle horses the Winans were again to the fore, thanks to the master hand of Gooch, well known to us in New York as a judge in that class. In the classes for hunters the English won, but in the jumping competitions the French, Italians, and Belgians were to the front.

The Riders of Europe

IT IS greatly to the credit of the English officers, however, that they did as well as they did, for, with nothing like the experience at this particular game of the other officers they were third; France winning the King's Cup with twenty and a half faults, Italy being second with twenty-three, and England third with thirty and a half—by no means a bad showing.

In the breeding classes the English exhibitors divided all the honors among themselves, and, from an American point of view, it was disappointing that the Americans had practically no entries in these and in the jumping classes; or, barring the Messrs. Winans, none in the saddle classes. It would have been very instructive had we been represented in the classes for hacks as well as we were represented in the harness classes. For, from a purely equine point of view, the classes that stand out in my memory as having been superlatively good were those for hacks and four-in-hands. I have never seen so many good ones together in one ring. In the trotting classes and roadsters the Americans, Stotesbury and Winans, again had it all out between them.

It may be gathered readily enough that the show was indeed international. Without the American trotters and roadsters, without the American entries in the appointment classes, without the American four-in-hands, both park and road, without the French and Italian jumpers, one is bound to say that the show would have been rather a provincial affair. It was a good cure for our Anglo-Saxon parochialism to see those Frenchmen, Italians, Belgians, and Argentines ride. It was an eye-opener to see the Italian, Baron Gino de Morpurgo, not only ride well, but take the cushion on Watson's coach and win the blue ribbon, handling his team as well as anybody who drove throughout the ten days. He taught us all that there are others, and we Americans and English need the lesson badly in the realm of sport. To sum up very briefly the aspects of the show most interesting to the American who was not present, I call attention first to the orderliness, completeness, comfort, and smoothness of everything to do with the running of the show. If Lord Lonsdale, the president, was responsible, the sooner the English Government gives him a hard job of organization, the quicker they will become possessed of a very valuable public servant. In the appointment classes all other competitors were simply smothered by the Americans. In the distinctly English game of coaching, either in the park or on the road, the Americans carried off everything. In the classes for horses under saddle—hunters, jumpers, hacks, or horses suited to the breeding of the same, including officers' chargers—the English exhibitors had the best of it, with France, Belgium, and the Argentine doing surprisingly well. The high jump was won by a Frenchman on Jubilee, doing seven feet four. As for the riding, in the hack classes it was Gooch first, the rest nowhere.

An Influence for Peace

THE show has done much for the horse and the road, and not a little to abate a certain condescension toward foreigners, from which we all suffer, whether we be English, American, French, or of other nationalities, and hence something for international amity and peace. It is no bad test of a man to put him on a horse, or behind a horse or horses, and we have all learned a little more respect for one another from seeing one another thus tested.

The Good Problem of Weeds

Tactics for a Campaign Against the Invaders of the Garden and the Grain-field

By L. H. BAILEY

THE city man who contemplates farming always dreads the weeds. The new farmer complains of them. The poor farmer is possessed by them. The home gardener pleads for relief from them. Even the best of farmers find them troublesome and sometimes almost unconquerable. The weeds are a persistent population.

It is interesting to me, however, that my correspondence contains fewer questions about weeds than it did twenty years ago. I think this indicates that the people are caring less about symptoms and perhaps more for the fundamentals or for the rational modes of good land practise. Years ago there were books that aimed at instructing the farmer to identify weeds; but names are of small consequence to any one who means to get at the bottom of things. Of course, any good farmer ought to know the names of the prevailing weeds, but this knowledge is only a means to an end, and is easily acquired; it comes naturally with a general understanding of the subject. The farther a man goes with his farming, the less he thinks about weeds; he either overcomes or he accepts them as one of the necessary evils as he accepts taxes and house-flies.

I suppose that we may recognize a philosophy of weeds as of anything else. Some plants we want and some of them we do not want. Those that we do not want are weeds; if they intrude themselves unpleasantly, they are bad weeds; and there are degrees of noxiousness, depending on the persistence with which the plant forces itself into the company of the plants that receive our care and protection.

Plants that are weeds in one place may not be weeds in another. June-grass is a weed in corn-fields, but it is not a weed in well-regulated lawns. In fact, half the corn plants are themselves weeds in a corn-field that contains twice too many stalks of corn.

There are some plants, however, that are weeds by profession—if the psychologists will allow me the expression. They are adapted to growing with other plants, as cockle and chess in wheat, dandelions in lawns, daisy and buttercup in meadows. These plants have a life-cycle similar to that of the grain or the grass, and their seeds are often so similar to the grain or the grass seed that they are not easily separated. Pigweeds are well at home in rich gardens, wide-leaved plantains and knotweed along hard yards, and docks in all good neglected places. These are all enterprising plants, that know how to find an opening and that take advantage of their opportunities. Of course they crowd and overrun the less hardy, less vigorous, or less exhausted plants that we introduce from other climates. They are the vandals that come down from the wild and unnamed places, and that are hardened and adapted by long conflict with all other plants and with man. They are an admirable and hearty lot.

The Conquerors of All Lands

ALL soils and all conditions are conquered by these hardy invaders. Pussley thrives on sand that burns the boy's bare feet. Narrow-leaved plantain delights in soil so poor that it will not raise good grass. Chickweed makes a carpet on cool rich lands in fall and winter and spring. Bindweed climbs up the stems of corn and of bushes. Burly old burdocks occupy all the room they can find. Mayweed and ragweed appropriate whole roadsides. It makes no difference what a man grows or where he grows it—everywhere these silent tramps discover him and make him prove himself or quit.

I have said this much to show that weeds are a part of the natural order of things. They are some of the greatly successful plants with which the earth is covered. Therefore, there is no remedy for weeds, any more than there is a remedy for English sparrows or crows or bumble-bees. The man who grows one kind of plant must expect to have his rights contested by as many other kinds of plants as chance to find him out. If he is really intent on growing his plants, he must accept the contest and fight it out. He ought to feel humiliated if he is worsted.

Of course I can not tell any man how to fight it out; that is his problem. But I think that I can give him some suggestions that will enable him to go at the work intelligently.

The first thing to do is to start off with a clean record. The crop that one is growing should not be handicapped by contestants that are already in the field and in the lead. The field or garden should be thoroughly clean at the outset. If it was well tilled and handled last year, and the fences and waste places kept in order, the chances will, of course, be all the better for a clean field this year. If the ground is thoroughly well prepared, the grass, docks, tree seedlings, and other weeds will be destroyed in advance, and the crop will make a rapid growth and will get ahead of the invaders.

In the next place, one must be careful not to sow weeds. This danger is not great except with grass seeds and the grains, although one may infest his fields with weeds that are carried in rubbishy manure. The modern seed-cleaning machinery removes the cockle and rye and chess from grain, and no end of impurities from grass seed. I have given many weary days to pulling cockle from wheat-fields, expanding energy that in this day could have been devoted to more productive and less painful ends.

In the third place, the ground must be completely covered with a good strong crop, or else the farmer must pull out, plow out, or hoe out the weeds in the unoccupied places. The greater part of a corn-field is unoccupied early in the season; therefore, the land must be tilled to keep the weeds down. It ought to be tilled any way, whether there are weeds or not; but the weeds will force the issue if the farmer neglects his business and his opportunity.

In a meadow or pasture or lawn the problem is first to secure a good sod. There is no use in continually pulling weeds from a lawn if grass is not put in the holes. Well prepared rich soil, clean seeds, a heavy "catch" of grass that is adapted to the soil and place—these are the requisites for a good start at lawn making. Where the lawn is thin, sow more grass, and keep sowing it until the "stand" is good and strong; and use enough fertilizer and water to keep the sod "in good heart." What I mean to say is, that the emphasis should be placed on securing more grass rather than on having fewer weeds. Even then one may have dandelions; but there are some persons who do not object to

reasonable number) and white clover and [illegible] of the lawn: it is largely a question of the [illegible] If one objects to the down of the ripe dandelion heads, the heads may be cut with a scythe or [illegible] if the near neighbors do the same the crop [illegible] lessened: but, in the main, the remedy for dandelions is not different from that for other plants that are not desired in the lawn—to take them out and, at the same time, to aid the grass to grow. I do not expect that one will ever completely outwit the dandelion. My neighbor digs dandelions religiously morning and night; but yesterday he discovered one comfortably in blossom in the crotch of a tree over his head. The best satisfaction comes from the fact that there are many worse things in the world than dandelions.

The daisy-cursed or carrot-covered meadows are bad meadows even without the daisies or wild carrots in them. Perhaps they would be worse off without the daisies, for it is better to grow something than nothing. When daisies and wild carrot begin to invade the meadow it is time to top-dress and reseed the meadow, or else to plow it up and begin again. Meadows are likely to be the weediest of all cropped lands, and for the very good reason that they are likely to be the most neglected lands. Preponderance of weeds means either neglect or a poor farm scheme.

Crop Rotation the Best Preventative

AN OLD practise of cleaning foul fields was by means of summer-fallowing. A crop was sacrificed to enable the farmer to devote himself solely to the business of putting the field in order by means of much plowing and harrowing. It was merely a way of preparing the land. With our better tools and our better systems of crop-rotation and more rational ways of handling land, the summer-fallow is now rarely necessary for the cleaning of a field, although it may be allowable for other purposes.

A proper course of farming eliminates the weeds, because it keeps the land continually occupied with a thrifty and well-adapted crop. A clean farm is usually a well-farmed farm, the same as an orderly factory is one that is well systematized and managed. Now and then there is an invasion of some particularly aggressive weed, and this must be met by special methods. Wild mustard may be quite independent of land management, but it may be despatched by a copper sulphate spray. Unfortunately, not all special pests can be dealt with so neatly. When the special weed difficulty comes, the man must study the situation carefully with a view to understanding it, and he would better seek expert advice. He may need to adopt a new cropping scheme as the best means of overcoming the trouble. A serious weed invasion raises a question whether the place does not need a radical change of system.

In home gardens these farm practises do not apply with so much force, and yet the same principles must be kept in mind. It is there largely a question of getting the weed between the finger and the thumb. I doubt whether garden plants would be worth very much if they were not earned; and some of the poor and puny and pampered exotics that we grow are not half so satisfying to a full-blooded person as a thoroughly successful pigweed.

The delight of bass fishing lies largely in its being open to the whole joyful family

The Black Prince of Game Fish

The Combative Bass Bites One Day and Refuses the Next

By CLARENCE DEMING

THE small-mouthed black bass, hardly to be distinguished, save by his intensive game quality, from his large-mouthed brother, is the sphinx of the goodly company of game fish of fresh waters. Mystery is his keynote of life and living, the prime factor that runs through his nature and his habit. He has been written about by the volume, studied by keen and observant anglers through season after season in various waters, theory after theory has been tried out on him in vain. It is said to have been old Dr. Samuel Johnson who, visiting Rome, declared at the end of his first week he knew much about the Holy City, at the end of a fortnight deemed he knew it all, at the end of six weeks confessed that he knew nothing. So with the black bass. The more we study him the less we positively know.

His Bewildering Habits

WHY the black bass bites on one day and refuses every bait the next; why he takes helgramites, and only helgramites, on Monday, grasshoppers on Tuesday, and frogs on Wednesday; why he bites only on dark days for a fortnight and then shifts his biting humor to days bright and breezy; why you find him to-day on sandy bottom, to-morrow on mud, and the day after on the rocks, are baffling traits of the bass that relate merely to his sporting relations with the angler. But there are other mysteries that puzzle the naturalist and bear on the organic life of the fish.

Up in Maine are two bass rivers not far apart. In one the fish run often to four, even to five, pounds; in the other rarely above a pound and a half. In one of the largest lakes of New Hampshire the writer's score for a whole season once ran up to three hundred and ninety-eight fish. Food was evidently abundant, for the bass were "chunky" and the viscera thick with fatty tissues. Yet the post-mortem showed in the stomach only glutinous, unrecognizable white matter; and the largest bass of the whole season drew the scales at but a pound and three-quarters. What did those bass live on and why didn't they grow bigger? Again, in the uplands of Connecticut are two large lakes some eight miles apart. In the one bass are often caught in winter ice fishing; in the other lake almost never in winter, though in its open summer waters bass fishing is the better. Remembering that the bass are supposed to hibernate, and in fairly deep waters, would not that fact argue in the late season darker outward hues and deeper bronzes? Yet the head of a large bass hatchery has observed a silvery change of the bass at the approach of winter when his habit and habitat would imply the exact reverse. Such are a few of the anatomical enigmas of the black bass that make him and his paradoxes an interesting study for that open-minded angler who blends the naturalist with the sportsman.

Rules for the Angler

OUT of almost half a century of experiences with the Black Prince of fresh-water fish come a few basic rules for the angler; but they are rules of the broadest generalization, fitting the season rather than the single day, for which no rule can be framed to fit the caprices of the strange but winsome fish. Look sharply to tackle, testing, to the farthest point of safety, line, leader, and the winding of the hook.

Bait, fresh bait, every kind of bait, and plenty of each kind of bait, means a hard contract for the bass fisher to fill, but of high import—for every old bass fisher knows what a genius the whimsical fish has for striking the angler's "short suit" of bait and quickly running it out. Use ever the double gut leader of the best quality, tipped by the No. 2 Sproat hook, which is the hook *facile princeps* for the average bass—small enough to be swallowed readily, strong enough to hold. Play the bass steadily on taut line and tense rod held pretty high, rejecting the old "fake" theory of dropping the rod to the leap—for the direct pressure of the hook, often loosened by the strain, should never be relaxed; and net the fish as deep as possible in the water at the end of the struggle—a precaution that saves many a good bass, otherwise lost by the last "flop." If fishing on the edge of weeds, approach the anchorage from the weedy side. Of the manifold frog and toad species used as bait, the small common frog is best—with the hook passed through both jaws. Of the varied race of minnows, the thin, bright "pond" shiner takes first place. Use the light sinker of twisted sheet lead, except when heavier is needed to sink the frog in bottom fishing. In flies, the brighter reds and whites are well ahead of the sober drabs and browns, except on very bright days in the smoothest waters. Final in order but first in value, make a careful study of places. Even with the mystic and capricious bass, whose moods and tenses for the day are past finding out, it is knowledge of places which always spells angling "luck" in the long run.

Peculiarities of the Sport

AS THERE are types of bass, so there are types of the bass angler. There is the exclusive fly fisher, who scorns the bait fisher and stigmatizes him as unesthetic. There is the single-rod bait fisher, who, in turn, scorns the other bait fisher who "spiders" his boat with half a dozen rods and, maybe, a hand line or two besides. But bass fishing, save in rare localities, is not as other fishing. Long are the waits—and days sometimes—'twixt bites. In regions of thicker population it is often a kind of abstract and ghostly fishing compared with the concrete sport of the remoter waters of Maine and Canada.

On the large, swift rivers of the type of upper Delaware, Susquehanna, and the Housatonic—trout brooks magnified a hundred diameters—the hunt for the bass, the warrior of fresh-water game fish, reaches the acme of the sport. Twice as strong and enduring and well-nigh as agile as the trout of the same size, the bass of

The Kaiser and the Czar on the occasion of their meeting at Bjorko, Finland, June 17–18

What the World Is Doing:

Round the World and Back Again

ONE more English seer has emerged with trembling and with prophecy. It is Lord Charley Beresford, this time, who glows with a message. "Germany is able to build ten ships to Britain's one," he cries. "But I've done my best." Says the "Evening Standard": "A whole empire has grown and prospered under the muzzles of the guns of the British fleet."

This is the peace-provocative week when England permits the nations to smell of the muzzles of those guns. Her warships lie at anchor, hard by London town.

Pausing only long enough to let prosperous but tangled German finance right itself, Von Bülow, Chancellor of the German Empire, will retire from office before the year is up.

Across two continents and the Atlantic Ocean, from Los Angeles to Cracow, Poland, they have borne the body of Modjeska, one of the loveliest of tragic actresses. With Poland's kings she lies in The Wawel. Of her, alone of modern women, the words for Elaine could be spoken:

"Buried not as one unknown,
Nor meanly; but with gorgeous obsequies,
And mass, and rolling music, like a queen.
And then the knights had laid her comely head
Low in the dust of half-forgotten kings."

Our country has been gladdened by one little sentence which casually spilled over from the rambling, jolly Yale speech of Mr. Taft. Said he: "If the Republican Party does not live up to what the people expect of it, it may be relegated to 'her majesty's opposition.'"

The shouting and the tumult dies from the college campus. The scholars scatter and merge with the Philistines. The degrees have fluttered out over all conditions of person, from the man Grenfell, who sheds light and healing on the Labrador, to Charles William Eliot, M.D., LL.D., President Emeritus of Harvard.

Harvard crowns a brilliant year by sweeping Yale off the Thames River, winning in three sorts of boat-race.

No surer proof exists that prosperity has returned to the market-place than the summer prevalence of strikes. The street-car operatives have won in Pittsburg after a short fight. Such a strike would have been a midsummer madness in 1908. In 1909 it becomes an easy success in Georgia, Philadelphia, and Pittsburg. Starving men in overcrowded jobs, with a margin of unemployed yammering at the gates, do not strike for misfit schedules.

The imperturbable Wright Brothers tread the blazing acres of Fort Myer as undisturbed as Shadrach, Meshack and Abednego in the burning, fiery furnace. Sweltering statesmen cursed the earth-bound creatures who tinkered but did not fly. But the young men will only climb the sky on their own schedule. Aldrich and Cannon were helpless, though hot. Three nights later, under a full moon, Orville lifted the half-ton machine up after him into space, and steered through the trackless void with the accuracy of a yachtsman at the tiller of a catboat.

In New York a sound of wailing is heard from the purlieus of Chatham Square, where Captain Galvin is pounding the hell holes which have robbed sailors and tickled tourists for a generation.

By hammock, tent, and cabin you can see the big brown men and women mirthfully roughing it. With harder beds but better air, with plain food but good appetite, these sons and daughters of joy are chattering in the forests, splashing in the mountain lakes, tossing in a two-reef breeze, punishing the tireless tennis ball.

Then from the heaven-born we turn for a moment, and think of the children in the mean streets of hot cities. And we hope against hope that for each of them this summer there may be a day of mercy—some little glad space offshore or in the hidden green places of the country.

The Honest Bingham

A STRONGLY built man, stentorian in manner, with a picturesque use of swear words, General Bingham has won the respect and dislike of his men on the police force of New York. They resent any outsider in Mulberry Street, and particularly so active a man who blurts out his exact meaning and Headquarters secrets in moments of irascibility.

He has been Police Commissioner for three and a half years. Under his strong, rough hand, the disorderly houses, which flourished so prosperously three years ago, imprisoning helpless immigrant women, have gone out of business. There were one hundred then, running at full speed, between Twenty-third and Sixty-sixth Street and

The Ithaca Crews Make a Clean Sweep at Poughkeepsie

Cornell won three races in one day on July 2, taking the Varsity Eight, the Varsity Four, and the Freshman Eight. The time of the Varsity Eight was 19 minutes and 2 seconds

procession, led by the Grand Marshal, Professor John C. Schwab, with his white rod, supported by the Bearer of the Mace; they are followed by President Taft with Professor W. G. Sumner, preceded by the Rev. Joseph H. Twitchell and Rear-Admiral Sperry, upon whom had just been conferred the degree of LL.D.

A Record of Current Events

Sixth and Ninth Avenues. There are scarcely twenty now, and they are only operating for old-time patrons. The stranger inside the city walls will not find the easy welcome for his licentiousness which 1906 and 1907 would have given him. Business is largely going to the hotels, "Raines Law" and other varieties.

The profession of ruining, selling, and renting out girls has been reduced. That organization known as the New York Independent Benevolent Association has had its wings clipped. The gentlemen who run this association have been checked from their vile trade by the strict régime of Bingham. For two years they have had to turn to honest or semi-honest professions in place of squeezing blood money out of little foreign girls, raped by their agents, and locked up in their chain of disorderly houses in the Old and New Tenderloin. They have almost forgotten the dark tragedies hidden just a fathom underground in their burial lot in Washington Cemetery —the poor murdered women, the infants "one span long."

Go anywhere in New York where vice is sold for money and you will hear Bingham cursed.

Of course much has been left undone, and the peremptory army officer has made many wide-open mistakes. He talked too much and too unwisely. He told things that most strong men leave unsaid—he talked out in meeting about the tempestuous difficulties, the hidden influence. Nobody has ever yet made what you would call a "good" Police Commissioner. There are too many loops in the job. Besides that, New York is too imperfect a place for all its vice to be trapped. It is just a situation for enlightened opportunism.

But he wasn't punished for failing of perfection. He was punished because the time had come for a wide-open town. The cadets, pimps, and owners of saloon girls are growing irritable with the long wait. Manhattan, stuffed with fat, succulent things, has been too long and too rigorously patrolled. Election time is drawing near.

Roasting the Wrights

CONGRESS journeyed from the steaming Capitol to the Fort Myer drill ground to see the Wrights in the act. The statesmen stood on one foot for a spell and then on t'other, and wilted under the rays of a rare day in June. There is no hiding-place down there. No one flew. Everybody was irritable but the Wrights. It was good to see the large calm which they distributed over a troubled landscape. That was June 28.

On Tuesday and Wednesday the motor was feeble, so Orville went up and came down again. The motor has always been the weak member of the machine.

It was a fine jaunt which Orville made by moonlight on July 1. He took three flights that evening, circling the field twenty-four times in twenty-two minutes, at an average height of thirty-five feet from the ground and an estimated speed of forty-eight miles an hour. The next night he fouled on a tree.

A gallery of a thousand or so persons showed up at each sunset to watch these men, who take their recreation a little nearer the stars than pedestrian, motorist, yachtsman. After a hot day of work in the sun-baked shed, it must be refreshing to check off a few miles up aloft and to drink a draft of the upper currents.

Some of the newspapers of this great free land are beginning to smite the Wright Brothers, because they haven't the Chauncey Depew manner of mnemons geniality.

Newspapers have no right to publish the spite-work of baffled reporters and create bad feeling in the public mind toward two modest, efficient men. The Wrights have no desires or ambitions except just to do their job.

No person ever got a more clean-cut and complete throw-down on the interview than the man writing this, but he isn't blaming the Wrights, and he hopes his brethren won't go any farther with the bad feeling which was cropping up among the hot, tired correspondents under the juniper tree at Fort Myer. A half-dozen men, strategically placed, can give Thumbs Down to any public character in Christendom. And that very power ought to be merciful and just.

Slaying the Fly

WHAT rabbits are to Australia and rats to San Francisco, that the common or household fly is becoming to our happy land. He is the most unpopular creature within our borders—the victim of a nation-wide crusade. Even the mosquito just now is only mildly hated and feebly pursued in comparison with the buzzing, malicious fly. The (*Continued on page 26*)

"Revision"

Cannon: "Cross out some more, Aldrich, old pal, the boss is too busy to notice it!"

The Final Act

PRESIDENT TAFT, within a few days of the time this page is printed, will sit before a huge parchment document filled with tariff duties. Were his imagination the most elementary, he can hardly fail to be thoughtful. His signature, or his refusal to sign without further changes, will affect the clothing, the shelter, and the food and drink, will largely determine the economic status of twenty million families for ten years to come. And to economic equality, to the opportunity to get enough food and clothing and shelter without labor so severe that it degrades—to these things happiness and morality are close. Whether children may have another year in school, whether young men can afford to marry at a reasonable age, whether daughters must go out to work—for millions of families, these questions lurk in that mass of figures and percentages on Mr. Taft's table. Not ancient kings with autocratic power over the fortunes of their people had more occasion for conscientious consideration.

Whatever thoughts may come to Mr. Taft through the stimulus of his unique position, whatever tests he may weigh in the balance of his mind to determine whether to sign or not to sign, one overtops all the others and is alone sufficient to decide: *"Will this bill meet the reasonable expectation of an average man in Mr. Taft's audience last fall at Milwaukee, at Des Moines, at Cincinnati, or elsewhere, who listened to Mr. Taft's promises of 'substantial revision downward?'"* If Mr. Taft thinks the bill does not fairly meet those expectations, he will not sign, for honor could not sit at his elbow if he did. It may be that Mr. Taft believes the bill does fulfil his promises; it may be, indeed, that the bill in its final form will meet those promises, for there is ample opportunity for reductions at the last moment. There is abundant chance, while the bill is in the Conference Committee, for Mr. Taft to exert the pressure which the country has all along expected from him. If either of these things is true, if Mr. Taft signs the bill, he can hardly fail to give out, at the same time, some assurance to the public that he approves the bill in one particular—as the complete redemption of his personal pledges. Only such an assurance, and this assurance later justified by the facts, can prevent the tariff from becoming a living issue again the day after Congress adjourns. If the cost of living, in terms of prices for food and clothing, has not been lowered, then the tariff has not been permanently revised. The agitation for a revision of the tariff which has characterized the past five years had its origin in the feeling, upon the part of the average family, that the cost of living had become intolerably high. The same feeling can result in the same agitation again.

Where the Credit Belongs

WHATEVER virtue inheres in the tax on corporation earnings, the credit for it belongs chiefly to three men, each one of whom witnessed its passage with bitter chagrin. These three are William E. Borah of Idaho, Albert B. Cummins of Iowa, and Joseph W. Bailey of Texas.

Each of these men had introduced an income tax bill. They had united their forces and worked early and late for such a measure. With the sentiment of the country behind them, they had overcome Mr. Aldrich. *There were enough votes in the Senate to pass an income tax law.* It was only in the last ditch that Mr. Aldrich sought President Taft and brought in as a compromise the bill for taxing corporation incomes. When fifty-nine Senators voted for this compromise bill, the majority of them did so feeling the same sentiment which Senator Rayner of Maryland openly expressed:

"Mr. President, I want to say that I am in favor of the income tax and I shall vote for the income tax if I have the opportunity of doing so. I may not have the opportunity of doing so, however. I may be forced ultimately to decide whether I shall vote for this corporation tax or not. If I am forced to that ultimate decision, I shall vote for it. I want to be distinctly understood upon this proposition. Between an income tax and a corporation tax I am decidedly in favor of an income tax, for reasons that have already been given by Senators, and I do not desire to add anything to the literature on that subject. . . . I do not like the corporation amendment; I think it is inequitable; but when the time comes and we can not obtain an income tax, then I am in favor of this tax. I am in favor of an income tax upon the proposition advanced by the Senator from Texas and the Senator from Idaho and the Senator from Iowa, and other Senators. When the point is reached, I will vote for this corporation tax rather than vote for no tax, and that is the only ground on which I will vote for it."

One or all of these men might have been measurably raised to fame. It is fair to record their unwilling part in what has actually happened. It is equally fair to President Taft to say that the corporation earnings tax, so far as it goes, is a good measure. The business of getting a genuine income tax, graduated so as to distribute the burdens of taxation equitably upon wealth, is merely postponed. There are a score of objections to the corporation earnings tax; but these objections are mentioned only in comparison with the income tax.

After all, the best part of the Game is the Bath, with

HAND SAPOLIO

SUMMER PLEASURES are essentially out-of-door ones. All the active sports make the bath a luxury; add to its delights by using Hand Sapolio, the only soap which lifts the bath above a commonplace cleansing process. Hand Sapolio neither coats over the surface, nor does it go down into the pores and dissolve their necessary oils, but by a method of its own it aids their natural changes. Other soaps chemically dissolve the dirt---Hand Sapolio removes it. Try a cake.

Fine-Form
TRADE MARK
MATERNITY SKIRT
Registered in U.S. Pat. Office

of great interest to
Every Prospective Mother.

Something new—only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society—**Always drapes evenly in front and back**—no bulkiness—no draw-strings—no lacing—no ripping or basting—**Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home.

FREE Send for our **Fine Illustrated Book—"Fine-Form Maternity Skirt"**—It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts**—If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you—**same guarantee**—Illustrated book free. Which book shall we send? Write to-day to

Beyer & Williams Co., Dept. 51 Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

Allen's Foot-Ease

Shake Into Your Shoes

Allen's Foot-Ease, a powder for the feet. It relieves painful, swollen, smarting, nervous feet, and instantly takes the sting out of corns and bunions. It's the greatest comfort discovery of the age. Allen's Foot-Ease makes tight-fitting or new shoes feel easy. It is a certain relief for ingrowing nails, perspiring, callous and hot, tired, aching feet. We have over 30,000 testimonials. **TRY IT TO-DAY.** Sold by all Druggists, 25 cents. Do not accept any substitute. Sent by mail for 25 cents in stamps.

"In a pinch, use Allen's Foot-Ease."

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

flea continues wicked, but goes its way unmolested while we brew poisons and build gins for the brisk little visiting fly.

In the days of our childhood our sternest rebuke was a "Shoo, Fly." Later came attacks by kerosene and sticky fly-paper, and then the poison paper, where they would tumble dead many yards away from the death-dealing draft.

We have made a collection of the nasty things that are being said against the fly this summer.

Dr. Woods Hutchinson names it The Fly that Does Not Wipe Its Feet. An entomologist of the Department of Agriculture calls it "the most dangerous insect on earth." It is busy in spreading Asiatic cholera. It is guilty of communicating typhoid fever, diarrhœas, dysenteries, tuberculosis. "Flies do much to swell the infant death rate." "Swat the Fly" is the advice of physician and editor.

Now, how to be up and doing? Over ninety per cent of fly eggs are laid in stable manure and two per cent in garbage and other filth. Keep the manure-bin covered with chloride of lime. Or residuum oil may be used in cesspools. For manure, this oil may be mixed with earth, lime, and phosphates.

The only champion of the fly who has entered the lists this season is the starry lyricist of the Emporia "Gazette," who heads his rime: "Spare the Flies."

He pleads:

"And you who would profanely slay the house-fly at your door,
When you the spark of life destroy, can you that life restore?"

France on the Gain

AS IF to spite David Starr Jordan, president of Leland Stanford, Jr., University, in his world-famous remark that France is a decadent nation, the birth facts of France for 1907 and 1908 preach a gain for the republic. There were 19,892 more births than deaths in 1907, and 46,441 more births than deaths in 1908. So France takes the ascending curve in the face of her critics and enemies.

Emptying Virginia

COME ye back, ye Southron yoemen; come ye back to old Virginia. Such is the siren song sung by the local press. The good State of Virginia has grown worried about herself because her young men are seeking fresh fields and Middle Western pastures. The census reports of 1900 have been examined for native white population. These show that the interchange with other States left Virginia in 1900 with a net loss of 237,077 persons. This is a net loss equivalent to twenty per cent of her population at that time. In proportion to population, this migratory tendency cost Virginia more heavily than any State or Territory in the Union, except Maine.

The Richmond "Times-Dispatch" speaks of "an uncompensated loss of nearly a quarter of a million of her own native-born," and "another old Eastern State, Massachusetts, with a clean gain of nearly 100,000. Virginia is losing population out of all proportion to her gains, out of all proportion to her actual population, out of all proportion to the experience of other States."

"Is there really no chance for an ambitious young man in the South?" asks the Columbia "State." "Is the South really blind to talent? The South ought to have sense enough to keep its young men."

A Chair of Flight

YOUNG scholars may now learn how to fly under the same roof with the departments of Greek roots and logarithms. The University of Paris has received gifts amounting to $240,000 for founding a department of technical aeronautics and a Chair of Aviation.

Blasting at the Rock of Ages

A BISHOP, speaking rather more unadvisedly with his lips than is the wont of his communion, had read overseriously a magazine article on the heresies and immoralities in our schools and colleges. It was Bishop James A. McFaul of Trenton who said that Harvard, Yale, and Princeton were "undermining faith and teaching immorality." He further said:

"I would forbid young Catholics to go to institutions such as I believe these to be, where they will get no moral training; where they will associate with skepties and agnostics and where, in the Faculties, there is a strong inclination to find faults in and attack Christianity."

What the Bishop is really feeling after here is a test for the efficacy of modern education. He is making the same quest as Dr. Pritchett of the Carnegie Foundation for the Advancement of Teaching, and Clarence Birdseye with his incorporation for testing higher education. Is it efficient and is it wisely directed?—are the points at issue.

Cardinal Gibbons, who is too wise and too kindly a prelate to venture unprovable assertions, says:

"There is no doubt that there is a growing tendency to omit Christian training, both moral and theological, from American institutions of learning of all grades. This is to be deplored. I believe that a religious training is necessary to the proper development of the country's youth. A well-rounded education is the greatest thing to be sought after, and an education which omits religion and religious training is not well rounded or complete."

Hearn's 'Rikisha Man

VERY charming have been the reminiscences of Lafcadio Hearn, which drift across the water from time to time from his Japanese wife. A new batch is at hand, done into English by the Springfield "Republican."

"Do you love your wife?" was the first question he used to ask the 'rikisha man before he went further to engage him for his service. And he was never disappointed even when he found his man too slow in pulling his carriage, thinking and feeling happy that he loved his own wife. He would say to me, supposing I complained of the man's slowness: "I like the man who loves his wife. Don't think about his slowness! However slow he be, I think still it is quicker than to walk."

Hearn as a writer was able to render effects of color and music in his prose. His own personal life-history contained loneliness and suffering. The excellence of his work and the pathos of his life will combine to make him one with Poe and a few other unforgotten workers who paid bitterly in the daily lot for their genius.

Gossip of the Kings

LIKE most sensitive, impulsive men, Kaiser Wilhelm smarts under ridicule. And the belaboring, for indiscreet talk, which he received a few months ago in the Reichstag hushed him into a silence that was audible across Europe.

But he is in form again after his season of reticence. His gifts of impetuous speech and a Delphic style have never been in better working order than in the last fortnight during and following the meeting with the Czar. He is able to make peace as lively and alert a theme as is war on the tongue of less gifted agitators.

He says in his stirring oracular way:

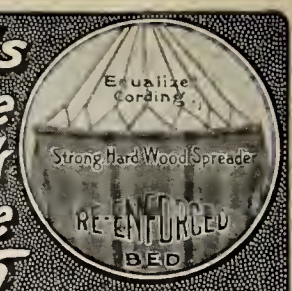
"Czar Nicholas and I agreed that our meeting is to be regarded as a vigorous reenforcement of the cause of peace. We feel ourselves as monarchs responsible to our God for the joys and sorrows of our respective peoples, whom we desire to lead forward as far as possible on the path of peace and to raise them to their full development."

The English "Nation" is not pleased at the approaching visit of the Czar to the British Court. It says:

"For all the activities of the Black Hundreds, for their assassinations and their massacres, the moral responsibility of Nicholas II is as clear as was that of Abdul Hamid for the slaughter of the Armenians and the persecution of the Young Turks. To treat a man who has consorted with the organizers of massacre as a civilized ruler is treason to civilization. A welcome offered to him is a misprint in the history of Liberalism and an infidelity to the cause of freedom."

It will be at least a mixed welcome which the Czar will receive in his jaunt about Europe. The members of the Labor Party in the House of Commons state:

"It is an insult to our national good name and to our self-respect that our sovereign should receive in our name the head of such a state."



In the Italian Chamber of Deputies, a member said that "the Socialists could not welcome an assassin."

Rumor comes of a couple of law suits filed against Abdul, the ex-Sultan, one for poisoning the litigant's father. This suggests a new method for dealing with tyrants. How trouble would have heaped up for Henry VIII if the relatives of defunct wives had decided to collect damages for his neglect of their welfare.

Think of the tangled path for Nero if the friends and connection of the early Christians had proceeded legally against him.

We can in fancy see Napoleon headed off by an injunction from a thoughtless raid on Russia; or the sturdy Cromwell, as he was about to eliminate Charles from the crowned heads, receiving a summons and trudging off to court to show cause why.

There Is Only One Hammock Made Like This Vudor Re-enforced Hammock

The bed of the Vudor Re-enforced Hammock is woven extra heavy in the middle—where the wear comes—a patented feature found in no other hammock. The cords are fastened to the bed of the hammock by means of hardwood spreaders and strong anchorages. The colors are sun-proof.

Vudor Re-enforced Hammocks come in a great variety of patterns, colors and styles, and at prices ranging from $2.25 to $8.00.

Write for Booklet and Dealer's Name

We will send you upon receipt of postal card request the beautiful Vudor booklet, showing various styles of Vudor Re-enforced Hammocks in actual colors. This booklet also shows the Vudor Porch Shades.

EASTMAN KODAK COMPANY,

"The Book of the Brownies," free at your dealers or by mail.

ROCHESTER, N. Y., *The Kodak City.*

Carey Roof Quality is best understood by seeing the Roof itself. May we Mail You this Sample?

WE want you to know about Carey's Roofing—and why it is in a class by itself—*different* and *better*. We want you to understand why this famous roofing has given *perfect protection* on buildings for 18 and 20 years; And, on inspection, proved to be in *better* condition than when first applied; the outer surface a more efficient resistant to wear and weather.

The wonderful inner compound is so prepared and tempered by our special process that it is permanently live and flexible. Extreme heat will not melt The Carey Roof—no tar to run, no paper to crack and crumble. Cold, wind, ice, snow, and soaking rain—sparks and burning brands—will not affect it.

The Carey Roof Standard

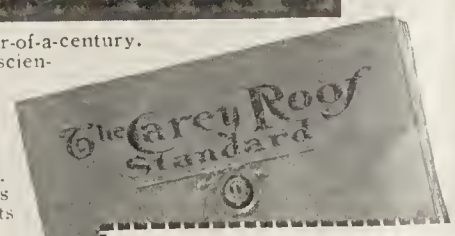
has been the highest type of roof-construction for a quarter-of-a-century.

A compact, indivisible sheet of high-grade materials, scientifically combined. Absolutely *standardized*—uniform in manufacture, quality, thickness and weight.

The most skilled workman cannot produce such a roof upon a building. And with a "Built-up" roof there is no judging the job until it is too late to change it.

You can prove Carey's Roofing *before* it is applied. Anyone can lay it. The Carey Patented Wide Lap insures one perfect, smooth and watertight covering that outlasts the building itself.

It's easy to buy Carey's Roofing—we have 46 distributing points; sold by leading dealers everywhere.



Let us send you a sample of Carey's Roofing to prove its quality. Compare it with every other roofing material.

Judge of its strength and elasticity. And remember that Carey's Roofing actually *improves with age.*

We'll gladly send, also, our "Book-about-Roofs," richly illustrated with photographs of factories, business blocks and other buildings—Carey-roofed. It's full of valuable information.

If you will describe your building, we will send specific information and estimates. We suggest that you use the coupon, and mail it today. Address

The Price We Pay for Bad Roads

(Concluded from page 15)

more than twenty States had special highway commissions. Illinois, Virginia, and Alabama have tried most successfully the convict labor on the roads. There is much to commend convict labor. It removes the convict problem from the disrepute of contract slavery in the South. It cuts the cost of good-roads labor exactly in half. It gives definite return to the State for the care of law-breakers, and it gives wholesome employment to convicts without competing in the labor market against legitimate labor.

Oil Roads in California

COUNTIES in California are undertaking good roads as a direct investment. Tourist travel brings hundreds of millions of dollars to favored counties; and the favored counties are not only building good roads, but building dustless roads. This is a hard problem where motor traffic is heavy. The principle of the macadam road is an underbedding of small wedged stones held together by the binding of the dust ground off by the wheels of vehicles and packed into the interstices like cement. This was all right for the ordinary vehicle with iron tires to grind off the grit. But the motors came along with heavy rubber tires, which grind off nothing, but whirl the dust away from the road into the field and suck the stones up out of place from sheer speed. To overcome this, California is using bituminous oils as road-binders. These make an absolutely dustless road.

State Aid Road-building

States	Total State Appropriation
California	$ 465,730
Colorado	25,000
Connecticut	6,601,000
Delaware	180,000
Florida	(ff)
Georgia	convict labor
Idaho	(m)
Illinois	130,000 c. l.
Iowa	17,000
Maine	456,577
Maryland	5,600,000
Massachusetts	9,948,830
Michigan	340,000
Minnesota	527,100
Missouri	975,198
New Hampshire	750,000
New Jersey	2,995,000
New Mexico	15,000
New York	14,223,265
North Carolina	(e)
North Dakota	(ff)
Ohio	750,000
Pennsylvania	8,581,232

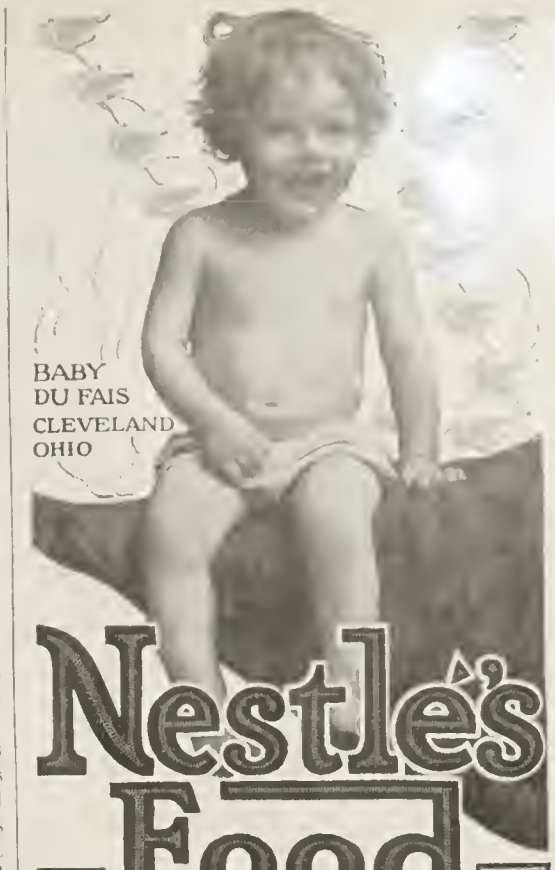
Virginia	499,681 c. l.
Washington	502,142 c. l.
West Virginia	10,433
Wisconsin	20,000

(e) No appropriation made for commission or State aid, but commissioners authorized to accept free transportation on railroads.
(i) No appropriation yet made.
(m) No appropriation for State roads.
(ff) Convict labor, but no money aid.



It remains to be seen how long they will wear.

In response to the tremendous demand for good roads, the National Government in 1893 formed a Road Bureau, which gives free engineering services on road-building in every part of the country. This bureau has grown into an organization which has assisted in the construction of two hundred roads, sent its engineers to thirty-four different States, tested twenty-eight hundred different samples of road material, and demonstrated the material suitable for good roads in every State.

A Substitute for Macadam

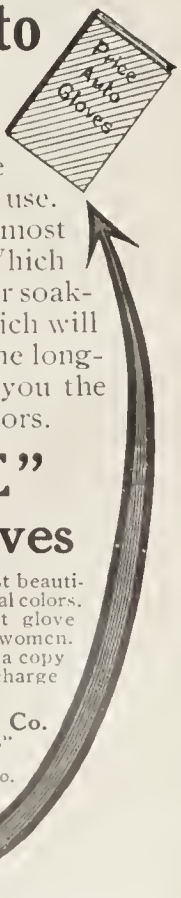
ONE example of the Road Bureau's work will show its usefulness. Roads for the States of sticky gumbo soil have been almost a hopeless problem. There is a whole belt of such States along the South, and there is another belt along the Missouri, where wheels sink hub-deep and horses flounder to death in a mire more treacherous than quicksand. The Road Bureau discovered, from many practical tests, that by burning gumbo soil, a road-bed compact as macadam could be obtained at half the cost of macadam; or at practically only the cost of labor and of fuel to do the burning. There is no longer any excuse for lethargy in road building through the gumbo States.

You are convinced, are you not, that good roads put money in your pocket, wherever you live or wherever your business?

Nestlé's Food

BEST FOR BABIES

Practically the only infants' food used in the hot countries—India, Australia, South and Central America, the African Colonies.
Its use there gives immunity from diarrhea and cholera infantum.



That's why you should use NESTLÉ'S FOOD during warm weather.

We have a new book on Infant Hygiene, which we will send with trial package (enough for 12 feedings) free on request.

The New Way

Everybody Can Afford It

The **Ideal Vacuum Cleaner,** completely equipped for hand operation, costs only $25.

Think of it! This price is less than the price which the wagon vacuum cleaners and the professional renovators charge for just one cleaning.

And so tremendous are the savings effected by the **Ideal Vacuum Cleaner** that its small price is quickly returned many times over.

Are your means modest? Then the work of this machine as a labor-saver, time-saver and furniture-saver will appeal to you the more.

Are you well off? Then the more do you need this machine as a means of keeping your beautiful things in spick and span condition. If servants clean with it, they must do thorough work.

Some Savings It Effects

Nothing cuts short the life of carpet or rug so much as the grit which daily is ground into it under heel. The **Ideal Vacuum Cleaner** takes all the grit out, brightens up the fabric beautifully, prolongs its life wonderfully.

It also protects your carpets and rugs by saving them from being beaten. It adds to the life of upholstery and draperies by keeping them free from dust.

All the expenses of special renovations and housecleanings are abolished. Housekeepers also are freed from the necessity of employing outside labor especially for cleaning purposes.

Anybody Can Operate It

The **Ideal Vacuum Cleaner** weighs only 20 pounds, and is easily carried from room to room where needed.

To work it by hand puts absolutely no tax on the strength. Your eight-year-old boy might well scorn the task as too easy. Compared with sweeping it is play.

No skill of any kind needed to use the **Ideal Vacuum Cleaner,** and it keeps itself in good condition.

It is in all respects a household or family implement—just as much so as a broom or brush—and it is far easier to work.

The Old Way

Cleaning I
Its Toil and

You are vitally interested in cleanliness.

What else matters about your home, your office, your store, so long as it is not clean?

Along with dirt go bad odors, vermin, germs, disease and death.

Along with cleanliness go freshness, sweetness, purity, health and life.

You know at what a great cost—in time, labor and money—anything like cleanliness is to be had with old-fashioned methods of cleaning.

Implements such as the broom can reach only surface dirt.

A large part of this dirt they scatter over a wider area, to be rehandled again and again.

Ideal Vacu

Operated by Hand — It Eats Up

This neat, strong, compact, portable machine is the perfection of the great Vacuum Cleaning System. What a world of difference there is between cleaning with it and cleaning in the usual way.

Sweeping calls for hard muscular work in a dust-laden, germ-poisoned air. The flying dust settles over everything, making necessary a second labor—"the dusting off."

With the **Ideal Vacuum Cleaner** you just take the nozzle and gently agitate your carpet, rug, upholstery or curtain,

$25 Brings You

Get an **Ideal Vacuum Cleaner** at once and put it to the test. If you do not live near one of our agencies, simply send us $25, by Postal or Express Money Order, Draft or Registered Mail, and we will send you an **Ideal Vacuum Cleaner** direct, completely equipped for hand operation.

Every machine guaranteed to give absolutely satisfactory service. Over

The American Vacuum Cleaner Com

DEAL VACUUM CLEANER eats up the dirt

eed Of All Drudgery

Another large part of the dirt they work deep down into the carpet, there to decompose and purify.

And that is why you must resort to those times of terror the semi-annual ripping up and tearing down, the pounding and beating, the carrying to and fro and out and in.

Don't do this any longer.

There is a newer, better way of cleaning.

It will save your time, your strength, your health, your money—even your very life.

For it is the only thoroughly efficient and strictly sanitary system of cleaning that the world has ever known.

um Cleaner

The Dirt Weighs Only 20 Pounds

and—whisk!—all dirt and dust, all germs, moths and eggs of vermin, are sucked out of it. All the dirt, you see, is instantly seized and whirled into the vacuum chamber, so that not a particle has a chance to fly. And the object is made clean, wholesome and sweet through and through.

The **Ideal Vacuum Cleaner** renovates every time it cleans. Nothing ever has to be taken up and beaten. Nothing ever has to be sent to a professional renovator to be treated you don't know how.

the Ideal Direct

23,000 of these machines have been sold in eleven months, and the enthusiastic letters we have received from these purchasers show that you, too, must be delighted. Send your order to-day.

Our Free Illustrated Booklet gives complete information about every phase of the cleaning problem. It tells a story that will mean a new era in your home.

ny, 225 Fifth Avenue, New York City

The New Way

The Only Ideal Cleaner

In the **Ideal Vacuum Cleaner** all the parts of the most efficient Vacuum Cleaning System are for the first time scientifically and economically associated and concentrated.

Thus the force you put into it by hand is able to do all the cleaning work of the big power plants, and do it as well or better and with more convenience. Pump and separating tank being right where the actual cleaning is done, no surplus power has to be developed to enable the suction force to operate through pipes and tubing over long distances and around sharp angles. Protected by patents.

The **Ideal Vacuum Cleaner** is not a makeshift composed of more or less unrelated parts loosely put together. Each part was designed with especial reference to every other part, and it stands forth a complete machine, built for hard and lasting service year in and year out.

As all its essential features are fully protected by patents, the **Ideal Vacuum Cleaner** is utterly beyond the reach of imitators. It is the one and only **"Ideal Cleaner."**

A Simple and Strong Machine

The **Ideal Vacuum Cleaner** is of strong metal construction throughout. It is compact, firm and strong to endure. It always works easily and always is reliable.

Its simplicity is remarkable. There are no parts concealed. Very seldom do any parts have to be replaced. Every part is easily and instantly gotten at.

Should it ever, by reason of accident, be necessary to do anything to it, any ordinary mechanic could quickly fix it for you.

Citizens of Chipmunkville

(Concluded from page 17)

though not satisfied, they would repeat the dusting performances. It was some time before I learned that this was their method of cleaning off the pitch that adhered to their hands and about their jaws.

While these little fellows would often engage in frolicsome chases, there was one form of amusement that seemed to have a prearranged object, and which might have been classed under the head of wrestling. In this the contestants strove to roll each other over with their noses, and while each squatted flat on the ground with feet far extended, at the same time they tried to root their noses under each other's sides in an attempt to tottle each other over.

At the time of my visit the chipmunks were busy laying in a stock of provisions to be used during the warm spells of winter when they rouse from hibernation, burrow through the snow, and stretch their cramped limbs in the sunshine. And also in the spring, when they emerge for good and find a blanket of snow five and ten feet thick covering the ground, at which time their hoarding instinct is all that keeps them from starving.

Like all unfortunates whose daily nourishment depends upon boarding-house upholstery, my boarders at first were appreciative boarders, but as time sped by I noticed that they were breaking away from the "bill-of-fare" that I furnished them and were going back to their natural diet of grasshoppers, berries, and roots and seeds of grasses and weeds.

After catching a grasshopper, they would sit up and, holding it between their front feet, begin at the head and eat the entire body except the legs and wings. To secure the seeds of grasses and weeds, they would sit upon their hind feet, reach up as far as possible and, if the stem permitted, bend it over, walk out to the end and snip off the seed bunch. If the stalk was too stiff, they climbed it until it finally yielded under the weight and gradually bent over, whereupon they severed the seed-pod and allowed the stalk to fly back into position.

✣ ✣ ✣

The Prince of Game Fish

(Concluded from page 20)

the swift stream has the vantage of rock, of current, of dashing waterfall, and is, so to speak, a fighting fish entrenched behind breastworks. If—the salmon alone excepted—there is higher and livelier sport of rod and reel in fresh water than the small-mouthed bass of goodly size, leaping, shooting, and breasting the rapids of a big river at the end of the tense line and vibrant rod, may that sport yet be found! And the angler himself, as he whips pool after pool of such a stream, has that variety and shading which give trouting its acute charm.

But such bass streams in our Eastern States are relatively few. Rather does the black bass identify himself with still waters, the inland lake or pond, free from currents, where the only poetry of movement is the plash of wave and the smile of ripple. Yet even there the angler of open vision will see things beyond his rod-tip. If the water is clear, let him note the strange vagaries of bottom where the shining sand spit emerges presently into rough and varied rock, and that again into a bottom carpet of aquatic moss of myriad tints. There is a wealth of flora, too, in the water weeds. Not to speak of the gorgeous water lily—springing from its muddy ooze and so exemplifying how, in the life of men, the whitest deeds may blossom among the lowly—there are the crude and striking yellow bulbs of the watch-weed, so-called; the arrowy leaves and white crests of the sagittaria; the pickerel plant, blooming broad in an area of blue that challenges the azure of the sky; and, in deeper waters, the string-weed, that, blossoming on the water, presently climbs down on itself to the bottom in a spiral to drop its seed. Let the fisher also, ere he hies him homeward after his day of sport, draw up one of the familiar spike-weeds (*potamogeton*) and mark what a beautiful translucent green tints its lower fronds; or study the host of minor flora that fill the spaces between the larger growths. Thus shall he realize that there are by-products of his sport, not expressed in terms of fishcraft, and that, with the outdoor sportsman of the wide eye, Dame Nature ever walks hand in hand.

THE NATURAL FLAVOR

of the richest and purest cow's milk is retained in Borden's Peerless Brand Evaporated Milk (unsweetened). It is especially adapted for use either plain or diluted on breakfast fruits or cereals. In coffee and chocolate it is much better than fresh cream. It enriches all milk dishes. —*Adv.*

Gillette Safety Razor

THE man with the wiry beard and tender skin appreciates the Gillette Safety Razor more than any one when he finds how easily he can shave with it.

It takes from three to five minutes for a clean satisfying shave. No stropping—no honing.

It is the one *safe* razor and the only razor that can be adapted for a light or close shave.

The time to buy a Gillette is now.

It pays for itself in three months and it lasts a lifetime.

The Gillette, illustrated herewith, is so compact that it can be carried in the pocket or slipped in the side of a traveling bag. It comes in gold, silver or gun metal—with handle and blade box to match. *The blades are fine.*

Prices, $5.00 to $7.50. For sale everywhere.

You should know Gillette Shaving Brush—bristles gripped in hard rubber: and Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor.

Everwear
TRADE MARK
Hosiery

Everwear are *more than merely "guaranteed" hose.*

They are unlike any hose you have ever worn—the kind you have been looking for for years.

Better than most hose that sell for twice the price.

Better in fact than any kind of hose, because Everwear are made to wear where the wear comes most. They look as neat—feel as good and fit as well as the most expensive kinds. And they retain their color, shape, and comfort during all their many months of wear and washing.

You pay as much for ordinary, guaranteed hose—as much or more for common hose, but you can't get hose as good as Everwear at any price. If holes appear in any or all of six pairs within six months after date of purchase you get new hose free.

Order six pairs today and the hose will prove our every claim. Remember the name EVERWEAR, and look for it on the hose and box.

Write for free booklet "An Everwear Yarn."

GERHARD MENNEN COMPANY, 35 ORANGE ST., NEWARK, N. J.

Good Ketchup Needs No Drugs

Every housewife knows—every food manufacturer knows—that Benzoate of Soda is not necessary in the right kind of ketchup.

Government officials know it, for the U. S. Department of Agriculture has issued a bulletin showing that ketchup can be prepared and kept without artificial preservatives.

Benzoate of Soda is generally used to prevent inferior, unwholesome materials from further spoilage, and to allow the presence of water in the place of solid food. The drug also permits unsanitary handling and loose manufacturing methods. More than this, eminent medical authorities have declared it harmful to health.

HEINZ
Tomato Ketchup
Contains No Benzoate of Soda

The tomatoes used in it are especially grown from our own seed. They are the best that soil and climate can produce—fine flavored, meaty, solid.

From the field to the bottle is a matter of but a few hours. The tomatoes are invariably vine-ripened. After sufficient cooking, spices of our own grinding, granulated sugar and pure vinegar are added—but not a drop of anything chemical or artificial—and opened or unopened, Heinz Ketchup keeps.

Your safeguard against Benzoate of Soda—often found in well-known brands—is to read carefully all labels, for on them the law requires the presence of drugs to be stated. Read the small type.

No Benzoate of Soda or other artificial preservative is used in any of Heinz 57. They are guaranteed to please or money back. Thousands of visitors pass through Heinz Model Kitchens every year and witness our care and cleanliness and the quality of our materials.

Outdoor Americans in Africa

¶ If common report is to be credited, it would seem that Outdoor Africa, at the present moment, must be fairly overrun with outdoor Americans. They keep coming out to the coast with reports of having shaken hands with Mr. Roosevelt in the jungle, and they bring with them carloads of heads and hides that are to be stuffed and hung in the halls of their descendants. The particular outdoor American in Africa in whom Collier's is interested is Mr. A. R. Dugmore, who is photographing the bandarlog and other jungle folk for this weekly. Photographing jungle folk is not like photographing cows. In a letter dated April 14, from his camp on the equator, Mr. Dugmore tells us this:

". . . I have been getting some interesting material both in pictures and experiences. I have been stalked by a pair of lions in broad daylight. I was alone with only six cartridges in my rifle, and so didn't have a chance to make a photograph, which was awful hard luck as the chance was an unusual one, but I needed my life even more than a photograph. I did pick up my camera, but on second thought and a second glance at the two lions decided on the rifle rather than the camera. I killed one and wounded the other.

"I got two photographs of a lion, which will, I think, interest you, as they are sharp enough to stand any enlargement. They were made at twelve yards distance, which you will allow was quite close to get to a wild lion. I have also got a series of hippopotamus pictures which are thoroughly satisfactory. One picture shows fifty of the beasts in and out of water, on rather a small scale of course. Others show them quite large and clear, with a crocodile thrown in for good measure. I also have a photograph of a herd of twenty-five buffalo, which was a very unusual chance and one that made my heart beat, and I wondered whether my life insurance policies were made out correctly.

"At present I am off on a long trip in search of elephants. We have still two hundred and twenty-five miles to walk before we get to the railroad again, and it will be about five or six weeks before we get out."

In a later letter, dated May 23, from Simba, and just received as we go to press, Mr. Dugmore had more to tell of his adventures:

"I am glad to say that after many nights of fruitless watching I have got a dozen photographs of lions, some of which are very satisfactory. My plans are to mail you an article, or perhaps two, immediately on arriving in England. These articles will be (1) on flashlight work, showing photographs of lions, hartebeest, and hyenas. Then (2), on working from blinds. This also will show hartebeest and a wounded lion.

"A week or two later I will send five more articles, which, so far as I now can see, will be:

"(1) A trip half-way round Mt. Kenia, with pictures of the snow-capped mountains from several points, some taken from an elevation of about 9,000 feet, some game pictures, and some of the Muru Kikuyu people and their dances. These people, with few exceptions, had not seen white men until about a year ago. They don't know money, and are altogether very interesting.

"(2) Sagari life (camping and traveling) as done in this country.

"(3) Some African river life, showing photographs of hippopotamuses, crocodiles, and some birds. (The hippopotamus photographs are about the best pictures I have ever made.)

"(4 and 5) On the game in general, with pictures of two or three kinds of zebras, buffaloes, rhinoceroses, giraffes, antelopes, and gazelles. I have made photographs of twenty-four species of gazelles so far, and hope to add one more to the list before finishing."

From further details given in Mr. Dugmore's letter, it seems probable that his first article will reach us in time to appear next week, or, at the latest, in the issue of August 8.

Vacation Stories—a Reminder

¶ One point was probably not made quite clear enough in the recent announcement of prizes of $100, $50, and $25, for the best accounts of vacation experiences sent to Collier's before October 1, 1909. This was that the papers *must* be limited in length to 1,200 words. Short and graphic—that's the sort that will interest readers.

The August Fiction Number

¶ Next week's issue will be the August Fiction Number, which will have a cover in colors by Reuterdahl and will contain among other tales "A Wasted Day," by Richard Harding Davis. With characteristic swing, Mr. Davis sketches a millionaire, reduced to his actual cubic space. Arnold Thorndyke, the Wisest Man in Wall Street, whose seconds are invoiced by dollars, decides to donate one of his moments to a former clerk, now under arrest. The Wisest Man undergoes a train of emotional novelties, which divert him from the ticker beyond the recall of pursuing clerks, and sting him into a determination to make good in a strange environment.

ADVERTISING BULLETIN

NO. 13

THE UNIVERSITY OF ADVERTISING

BY a thorough reading of the advertising columns of this paper you will add as much to your store of practical knowledge as you will from a study of the news columns. Try it on this issue—thinkingly. Unconsciously you are doing it all the time, absorbing day by day, from the advertisements in the newspapers and magazines, news of the world's progress in producing things—things which are to feed, to clothe, to educate, to amuse, to inform, to instruct, to conserve the health, and to advance the general comfort and welfare of its people.

Advertising is coming to be more and more the news of the world's workshops and market places. Advertisers realize that they must tell you the interesting *facts* about their goods—how they are made and why they are made so. They know you will buy their goods if they can convince you of superior merit or value; but they must first *interest* you, and experience has shown that the best appeal they can make is to your intelligence, your power to reason and your willingness to do so.

And so their trained writers write into the advertising columns of this Weekly the simple but intensely interesting story of the new things that are produced, and of how both the new things and the old things are made; and their artists skillfully illustrate the processes and the finished product. In this issue, and in every issue, the advertisements form a chapter in the great history of the world's production. As you read it, from cover to cover, think how the National Weekly would lose in interest and value *with this chapter missing.*

A Sample of Uncle Joe's Work

SPEAKER CANNON, the other day, had to perform his first important official function in many weeks. As ever, he utilized the occasion to give the rudder of our history a twist that was quiet and adroit, but firm and strong, in the direction of the interests of that organized wealth which CANNON represents.

It became the Speaker's official duty to appoint, from the House, five members of the conference committee which has the final framing of the tariff. By every rule, those five should be the senior five members of the Ways and Means Committee. Their names were well known. Every member of Congress—excepting, possibly, the little clique in Uncle JOE'S confidence—would have told you with perfect assurance who the five House conferrees would be. Every well-informed person in Washington could have said the names, for no one dreamed that CANNON would depart from a rule so well understood.

But the fourth man on the Ways and Means Committee is E. J. HILL of Connecticut, a moderate revisionist, committed to a reasonable reduction of the tariff on lumber. In the conference, Mr. HILL would have fought hard for the House schedules, as against the grossly higher Senate schedules. So Uncle JOE, in naming the conferrees, quietly passed over Mr. HILL and selected in his place the eighth man on the list. *That eighth man is* JOSEPH W. FORDNEY *of Michigan, the man who declared that if he had his way he would not change the Dingley Bill by the "dotting of an i or the crossing of a t."* FORDNEY is frank and a stubborn fighter for higher rates; himself a wealthy owner of timber lands, his chief interest in Congress has been to maintain a high duty on lumber. In effect, Uncle JOE packed the conference committee in favor of revision upward, an act which left, as the sole of hope of the public, President TAFT'S presumed fidelity to his campaign promises.

This is a typical example of what we call "Cannonism." It was not a conspicuous vote, not an outspoken speech on the floor of Congress, but a quiet and apparently minor detail of legislative routine. Outside of Washington few people would notice it or understand its significance. Quietly, hour by hour, day by day, these many years CANNON has used his powerful position thus to advance the interests of organized wealth. That is why we see no present need in American politics so important as the deposing of him.

Five Feet of Books

WE PRINT THIS LETTER from ex-President ELIOT about his five-foot shelf of books:

"ASTICOU, MAINE, July 10, 1909.

"GENTLEMEN:

"It was your desire and purpose to publish a carefully selected library which, if conscientiously read, would make of the judicious and ambitious reader a cultivated man; and it was this educational purpose which interested me in your undertaking.

"The recent discussions in the public press and in private conversation over 'the five-foot shelf of books' satisfy me that the project had not been correctly apprehended in some quarters. The incomplete and inaccurate list which appeared in the newspapers a few weeks ago was published without my knowledge, and gives an erroneous impression of the project. At this date, not more than half of the books have been decided on.

"The volumes which I undertook to select are intended to give faithful readers who know no language but English a true picture of man's imaginings and reasonings through more than twenty centuries. They must all be works of high literary merit, and must illustrate well the mental and moral history of mankind. While the collection will inevitably contain much philosophy and religion which the twentieth century does not accept, it should demonstrate that much of the present stock of available wisdom has long been at the service of educated men.

"To depict the 'Stream of the World,' the collection must contain worthy representatives of both the ancient literatures and the great national literatures which have been created since the revival of letters; so that the proportions of the different literatures have to be carefully considered. Many famous books are unavailable because too long—that is, they would occupy a disproportionate space in the series.

"The collection can not represent largely the natural science of the nineteenth century, or give much space to the current thought of to-day, because these recent acquisitions of the race have, for the most part, not yet been cast in durable literary form.

"The Bible and Shakespeare are omitted because these books are within the reach of most Americans who read at all. Very truly yours,

"CHARLES W. ELIOT."

There is little to add to Dr. ELIOT'S admirable statement. It was natural that the publication of an incomplete and inaccurate list should have provoked some "silly season" editorials. These wordy symposia concerning books are dearly prized occasions for a display of newspaper erudition. They give a pleasant literary flavor to the page and offer a happy diversion from the weary tariff.

The New York librarian who declared that the list was "not such as the average New Yorker would select" was not more ingenuous than an editorial writer for the Hearst newspapers, who was apparently surprised that Dr. ELIOT did not share Mr. HEARST'S idea of what constitutes good reading.

Out of the mass of criticism, restrained, violent, flippant, or merely dull, which followed the publication of the supposed list, we may take note of one or two misleading assumptions.

One is that Dr. ELIOT consented to lend his name for money to an "advertising scheme" designed to unload upon the public certain books which the publishers had in stock.

Dr. ELIOT consented to select and edit the five-foot shelf of books now newly published under the name of "The Harvard Classics," because he believed by so doing he would encourage a taste for good reading among the people. The publishers feel that the honorarium he received has recompensed him poorly enough for the time and labor he is now spending. That Dr. ELIOT, after a lifetime devoted to teaching, should have undertaken, it is needless to state with the knowledge and approval of his associates, the selection and annotation of "The Harvard Classics" should be no surprise to those who have followed his public utterances for the past forty years.

He has been a consistent advocate of that education which comes from a fellowship with noble books. The publishers of COLLIER'S count themselves fortunate, for reasons not entirely "commercial," in being able to assist America's foremost educator in his task of bringing good books into the homes of the people.

A Good Work Threatened

THE RECLAMATION SERVICE is a branch of our Government which may be viewed with unusual cheerfulness and satisfaction. This is so for several reasons. In the first place, the work it does appeals to the imagination. To create something out of nothing must always be fascinating. Then the relations between the service and the citizen are peculiarly beneficent. State help often endangers individual initiative. In the case of the Reclamation Service the Government merely gives help when and where help is rightly needed. In effect, the Government in building storage reservoirs and irrigation canals on these various projects lends from its vast store to a large number of farmers who, presently, repay the loan in purchasing their land and its water rights. The original capital is again available. The farmers helped are now able to take care of themselves. It is an excellent scheme all round. The Service is new, its engineers and office men young for the most part, enthusiastic, interested in this work and not in politics. The Reclamation Service has thus far been happily free from the domination of merely political ambitions. The appearance in various newspapers of "feelers," suggesting that Chief Engineer NEWELL might be replaced during the autumn by a political friend of the present Secretary of the Interior is, therefore, something to be viewed with uneasy concern. To make a political machine of the Reclamation Service would be seriously to interfere with the work so well started. FREDERICK H. NEWELL has devoted himself to the science of irrigation for over twenty years. He has been behind the Reclamation Service since its beginnings. Few men, if any, know better this special field. He is now in the prime of life—a few years short of fifty. To displace him, as has been suggested, with a man who has had no experience in irrigation work, would be a peculiarly uncalled-for sort of political quick knife sticking and the beginning of a domination which this branch of the Government has been fortunately spared.

The Western Spirit

LIST TO THE SONG of Centralia! Midway between Puget Sound and the broad Columbia, across the cool Cascades, the pæan rises and from it we catch these shining notes. When the panic struck Centralia the town lost its job. Its lumber mills shut down. Instead of yielding to the dumps the buoyant Centralians decided that this was the moment to put their house in order. Their main street was a sea of mud half the year and a puddle of dust the other. There were five thousand people and no sewer system. Not a street was graded, nor was there a sidewalk worthy of the name. They had passed an ordinance prohibiting cows from running at large, and that was about the extent of their civic betterment. These things they resolved to change. The

citizens held a mass meeting for the purpose of *increasing* their taxes. The assessed valuation jumped from $580,000 to $1,688,207. They built their sewer system. They paved the business streets. They spent $32 for each man, woman, and child, and they ingeniously arranged, by verbal promises, to have the work to go to local labor. The result was that hoarded money came out to be used when it was most needed, that the idle got work, and that a rather shiftless-appearing town became a little city. There are now some eight thousand people—so the Centralians say. Their state of mind is illustrated by the fact that one of the reasons for the defeat of an otherwise excellent candidate for mayor was that although the city had had an electric-light plant for several years he had only recently put lights in his house. The mills are running again. Centralia again has a job. What prosperity didn't do for the Centralians, adversity did. Happy pioneers!

The Contemporary Classics

ON MANHATTAN ISLAND, New York, June 22 of the present year, occurred a public event of primarily academic interest. The participants were nine students of Yale University and nine students of Princeton. The several thousand spectators were chiefly graduates or undergraduates. Of those who were likely to read the newspaper accounts of this event, fully nine-tenths might fairly have been expected to be men who had spent toilsome years in Yale or Princeton, or other universities, acquiring mastery of and a taste for classic literature. From the account of that event in the New York "Times" we take these sentences:

"It was a good game—rattling good. Classy? Rather! Pep? Plenty of it! Ginger? The real old Jamake."

"Bingles and bungles were bunched in the breakaway by the Bulldogs—"

"Sides whipped Murphy's hop to first for a put-out and Warwick snapped the sphere to the plate in time for Dawson to nail Philbin in a daring try for a jot."

"—a bad throw by Sides roosted Fels—"

"The sprinter purloined a perch."

"One down, he laced to left for a landing, making the midway when Sweeny, following Reed's strikeout, threw wildly to first to catch him, and eating up the rest of the distance on Pitkin's dexter drive for a nook."

"Jeff annexed another angle, and when Reed gave the go-by to Logan's grasser, the advance runner scored."

The little island upon which this game was played speaks some sixty tongues. Babel it is often called, but what tongue is this? Haven't the newspapers, in the search for strange sounds to describe baseball games, gone so far that bizarrerie has itself become conventional? What paper will destroy monotony by employing some famous master of classical English to report the championship series next fall, or write its baseball page after the manner of Greek battles? For the thousands of graduates and undergraduates primarily concerned, the big college football games possess a dramatic interest and a mood to which there are close analogies in the Iliad and the Anabasis. To some hundreds of thousands last fall the championship series between Chicago and Detroit were fit events for heroic verse.

A Plea for Canvas

THIS IS THE AGE of gasoline. Over earth and sea the spirit in the tin can drags us at incredible speeds. On land it is relegating the horse to the category of curious luxuries. On water—sad the saying of it!—it is displacing the sailboat. Where once the surface of the changeful blue was flecked with white wings, where the shifting canvas crackled and boomed and the breeze harped its music on the taut sheets, now the eye sees only low-gliding hulls, the ear hears but the pop and splutter of the hurrying put-put boats. Something gracious and beautiful has vanished from the world. Loath, indeed, should we be to believe that it will not return. Surely there is that in the blood of the American which, when his vitality calls for replenishment, urges him to the struggle with the elements, hand-to-hand, on their own terms; which sends him, stripped to gun and ax, to cope with the open; which lures him to outface hoary winter on the frozen rivers, with the ringing steel upon his feet; which bids him launch his petty craft against the chances of wind and wave, and, with a handkerchief stretched on a toothpick, beat his way into the rigor of the northern gale. In a workaday world let us, by all means, go about our necessary business soberly and swiftly to the safe and sane pulsations of a malodorous machine. But, for the thrill at the heart, for the savor of life in playtime, for the sheer joy of matching human wit against the wind's will, of outmaneuvering the might of heaven—up sail and away!

Countryfolk

AN APOSTLE OF NEW ENGLAND passed when SARAH ORNE JEWETT died. She loved "the dry, shrewd, quick-witted New England type," as she called it. She saw its strength and its weakness, but both she loved. Born and brought up "down Maine," she used to drive about with her father, "a country doctor," while he ministered to the countryfolk. This gave her the primal insight into the New England character, which she supplemented with rare instinct. Oddly enough, it has remained for women to pluck out the heart of the Yankee. Some have struck more poignantly the deep note of suffering in the country and the occasional wreck of human souls, which is all the more tragic because it comes in the comparative solitude of farm or hamlet. Miss JEWETT was content to touch the lighter sides, the humors—and the pathos—of humble lives and hearts. She takes one back to the older New England—the land of the Concord coach and the album on the center table. But she never lapsed into stereotyped forms. The extreme, trousers-tucked-into-his-boots, straw-in-his-mouth, nasal-twanging Yankee of the B'Gosh drama does not appear on her pages. Her types are never exaggerated, but invariably human. Yet one feels in her stories her conviction of an inherent divinity in countryfolk which the city-bred lack. Indeed, when she was hardly more than a girl, she defined this:

"There is one side of such lives for which one can not help feeling reverence: they live so much nearer to nature than people who are in cities, and there is a soberness about country people oftentimes that one can not help noticing. I wonder if they are unconsciously awed by the strength and purpose in the world about them, and the mysterious power which is at work with them on their familiar farms. In their simple life they take their instincts for truths, and perhaps they are not always so far wrong as we imagine. Because they are so far instinctive and unreasoning they may have a more complete sympathy with Nature, and may hear her voices when wiser ears are deaf."

All her life she followed this belief, and it illumined the hearts of her simple characters. Such gospel can not spread too far.

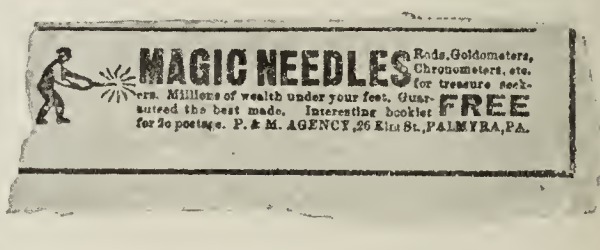
Senator Bourne's Vocabulary

SENATOR BOURNE OF OREGON on July 1 made his first formal speech of the session. In the opening paragraph occurred a strange word:

"The struggle was a titanic one, his task herculean, the treatment necessarily heroic, but Mr. ROOSEVELT was equal to the emergency. He first awakened the public conscience, pointed out in an *echinated* manner the existing evils. . . ."

Such as wish to add this word to their vocabularies will find this meaning given by the Standard Dictionary, Twentieth Century edition:

"Echinated—A family of echinoideans, especially diadematoideans having tests with equal diameters, the ambulacral plates compound with pores in triplets, tentacles all alike, and jaws with epiphyses. Set or armed thickly with prickles."



It seems expedient to add that the remainder of the Senator's speech carries the conviction that his intention was to compliment Ex-President ROOSEVELT.

Thunderstorms

THE THUNDERSTORM now has its day. It rumbles across the sunny face of the midsummer heavens. Sometimes it lowers the temperature and fills the air with freshness. Almost invariably it pricks the nerves of your little sister and maiden aunt. It splinters the city flag-pole, it demolishes the village steeple, it burns the farmer's barn. But all this does not prevent the thunderstorm from being the most awe-inspiring phenomenon which nature ordinarily shows to man. The city dweller, scurrying impotently through cañons of masonry, does not have more than a hint of the true grandeur. One should be upon a hilltop or on a broad lake to realize the omnipotence of the storm. The air is sultry. Great white "thunder-heads" pinnacle the heaven. Dark clouds bulk upon the horizon. These are laced with lightning. The dwarfs can be heard at their bowling on distant mountain peaks. The sun is overcast. The storm rushes onward. A glowering copper tinge marks its center. A hush broods over the lake's unrippled waters. Suddenly comes a blast of wind as if from the puffing cheeks of a giant. Then like a marching white waterfall—the rain. It pelts upon the lake until the drops seem to rebound. The thunder has ceased its rumbling. Now it comes *with* the lightning in a treble rip like the tearing of a sail. Thus the storm mounts to its crescendo, steadies, wanes, dwindles, and fades—ramping away across the countryside. The sun creeps out. The heavens shine with fresher blue. The universe is purified. If all this be not majesty, there is none in Nature.

White Magic

WHO'S FOR TREASURE TROVE? Who's for the rainbow's end and the glint o' gold? Let him come here, and read, and have his will. A thrilling word, Goldometer! Not to be met with in the dictionary's arid wastes, but scattered in far-flung seed of print by the genius of a twentieth-century mage. What soul so dulled that it does not feel some faint throb of response to the call? Not all of us, alas! can sail the Spanish Main and hunt the ringing doubloon. But most of us have back yards. And many of us have spades. Millions of wealth under our feet! Universal, indeed, is the ambition to which the P. & M. Agency makes appeal. Whosoever was once a boy has, somewhere within him, however deep-crusted in disappointments, a profound and touching, though unformulated, expectancy that his own deserts will, one day, be rewarded by a special dispensation of Providence. And in what more glorious, dramatic, and likely way than buried treasure? Let us then be up and digging. After all, the divining rod may be something more than human. At the worst we shall have had some manful exercise. And there is always the remote but splendid chance that the exploring shovel may exhume, if not the teapot of tradition, brimming over with minted metal, then, haply, the bone that Fido interred last week.

The Philippine Assembly, the Lower House of the Legislature, in Session in the Marble Hall of the Ayuntamiento, or Government Building

The second session of the insular lawmakers in Manila closed at one o'clock on the morning of May 21. The long sitting of the final day was consumed by the question of independence, and it was vigorously maintained by the majority of legislators that the islands are fully ripe for it. A resolution was finally adopted instructing Manuel Zuezon, delegate to Washington, that he should ask for the immediate independence of the Philippine Islands

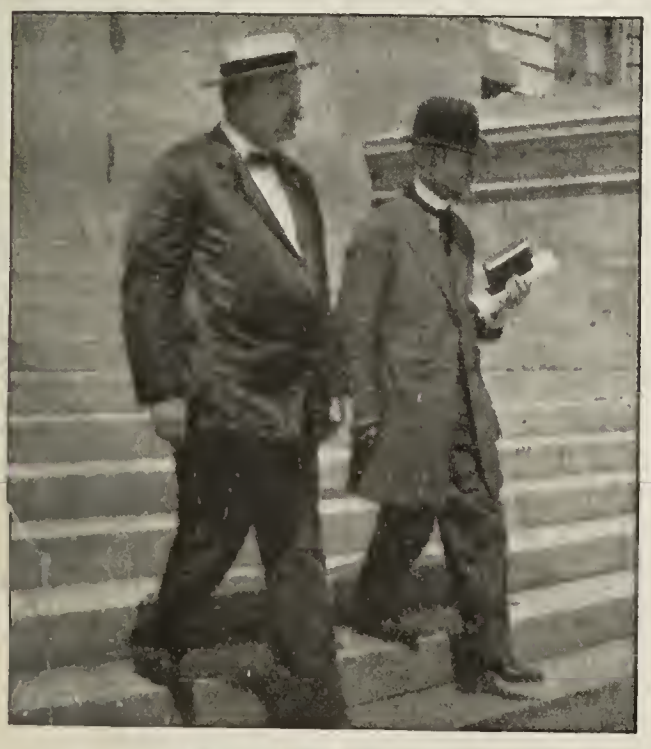
A Plague of Jack-Rabbits in Southern California

IF YOU had traveled through Antelope Valley in southern California not longer ago than February, in whatever direction your eyes turned, you would have seen long-eared jack-rabbits in countless thousands. They were thick on all sides of you. When they moved, they seemed to do so in concert, like many army corps under one general. They no longer leaped in great strides. They were hobbled, so to speak, by their companions on all sides. Everything green was mowed down as they advanced. First, the free-grazing lands were swept of every vestige of herbage from the foothills to the outskirts of the settlements. Then they deployed into divisions to prey upon the enclosed alfalfa fields.

The rabbits would enter a field of alfalfa just ready for cutting and leave it cleaner than if swept by a prairie fire. A small field of ten acres, under fence, near Lancaster, was invaded one day at sunset by a swarm of the pests. There were not less than seven thousand in this ten-acre patch, a jack-rabbit almost to every ten blades of alfalfa. At sunup, which is a jack-rabbit's bedtime, not a blade of grass was visible in this field. Nor was there a vestige of alfalfa in three adjoining fields. Four fields in one night—a jack-rabbit's day. The ten-acre field alone represented a loss of $2,000.

The cattle owners were forced to round up their starving cattle and either transfer them to distant pastures across the mountains or send them to the Los Angeles market for killing. Feed for the stock in daily use had to be brought in at high prices. The ranchers, who supplied their tables with vegetables from their gardens, had to buy in the Los Angeles market or go without.

Early during this rabbit scourge the ranchers were hopeful of getting control of the situation. After the stock had been rounded up and transferred, they set out poison all over the free-grazing lands. The grazing lands soon were littered with dead rabbits, and the atmosphere was foul with the stench of the thousands which lay unburied. To cross one of these fields on foot without tramping on a dead rabbit at every step was somewhat of a feat. Their swollen bodies were everywhere. A more terrible pestilence than that of the devastation by the rabbits was feared. The word went out to stop poisoning. The ranchers then organized great rabbit hunts, and invited every one for miles around. They were killed by the thousands in these hunts, but the rabbits seemed to multiply faster than they were killed. In one of these hunts I counted, with the assistance of two persons, nine thousand rabbits, and then we gave up the count. The ranchers tried in vain to protect their alfalfa fields with rabbit wire-fencing.



Such were the conditions as late as February; now you may consider yourself in luck to jump one jack-rabbit from its hiding-place in a day's drive through Antelope Valley. They came almost in a night, in vast armies, and departed as mysteriously, between days.

In 1864 there was another such pestilence in Antelope Valley. A stage-driver claims to have encountered a vast hegira of jack-rabbits that year in the Mohave Desert. They were headed for the Colorado River. His story was given credence among the natives of Antelope Valley. It partly explained to them the absence of the thousands that had infested the valley. No one had seen them depart. At sundown these invaders were everywhere in sight, but the following morning and thereafter there were none to be seen, as if they had vanished at the wave of a magic wand.

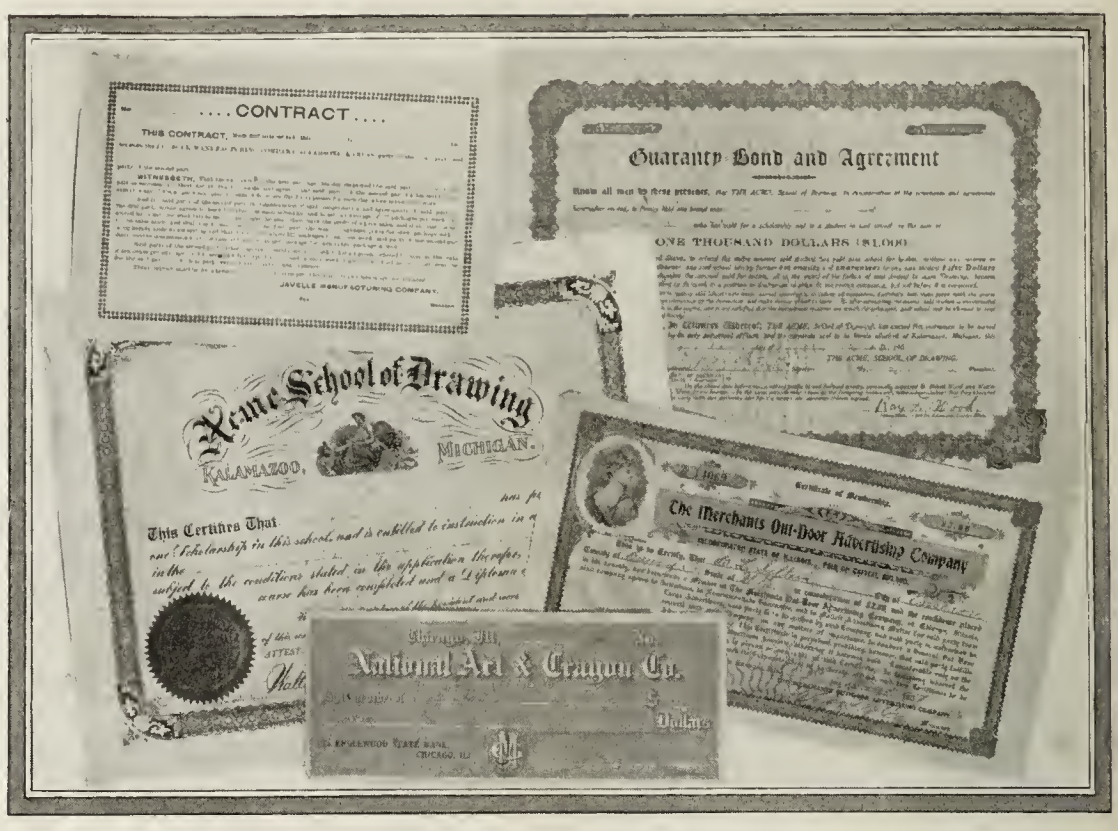
It is a noticeable fact that these visitations have occurred only in unusually wet years, and also that such pestilences have been followed by six or seven years of great drought. In the present instance there are unmistakable signs of a dry year. No rain has fallen in Antelope Valley since March, and the rainy season is now far past.

A jack-rabbit drive in southern California, where these pests of the hay-field are slain by thousands

Georgia's New Governor

Joseph M. Brown, "Little Joe" the hundred-pound statesman, after being sworn into the executive chair of Georgia upon the Bible of his father, "Joe" Brown, war-time Governor and United States Senator, is here seen leaving the Capitol with his close friend, ex-Governor J. M. Terrell

The "Half Moon" Under Sail



The "Half Moon," built in Holland for the Hudson-Fulton celebration, left Rotterdam July 9, on the deck of the Holland-American liner "Loestdyke," scheduled to reach New York July 22. She was fully rigged out and put on trial under her own canvas before being hoisted aboard the steamer

Traps and Pitfalls

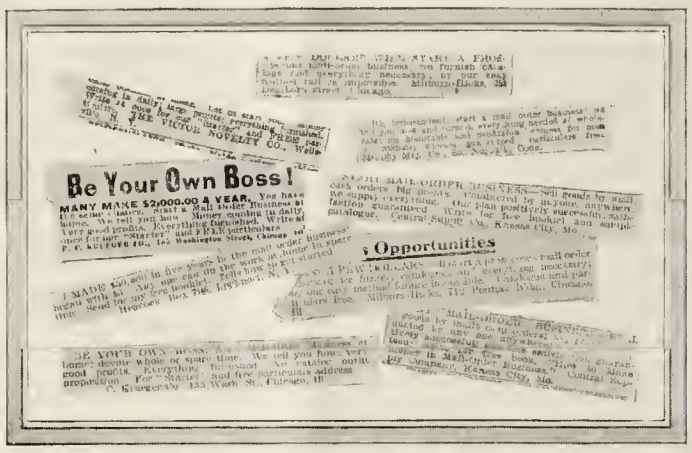
By SAMUEL HOPKINS ADAMS

THIS is the third of the series of articles on "The New World of Trade." It describes the methods in which publicity may be used against the interests of the reader. Glittering promises should be searched with common sense; there is always a hook. The first article of this series of four, "The Art of Advertising," was published May 22; the second, "Fair Trade and Foul," on June 19; the next and last, "The Publisher and the Public," will appear August 21

The kind of contract and guaranty which should be read from every angle and weighed with judgment before subscribing yourself to the conditions

YEARS ago an ingenious, inventive, and anonymous person filled the public eye briefly, and to this effect: "Three Yards of Fine Silk: Only Twenty-five Cents." Bargain-hunters hastened to deluge him with silver quarters by mail, receiving in return nine feet of silk thread. Gone is that genius, together with his fellow of master-finance, the man who vended the ordinary two-cent stamp of commerce as "A Handsome Steel Engraving of George Washington for Ten Cents in Silver." But their imitators, less original, though more rapacious, are still doing business. They are the twentieth century bunco men.

No longer do these venders of the new-style greengoods lurk at ferry entrances, awaiting the guileless farmer. The business has developed far beyond that. Nowadays they hire offices, enwrap themselves in firm names of impressive purport, and seek the victim in his own home through the agency of the published word. In the aggregate they take millions of dollars yearly from the general current of trade, and it comes mostly from the pockets of those who can ill afford it.



Under various guises these gentry work their wiles. What more innocent, on first thought, than, for example, a clothes-rack? Yet it is through this humble and useful contrivance that the W. A. Jenkins Manufacturing Company conducts its profitable swindle. Consider the advertisement hereto appended. Could any offer be more explicit of promise? Permanent employment at $25 a week and expenses, and your work all laid out for you. "No experience necessary." Is it conceivable that there should be men toiling for a mere pittance, or out of work altogether, when opportunity such as this sounds its golden trumpet-call to a million households?

Let us, then, be up and doing the well-salaried and inexperienced work of the Jenkins philanthropy. We write, applying for the job. We receive promptly a reply flattering to our hopes, so flattering that we take little heed of a modest request for a $15 order of clothes-racks to begin business on. As soon as we have ordered the $15 worth of racks, with cash accompanying the order, the salary contract will be forthcoming. Forward goes the $15. Back come the racks. But the salary contract? That's another matter. To be sure, there arrives a document, purporting to be a contract, but proving to be nothing at all but a curio of pseudo-legal crookedness. For our $15 we have received a lesson in experience, and that is about all. Perhaps the racks should be reckoned on the credit side; but, personally, we have never possessed sufficient apparel to decorate $15 worth of clothes-racks, and never hope to.

Forgetful Institutions

LONDON, Ontario, Canada, is the home of the Jenkins scheme. The same town boasts two other financial institutions so similar in character and purpose to it, that one suspects something more than a geographical coincidence. "Farmers' Sons Wanted" advertises the Veterinary Science Association. Ostensibly the progeny of the soil are wanted to earn $60 a month with an expense allowance of $50 a month for starting branch offices of the association.

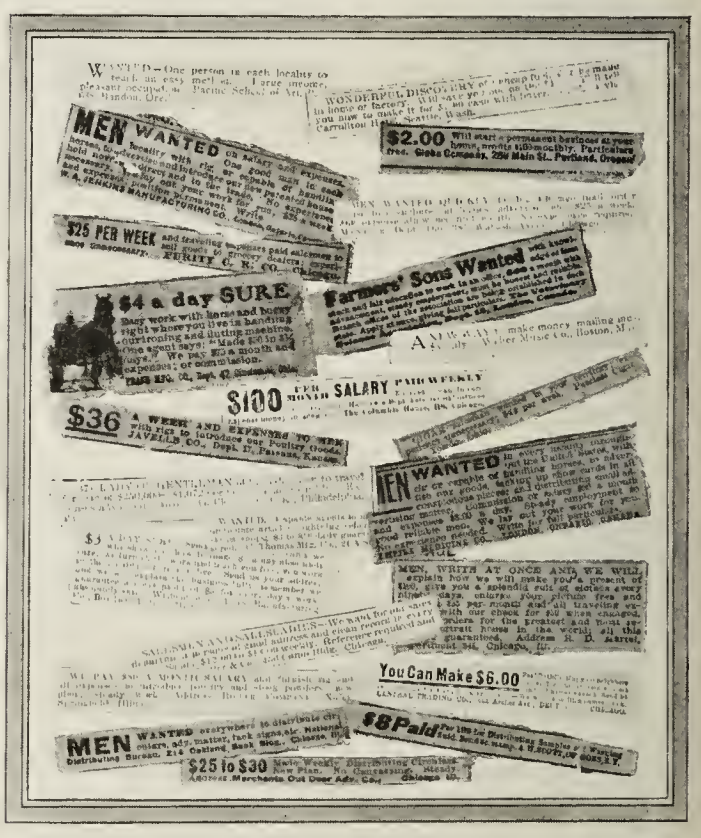
In reality, however, it is the farmers' sons' money that is wanted; $3 for a book on veterinary practise, please; then three "members" to be gathered into the fold by him at an initiation fee of $2 each. Having secured $9 from him by this simple method, the association abruptly loses all interest in the farmer's son and, simultaneously, all recollection of the $60-a-month-salary promise. Now, if the ambitious youth wishes to add to his collection of promises, he may have a $90 one from the Empire Medicine Company of London, Ontario. There is the offer in cold print: $90 a month salary and $3 a day expenses for distributing advertising matter. But first there is the small item of $4 for samples before the em-

The mail-order scheme—whereby you are to sit around and let the postman bring you money

ployment can begin. "Please remit." After receiving which the medical concern goes on its primrose of petty larceny rejoicing and leaving its new employee to doctor himself for the painful and surprising sensation of having been stung.

"Salaries" Which *You Pay*

PERHAPS the most glowing promise ever held out in hot type is that of R. D. Martel of Chicago. Here is generous maintenance, clothing, art, and a princely present awaiting the eager grasp. But as the eager grasp contracts, it must have a small sum of money in it to pay for a "sample case." And at the touch of that money, at the blight of material things, the whole golden witchcraft dissolves. The $100 present is mist, the $85 salary is fairy gold, the suit of clothes is woven of the rainbow, and the $50 check is—well, that's material anyway, and a very remarkable document too. The only difficulty about it is that it isn't cashable. It's a fake, like the rest of the offer. As a refutation of the widespread slander that only high financiers attain immunity from the laws, I instance the fact that Mr. Martel is still out of jail.



To find out what underlies the $100-a-week salary offer of the Columbia House, one must first make a $15 deposit for its outfit of hardware. That entitles you to call yourself an agent, and gives you authority to "appoint" subagents, each of whom must pay in a deposit also. Part of this deposit you are entitled to keep, this constituting the promised "refund" of your own deposit. So cunningly is your contract worded that, if you fail to appoint six subagents, the company can keep your $15. As for the "salary," that consists in a percentage on what you can fleece your unfortunate subagents out of. When the supply of subagents stops, so does the "salary."

Presumably there is some ingenious legal quirk which keeps this kind of enterprise out of the clutches of the law, for it is a popular device. George G. Clows, who runs the American Home Supply Company, uses it to collect an $11 deposit. The Purity Company of Chicago charges you $11 for a sample outfit, plus the experience of finding that you've been buncoed and that the "$25 and expenses" is merely a bait. The Javelle Company's promise of $36 a week is just as fallacious as the Clevis Company's $80 a month, or the Bailey Company's $88 a month, or Ziegler & Company's $12 to $18 a week. All of them want to palm off their "samples" or "outfits" on you. None of them pays a salary as promised.

Lesser employments also hold out their lure. What youthful imagination would not be stirred by the chance of being a real, live detective? Here it is, in cold print: Shrewd men wanted and no experience necessary. Webster of Indianapolis offers the thrilling opportunity; so does Granman of Cincinnati. The first charges $2 fee and the second $3. For that you get a badge and a few papers, and can masquerade as a detective to your heart's content if the real police don't catch you impersonating an officer. Having your money safely stored away, the Old Sleuth factories have no interest in your subsequent proceedings.

The Sale of Memberships

FOR those whose ambition is content with lowlier things, there are the concerns which advertise for men to distribute circulars and advertising matter and tack up signs. Their literature is full of attractive promises, and they sell you certificates of membership for various sums, after which they implore you to buy stationery from them. I belong to three of these organizations, as I can prove by gorgeous documentary evidence; but I've never had a single job from any of them. For membership in the Merchants' Outdoor Advertising Company, I paid $2; while the National Distributing Bureau and the Sun Advertising Bureau got $1 each out of me. Up in Cohoes, New York, one A. W. Scott runs a sort of department store

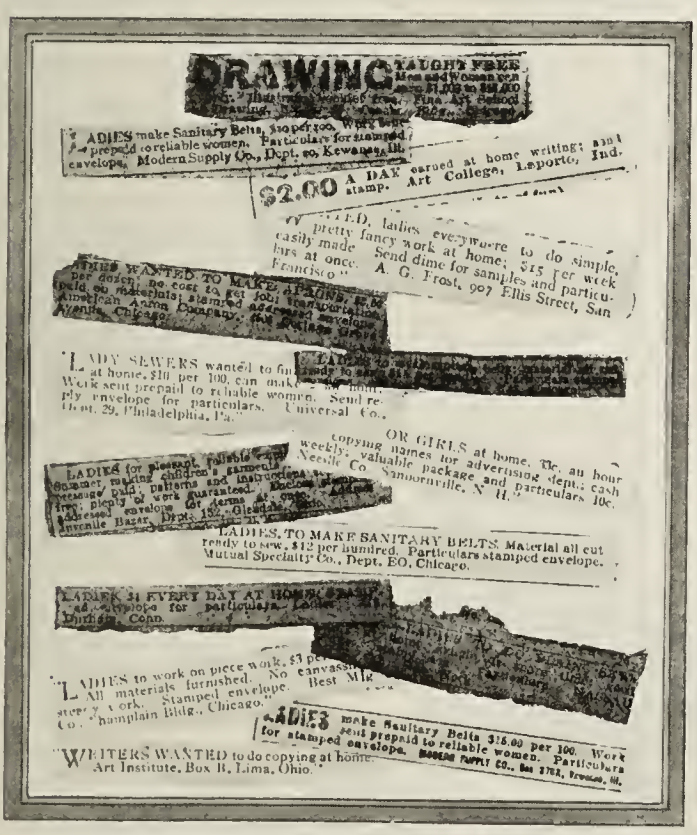
Salary guarantees, which seem to dissolve when you have completed the payment of the preliminary fees

of mail-order fakes, one of which promises $8 per hundred for distributing samples of washing fluid. You may get the $8 if you can. Meanwhile, please to pay Mr. Scott $1 for the formula of the fluid, and another dollar for the privilege of bidding on the contracts. Thank you, from Mr. Scott. That will be all at present. Good day.

A Guaranty on a Catch-Line

AN OFFER which is guaranteed in print can not but have weight with the inexperienced reader. Both the Royal Manufacturing Company and the C. Thomas Manufacturing Company find their way into respectable publications. After I had bought the Royal Company's "silverware," which is very far from being what it purports to be, I sought to extract from them the promised guaranty. They replied that the guaranty offer was only a catch-line; it wasn't made in good faith. As for the Thomas Manufacturing Company, who deal in "self-sharpening" scissors, they considered

it quite absurd that a guaranty should be demanded of them. Perhaps it is absurd. But it's something worse than absurd that they should advertise "$3 to $10 daily guaranteed" when they haven't the remotest intention of guaranteeing a cent. Incidentally, the "self-sharpening scissor" is a contrivance in the class with the Keeley Motor, the perpetual-motion machine, and the philosopher's stone.

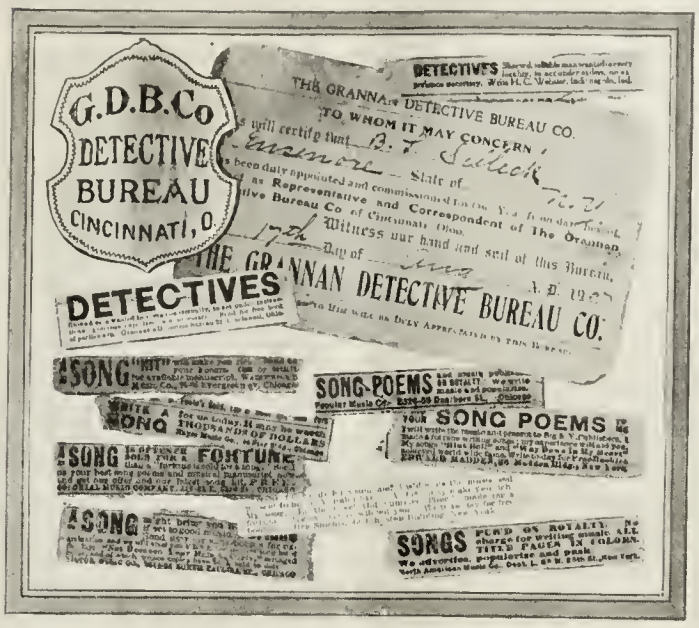


"Widow-chasers" is the picturesque trade term by which a certain class of petty swindlers is known. Home-work is the sign of their craft. Usually it is sewing to be done at home; sometimes copying. In two years of investigation I have found no exception to the rule that these home-work offers are traps for the unwary. Take, for example, the offer of the Needle Company of Sanbornville, New Hampshire. For her ten cents the applicant gets a package of needles and an opportunity to join an endless-chain scheme, whereby she beguiles her friends just as she was beguiled by the original advertisement. By promising them work at copying names, she extracts twelve cents from each of them, of which she sends seven cents to the Needle Company and keeps five cents for her commission. This is as near as the Needle Company comes to fulfilling its promise of thirty-three cents an hour for copying names. It might with equal propriety, accuracy, and honesty advertise to pay $4 a minute for lassoing mud-turtles.

The sanitary belts, shields, aprons, and piece-work offers are all on the same basis. Take the case of the most widely advertised one, the Universal Company of Philadelphia. The gist of this is that, though the work is "sent prepaid," there is a charge of $1 for sample. From this sale of samples the concern makes its profits. It is practically impossible for an inexperienced worker to fulfil the conditions of employment. In order to test this matter, I gave the work to an experienced seamstress. It took her an hour and a quarter to make one shield, at which rate she would earn the munificent sum of eighty cents a day for a ten-hour day. Problem: if an experienced seamstress can make but eighty cents a day at the work, what could a novice earn?

A Lure for Home-Workers

THE Best Manufacturing Company, which has done business also under the aliases of the Ladies' Exchange and the Royal Company, seeks to beguile the innocent into doing "Zephyr Embroidery." As a preliminary step, $1.50 must be paid for material. Then, it is found, the work is impossible under the restrictions imposed by the concern, which is $1.50 the richer by the sale of material



"Widow-chasers"—a type of advertisement which is set for the woman dependent upon her needle

which cost perhaps fifteen cents. The same scheme has been worked in the case of the Juvenile Bazaar Company and the American Apron Company, both of which are now, I believe, out of business. The Ladies' Aid of Durham, Connecticut, charges fifty cents for "a life-time income," and sends a recipe for "Vienna Crisp" with directions for hiring agents and the information that the sale of only twenty-five bags a day will bring in the daily dollar promised. "Your money back if not as represented." A letter requesting the money back elicited a reply from Mrs. F. P. Barton, declining to make the promised restitution, but offering for an additional $1.50 to let me in on a scheme that her husband was running!

A. G. Frost's little game is inspiring home-workers to tinsel fancy cards. All that is needed for this remunerative work is an outfit which he stands ready to supply for only $2. Only after purchasing this does the victim find that the trade isn't as eager for tinseled cards as Mr. Frost's encouraging letters had indicated: in fact, that it is impossible to make a living in this way. So Mr. Frost has the $2 and the ambitions home-worker has the experience.

Encouragement (on a strictly financial basis) awaits those who woo the muse. No singer need die unpublished who has the price, so long as the musical grafters continue to do business. I have tried them all, and caught most of them, with a poem of such driveling inanity that no sane publisher could possibly accept it on a business basis. Nevertheless, all the concerns whose advertisements are printed here grew enthusiastic over my versified slush, and were sure it would make a success "when set to our catchy and tuneful music." "No charge for writing music," says the North American Music Company; and they stuck to that when they accepted the poem, but—$17 for publishing expenses, or no publication. "Cash or Royalty for Available Manuscript," advertised the Wainwright Music Company, but, though my manuscript proved "available," the cash proved to have what a billiard player would describe as a "reverse twist" on it, since it went from me to them, instead of coming from them to me. Five dol-

Detective certificates for people not shrewd enough to detect the certificate—songs solicited, music offered, publication assured—at your expense

lars was the price of immortality at their hands. The Victor Music Company demanded $10, or no publication. The Colonial Music Company and the Popular Music Company, which appear to be different names for the same concern, asked $25. Nine dollars was the charge of the Hayes Music Company, while Edward Madden's brand of music to order cost $1 more than this. To do Mr. Madden justice, however, he returned my money upon my pointing out certain defects in his music. Ren Shields, who advertises himself as having written "In the Good Old Summer Time," further implicated himself by asking me $6 to give publicity to the awful stuff I sent him, but subsequently turned me over to Arthur A. Penn, who considered it too short, and urged me to "add a verse or two to it," agreeing in that case to "give it a first-class and original musical setting" for $10. Here it is in all its enormity:

THE ENGINEER

Who would not be the Engineer:
See him standing at the throttle.
He does not use Whisky or Beer
Or touch Tobacco or the Bottle.

Chorus— *Then three cheer*
For the Engineer:
He is always true and brave,
He does not know any fear
Even if he goes to his grave.

This it is which Mr. Penn considers "far too short"! The Rev. W. G. Price conducts what he terms "The Square Deal Company" at Newport, New York, and scatters abroad "want" ads, appealing for sacred verse and Sunday-school hymns. It's the same old swindle in religious guise. He finds my made-to-order drivel "available," and asks me to pay him for publishing it, holding out glittering prospects of royalties as the logical outcome. Far down in the expense scale is the Song Writers' Association, which offered to do business with me for $3.

Now, I am not prepared to deny that these musical furnishers and outfitters fulfil an amiable function by making glad the heart of some otherwise mute, inglorious Milton of Peapack, New Jersey, or Waco, Texas, who otherwise would never experience the thrill of seeing himself in real, live type. But when they beguile the fledglings of poesy into paying out good money on the pretense that their slushy verbiage is potentially profitable, they ought to be locked up and compelled to read their own publications aloud.

Apparently the bottom is dropping out of a once lively profession—the teaching of the mail-order business by mail. Where two years ago every fake publication and many of the respectable ones exploited a dozen of these concerns in every issue, now there are but three or four survivors. Their aim, ostensibly, is to give instruction in the mail-order trade, at which enormous profits are to be made. "Our plan positively successful; position guaranteed," proclaims one. "I made $5000 in five years in the mail-order business; began with $5," announces Heacock of Lockport, New York. What these and the other mail-order tricksters really do is to load up the caught victim with letter-heads, envelopes, old lists of names, or various knick-knacks which they keep on hand, as stock-in-trade, on the pretext that he can make splendid profits by reselling them through the mails.

Magic Inheres in the Printed Word

THE whole thing rests on a trade fallacy. The "teachers" have the very goods which they sell to the beginner (at a profit, of course), and the same opportunities of selling through the mails that he has. If there is such a large profit to be made, *what is to prevent their going into the field direct and underselling him?* Why should they establish competitors, on every hand, in a business that returns an easy and big percentage? Again, every new applicant whom they start in business becomes a competitor of every other victim, and must strive to sell in a field that has been worked and reworked until it is practically sterile. There isn't a mail-order "teacher" in the business who can give references worth the paper they're written on. In its very nature the business is essentially a thrashing of the empty air.

Often the discoverer of a new method of money-making offers, via the public prints, to share his secret for a modest consideration; too modest, indeed, to be honest. How much would you suppose a fuel to be worth which would cut heating bills down fifty per cent? A billion dollars would hardly overestimate it. Well, here's one. Davis of Seattle, who offers the secret for a single dollar, "Can be made in home or factory." His recipe is a mixture of sawdust, crude fuel oil, and shingle-mill shavings, pressed into cubes. Perfectly simple! All you need for the raw material is a saw-mill, a shingle factory, and an oil well; while, as for the pressing, surely there will be an old brick-press lying about the attic somewhere! The Globe Company's $100-a-month scheme, which it sells for $2, is simply an outworn recipe for soap. As for the Pacific School of Art, you pay $5 to a "Prof." Eaton to learn an impracticable and worthless process of turning a respectable photograph into a lurid chromo. "Chemical painting," he calls it, and instructs you how to start classes, which are to order their materials from him. Of course it's simple bunco.

Magic, surely, inheres in the printed word. Otherwise, how account for the fact that thousands of persons go into enterprises by mail which if presented by word of mouth through an agent would provoke only contemptuous laughter from even the most innocent? Take, for example, the offers of employment in the first group of advertisements, and recast a typical one in terms of a personal offer. As thus: a stranger comes to you and, without any introduction or guaranty, says:

"I wish to engage your services at a good salary, plus a generous commission. All expenses will be paid. It is true I never saw you before, but that makes no difference. I'll take a chance. Will you work for me?"

Thus far you might consider your new acquaintance merely a harmless lunatic. But now he adds:

"As a condition of obtaining this employment, you will deposit $10 with me, for samples of the goods you are to sell."

Isn't the cloven hoof plain enough there? You would kick that man out of your house. Yet those offers come to you every week or month in the "classified" columns of the newspapers and magazines, and if you yourself are not influenced by them, others are. No publication which carries classified advertising is free of them, or can be kept free without almost preternatural watchfulness, so shrewdly are some of them disguised. The rule of self-preservation from these swindlers is a simple one, resting on business common sense.

Beware of a Job That Hunts You Up

PAY no money to an unknown person for an unknown article. If a man who doesn't know you offers you a job through the mails and asks money from you, find out what the job is first, and then don't pay the money. Good jobs don't hunt men by mail. They don't have to. If it's a salary he offers you, he's a swindler. Honest business men do not pay salaries to unseen applicants. If he "guarantees" so much per day or week or month to you, he's a liar. No man can guarantee your earning powers without knowing who or what you are. If he cites tempting figures, seeking to enroll you among his agents, and asks you for a deposit on a sample article, shun him. You wouldn't pay money for an article you had never seen to a man whom you chanced to meet on the street because he promised you an agency. Why, then, pay to it an unknown who calls from afar to you through a newspaper or magazine? Let him, if he be honest, send his sample on approval. And, above all, when you have been swindled by a fake advertiser, tell the publisher of the medium in which you found the advertisement. If he's honest, he'll be glad to know of it. If he's dishonest, he'll be uncomfortable. Two to one, he took that advertisement with an uneasy feeling anyway. And if ten per cent of the victims protested with the might that is in them against these swindles, ninety per cent of the petty larcenists who thrive on printers' ink would take either to honest labor or the woods.

Our Japanese Territory

Seventy-five Per Cent of the Population of the Hawaiian Islands Is of Oriental Extraction—Their Industrial Invasion, and the Problems It Has Brought

By ALEXANDER HUME FORD

TEN THOUSAND Japanese strikers are in open rebellion in Hawaii, and seventeen of their leaders are under arrest, indicted by the Grand Jury on the charge of conspiracy.

The most recent official reports from Hawaii indicate that over fifty-one per cent of its population is Japanese and that the little brown people there are outracing, births over deaths, all other nationalities in the islands combined. Perhaps seventy-five per cent of the population of Hawaii is of Oriental extraction, and another generation may see Hawaii a State of the United States, with yellow Senators sitting in our Capitol at Washington. The hope of the people is otherwise, and a campaign, with limitless capital behind it, is now in progress to repeople the islands with white men.

Shall Hawaii enter the Union as a Japanese State? is a question seriously asked by the handful of whites in our island Territory. It is quite possible that she may; in fact, it is a matter that a few influential and wealthy men in Hawaii have it in their hands practically to decide, one way or the other.

The story of the Japanese invasion of Hawaii goes back to the year 1885, when the first Japanese laborers were brought to Hawaii by the white man to work for him in the cane fields. The year 1909 sees the majority of all the people who live in our island Territory Japanese subjects, the press largely Oriental, and the "Jiji" (the editor of which is now under indictment), one of the leading Japanese dailies of Honolulu, giving utterance to this threat to the very men who made Hawaii our Japanese Territory: "Planters, listen to us, if you do not accede to our demands, all Hawaii will be turned into darkness."

There may be war in Hawaii between the Japanese and the sugar-planter, but between the masses of the white and yellow races only a feeling of friendship exists.

It was the American and English born sugar-planters who turned Hawaii over first to the adult hosts of Japan. There was money in it, it was business, and they did it. Now that a new army of yellow voters-to-be is growing up, these very planters are preparing to spend millions in the hope of undoing what they have done, and to repeople Hawaii with the white man, not entirely because they are philanthropic and patriotic, but largely because of a growing sentiment among the Japanese which culminated recently in burning articles and editorials in the Honolulu "Jiji" and other Hawaiian Japanese papers, denouncing the great land barons and urging a rising against them in fervent appeals to "take up the heavy iron hammer and get rid of the odious fools" who oppose their demands. These demands are for "white man's wages" and a larger recognition of their desire to acquire land.

The Kanaka Resents the Jap

ONE has but to glance about him in Hawaii to realize how completely the Japanese have conquered the islands, industrially at least. No one acquainted with the facts wonders that the native Hawaiian has no love for the Japanese; they are rivals. Once the fishing was entirely in the hands of the native. He fished when he wished to, needing either food or something he could buy from the proceeds of a sale of fish to the white man or the Chinaman. To his own people custom demanded that he give, so, of course, the socialistic native preferred some other individual of his race to do the actual work, and he would share the profits for the asking. Then came the Japanese. The Chinaman was always willing to buy fish from the native and even built markets in which to sell them, but the Japanese did his own fishing, built deep-sea boats, even putting auxiliary motor engines in some of them, for a time employed native fishermen, until he learned the best fishing places, and then deep-sea fishing in Hawaii quickly became a Japanese monopoly.

Also, with the Chinese, the Japanese have preempted the ancient tara fields of the natives. These now grow rice, or tara, that the Oriental pounds into poi, the native food, and sells to the Hawaiian.

It is not only the native Hawaiian that the little brown brother squeezes, for he is crowding the white man out of coffee-growing, raises bananas, and, as a small farmer, puts even the agricultural experiment stations to shame.

Ten years ago, on my first visit to Hawaii, I took a walk up Pauaa Valley, just behind Honolulu. Every other house was that of a native, and the bed of the valley was one vast tara plantation divided by imaginary lines into little holdings, each acre of which would comfortably support an entire Hawaiian family. Toward the mountains Hawaiian boys and girls gathered the wild guava. There were but thirty-odd thousand Japanese in Hawaii then, and I met none in this most delectable and picturesque valley under the American flag.

But yesterday! Another walk along the same paths—one native grass house remained in all the valley; Japanese boys gathered the wild guava, but to do so they climbed a mile or more farther up the valley than I had ever before explored. I met Japanese men and children coming down the roads and byways with vegetables and even strawberries daintily wrapped in the useful ti leaf. Far up the valley, in the very last gulch, nestled a little grass-thatched house of old Japan, and on the almost perpendicular hillside beyond a Japanese woman was terracing the whole, and on those terraces grew acres of fragrant violets, from which a family of tiny Japanese children were making artistic bouquets.

To deny that the Japanese have created the greater part of the wealth of Hawaii would be absurd. Their toil creates the $40,000,000 worth of sugar that Hawaii annually sends to San Francisco and New York. But the Japanese is inclined to remain on the sugar estates only until he has saved enough to lease an acre or two for his own personal use. Then he builds his little shack, and becomes an independent; or he drifts to Honolulu and creates some new industry there, on a small scale to start with.

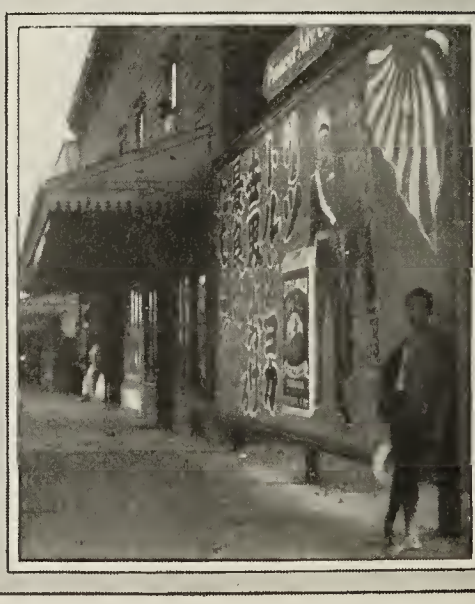
His children are educated in the public schools, so that when they graduate, with a refinement and knowledge their fathers never acquired, they would as soon think of becoming human beasts of burden in the fields as they would to draw a riekshaw through the streets of Honolulu. They become physicians, lawyers, teachers, business men, clerks, ousting the young white men from every opening, and add to the complexity of the problem of the Anglo-Saxon in Hawaii.

Fishing boats in Honolulu Harbor

Japanese melon farm, Oahu Island

Commercial Enterprises of the Japanese

THERE is a Japanese Merchants' Association, with agencies on all the plantations, and there independent stores are conducted, wherever land can be secured for a building. The great firms in which the millions of the white man are invested begin to feel this competition, for the Japanese undersells his white brother, who, as a rule, does not run a plantation store merely for the benefit of the plantation hands. The Japanese have also taken a hand in the transportation business. It costs many dollars to go from Honolulu to the windward side of the island in a white man's rig. The Japanese have begun to operate a 'bus line that carries passengers at a dollar a head. They are just beginning to compete in water transportation between the islands. When the Hawaiian-born Jap becomes more numerous, he will, of course, place steamers on the inter-island runs at Japanese rates of fare, creating a revolution in methods in our island Territory that will mean more to the white man than anything yet accomplished by legislation.



At present inter-island rates are so abnormally high that it is practically impossible for the small white farmer on one island to get his produce to

The Care and Cure of Nature

Live and Sleep in Rooms Without Walls, but Watch Floors and Roofs, and Temper Enthusiasm with Caution—Definite Instruction for Consumptives

By PAUL PAQUIN, M.D.

C—Sleeping-room, open above the bed

IN THE United States alone two hundred thousand die of consumption annually. It exists anywhere and everywhere. Yet it is preventable, arrestable, and frequently curable. Nature's own efforts, supplemented by proper hygienic and remedial measures, are the best aids to the consumptive.

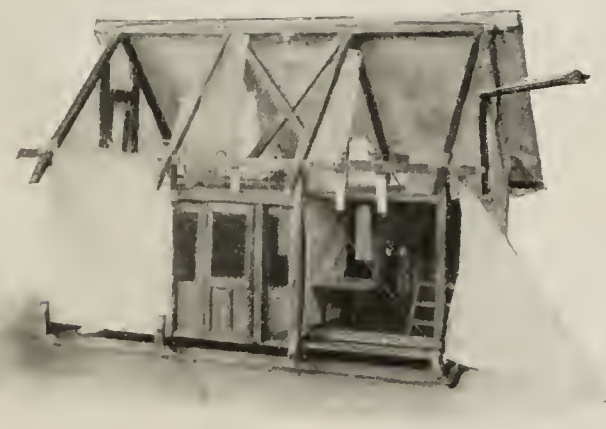
What the people need most right now is knowledge of how to protect themselves and others against infection; and those who are already invalids need to know how to apply the curative powers of nature. The chief of these is open-air life. It is a remedy which can be utilized by practically all the people everywhere, although it may be more pleasant and effective, and good results may be reached more speedily by the selection of a naturally beneficial climate, or an especially favorable locality.

Simple as outdoor life seems, it is not by any means readily understood, nor is it as safe as is generally supposed unless certain rules are respected. Housing, clothing, inheritance, and environment have by degrees turned us more or less from beings with resistant ruggedness into hothouse plants, not always to be exposed suddenly with impunity or to be set outdoors night and day without preparation. For instance, if a consumptive sleeps out and arises from a warm bed into cold air or steps onto a cold floor, a cold or a pulmonary congestion, more or less grave, may result.

Outdoor life aims to reverse the unhealthful consequences of life inside, particularly in bedrooms, arising from insufficient ventilation which is an almost universal condition of the homes everywhere. It is meant to lavish free air around whoever will have it in lieu of the impoverished, impure sort created by breathing and rebreathing, often made more unwholesome still by the use of lamps, gaslights, stoves, or grates which consume oxygen and generally leave certain unsanitary gases behind.

In-and-Out Sleeping on the Porch

A sanitarium with its verandas divided off into sleeping quarters. A coping rises as high as the level of the beds, and prevents drafts from getting beneath. The bed stands between two sliding sashes which may be raised or lowered at will, and the sleeper may shut himself inside, or remain out of doors, as he pleases. Wider eaves would make the porch more attractive



What to Do and Avoid, and Why

IF WE could remain out of doors in a dry warm bed or in a reclining chair without ever having to change position, whatever atmospheric condition might exist at the time, there would be no danger. But this is impossible. So we must observe certain rules if we hope to obtain the best results from the outdoor life. These points are important:

First—Complete, persistent, continuous bathing of all the body by fresh air. This is superior to merely breathing fresh air, as when your head is stuck out, by some device, through a window. In closely settled communities this may often be all that is practicable, and it is far superior to breathing in the atmosphere of any bedroom. But the skin also breathes, so to speak; it needs pure air ventilation and, besides, a uniform temperature of the body is safer than having a part in the cold air outside and a part in the warmer air within.

Second—In taking the fresh-air cure, by complete exposure, you must be so protected by your covering that even when cold weather, rain, snow, or winds prevail you will not suffer. Cold drafts, particularly if they only strike one part of the body, sand-storms, dust-storms, persistent smoke, street dust, marshy surroundings—these are all conditions to be avoided.

Third—The outdoor sleeping quarters should be high above the ground, with thorough ventilation underneath, say two to six feet high, and higher; indeed, usually the higher, the purer the air. Open-air sleeping next to the ground, in the majority of localities, is not the desirable or useful measure of tuberculosis treatment that it has been proclaimed, particularly by the indiscriminate tent and shack advocates. Unless constructed on scientific lines, affording proper warmth in cold weather, and continual fresh air under all circumstances, we are better off in house rooms high above the ground and ventilated to the utmost degree practicable. There is difficulty, too, in building a tent on a foundation floor elevated sufficiently, and then when high enough there is danger of it being swept away by the winds, even by a moderate one. A roost in a large tree, on some sort of hold-on-to platform around the trunk, with overhead covering and proper side devices for protection against the elements, is a suggestion that offers opportunities for profitable fresh-air life undreamt of by most of the sick.

B—Rooms with canvas partitions

Fourth—Whatever arrangements you make, try to have them such in details that the whole body will remain bathed the longest possible time every twenty-four hours in open air; that ventilation of the sleeping and living quarters shall be complete; that the foul air of the floor shall be steadily eliminated; that no occasion shall arise to chill the body.

Fifth—Don't sacrifice homelike conveniences and artistic design for expediency, for you can have all of these in constructing outdoor living rooms.

Let me present pictures of some models exemplifying various ideas worked out by experts.

Picture A represents a tent built on scientific principles by the State of Pennsylvania. It offers many advantages—and some disadvantages. It is set too close to the ground and must be affected by the earth's condition—dust, moisture, etc. For ventilation, this tent has superior qualities. The canvas roof does not reach the ground, allowing a good flow of air within, and then there are inside canvases to control ventilation and direct it properly. In cold weather there is a stove in the center, with beds at the sides. Unfortunately, this stove necessarily throws the heat on one side only of each bed, and, as with all stoves, one warming himself by it in very cold weather burns the side exposed to the heat, while the other freezes. However, for a tent abode it is among the best, and can be of great service in the early cases of consumption, or for limited outdoor life in suitable localities.

In picture B you will note a wood frame-work, covered with canvas and with canvas walls within dividing the structure into six rooms, three on the first floor and three in the attic. All those canvases can be moved, taken off or opened at will, thus ventilating and changing the inside space. The chief criticism applicable here (provided the building is put high enough above ground) is that in bad weather there can be scarcely any ventilation, as the canvases and the doors must be closed more or less completely and other air inlets are bound to be insufficient. In any event, ventilation must, in such circumstances, be restricted in a measure. And then the attic quarters must be very hot in summer. However, some proper additions and rearrangements could make this economical construction more suitable and probably more practicable.

Picture C is an improvement over B, having solid walls on all sides up to a few inches above the beds, just about right for ventilation through and through, above the head of the sleeper and to keep the inside air fairly renewed. And then it has curtains or awnings controlled by strings. The fault of this construction is that it also must be more or less tightly shut up during the rains, winds, and storms. By substituting large eaves for the curtains or awnings most of these

D—A cottage, with walls of netting

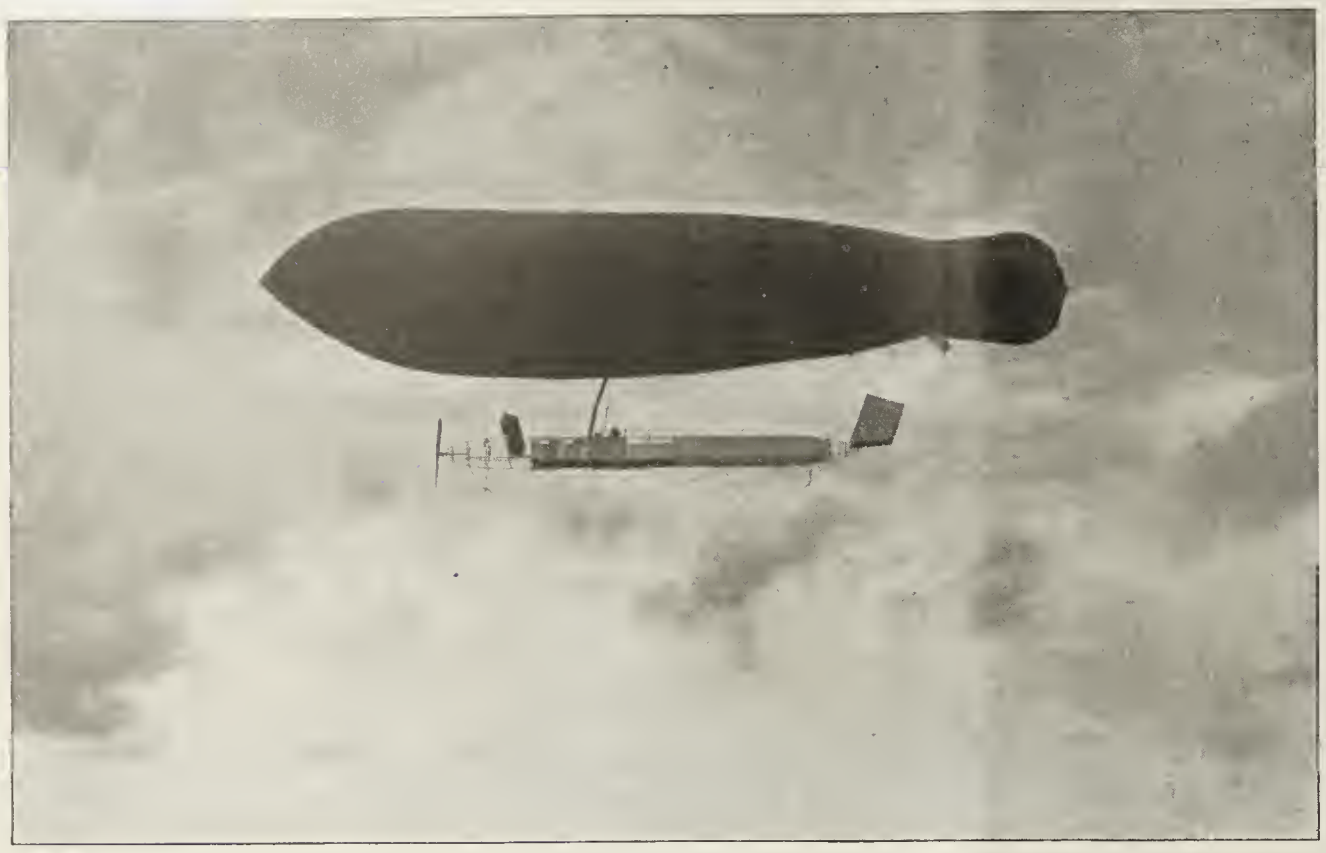
faults would be cured. And, too, these eaves would shade the body of the building from the direct sun rays, and prevent them from penetrating the interior and hitting the persons therein through the large air inlets.

Picture D shows a neat cottage of a California sanitarium. The lower part is well protected by walls all around to a point above the bed. The rest of the sides, up to the roof, is enclosed with fine netting, an admirable thing to keep out flies and other insects while admitting air. It is provided with windows and doors in proper places for ventilation. The criticisms that might be applied here are about such as apply to the design shown by picture C. The eaves are not projecting far enough to protect the inside parts facing the open spaces from the hot rays of the sun or the rain or snow beating in, thus forcing the occupants at times to close the air inlets to some degree at least. Besides, the porch should have a roof and draft protection to afford actual outings in any sort of weather not too rough.

The uniform lack of eaves in every one of the structures discussed above indicates that the idea prevails in the mind of those who evolved them or recommended them, that they want sun rays, no matter how hot, to strike the building, no matter how much they heat it, and also on the patients within through the more or less wide openings for open-air circulation. The truth is, however, to speak only of the last proposition, that the bearing and beating of sun rays directly upon tubercular patients is usually, particularly in the summer and in certain climates, a prostrating force rather than a reviving one, and often produces too much perspiration, or else bakes them.

A Device That Any One Can Use

NOW, as to improvising outdoor living and sleeping quarters: If you want to sleep on a veranda or porch, first remember that it should be roofed, that the railing around ought to be solid, admitting no current of air to the floor of the porch, so that no draft may reach under the bed or to the sides of the person in it. This solid porch wall should extend up eight to twelve inches above the body of the occupant of the bed, so that the wind or breezes will flow across the porch above the body, without hitting it; thus the currents of air will fan the patient lightly perhaps, suck up, in a measure, and carry out the floating impurities, and keep up a



A—A well-built tent, set too close to the ground

constant renewal of oxygen. Of course I would have the wide eaves above described to these porches too, including the hinged drop-boards. If not, there should be provided some suitable curtains on rollers, like window-shades, or, still better, suitable awnings.

In conclusion, let me suggest that the so-called "In-and-out Sleeper," a device which, by the use of wide sashes, will turn a bedroom into an open or a closed apartment in a moment without shifting the bed, is a simple arrangement that ought to apply to at least one room in every new home. As a preventive measure or for an emergency, if desired, a person could, by its use, be instantly put out to live night and day. It can also be applied, by a little remodeling, to any old home, sanitarium or cottage, including all those discussed above. It could also be made to fit canvas abodes. As I understand it (unlike many others, which are patented), its design is free from any sort of restriction. Diagrams and measurements of the plan are given away. One section of this structure standing alone would not look artistic or homelike, two sections would. For a little cottage for one or two occupants, the design of the California cottage, or something like it, with the "In-and-out Sleeper" arrangement, would have a good appearance and would prove practical.

What the World Is Doing:

A Livable Airship

Here is the first of the airships to be equipped with cabins for passengers—little cubby-holes of shelter where food may be stored and into which the sky pilots may retire when chilled or wet. It is the dirigible balloon "Ville de Nancy," launched at Sartrouville, France. It is 170 feet in length

These are the Houses that Jack Tar Built

A few of the 1,500 frame houses, each with two large rooms and an attic, built in Messina in blocks of twenty for earthquake survivors. American money built them. Native labor was used under the direction of American naval officers and sailors and volunteer artists and architects. $700,000 was subscribed

Music in the Air

The great bells which have just been completed will be hoisted into the Campanile of St. Mark's, Venice. This historic tower tumbled to the ground several years ago and is now being restored

Globe-Girdling

ENGLAND is wooing Russia. She has entertained twenty conservative members of the Russian Duma. And she prepares to be gracious to the Czar. She stands ready to spank the Socialists and radicals who would boo or ban him.

With a beautiful moderation the "Standard" sums up the bloody centuries in Russia as "authority exercised not always clemently, not always fairly." Such liberalism would whitewash Judas and Nero and soften St. Bartholomew's Eve into a midsummer night's merry-making.

The birthdays of John Calvin and Charles Darwin are receiving a world-wide celebration. We are four hundred years away from some of the doctrine that came out of Geneva, while Darwin's rediscovery and restatement of the mystical theory of flux and change is still freeing the thoughts of men.

London rebukes us for employing the "third degree"—the terrorizing use of questions that presuppose guilt. The ever-genial "Saturday Review" finds in the use of the third degree by the New York police in the Sigel murder "further evidence that American civilization is only of the semi kind." The "Spectator" says the proceeding is removed many more than three degrees from usefulness and decency.

Like an eleventh-hour hero, Mr. Taft is expected to gallop in and rescue that hapless and stricken virgin, the Ultimate Consumer, from the piratical high-tariff crew. Under his breath Senator Aldrich is heard humming the motto: Look up and not down, and lend a hand to suffering trusts.

The slaughter of the innocents proved not to be so heavy on this year's Fourth of July. The roll-call has shown 61 killed and 3,246 injured. Some day we shall learn how to be happy without enriching the graveyard and hospital.

By Champlain's shore the insubstantial pageants have faded, leaving not a rack behind. Two States and Canada have supplied painted Indians and pale canoes, orators, poets, Governors, and a President—all now melted into thin air, and the revels ended.

San Francisco is torn between two minds as to the Patrick Calhoun trial. Was it a battle royal between two hugely rich men? "That feeling came and went in San Francisco," says Professor George H. Boke of the University of California; "we know now that there was no personal animosity on the part of Spreckels against Calhoun." The "Argonaut" has been unusually acid throughout the trial. It calls it "the graft movement, a revengeful vendetta, seeking not public, but private, aims."

In Chicago, bomb-throwing, ceasing to be a diversion, has become a habit. The thirty-first bomb has exploded. Two rival clans of gamblers use this method of reprisal when they feel they are being treated harshly. The same underworld is being raked fore and aft in court on a white-slave investigation. The police and municipal authorities seem as yet unable to thread the jungle.

In New York those angel faces smile along the Bowery which we have loved long since and lost awhile up the river. Refreshed by quiet months in Sing Sing, "Monk" Eastman, thief and pimp, and Antonio Vaccarelli, alias Paul Kelly, thief and pimp, have returned to the scenes of their early triumphs in time for the fall elections, where they will display their old-time skill in herding voters, repeating votes, and blackjacking opposition. These two criminals will exercise more actual power at the coming municipal election than any hundred of our wisest and best.

Words, Words, Words

BORED, pessimistic, muddled, Senators and common people alike have flung off the tariff debate like a poor relative.

But England has had a jolly good time with her measure, the Budget. With gaiety the thing has gone with them. Their debates were more picturesque in phrasing, cleaner from taint of vested interests. Their politicians were a little better informed, better equipped.

With wit and genial fire they have filled the hours, sometimes till dawn. A thousand jests have descended on the skull of the "dapper little Welsh squire," Lloyd-George, and, smiling, he has put the question by.

Said Mr. Balfour in one of his rapid word pictures, like a lightning-chalk artist:

"Suppose you were to say that every man with red hair and more than £10,000 a year ought to pay a special super-tax. You would say: 'Look at this mean-spirited, red-haired man. He "hollers" for *Dreadnoughts*, he votes for old-age pensions, and this mean fellow, though he has got £10,000 a year, won't pay the small super-tax which I put upon him—the wretched creature!'"

At public meetings the British bards salute the patient Lloyd-George with ironical verse:

"Thus the work goes on gaily, the owner may groan,
But the Chancellor rescues what was never his own."

So a blue-tinted finance bill, with seventy-four clauses, six schedules, and two thousand amendments, enriches the intellectual life of a great people, as later it will fill the exchequer.

And the speed of that parliamentary life has been reflected in the English press. The English journalists have had fun with their lawmakers in session. Here is a picture of the statesmen in action:

"Mr. Lloyd-George, the man of the year, had a fever-

A Record of Current Events

ish cold, which showed itself in his voice, but failed to dim the radiance of his smile. Colonel Lockwood, one of the blithest of the Unionists, with an enormous pink carnation and his inevitable draft-board tie; Lord Robert Cecil with two coat pockets bulging with parliamentary papers."

The heaviness of our floundering statesmen has settled like an obscuration on the Washington scribes who emit the daily column of Congressional gossip for the home papers. We read:

"Senator Bailey objected to the motion on the ground that the course proposed was unusual."

Then comes the next hurtling paragraph, alert and flashing:

"Mr. Aldrich contended that his motion was usual."

The English have radiantly emerged from that slough. Here is what the "Evening Standard" does to a prolonged session:

"2.20. A. M.—The Home Secretary sleeps. The First Commissioner of Works and the Attorneys-General for England and Ireland sleep. The Solicitor-General sleeps. The Civil Lord of the Admiralty sleeps.

"2.22.—A rolling Unionist cheer in support of Mr. Bonar Law wakes several Ministers.

"2.40.—Ghosts of dawn play at the high windows vaguely.

"2.50.—House rises. The nightly cry of centuries rings through the great corridors: 'Who goes home!'"

The Clown with a Broken Heart

THE world is beginning to find Bernard Shaw out. He is as a clown whose heart is broken. He used to be thought flippant, irreverent, and cheap. Now we know him for a worshiper, full of antics. He will stand on his head and kick his heels in the air when in the act of prayer. That is to distract attention from his patient rite. He will froth at the mouth with wrath at man's injustice, and then pretend he was spitting at a hole in the ground. He is ashamed of his passionate humanitarianism, his sense of pity and justice. With a hundred disguises he tries to hide his bleeding heart. He masquerades as a king's jester, a monster egotist, while beneath the spangles and frippery he is torn by the universal suffering.

Stanton Coit says of him:

"And what shall we do with Mr. Shaw? What but recognize him, the humanitarian, as sensitive as St. Francis himself to the sufferings of the poor and of dumb brutes; as chivalrous as any knight of the Round Table, as candid as truth itself, and yet more than all the other saints of the church, possessing the supreme grace of humor."

But there is danger in the tender heart that at times its thinking will be soft and mushy. It must needs be that there is suffering all along the line—the weaker slaughtered in pain to make the strong stronger—the less developed organism sinned against, that there may be light on the path of the perfected.

And Shaw is in unwise mood when he charms the annual gathering of the British Union for the Abolition of Vivisection with piteous extravagant statements on modern physiology and surgery. He said:

"Vivisectionists act on the primary instinct that, since what they want to find out is something of the miraculous, the way to do it is to do something cruel. All the experiments from which most was hoped were experiments on the physiology of pain. The man who becomes a vivisectionist deserts the honorable and fruitful paths of science for the dishonorable and probably barren path."

He conjectured that if all the energy devoted through the century to vivisection had been cut off from that wicked, cruel path and given in other directions, probably the Hertzian waves would have been discovered years before they were. There was a strict law for the conservation of energy in these days. There was a law for the conservation of scientific energy, and every man who was groveling in the entrails of some unfortunate animal was a man cut off from the paths he could follow without shame and without cruelty.

The Veterans

CONVENTION-CAPTURING is the latest war game of the Far West. Being desirous of losing their frontier reputations, in Eastern minds, as mere watering spots in a desert of sage-brush, the cities reach out for tourists.

This summer Salt Lake has captured the veterans of the G. A. R. A hundred thousand strong, the old soldiers are expected to tramp into Salt Lake in the middle of August. It is the town's first big chance, and through July it is getting its welcome ready.

The committee of the Commercial Club said the electric-light wires were ugly: they had to come down. The City Council told the telephone companies a poleless city was the only thing to present to these distinguished guests: there are no poles now—at least in high places. Even the bill-boards have lost their vogue and mostly desecrate suburban fields and rear alleyways.

The pavement on which the veterans would march was rather shabby through overwear. It was rolled up into great heaps of asphalt overnight, and a nice new layer was put down in the morning in record time just so that Pat Moran—he who always gets the contracts—could show that it was efficiency and not graft that brought them to him.

When it gets its first skyscraper a town goes into a delirium of joy. During this season of preparation for the veterans Salt Lake has had a chance to crane its neck upward at its first and second skyscraper, and

Chatting after the dinner in this group, seated at the table from left to right, are the Marquis Katsura, Premier of Japan, Mr. Fairbanks, former Vice-President of the United States, and next to him Prince Ito

A Skyscraper Which May Change a City's Balance

The first tall building in Salt Lake, called, with its sister-structure, "Newhouse's Folly," was raised in a section isolated from the business center. There seemed to be no warrant whatever for their location; but the owner made free offers of several building sites in the neighborhood, and the result has been that important interests have followed up the trail, and the district now promises to become the commercial hub of the city

Democrats and Some Near-Democrats

By MARK SULLIVAN

FRANK CLARK is a Democratic Congressman from Florida. Very early in the present session he broke away from his party, denounced the leadership of William Jennings Bryan, and held out this offer to the Republicans:

"If you put what my people want in the bill, if you give them protection against Cuba on pineapples, and give them protection against the pauper labor of Egypt on long-staple cotton, and take care of their lumber and all these things, then you may put what you please in it."

When some of the other Democratic Congressmen (especially Choice Boswell Randell of Sherman, Texas) began to reproach Clark, the latter became even more frank and explicit. Speaking on the floor of the House, he said:

"As long as a protective-tariff system prevails in this country, as long as the articles we have to buy are taxed, as long as my people have to bear the burdens of it, they say that we ought at least to have a division of the benefits. That is where I stand. You may call it 'swag' or what you please."

Clark's attitude didn't meet with universal approval at home. For his defection, the Florida Legislature passed a resolution of reproof. Thereupon Clark took a train back to Florida, walked in upon the Legislature, and declared himself still more frankly. From his speech before the Florida Legislature on that occasion, these two paragraphs are taken:

"Now I want to tell you one thing, my brethren. I spoke of the great lumber interests of this State. You know what they are. You know what they are worth to Florida. You know whether it is worth while to build up the material interests of this State, or *whether it is best to follow a sickening fanatic sentiment or not.*"

"We have been following a fatuous light. *We have been traveling through the desert and eating the husks, while our brethren above the divide have been living on the fat of the land.* I love the traditions of the South; I love her glorious history; but, my friends, I am tired of living back forty or fifty years ago. I believe that this Southern country is the garden spot of this great Republic. I believe the time is not far distant when her industries shall thrive, when her products shall come forth bountifully from out the earth, and with proper legislation and proper political guidance she will prosper as no other section of this country can. I am for the South, I am for Florida, her products, her industries, her men, her women, and her children against the world."

The official account of this speech shows that it was punctuated by "great and prolonged applause," and "tremendous applause." On the other hand, the Florida Legislature did not see fit to rescind its resolution of censure. It is fair to say that a certain amount of public opinion throughout the South genuinely endorses the attitude expressed by Mr. Clark. It is this section of public opinion which is relied upon by those Democratic Senators who have voted with Aldrich frequently. It is a pity, however, that a Senator who expects to endorse the Republican policy of protection, who is going to help Aldrich out in tight places, and vote for the duties that Mr. Aldrich proposes—it is a pity that such a Senator does not get himself elected as a Republican. Bad faith is inevitably involved when any Democratic Senator goes over to Aldrich, for unquestionably the majority of the votes that sent him to Washington were cast for him in the belief that in his votes and speeches in the Senate he would support the traditional policies of the Democratic Party.

McEnery of Louisiana

SAMUEL DOUGLAS McENERY represents Louisiana in the United States Senate. He is seventy-two years old. He fought in the Civil War, and has held public office, with negligible intervals, steadily for thirty years.

If Senator McEnery avowed himself a Republican, he could by no imaginable means come to the United States Senate from Louisiana. There are practically no Republicans in Louisiana. (Taft got only eight thousand votes in the State, compared to Bryan's sixty-three thousand.)

How the Democratic Senators Have Voted

	Voted with Aldrich	Voted against Aldrich	Absent or Paired
McEnery, Louisiana	38	7	22
Foster, Louisiana	20	29	18
Martin, Virginia	12	41	14
Chamberlain, Oregon	9	43	15
Simmons, North Carolina	9	46	12
Smith, Maryland	9	45	13
Tillman, South Carolina	9	41	17
Daniel, Virginia	8	26	33
Taliaferro, Florida	8	46	13
Taylor, Tennessee	8	34	25
Fletcher, Florida	7	57	3
Bankhead, Alabama	6	33	28
Money, Mississippi	6	38	23
Bacon, Georgia	5	59	3
Bailey, Texas	5	35	27
Hughes, Colorado	5	56	6
Johnston, Alabama	5	56	6
Clay, Georgia	4	57	6
Overman, North Carolina	4	58	5
Davis, Arkansas	3	28	36
Owen, Oklahoma	3	32	32
Paynter, Kentucky	3	55	9
Stone, Missouri	3	49	15
Frazier, Tennessee	2	44	21
Gore, Oklahoma	2	61	4
McLaurin, Mississippi	2	33	32
Rayner, Maryland	2	42	23
Culberson, Texas	1	43	23
Newlands, Nevada	1	44	22
Shively, Indiana	1	18	48
Clarke, Arkansas	0	9	58
Smith, South Carolina	0	31	36

There were sixty-seven ballots in the Senate, important and unimportant, on the various tariff schedules. Of course, roughly speaking, a vote against Aldrich is a Democratic vote. It is also true that the number of failures to vote is important. A Senator may often be absent in good faith, or he may occasionally be "paired" with another Senator of the opposite party; when either party to a "pair" is absent, the other refrains from voting. But a Senator who has failed to vote more than twenty-five times out of sixty-seven would seem to owe his constituents an explanation. A failure to vote is often as serviceable to Mr. Aldrich in a crisis as a direct vote with him. The record of Gore of Oklahoma is probably typical of a genuine Democrat—only four failures to vote and two votes with Aldrich, while his votes against Aldrich number sixty-one.

This cartoon, from the "Daily Chronicle," of Houston, Texas, pictures the sentiment which the Southern newspapers quite generally feel concerning the subserviency of some Democratic Senators to Aldrich

But McEnery *is* a Republican. He has been as servile, as completely at Aldrich's beck and call, as the most stalwart of the Republican regulars. He has voted with Aldrich more consistently than twenty of the Republicans have. *Only seven times out of sixty-seven ballots in all did Mr. McEnery cast his ballot against Aldrich.* These seven may safely be presumed to have been unimportant ballots when Aldrich didn't need him. Only seven anti-Aldrich votes out of sixty-seven is a more uniformly Republican record than that of so strong a party man as Senator Burton of Ohio, or Senator du Pont of Delaware. McEnery voted with Aldrich in favor of a high tariff on agricultural implements, and he was the only Democrat who did. He was the only Democrat who helped Aldrich put the outrageous duty on cotton gloves. Again he was alone among the Democrats in voting with Aldrich in favor of the duty on window-glass. Alone in all his party he helped Aldrich postpone the vote on the income tax, at one of the most critical points in Aldrich's management. On twenty important items of the tariff bill, McEnery was the only Democrat to vote with Aldrich. *As the crowning act he was the only Democrat in the Senate who voted in favor of Mr. Aldrich's tariff bill as whole.*

With no other record than his votes, it is hard to escape the inference that Senator McEnery's course is in pursuance of some bargain which reflects credit neither on him nor his State.

The Other Senator from Louisiana

MURPHY J. FOSTER'S record differs only slightly from that of McEnery. Twenty times he has voted with Aldrich, and eighteen times refrained from voting—and to Aldrich silence is often as serviceable as a vote. Did the people of Louisiana *intend* to send two Republicans to the Senate?

What the Southern People Think

A FEW wealthy persons in the South may endorse the action of those Democratic Senators and Representatives who have broken faith. But the mass of the people of the South are indignant and ashamed. The Southern Democratic papers have been practically a unit in their severe condemnation. In one district of Louisiana a mass meeting was held and very severe resolutions were passed. They are too long to quote here in full. They recited at length the facts and the votes to support the charge that the Louisiana delegation "has gone soul, body, and boots into the enemies' ranks" and "voted and spoken in opposition to Democratic doctrine," and declared:

"We, a mass meeting of Democratic voters of Claiborne Parish assembled, protest, condemn, and repudiate with all the vehemence at our command the un-Democratic and faithless actions of our Senators and Congressmen."

At the end of their resolutions of censure, that mass meeting of Louisiana people gave formal expression to this Democratic doctrine:

"Be it further resolved, that as cotton growers who have to sell our product in a free-trade market, nevertheless we do not ask or desire that others should be taxed for our benefit: what we ask is that our Representatives protect us as far as possible, by keeping other people's hands out of our pockets and not join Republican protectionists, helping them to tax us for the benefit of saw-mills and other protected concerns."

We hope these resolutions will do good. And we wish that the energy and initiative of these Louisiana voters might be imitated in every Congressional district in the country. There has never been any question that the overwhelming mass of the sentiment of the United States was opposed to the tariff bill Mr. Aldrich was making. The bill was made in frank defiance of that sentiment. What organized wealth wanted was the one thing considered.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

see the foundations laid of its third and fourth.

On the patriotic side, the coming encampment differs from other meetings in that it is a long ways from the old battlefields. But the Utah people touched the war at a point. Brigham Young, while a private citizen, received and responded to a personal call from President Lincoln to raise and scatter a force of volunteers along the Overland Mail Route from the Missouri River west. They were needed across Wyoming and Nebraska because none of the nation's regulars could be spared for this work. They performed a long and hazardous tour of duty.

Third Degree for Income Tax

IT IS conceivable that a cat might swallow too many canaries, and choke instead of looking innocent. Sometimes we have a like fear for Senator Aldrich. He is deft so very often, each day. We wonder if he isn't about to be too clever. "Be funny, but don't be damned funny," was the advice given to Peekskill's favorite after-dinner speaker when he was still but a lad.

The Rhode Island chieftain has just emitted a series of scintillations, like a magnetic furry cat on a winter's night. By exchanging winks with Senator Lodge he planned the attractive coup of shelving the income tax through the device of so introducing the corporation tax as to put it in the second degree. Under Senate rules an amendment in the third degree is out of order. So any attempt to ring in the income tax would be in the nature of an amendment in the third degree. So perished the Bailey-Cummins scheme for a direct tax on incomes.

When Senator Bailey, after a brief sojourn in the lobby, returned to the scene of his triumphs, he was grieved to find that his pet child had expired under the silent but deadly ministrations of the New England statesmen.

Senator Aldrich is quoted as believing the corporation tax will die a lingering death in the next two years. Thus his enemies go down before him.

England believes that we are about to be caught napping in still other ways by the sly ones of the Senate. One paper points at the tariff section providing that on and after March 31, 1910, the general tariff will be the duties laid down in the schedules constituting the minimum tariff, plus twenty-five per cent *ad valorem* to be added to the schedules as passed. It believes this "plus" proviso contains elements of danger. For the President, it holds, will not wipe out the "plus" till a long inquiry has been made, with the "interested and organized avarice of the country on the side of the minimum rates."

A Notorious Notary Publie

A RECENT item in this department sold out all copies of "The Transcript" for the current week, and for the last eight weeks has caused the pink sheet to bloom profusely on almost every news-stand of New York City. It wasn't our purpose to boost the sales and increase the dividends of "The Transcript."

The various authorities that deal with crime are tardy in ending the career of William C. Jones, publisher and editor of "The Transcript." "The Transcript" is a directory of vice and is circulated through the Eastern States. Its main stand is New York City. It publishes vicious advertisements in each issue.

Jones is also active as bail bondsman for the notorious women whose profession he advertises in the columns of his sheet.

The agencies of law and decency are, each of them, considering the case, but they are slow on the trigger. Jones is a notary public, and Governor Hughes is scrutinizing his usefulness in that function. The post-office authorities have under advisement the refusal of second-class mailing privileges to "The Transcript." If the post-office authorities bar the paper, and this action fails to kill it, the United States District Attorney's office will consider the case.

Meantime, Jones, who differs from a cadet of the red-light district only in being more prosperous and better protected, flourishes on the brisk sales and salacious advertisements of his "Transcript."

Slave-Grown Cocoa

IT IS an odd coincidence that in the year of the Lincoln centenary our country should be helping to maintain a slave traffic. We are first among cocoa-consuming nations, with 37,526 metric tons to the credit of our drinkers for 1907. Much of what we consume is San Thomé cocoa. In January, 1908, the Lisbon stock of San Thomé cocoa was 120,015 sacks; and in June, 1909, the stock had been reduced to 60,000 sacks, nearly all of which has already been sold to America.

San Thomé and Principe are Portuguese islands, employing 30,000 natives, who have been brought from Angola at the muzzle of rifles. The slave-raiding was done twenty years ago at the annual rate of 2,200. The official figures for eight months in 1908 were 3,924, which is a yearly rate of almost 6,000.

Revolted native soldiers of the Congo Free State swoop down upon the villages of the southern Congo, pluck out the able-bodied natives by force and guile, and tally, transport, and deliver them duly to the rigors of the cocoa-fields, where disease, shackles, and loads make their life both lonely and severe.

Our authority for these statements is Joseph Burtt, who is vouched for by the London "Spectator." The "Spectator" then goes on to plead editorially:

"If the people of America would pledge themselves to drink no more slave-grown cocoa, they would raise the noblest and most magnificent memorial to Lincoln that the brain of man can conceive. Such a resolve would paralyze the hand of the slave-raider of Angola. The knowledge that there is always a price, and a good price, to be got on the coast for plantation laborers sets a flood of unspeakable cruelty and misery flowing. Strange as it sounds, the innocent demand for cocoa to drink or chocolate to eat by men, women, and children in America is only one end of a chain which at the other is shackled to the slave. Those who use San Thomé cocoa are unconsciously giving an order that slaves shall be hunted and caught in Angola and brought to the coast. A refusal to give any more orders for San Thomé cocoa till the planters use free labor will as surely, if more slowly, emancipate the slave as Lincoln's proclamation. Our voice has sometimes been listened to in America. We trust it may be heard now, and that those who can influence the American press may induce that press—a giant in its power alike for evil and for good—to remember in Lincoln's year the cry of the captives."

Cross-examine your grocer.

Invading the South

A PARTY of Italians, among them Lugi Solari, president of the Italian Chamber of Commerce of New York, and Felice Ferrero, a brother of the Italian sociologist and historian, left New York for North Carolina, July 2, in quest of farming land. They represent not the advance guard, but the leaders of the first reserves in a new immigration invasion of the South. Heretofore the tide of immigration has swept westward from the great ports of entry.

The Southern experimental colonies have already been planted. It is on their success that the future of the enterprises depend. The Italian party went to look over a group of Italians located at St. Helena, just out from Wilmington. There they were met by a brass band of their countrymen who are making themselves into farmers instead of the more familiar New York "wap."

The St. Helena colony (it is named in honor of the Queen of Italy) was started four years ago in a pine forest with a group of capitalists back of it to see that all went well. For the company the colonists put in half their time making ditches and the rest they used up in clearing forests on their own allotments. To provide ready money the company bought the wood as fast as they reduced it to saw logs. Realizing that the single man, unattached by family ties, takes but a slight hold on the soil, these colonists were brought in with their women and children, and 215 of them have at least made ends meet out of their crops this season. All are from the Italian provinces north of Tuscany, and so far but little opposition has been voiced to their coming.

Two days before the inspecting party started on its work, three humble Hollanders went by day coach over the same route, to end up at Castle Haynes Colony, on a farm donated for their use this summer by Hugh McRae, one of the financial bankers of the colonizing scheme. Their purpose in making the long journey from Holland is to see if they can put Irish potatoes and lettuce onto the New York market from their farm in ninety days. They get as a starter a mule, a shanty, seeds, fertilizer, and implements, and have a twenty-acre place to work with.

The experimentation is by no means confined to the Dutch and Italian. Hungarians are already established in some strength at Castle Haynes, Poles at Marathon, Germans at Newberlin, and Hollanders and Poles at Artesia—all these places near Wilmington, and in easy reach of the market. The advance guard of foreign immigration started for the South in 1905. Before winter the first line of the reserves should be on the ground.

HAWK-EYE CAMERAS

'Board Ship

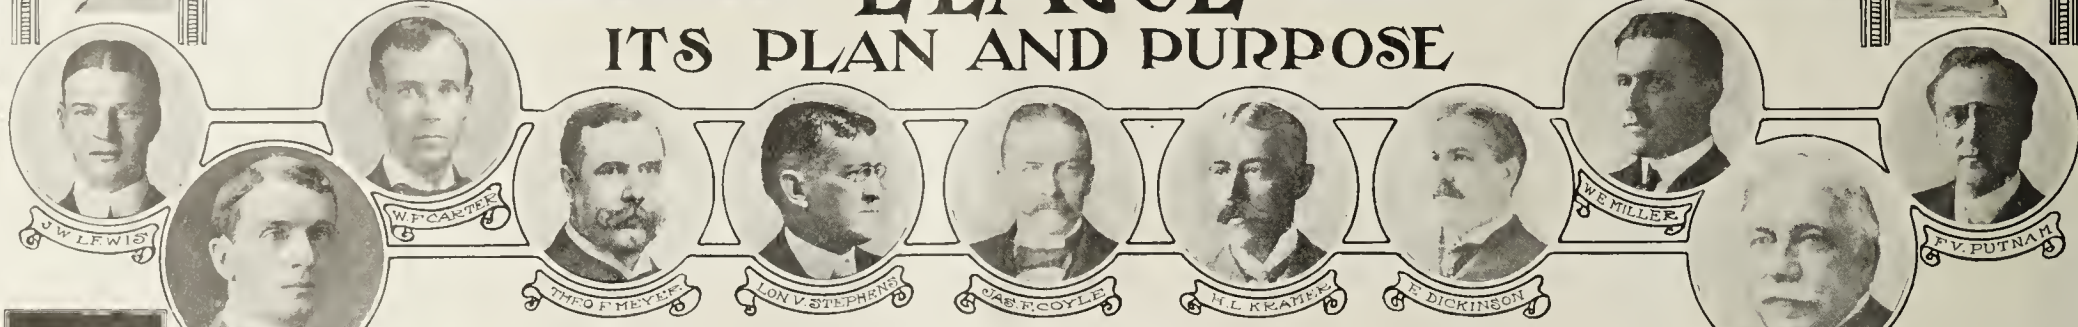
There is no place for a "boiled collar"—so it is almost anywhere that your vacation may take you. Yet one must maintain a correct and stylish appearance at times, even on a vacation. Our

CHALLENGE
Brand
WATERPROOF
COLLARS & CUFFS

are the only perfect solution of this problem. You really can't tell them from linen—same dull finish, same linen texture; yet they are never affected in the least by travel dust or weather.

Challenge Collars and Cuffs are made in the latest, most up-to-date models. They have the perfect fit and dressy look of the best linen collars—our new "Slip-Easy" finish permits easy, correct adjustment of the tie.

Challenge Collars and Cuffs are absolutely waterproof, never turn yellow, can be cleaned with soap and water.



Ask your dealer for Challenge Brand Waterproof Collars and Cuffs and don't take a substitute. If he doesn't keep them in stock, write us at once, stating size and style you desire—send 25 cts. for collars, 50 cts. per pair for cuffs and we will see that you are supplied at once. Our latest style book contains many valuable hints—let us send it to you.

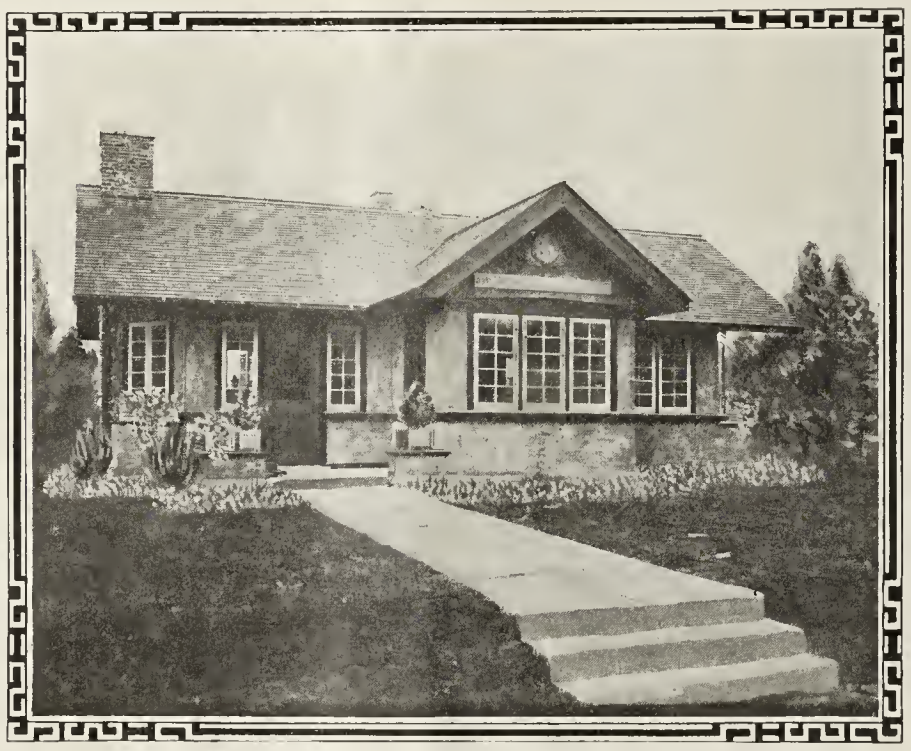
THE American Woman's League, with its membership already numbered by tens of thousands and with over seven hundred regularly organized local branches or chapters throughout the couutry, is a single business plan of co-operation between leading publishing concerns and local societies and clubs of women, and individual women. It makes no pretense of being anything but a business organization for the purpose of mutual benefit and profit. Its organization was first conceived and undertaken in 1908 by The Lewis Publishing Company of University City, St. Louis, one of the largest publishing concerns in the world, who remain alone responsible for and in full control and direction of the plan, until its organization is completed. The League will be permanently established under a trust agreement to be approved by the membership itself. Early in 1909, six other leading publishing houses were invited to co-operate under the plan so far as the subscription end is coucerned, and at the present time seveuty-three others of the leading jouruals of the country have made applicatiou to joiu iu the plau, which will ultimately be thrown open to all acceptable publications on fair terms. The plan of The League consists of effectiug a permanent national subscription or sales organization for reputable publishers, one-half of the income going to the publishers who receive 50% of their subscription price net cash; and the other half to this organization, known as The American Womau's League.

It is estimated that the annual gross subscription income of the leading magazines and journals of general circulation in this country exceeds $60,000,000. It is also estimated that it requires the expenditure by the publishers each year of the greater part of the $60,000,000 to secure aud renew this subscription by means of endless schemes, premiums, commissions, prizes, contests, and advertisiug matter. Comparatively few years ago all journalism was entirely ou a subscription basis, advertisements not being accepted at all by reputable publishers. Today it is entirely on an advertising basis, the subscription income playing a nominal part. Most such journals are published for women. With teus of millions of dollars invested in their manufacturing plants, producing a better article for a lower price than any other industry, the publisher as a manufacturer has no PERMANENT, national, wholesale and retail sales organization such as all other industries have in the jobber and retailer, but goes direct to the consumer scattered from end to end of the land at a selling cost in many cases greater than the selling price.



Comparatively few years ago the sphere of woman was held to be exclusively inside the home, most things entering into the home life being produced or controlled within the family. Of more recent years progress in the art of living has brought about marked changes in this, and today the entire community life is a matter of vital coucern to the home. Water, light, milk, schools, street cars, sanitation, parks and factories have become community interests in which the individual home is vitally concerned. In our rural districts, where two-thirds of our population live, even more marked changes in the conditions and standard of living have occurred in most recent years. Ten years ago, the ruralite was isolated, received his mail but seldom, had no telephones or rapid transit, and was dependent on crude local educational facilities. Today 40,000 rural routes serve 30,000,000 rural population with daily mail, while a network of interurban trolley lines traverse the country, and farm house is connected with farm house by telephone. With the rapid broadening of the home life of the individual has come a pressing realization that the lack of education, refinement and culture means lack of ability to grasp opportunity as well as of appreciatiou of the most beautiful things in life. We see this

GEORGE JULIAN ZOLNAY

League Chapter House of Class II, Edwardsville, Ills.

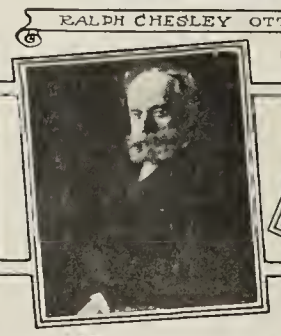
most in the more thau 500,000 womeu's clubs and societies, 95% of which are ostensibly at least for improvement in home life, community life, education, the arts and general betterment of social conditions. These clubs and societies found in every hamlet, town and city are supported in the main by a system of polite social brigandage, funds being obtained through endless fairs, fêtes, guilds, festivals, where women, first having begged or made articles of more or less value, proceed to sell them at many thousand times their possible value to friends, relatives and themselves for the benefit of the object represented by their club, society or circle. These hundreds of thousauds of local clubs, societies and circles of women, located in every city, town and hamlet, if brought together under some simple business plan of co-operation, would present the most powerful resourceful business organization in America. It has seemed to those who conceived the plan of The American Womau's League that to the great journals of general circulatiou is given the mission to take the lead in making culture, the arts aud education the keynote of this century, as commercialism has been that of the past one, and that this can be accomplished on a business basis. The League plan is effectiug a permanent co-operative national organization, between the leading publishing houses as the manufacturer aud these thousands of local clubs, societies and guilds on a mutually beneficial and profitable basis. The publications now co-operating under this plan with The Lewis Publishing Company are, COLLIER'S WEEKLY, EVERYBODY'S MAGAZINE, SUCCESS, THE FARM JOURNAL, THE DELINEATOR and THE AMERICAN BOY. Membership in The American Woman's League has but a single requirement open to all alike: the securing of a total of $52 in subscriptions to the publications co-operating in the plan. Whenever this has been accomplished, the applicant is a member for life without other dues or requirements and eutitled for life to all rights, benefits, advantages, protection and opportunity The League organization can offer. The subscriptions may be paid for as gifts to friends if desired, but the membership does not cost the member anythiug, as the only thing paid for is the subscriptions to the several publications at their regular prices, which are in themselves a full return for the money. This membership requiremeut constitutes the national SALES force.

To effect the permaneut RENEWAL orgauization, The League is divided iuto chapters or local organizatious, each haviug permanent jurisdiction over a fixed territory. Five or more members may organize a local chapter, and any local club, society, circle, or combination of them may become members of The League and secure the local chapter charter and rights. The local chapter receives for its iucome and maintenauce 25% of the renewal subscription income of all the publications that come from its territory, its Secretary being a paid official selected by the members, whose duty it is to look after the renewal of all subscriptions in that chapter's jurisdiction from year to year, with the moral support and assistance of the chapter as a whole; accurate record of all subscriptions received and their expiration dates being supplied from headquarters. Upon securing the charter for a local chapter, a beautiful permanent local chapter house is at ouce erected on the following terms:

The Chapter Houses are divided into five classes in style and cost, according to the membership of the local Chapters.

CLASS 1—To each local Chapter having fifteen members, of whom at least ten are fully paid, a Chapter House will be built to cost $1,200.

CLASS 2—To each local Chapter having forty members, of whom at least twenty-five are fully paid, a Chapter House will be built to cost $2,500.



CLASS 3—To each local Chapter having seventy-five members, of whom at least fifty are fully paid, a Chapter House will be built to cost $4,000.

CLASS 4—To each local Chapter haviug one hundred members, of whom at least seventy-five are fully paid, a Chapter House will be built to cost $5,000.

ENTRANCE PYLON TO UNIVERSITY CITY

"PLAZA" ENTRANCE TO UNIVERSITY CITY, ST. LOUIS, MO.

Views of the Plants of the Lewis Pub. Co. and Art Institute of the League in University City. The Lewis Pub. Co., founders of the League, is one of the largest publishing institutions in the world, with a capital of $3,500,000, producing over 10,000,000 copies of its several well-known journals each month. University City is a separate municipality from St. Louis, although embracing in its borders the best residence section of St. Louis

CLASS 5—To each local Chapter having one hundred and fifty members, of whom at least one hundred are fully paid, a Chapter House will be built to cost $7,300.

First—A suitable building site must be secured by the Chapter in the home town of the Chapter, clear and free of encumbrance, equitable title to it vested in the Trustees of The League. This site must be well located, and ample in size for the building.

Second—Immediately on awarding these Chapter Houses the contracts will be let for their construction to responsible contractors.

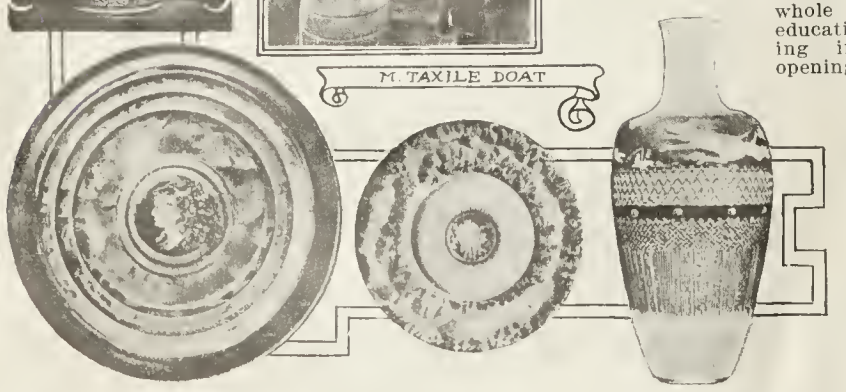
Third—In counting memberships for securing a Chapter House, three full-paid honorary members count the same as one full-paid Full member. Thus to secure a Chapter House of Class 1, the Chapter must have fifteen members, of whom ten are full-paid Full members (women); or if the Chapter has seven full-paid Full members and nine full-paid honorary members, this would count the same as ten full-paid Full members.

Fourth—The money advanced for the purpose of erecting this Chapter House will be repaid to the home office of The League by the withholding from the local Chapter the ten per cent building fund until the loan is repaid, and does not come out of the general subsidy of the Chapter which is twenty-five per cent of all the subscription revenue derived from the Chapter's territory.

Under this plan, while 25% of the subscription income will eventually go to the local chapter organizations into which the entire country is rapidly being divided, and all and even more than the amount of the subscription income first derived from the membership requirement of the members of the chapters is expended in erecting the local club or chapter houses, yet the central organization receives the entire 50% on the vast scattered membership and 25% of all renewal income. Experience has also shown that while a chapter of a fixed number of members is required to secure the erection of a local chapter house, the erection of which costing more than the entire revenue from these memberships; yet, before the building is completed, the membership of the chapter invariably increases to several times the original number, so that the chapter house's cost easily falls within 25% of the original income.

With the organization of the local chapter, it becomes entitled to the services of the circulating library, the weekly phonographic concert circuit (the finest concert grand phonographic instrument obtainable, made expressly for the organization in the form of a beautiful center table, being supplied to each chapter and a weekly shipment of concert selections of the best music in the world being sent it); a series of lectures and entertainments by the lyceum bureau of The League, and several other special features, tending to make the chapter house the center of the best instruction and entertainment, while the permanent income of the chapter itself is in exact proportion to its size and ample to enable it to provide every comfort and entertainment to its members without expense to them. The local chapter is given entire freedom in the use of its chapter house and the personnel of its membership, and if several local clubs combine to secure it, they may divide its use among themselves as they see fit. Only members of The League may use the chapter house, however, excepting as temporary guests.

While the local chapter and its beautiful building is the permanent income-producing machinery of the organization, yet, to the individual member as such, whether affiliated with a chapter or not, The League plan offers its greatest benefits, advantages and opportunity through the great central institutions free to all. The center of this remarkable movement—its capital city, so to speak—is University City, St. Louis, a separate municipality of some 2,000 acres, incorporated and laid out some years ago, before it had become the finest residence section of St. Louis, owing to the growth of that city. The officers of The League are also the municipal officers, the president being the mayor. Here are located the magnificent institutions of The Lewis Publishing Company, the largest and finest publishing institutions in the world, and here are rapidly being erected the other great institutions of The League. It is designed to make University City the most beautiful and model municipality in America, and much has already been accomplished along these lines. The design, conception and execution of its entrance gates, ornamentatiou and buildings becomes a part of the work of honor classes in the art institute, architectural, engineering and landscape classes, so that in a few years it will in itself represent a magnificent monument to The League. The organization is being conducted by the officers of The Lewis Publishing Company, assisted and advised by the Board of Trustees, who are also the Board of Directors of the Peoples Savings Trust Company, trustees of The League endowment or reserve funds and property, it in turn being owned by the members of The League.



League Chapter House of Class III

THE CENTRAL INSTITUTIONS

It is estimated that the entire League income will be required for the next year or two in erecting the hundreds of local chapter houses, building and equipping the great central institutions of The League, after which there will be a rapid accumulation of a surplus or reserve which becomes a trust fund; membership in The League being a life beneficiary. The whole League is a trust, and, whatever its income, only to be devoted to the use and constantly added benefits of membership. The principal benefits of membership are: First, the free right to all courses of instruction in its great schools, university and art institute. Second, the use of its postal library and phonographic library, a phonographic instrument of superior make being supplied members in their homes as well as to chapters. Third, a national Woman's Exchange, of which each local chapter is a branch, for the marketing of woman's handiwork and the products of The League. Fourth, a loan and relief fund, for loans at low interest for home building, and no interest in distress. Eventually, with the accumulation of a reserve or surplus, it is proposed to erect and equip the finest home or retreat and orphanage in America, where a member, destitute and alone in old age, may be cared for as the center of the good will and care of the whole organization and as a right of membership, corresponding to a surrender value; also for the care and education of orphaned children of members. The League being purely a business organization on a cash basis, with no pretense of philanthropy any more than an insurance company, does not undertake to do anything that can not be done as a business proposition, the home and orphanage itself being figured against the surrender value of membership, while the musical library, the university, art schools, exchange and all other features, in addition to the general income for their maintenance, become largely self-supporting through the sale of their products and supplying to the membership of The League the materials, supplies, equipment and other articles required in their use, the exchange having already become a shopping bureau for the more remote members, with its buyers in the best markets, at considerable profit and the great advantage of the membership. Of all features of The League, the art schools and institute and the university are the principal. The first of the university buildings—the great art schools and institute—is now nearing completion and will open its courses to all members October 1. It is undoubtedly the largest and finest institute of the sort in America. Five other university buildings are expected to be complete within 12 months at a cost of approximately $1,000,000. The foremost sculptors, artists and instructors in all branches have been secured, and the correspondence courses, now about completed, are the work of the masters themselves and are intended to lead up to the personal attendance or Honor courses, enabling the student to acquire the elementary training and to demonstrate their fitness and ability for the higher courses, without the loss of time or expense necessary to personal attendance, and also to provide to the whole membership an educational and refining influence, while opening to those of marked ability or genius, OPPORTUNITY. To accomplish this double purpose—the educational refining and useful advantage to the whole membership of instruction prepared by eminent masters, and at the same time to separate out from the mass special ability, genius, talent or qualifications for special training and opportunity—the courses of the University in all its departments are divided into the correspondence course and the personal attendance or honor course under salary sufficient to pay all reasonable expense of attendance.

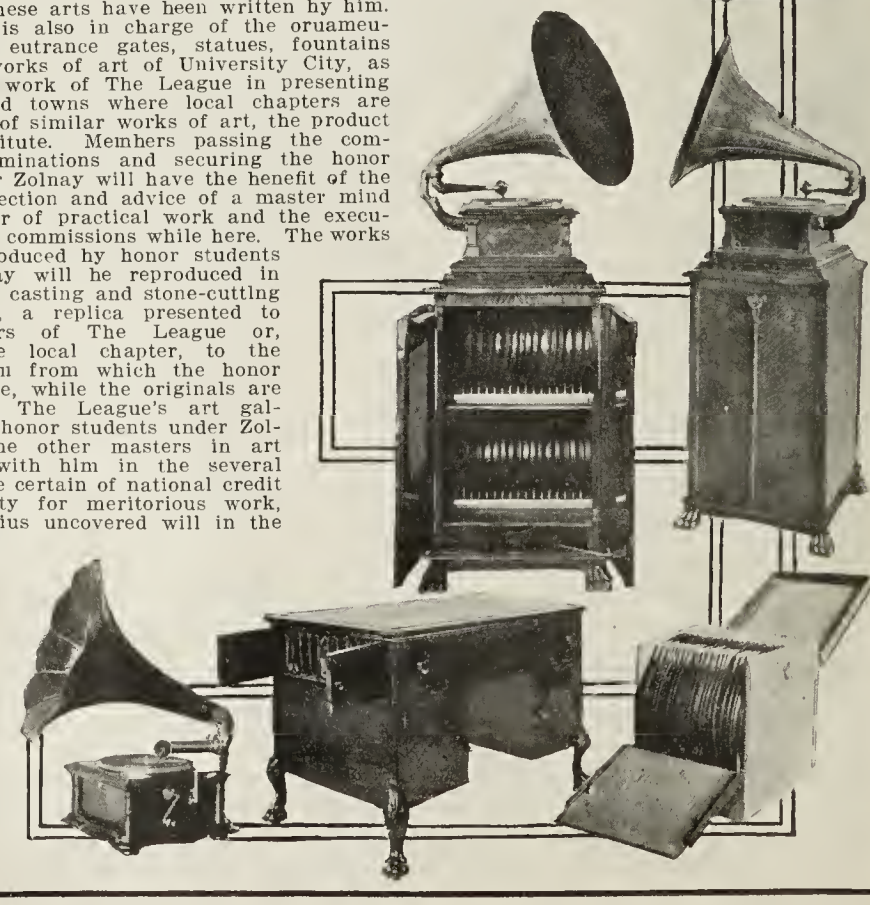
The institutions of The League themselves seek and require the highest talent and ability in all lines and hold out to it the certainty of the highest opportunity. The honor courses of personal attendance under salary are awarded through frequent competitive examinations open to all, but made sufficiently severe in their requirements to insure that those who acquire them are of so high an order of ability as to become really producers and a profit to the institution. The benefit of the knowledge, experience, learning and skill of great masters can, through the correspondence courses, be available in their own homes to all, but the advantage and opportunity of personal association with those masters for a year of practical and actual application of the student's own ability and training in the conduct of the institutions of The League is reserved for those alone whose high ability, application or genius makes them desirable acquisitions to the personnel of those institutions.

Through the national dragnet of the correspondence courses it is the effort to find out and uncover special ability and genius in every branch of human effort, that it may be brought into and made a part of the great League plan and, in return for the opportunity given, shed on The League and its institutions a constantly increasing luster, fame and success. The League being strictly a business organization with no pretense of philanthropy, while through its great University correspondence courses it serves all alike, yet as a matter of business and profit it offers exceptional opportunity to the highest ability.

Any members and minor children of their families may take any of the correspondence courses and pursue them just as far or as little as they choose, or may take up a single study, art, business or profession, for its culture, use and enjoyment, but if a career in any business, profession or art is desired, the closest application, not alone to its courses, but to all correlated courses, including a general academic course, is necessary before the honor or scholarship course can hope to be acquired. The remuneration of the member acquiring an honor or scholarship course while in attendance during the year of practical finishing work is $60 per month. A series of commissions, awards and prizes each year, however, offer to the honor student special remuneration for excellence of work. In the Art Institute a number of commissions, ranging in value from $500 to $3,000, will also be awarded at the end of each year through competitive tests for the execution of works of art in the ornamentation and beautifying of University City and the buildings of The League. All work done by honor students is the property of The League, unless executed for outside commission, when The League receives the proceeds. Graduates and advance students of other art, business and professional schools, who are members of The League, may compete for the scholarship or honor courses without taking the correspondence courses. Teachers, members of The League, may equip themselves for better positions or higher instruction through the correspondence courses without interference with their duties, loss of time or expense, and by the demonstration of the necessary ability and qualifications through the examinations, be certain of a year of personal instruction with salary sufficient for expenses, under famous masters in the Honor courses. The catalogues of each of the courses, complete in detail, may be had on application by any member. The school terms are three in number—October 1 to December 20, January 5 to May 1, and the Summer term from May 10 to September 10. The University and its branches are divided under the following heads:

I. Kindergarten, Grammar, Academic.
II. The Business College.
III. The Professional Courses.
IV. The Applied Arts and Crafts.
V. The Fine Arts.
VI. The Musical and Dramatic Institute.

The honor students, after two terms of personal attendance under the direct supervision and instruction of the master in the practical application of their ability, are then sent on a circuit of the local chapters for the assistance, instruction and coaching of correspondence students, and to conduct the competitive examinations in the arts, music, the drama and other courses. Through this means a continual series of lectures, entertainments, instruction and personal demonstration is provided the local chapters throughout the year by the honor students, themselves members of The League, as their final finishing touch before graduation, giving the honor students an opportunity to acquire a wide personal reputation in their chosen art, profession or specialty before entering on the life battle of a successful career. By this means the master of each division is assisted in the conduct of the courses by the honor students themselves, who must be of the highest order of ability and accomplishment to have secured the honor courses.



DIVISION OF SCULPTURE AND DESIGN

George Julian Zolnay, Director

Mr. Zolnay, director of this division of the Art Academy, is so well known in this country and Europe as one of the foremost sculptors of the age as to need no introduction. An honor graduate of the Imperial Academy of Fine Arts, Vienna, and Royal Art Academy of Bucharest, the winner of gold medals in America and the graud prize of the Vienna Art Academy; decorated by the King of Roumania with the order of Bene Merenti of the first class; member of the leading art clubs and of the International Jury of Awards; his work is a part of the history of modern art. Among his principal works are the colossal Tympanum of the Carmelite Cloister, Vienna; his frontispiece for the Armory, St. Poelten, for the Austrian Government; his bust of Francis Joseph, King of Hungary; his heroic statue at Croyora for the Roumanian Government; his seated lions in colossal bronze on the new custom house, San Francisco; his Sam Davis monument, Nashville, Tenn., and Winnie Davis memorial in Richmond, Va.; his heroic groups at the St. Louis World's Fair, and the superb lion and tiger crowning the entrance gates of University City.

The entire division of modeling, sculpture, form and design of The League's Art Institute and Schools is under the personal direction of Mr. Zolnay, and the correspondence courses in these arts have been written by him. Mr. Zolnay is also in charge of the ornamentation with entrance gates, statues, fountains and other works of art of University City, as well as the work of The League in presenting to cities and towns where local chapters are established, of similar works of art, the product of our Institute. Members passing the competitive examinations and securing the honor course under Zolnay will have the benefit of the personal direction and advice of a master mind in their year of practical work and the execution of their commissions while here. The works of merit produced by honor students under Zolnay will be reproduced in the ceramic, casting and stone-cutting departments, a replica presented to the chapters of The League or, through the local chapter, to the city or town from which the honor student came, while the originals are retained in The League's art galleries. The honor students under Zolnay and the other masters in art associated with him in the several divisions are certain of national credit and publicity for meritorious work, so that genius uncovered will in the single year of the honor course gain a reputation not otherwise to be acquired in many long years of lack of publicity. Honor students in the art

courses are, during the first and second terms, given the actual conception and execution of works of art, the sculptural and mural decoration of buildings, the ornamentation of public parks and modeling and decorating work in the Ceramic Institute, their successful efforts being reproduced in the institute's Art Journal if in drawing and painting, and in the Art Potteries if in modeling. The correspondence courses in modeling, sculpture and design are free to all members of The League, and are accompanied by the necessary models.

DIVISION OF DRAWING, PAINTING AND COLOR

Ralph Chesley Ott, Director

Mr. Ott, director of this division, while belonging to the group of younger artists, has acquired a wide reputation, both for the high standard of his portraiture, the exquisite atmosphere of his landscape, delicate but masterful tone and his remarkable achievements in mural work. Made Instructor of drawing and painting in the St. Louis Academy of Fine Arts at an early age, an honor student of leading European academies before 30, his magnificent treatment and mural decorations of the Woman's Magazine building and later of the Woman's National Daily building interiors have been admired by hundreds of thousands of visitors from all parts of the world. The correspondence courses in drawing and painting have been written by Mr. Ott in person, and profusely and carefully illustrated from life under his personal supervision. They are the highest obtainable result of wide experience, careful study and personal genius. Honor students in this division receive the personal direction of Mr. Ott in their work for two terms and then make the circuit of the chapters the third term, as in sculpture, modeling, ceramics, music, the drama, and other divisions. Under the direction of Mr. Ott, in addition to the correspondence courses in drawing, painting, illustrating and decoration, assisted by the honor students in these divisions, the mural decoration of all League buildings and chapter houses is carried out, the illustration of the journals of the Publishing Company, the execution of all commissions in portraiture, landscape and decoration accomplished, and special works of art executed in connection with the ceramic institute.

Students of all other art schools, if members of The League, are entitled to compete in the examinations held at frequent periods for the honor or scholarship courses of The League Institute of Fine Arts, as in all other divisions, without taking the correspondence courses.

Map of the United States showing the location of chapters of the League already organized

THE CERAMIC ARTS INSTITUTE

Taxile Doat, Director

For 30 years the name of Taxile Doat, leading expert and ceramic artist of the great Sèvres art potteries of France, has stood for all that was highest, best and most progressive in the art of arts, ceramics, before the world. It was Mr. Doat who, by special permission of the French Government, first published to the world the secrets guarded for centuries of the wonderful high fire glazes. Mr. Doat's own work is found in the principal art galleries of the world as the highest examples of ceramic art, and, in addition to securing his services exclusively for the Art Institute of The League, we have purchased his private ceramic collection for the Art Museum of The League, where it will serve as an inspiration to those personally attending the post-graduate courses. Mr. Doat has selected three collaborateurs to assist him in the conduct of The League's ceramic schools and institute from among the leading ceramic artists and technicists of Europe. His first visit in June, 1909, was for conference with The League's architects, in order that the erection of one of the most perfectly designed and equipped art potteries in the world might be begun, temporary facilities, kiln rooms, laboratories and studios having been provided in the art building. The courses in ceramic arts, including every branch of glazing, decoration, turning and firing will be open to members of The League in October of this year under Mr. Doat and his assistants; the institutes of modeling and sculpture under Zolnay, and of drawing, painting and color under Ott, collaborating with the ceramic institute under Doat in a series of courses which will offer to genius and ability the highest instruction and opportunity in the world, is open to every member of The League. The post-graduate or honor course in ceramics consists of two terms of actual experience and practical work under salary in the art potteries at University City, under the masters, the work being practical execution of art pottery, porcelains, grès and other works, for sale through The League's exchange branches in the local chapters, the decoration of its buildings and chapter houses, the ornamentation of University City and the execution of commissions for the public.

APPLIED ARTS AND CRAFTS

The courses in applied arts and crafts, each under the best instructor obtainable, supplement the highest courses of the beaux art. They are intended to give to members of The League a means of practical application of their talents, both for pleasure, refinement and profit. For this reason they are made extremely practical. Among these courses are:

Miniature	**Illuminating**	**Illustrating**
Mosaic	**Decoration**	**Engraving**
Casting	**Mural Decoration**	**Etching**
Jewelry Design	**Interior Decoration**	**Lettering**
Fabric Design	**Scagiolia**	**Bookbinding**

SCHOOL OF JOURNALISM

Hugh K. Taylor, Managing Editor The Lewis Publishing Company, Director

In preparing the courses of instruction in journalism, each separate lesson was the careful work of the editorial, business, mechanical, accounting and administrative heads of every division of The Lewis Publishing Company, assisted by a number of leading newspaper, magazine and editorial experts of the country. The course is a distinctly practical one, and offers a more complete and comprehensive knowledge and grasp of journalism in all its branches than could be obtained in any other way in a lifetime of experience. With the correspondence course is also open, through competitive examinations to those demonstrating high ability, a finishing or post-graduate year of actual practical experience in all branches, under salary, in this great publishing institution, presenting exceptional opportunity to unusual ability developed and the best opening to a successful career.

PROFESSIONAL COURSES

The professional courses have been prepared so that with the aid of the grammar and academic courses they present the opportunity to take up such professions as can be taught by correspondence, and acquire an instruction without loss of time [illegible] that will save several years of personal attendance to those desiring to [illegible] professions, even though the student may not have previously had the adv[illegible] of higher education. The standard of graduation will, however, be maintained [illegible] par with that of the best universities here and abroad.

AGRICULTURAL COURSES

The courses of instruction in agriculture in all its branches have been prepared each by a leading expert, and are of the most practical and useful nature. At the head of this division will be placed one of the leading agriculturists. The [illegible] include the post-graduate or scholarship course of personal instruction and experiment in the experimental laboratories and farm of the institute and lecture circuit of the chapters. The experimental farm, orchards and dairy of the School of Agriculture will supply the Retreat and Orphanage with their products.

KINDERGARTEN

The kindergarten courses by correspondence are the work of Miss Jessie Davis of Chicago, well known as the leading originator and instructor in this work. They are profusely illustrated and are for the service of members' mothers who desire to instruct their younger children.

THE BUSINESS COURSES

Embrace stenography, bookkeeping, telegraphy, dressmaking and many special features of home work for women. They are practical, thorough and easily understood. The greatest effort being to make this class of instruction of real service and help to those seeking to better their condition.

LOAN AND RELIEF FUND

A fixed percentage of The League's net income is set aside in a permanent fund for loan to members at low interest rates and convenient terms for home building or for temporary relief in distress without interest under reasonable safeguards.

THE NATIONAL EXCHANGE

One of the principal features is the extension of the woman's exchange plan, common in the larger cities, to a national scope, each chapter house having its exchange or sales room for the product of members and of the Art Institution, potteries and applied arts division, constituting a national sales organization operated through a central agency and the local chapters, assisting in finding a wide market for skilled work in embroidery, candy making, preserving, and other home work of women, under the supervision of the instructors in those things provided by The League's schools.

As the income of The League increases through the spread and organization of its membership, hence its control of the subscription field, the advantages and benefits to the individual member will constantly increase. Being purely a business organization, however, it makes no pretense of giving something for nothing, but is simply applying the same principles of combination, organization and co-operation for the mutual benefit of the publishers and their readers which have proven so successful in the industrial world. The income of The League is but the vast sums heretofore expended annually by publishers to maintain their subscription, paid instead to an effective, permanent subscription organization. The same energy expended by any local woman's club, society or guild in holding a single fête, fair or bazaar, will, under this plan, secure for it a beautiful club house and a permanent income to support it. Aside from its other features, the aid, protection and service which The League has already been able to render members in every section of the country through its law and banking divisions and the wide influence and power of its organization, has been worth many times the slight effort necessary to secure membership in it for life.

The membership has been divided into the Founder's Chapter, composed of the first hundred thousand members who complete their requirement and the general membership. Men may become Honorary Members, entitled to all rights and benefits excepting that of voting, of the Loan Fund and of the Home when established. Minor children of members have the free use of the schools. A special endowment of a million dollars of the capital stock of The Lewis Publishing Company and an equal amount of that of the Peoples Savings Trust Company, the two industrial institutions principally enriched by the plan, has been provided for by the Founder for the Founder's Chapter, to which any member is eligible until its number is completed. Of necessity the membership of The League itself is limited, but the very nature of the plan, appealing as it does only to the desire for culture, improvement, education and opportunity for bettering one's position, is enlisting the refinement and intelligence of the country by a selective process. Those who acquire the Founder's Chapter memberships occupy a position of special privilege and profit as is right that they should, for taking the lead in the organization; the entire yearly income of the Founder's Chapter's endowment will be equally paid each year during life to its members.

The beautiful book of The League, giving complete detail information of its many features and benefits, will be sent on request; and its chapter house book and one of its field organizers will be sent to any club, society or guild desiring to secure the local chapter rights, and club or chapter house where chapters have not already been established.

View in University City from the entrance plaza looking down Delmar Boulevard into the heart of St. Louis' best residence section.
More than a million visitors have registered in the visitors' book of the Lewis Pub. Co. plant

ADDRESS

THE AMERICAN WOMAN'S LEAGUE
University City, St. Louis, Missouri

Sample copies of the magazines will be sent on request to all applicants for membership. There is no other requirement for life membership but the sending in to The League of a total of $52 in subscriptions to the following publications, which may be paid for as gifts or solicited. This once accomplished, there are no further dues, as the entire organization and its institutions are permanently maintained from the renewal of the subscription through its chapter system. Applicants for membership may take their own time in completing this requirement, but do not have the benefit and right of The League until completed. If, for any reason, the applicant fails to complete the requirement, 25% of all subscription already sent in by the applicant is paid back as a commission.

The publications now listed under the plan are:

THE WOMAN'S NATIONAL DAILY	EVERYBODY'S MAGAZINE
THE WOMAN'S MAGAZINE	THE FARM JOURNAL
BEAUTIFUL HOMES	THE DELINEATOR
COLLIER'S WEEKLY	SUCCESS MAGAZINE and
	THE AMERICAN BOY

Although its scope may shortly be enlarged to include all high-class journals under uniform terms.

FREE CIGAR TRIAL

10c. Cigar, 4½c.

This new La Reclama "Panola" is made by hand with a filler of LONG, clean, rich and mellow Havana, wrapped with the finest quality of Imported Sumatra. It is that popular Panatela shape (full 4⅞" long) which will smoke freely and burn perfectly with a firm steel, gray ash. **Our price for this 10c. cigar is but 4 1-2c.,** because we cut out the profits and expenses of jobbers, salesmen and retail dealers through selling cigars—by mail—from our factory to the smoker direct.

Free Trial Offer

Write us the request on your business letter-head and we will ship you 50 (fifty) La Reclama "Panola," expressage prepaid. Smoke five or six—then if you like them, send us $2.25 within ten days, but if for any reason you are not entirely satisfied, return the remainder to us, expressage collect. There will be no charge for the few cigars used in testing.

Send today for a TRIAL shipment and compare our "Panola" with the cigar you have been smoking. Mention if you prefer them mild, medium or strong.

We want your permanent patronage, therefore, let us prove to you the remarkable value of La Reclama cigars.

The Meaning of Peonage

Labor Camp Torture in Arkansas Explains It

LABOR camps for criminals, convicts, or city prisoners used sometimes to employ torture, murder, and overwork in a way that did not serve the interests of justice. The case of Callas is recent. The crime for which Callas was handed over to the overseer with his rifles and his whips was unemployment. Joseph Callas, Russian Jew, is personally known to this paper. From his own lips we give the story of his wanderings and sufferings and White House rescue which freed him from bondage in February, 1909.

He was beating his way across country from New York to Colorado in the year of unemployment, November, 1908.

At Little Rock, Arkansas, Callas was standing at the railroad station. A man approached and put a revolver to his forehead.

"Who are you, and where are you going?"

"I am looking for work," Callas answered.

"Have you any money?"

"Ten cents."

"You're arrested."

He was locked up in a barn, and the next day fined "$10 and all expenses."

Others of the unemployed had been gathered in. After the trial the men were chained, led to the railroad station, and shipped to a small town in southeast Arkansas. What the men ate while traveling and the provisions of the detectives guarding them were charged to the prisoners. When the party reached the town the debt of each prisoner was $90, although the railroad fare was $6.40.

"We came to the small railroad station. As soon as we left the train, we were surrounded by six negroes armed with rifles. We were seated in a wagon, and went slowly through a forest. In front of the wagon rode a negro, on both sides were negroes, and behind us rode Mr. Simpson, 'the whipping boss,' and Mr. Gentry, the superintendent. They were all armed."

On arrival at the Labor Camp they asked the men already there about the place.

"You'll see it for yourself to-morrow," said one of them. "It is worse to live here than in the hell. Men are flogged and shot down."

Driven by the Lash

"THE next morning we formed in two lines in the yard. The boss came out of the house and counted us. There were eighty-five men, white and black. The white go to work separately from the black, though they often work together. We walk in a line. In front of us are two negroes armed with rifles; behind us the same, and on one side rides the overseer. To his saddle is attached a large whip with a heavy wooden handle, and a strap three feet long, three inches wide, and one-quarter inch thick. The rear of this procession is brought up by a negro leading a pack of bloodhounds, designated to hunt for the runaways.

"We did not have to walk far and soon stopped before a field sown with cotton. Bags were tied to our backs and we were told to gather the cotton. We, the Northerners, were not accustomed to this work, and did it very slowly, while the negroes quickly and skilfully gathered the cotton and went on. Behind us was the overseer, scolding and cursing us. He was particularly angry with one of the comrades, Schmidt. Calling him, he said: 'Are you going to gather cotton or not?'

"'I work for the first time,' answered Schmidt; 'as soon as I become used to it, I will work faster, but I can't do it now.'

"'You can't? I'll teach you.'

"He dismounted and took his whip.

"The overseer called two negroes.

"'Lie down!' he shouted to Schmidt.

"The latter did not know what to do. At a distance stood the sentinels with their rifles and watched the proceedings. Consequently we could not help our comrade.

"The negroes threw Schmidt on the ground. One of them held his head, the other his feet. The overseer took his whip in both hands, shook it in the air, looked around and then struck Schmidt on his naked back. A blue mark revealed the place where the strap came in contact with the skin. Schmidt cried out with an unhuman voice. The overseer became still more enraged and struck him the second time, third, seven times.

"Schmidt rose to his feet with great difficulty and staggered to his place of work.

"Simpson, the overseer, was not, however, content with Schmidt's sufferings. He called out two more men and gave them five blows each. After that all worked faster lest they should incur the wrath of Simpson.

"Before my arrival to the peonage, during this work, one of the white men tried to escape: but before he had covered twenty paces he was shot down by a negro sentinel. During that time was also shot a negro and racked to death a white man. He was given twenty-five blows of the whip, after which he died.

Hunger and Disease

"WE WERE put to different works. We gathered cotton, we felled trees, cleared the fields, dug ditches, tilled the ground, built fences around the fields, etc. There was not one day in which somebody would not be flogged. Two or three were flogged every day, and sometimes this number rose to ten. Very often Mr. Gentry would become intoxicated. Then he would punish the sluggards himself, and he flogged them with all his strength, with rage, on the back, on the head, or any place where his lash could reach. In such cases we had to work like automats, unceasingly, and Gentry would sit somewhere and watch us.

"For the first two months of my life in the peonage the number of whites was increased to forty-five and of negroes to one hundred. Our life was very hard. We were not allowed to smoke. Our food on week days was bad, but on Sundays it was still worse: only two meals a day, a breakfast at nine and a dinner at three. We were always hungry. Exhausted, half-fed, we could find no rest even at night. Work, lash, and hunger, hunger, lash, and work, such was our life, and this miserable existence was undermining my health. Only the fresh air gave us some strength. We forty-five men were lodged in one small room with four tiny windows. Along the walls stood benches for sleep, two stories high, and between them was an aisle about a yard wide. On Sunday we stayed in bed all day, under dirty, full-of-vermin blankets. Many of us became sick of overwork, lack of sleep and proper nourishment. The doctors visited the place very rarely. No matter what was the disease of a man, whether it was a toothache, a fever, or a sprain, the doctor would give the same kind of pills.

"From the first of January of this year the overseer was discharged for his excessive cruelty, tendency toward drinking, but chiefly for cheating. His place was taken by Mr. Nickol, an older man than Simpson. He disliked the negroes so much that it gave him real pleasure to flog them. If a negro would say a word to him, he would beat him on the head with the handle of his whip. He treated the whites less severely. He treated me somewhat better than the rest, as he had found out that I sent letters somewhere. This circumstance disturbed him a little."

Callas had written letters which were forwarded to the State Department at Washington. An official came for him.

Rescued by the Law

"FROM the place of my sufferings I was being taken to the White House, to be put under the protection of American law. My attirement was of a singular style. My clothes were torn and shabby—a dirty red shirt, a red handkerchief tied around my neck, large Californian boots on my feet, and straw farmer hat on my head. I sat on velvet cushions and smoked the best Cuban cigars. The Americans regarded me with visible curiosity and perplexedness. I resembled, as one of the passengers said, a Californian robber. My boots were so torn that they revealed my bare toes."

Mr. Elder, a Government attorney, two Congressmen, and a Senator heard Callas tell his story.

"Mr. Elder will take up your case," concluded the Senator; "we will demand satisfaction for your arrest and other sufferings. You should thank those who helped you. You will be given $10 and a ticket to New York. There you will await the end of your case."

"We shook hands and I departed. I bought a new suit of clothes and went back to that same New York from which I started on my wanderings."

PURE MILK FOR BABY

Sanitary milk production was first started by Gail Borden in the early '50's. The best systems to-day are largely based on his methods, but none are so thorough and so rigidly enforced as the Borden system. For over fifty years the Eagle Brand Condensed Milk has proved its claim as the best food for infants.—*Adv.*

"In a pinch use Allen's Foot-Ease," remarked the tramp, as he threw a package of white powder into the eyes of the policeman who was about to arrest him.—*The Harvard Lampoon.*—Adv.

The Best Shoe Polish

For Women's and Children's Shoes

Quick, easy and satisfactory results are the proof of value in a shoe polish and Bixby's "Double A-A One" Polish is certainly quicker, easier and makes shoes look better than any other.

REMY Magneto Wins Again!

Famous ignition system used on the car driven by Chevrolet to decisive victory in the Cobe Trophy Race, the Western Vanderbilt, at Crown Point, Indiana, June 19th

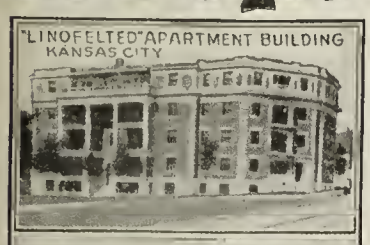
Chevrolet chose the Remy Magneto for use in this event, despite the fact that attractive prizes were offered by other magneto firms.

And proved the superiority to all other magnetos, foreign or American, of *the Remy, the perfect mechanical ignition system!*

Fifty Thousand Remy 1910 Magnetos are called for by contracts with two automobile manufacturers alone.

The Remy is the simplest ignition—has the broadest margins for abuse, dirt, oil, water and neglect—requires practically no care—can be installed by anybody.

Motorists everywhere are invited to take advantage of *the Remy Magneto Service.*



A competent corps of experts at our branch selling offices in New York, Chicago and Detroit, will help you to solve your ignition troubles. Call or write to our nearest address.

1910 Models

Chalmers-Detroit "30"—$1500 | **Chalmers-Detroit "Forty"—$2,750**

Five Styles—Touring Car, Roadster, Pony Tonneau, Inside-Drive Coupe and Limousine

Note How Much We Have Done With The Saving

Last season's model of the Chalmers-Detroit "30" was an amazing car for the money.

It was so good that, when people awoke to it, the demand exceeded our output by $1,200,000.

The Chalmers-Detroit "Forty" has been, for four years, the topmost car in its class.

Yet, note how remarkably both these cars are improved for the season of 1910.

How It Is Done

This season, we are adding 1,000 cars to our output, without adding a dollar to overhead expense.

Our fixed expense, which last year was divided by 3,000 cars, is this year divided by 4,000 cars.

Then we need no new tools, no new machinery, for our cars are not altered mechanically. The result is a saving of quite a sum per car.

We have put all of this saving into appearance. We have spent it for size and style and room.

Last year we gave you the utmost in worth. Now we are adding a beauty of line that is unequalled.

Note the Result

Note the lines of these cars in the 1910 models. There are no handsomer cars at any price on the market.

A Memo to

Chalmers-Detroit Motor Co.

Detroit, Mich.

Mail your 1910 Catalog to

County _____ *State* _____

Collier's Weekly, New York

Mail us this coupon today.

Our "30" now has a 115-inch wheel base. That's three inches longer than our "Forty" of last season.

It has 34-inch wheels, against 32-inch last season. The tonneau is far more roomy, and the hood is accordingly longer and higher.

The 1910 "Forty" has a 122-inch wheel base—ten inches longer than last season. It becomes a 7-passenger car.

It has 36-inch wheels—two inches larger than last season. It is upholstered in hand-buffed leather, and the magneto is free.

Now these two cars—always mechanically perfect—have all the appearance of the costliest cars created.

Profit Nine Per Cent

Our profit remains just the same as last season—exactly nine per cent. Every penny of saving has gone into the cars.

This season we even go further. We shall sell our extras, as we sell our cars, on the smallest possible margin.

We will fit our "30" with a Bosch magneto, a Prest-O-Lite gas tank and two Atwood-Castle new style gas lamps, all for $100 extra. The cost of these extras at regular prices would be $175.

We will fit our "30" with a Lenox mohair top—the very best top we can buy—for $75 extra. The regular price is $125.

We will fit our "Forty" with a Bosch magneto, gas tank and gas lamps free. We will fit it with a $150 Newport mohair top for $125. The two extra seats in the tonneau will cost only $75 extra.

In these extras we give you, as we give you in cars, more than anyone else for the money.

The Popular Cars

Only those who don't know the Chalmers-Detroits wonder at their immense popularity.

The reasons are these:

Mr. H. E Coffin has put into these cars the best work of his life in designing.

We have built these cars on such a small margin of profit that no other maker could begin to compete with us.

We have brought the cost of upkeep down to the record point. On last year's output owners paid us for repairs only $2.44 per car.

In a public Economy Test, our "30" has run 25.7 miles on one gallon of gasoline.

One of our "30's" last year covered 32,000 miles, making such endurance records as no other car ever made. And, on a long-distance test, its average speed record was 52.2 miles per hour. Those are amazing records for a $1500 car.

When thousands of such cars are in actual use, it doesn't take long for buyers to learn about them. Those are the reasons why the demand last season exceeded our output by 800 cars.

1910 Models Ready

Our agents almost everywhere are showing our 1910 models now. Deliveries to users begin August 1st.

Last year's record will indicate to you the probable demand for these new models.

A 1910 model, delivered in August, gives four or five months' use before the calendar year begins.

Send now for our catalog showing all the new improvements. Then let our nearest agent show you the cars themselves.

With Bosch magneto, top, Prest-O-Lite tank, double rumble seat—**$1050.**

"Look for the Triangle on the Radiator."

1,452 Cars Asked For in Five Days

The highest compliment ever paid a new car followed our announcement to the trade. Every automobile dealer in America received practically the same day an announcement of the Hudson "20," giving complete specifications and a list of officers, engineers and directors of the Hudson Motor Car Company.

This announcement was received by dealers the 19th of May. During five days following we received 104 telegrams and long distance calls all containing requests for the agency of the Hudson "Twenty," and giving the number of cars wanted.

The grand total of the cars asked for in these telegrams and long distance calls was 1452.

Scores of certified checks were received from dealers in different parts of the country who wished, if possible, to bind territory at once.

In addition to telegrams, we received within ten days 1,873 letters from dealers, requesting territory in which to sell the Hudson "Twenty."

Of course we could not give an agency to every dealer who wanted it—in many instances several requests were from the same city. But the ***true significance*** of this wonderful response lies in the fact that 104 men who sent telegrams, and 1,873 who wrote letters are ***all actually in the automobile business. They are selling cars every day.***

They judge a car from the over-critical standpoint of the man who has to sell them—the man who is going to invest his money and his business reputation in them.

They know where other cars are weak. They know why certain cars are hard to sell. Being experts they know from the specifications and appearance of the 1910 Hudson "Twenty" and from the reputation of the men behind it, that never before was a car offered which represented so much value for the money. They know that ***for the first time*** a car is being built to sell for less than $1,000 free from every objection heretofore raised against cars selling at or near this price. They know that never before has a car with so many high grade features been sold for $900.

Some Reasons why the Hudson "Twenty" has Created a Sensation

In the first place it is a good looking car. The officers of the Hudson "Twenty" have been the first to appreciate that it is as easy to make a ***good looking*** car and sell it for less than $1,000 as it is to make the other kind.

It is a ***big car*** with a 100-inch wheel base, and 32-inch wheels.

It is as ***roomy*** as any roadster made, regardless of price. To insure absolute comfort to the driver and passenger, the foot pedals are adjustable. A woman can drive it with as much comfort as a 6-foot man.

Sliding Gear Transmission

It has a sliding gear transmission, selective type, three speeds forward and reverse, such as you find on the Packard, Peerless, and other high grade cars.

Its motor is the Renault type, patterned after the famous French motors of that name.

Long Stroke Motor

With a bore of $3\frac{3}{4}$" and a stroke of $4\frac{1}{2}$" it conforms to the most up-to-date foreign design, a long stroke motor.

The same company which makes the frames for the high priced Stearns cars makes the frames for the Hudson "Twenty."

The front axle is a one-piece drop forged I-beam section of the best grade of open hearth steel carefully heat treated.

Three-quarter Elliptic Springs

The judgment of the best designers in the world is back of the suspension of the Hudson "Twenty." Semi-elliptic in front, and three-quarter elliptic rear springs are the easiest riding under all conditions, faster and due to their peculiar actions, are the least liable to fracture. This is the spring suspension found on the Hudson "Twenty." Springs are unusually long, and mounted with heavier and stronger fittings than on many cars twice the weight. The radiator is composed entirely of brass and copper of such dimensions that more cooling surface is provided than on most cars of half again as much horse power.

Carbureter Specially Designed

The carbureter has been especially designed for the motor, insuring absolute control at all speeds. The fan, as in the best high-priced cars is belt driven; and so on throughout the entire car—judged by every mechanical and engineering standard, the Hudson "Twenty" is thoroughly up-to-date without embodying any experimental features.

50 Miles an Hour

Any Hudson "Twenty" will do fifty miles an hour. It has all the power you could ever have use for. It not only ***looks*** like the most expensive cars, but it ***acts*** like them too. It is strong, speedy, roomy and stylish.

Please write today for complete specifications. The Hudson "Twenty" is the only four cylinder licensed car selling for less than $1,000. It is the first ideal car at the price.

With the Circus

¶ The flap of the tent and the smell of earth in the spring quicken the heart of the showman. In the layman they renew the perennial glamour of the circus. "Under Canvas Again," by Arthur Ruhl, appears next week, and describes a day spent among the stakes and guy-ropes, with bands and gilded vehicles, elephants and camels. He finds the rovers of the ring eager to set forth from the metropolis once more into the open summer.

He meets the clowns, donning their blatant clothes, and painting their faces with mirth; he has a glimpse of the contortionist, in his sensational posture of rest; he talks with the giant trio, who discount Samson and Sandow; he notes the muscular young men who make up as the belles of the dangerous acts; he listens to the history of the Human Butterflies, who would prefer a "real aristocratic vaudeville audience," and he becomes acquainted with the Jordan family, folk to the canvas born.

He watches the acrobats in the "main-tops," flitting about "like disembodied spirits," and pictures a circus accident, while the music and show go on. The mammoth meal in the cook-tent has a number of unique features, including the armless man who dines with his feet.

At the evening performance he portrays the deft collapse of the whole community and the bleak, cold aftermath which have given to the circus its illusive fascination.

The Call of the City

¶ In an article entitled "The Kansas Farmer's Daughter," Miss Sarah Comstock presents a new question of sociological trend. The magnetic power of the city—a dynamo of attraction—has in all times picked away the youth of the farms. But this has never before become a migration; and it has never before been confined to the girls.

Miss Comstock travels through Kansas in a search for an old-time country-maiden, and, in next week's issue, recounts the log of her journey. This State of wealth and agricultural comfort is losing its young women.

The money which is dug from the soil is used to remove the child from it. Once away to school, and the restful acres have lost their hold. Though the author succeeded in finding daughters who were enticed to stay at home, with motor cars and grand pianos, yet she discovered those who would even reject as a suitor the possessor of a broad estate, for a city clerk and an air-tight tenement.

Fathers and mothers whose years have been dragged through toil and young Lady Macbeths, returning from the dramatic schools, have few things left in common. Many girls who could be pleasantly supported under the paternal roof prefer to wander off to the cities to work.

¶ Among other features will be a double-page drawing by Charles Dana Gibson, in the vein which established his greatest popularity, representing the prevalent theme of the season,—a group of pretty girls, in a summer setting by the seaside. The title is "Engaged."

Prizes for Vacation Stories

¶ It may be well to repeat for the benefit of those of our readers who have not seen the prize offer in Collier's for July 10, that this weekly will pay one hundred dollars for the best 1,200-word account of a vacation received before October 1. For the second best article fifty dollars will be paid, and for all others that are accepted twenty-five dollars. The articles must be typewritten on one side of the paper only, and must be signed on the first page with the name and address of the sender. Good photographs that illustrate and add interest to the account should be sent as a pictorial accompaniment to the article and will really count a great deal in its favor. On its back every photograph should be described, and the name and address of the sender should also be written. Be sure to send the article and photographs in the same envelope, and do not let your manuscript exceed 1,200 words. Manuscripts and photographs intended for this competition should be addressed to the Vacation Editor, Collier's, 416 West Thirteenth Street, New York City.

As was the case last year, the present competition calls for specific stories of vacations, whether in the mountains, by the sea, on the lake, on the farm, afoot, awheel, in camp, on sailboats, in motor boats, or in automobiles—in fact, in whatever way the vacation was spent. Essays or fiction are not wanted; neither is it necessary for you to tell the whole story of your vacation. Use the twelve hundred words for a description of some part of your vacation, if this seems preferable. The more vividly you put on paper in words and in photographs the sense of joy of the summer's outing the more certainly will the story be of interest to others. Do not send sketches or drawings, these are usually unconvincing; photographs are almost always a reflection of real things.

$75.00 upward for THE BEST

ADVERTISING BULLETIN

NO. 14

THE EFFECT OF ADVERTISING

DID you ever think of the involuntary effect of advertising upon you? Perhaps you have never taken an interest in the advertising columns of the magazines you read; maybe you scarcely glance at them and never really read an advertisement.

Are there not, however, a few names that have unconsciously fixed themselves in your mind? When you go to a grocery store for crackers, don't you ask for a certain brand? If you want breakfast food, what names instantly occur to you? When buying toilet soap, aren't there two or three names that you *can't forget?*

In other lines: Do you wear ready-made clothing? Don't you instinctively have faith in the goods that are known to you through dignified, attractive advertising?

Samuel Hopkins Adams said in one of his recent articles on advertising—"There is a distinctive entertainment value in the best of advertising. Think how much duller your ride to business would be if the car hoardings were blank instead of being filled with color and print." Even the outdoor signs, though we may protest against the disfigurement of the landscape, entertain us and have their effect upon the public mind.

As for magazines, there would be a noticeable loss of news value if the advertising pages were eliminated. They bring the family into closer relation with the world of trade than anything else could do. There are so many ways in which advertising is affecting all of us, to our distinct betterment, be it acknowledged, that we really owe advertisers the most loyal support. And when we have not only their own but the publisher's guarantee of good faith, there is every reason for insisting upon advertised goods.

E. L. Patterson.

Progress

TWO TUNNELS WERE OPENED the other day connecting the little island of Manhattan with the North American mainland. These, with two other tunnels lately completed by the same management, make it possible for the first time, after three hundred years of history, for the people of the rest of the United States to reach the country's greatest city without embarking on a boat. For city and nation both, this increased ease of access means much in spiritual as well as material ways. The city, compact, crowded, and circumscribed by water, could expand in only one direction—upward, in stories piled on stories of office buildings and human homes. On a space of five acres—less than an average farmer's field—on the lower end of the island, every week day in the year, in the single hour between five and six, half a million people place their impedimenta in their pockets and their bags and move away to distances of five to fifty miles. It is as if the entire city of Baltimore, or Washington, or Kansas City, should, in an hour, pack their goods and move twenty miles away. This is the congested spot that the new tunnels tap. With a dozen other tunnels and bridges now building they will transform New York into a normal city which can spread out in wide concentric circles of lawns and gardens, each family on its own piece of ground. The resident of the North American mainland is by these tunnels brought nearer to a marvelous city. On it any given service of hand or brain, from day laborer to banker, is paid for at from two to twenty times the compensation that obtains anywhere else in the world. To the man with money to buy, New York is a bazaar of goods and entertainment more marvelous than was ever pictured in the "Arabian Nights." On any winter evening a man with the money and the taste may take his choice of more than fifty high-class plays, operas, musical and literary entertainments.

Marvels

ON THE SAME DAY the Hudson tunnels were opened a young man on Long Island flew twenty-five miles in a flying-machine. Flew—not floated—in a flying-machine; not a balloon. The gas bags in which men have allowed themselves to be wafted about by the wind are a century old; they have never been much more than toys. The flying-machine with which man subjects the wind to his command and service, going against it or with it as he wills—that is of to-day. The flying-machine of this week is where the automobile was a dozen years ago. Who can picture its final evolution? What man of fifty, whose own life spans the incredible marvel of the telephone, will have the temerity to doubt that with the ultimate flying-machine man can pick up a church and fly away with it? In just these words prophecy is made by the very man who invented the telephone in 1874—himself still living and, through skill and patience, a powerful helper in solving the problem of aerial navigation. Not all the stores of the literature of imagination contain marvels more amazing than are commanded by the humblest day laborer who can buy and read the smallest daily paper which records the history of these passing years.

Harvard's President and Athletics

PRESIDENT ELIOT of Harvard had the gift of saying the right thing on almost every subject, but in criticizing athletics he sometimes seemed curiously to miss an essential fact. Himself a man of robust physique, a varsity oarsman in his day, he yet was so disturbed by the excesses of intercollegiate contests that he sometimes seemed opposed to athletic competition itself. In his own fine sanity and balance he rather lost sight of certain phases of frail human nature; ignored that fourth dimension—the zest of the game—which makes all the difference between mere drudgery and the exhilaration of sport. Dr. ELIOT'S successor seems to be a little closer to the undergraduate point of view. "The mere pleasure of exercise," he says, "soon ceases to suffice, because muscular strength and nervous and moral force can be brought to a high point only by a strenuous exertion that surpasses the bounds of strictly physical enjoyment. To make the most of himself, the boy must put forth an uncomfortable effort, and for this he must have an external stimulus. It is safe to assert that if young people took part in games only so far as they enjoyed the exercise without being affected by ambition or the opinion of their fellows, a large portion of the more strenuous sports, and therewith much valuable training, physical and moral, would be lost. No doubt competition is often carried too far until it has the effect of eliminating all but a few champions of preeminent qualities. But the fact that competition may be carried further than is wise does not prove that it is not valuable as a stimulus, that it is not, indeed, the main factor in the physical development of youth." This is sound talk. The body, as well as the mind, must be forced to do something which seems at the moment uncomfortable in order to attain its highest growth. An athlete learns to run a half-mile in two minutes, not by comfortable jogging 'cross country—superior as that is from the point of view of pleasure and ordinary exercise—but by supreme efforts repeated many times under proper training. Young, growing men need competition and games to force them to make such supreme efforts because, in our civilization, they rarely have the chance to chase their enemies or their dinners, or indulge in the other sports of aborigines. A man of President ELIOT'S intellectual strength and discipline may see through the tediousness of gymnasium exercise to health and strength beyond. The average undergraduate generally needs to be allured by applause and the desire to win.

Credit President Taft with This

IF THERE WERE in the United States a system which should select men in their youth and train them both in scholarship and experience, throughout half a lifetime, for just that kind of diplomacy which is adapted to the international relations of the present day, that institution would occasionally turn out, as its most perfect product in fitness, such an appointment as that of CHARLES R. CRANE to be Minister to China. He is a business man who has handled large affairs with poise and success—and this is rare enough even in a day when nine-tenths of international relations are commercial, while nine-tenths of the men who handle these relations are inexperienced in commerce and regard it with bored disdain. Mr. CRANE knows China well and, quite as important, knows Russia even more. He speaks the languages and knows the customs whose mastery will make him effective. He is a reformer. By his appointment Mr. TAFT pays no political debts and secures alone that kind of political capital which counts but little in votes. So far as high appreciation can go, he should be greatly rewarded.

"Decadence Here and There"

CONCLUDING AN ACCOUNT of the life and works of the late Congressman CUSHMAN, the "Outlook" falls into this state of mind:

> "Such a man is a sign of that vitality which, in spite of decadence here and there, is characteristic of America."

We wish we were sure we understood the intimation which the "Outlook" intends to convey. If it means what it looks like, we think the Contributing Editor will raise the "Outlook" office roof when he sees it.

Charley on His Travels

WE ARE IN RECEIPT of many mimeographed sheets of a kind which, to the experienced editor, carry the idea that many other papers have been similarly favored, and convey a suggestion of the diligent press agent. They contain the speech of the Honorable CHARLES W. FAIRBANKS before the International Press Association of Japan. That part of the speech which seems to us most removed from the platitudes of the Indiana stump, most charged with that emotion whose touch alone turns language into literature, is this:

> "I have some experience in the press. The press is very difficult to control. Some of them are quite stubborn, and, according to my experience, they are very refractory organs."

The Root Case in Washington

MILO A. ROOT was a Justice of the Supreme Court of Washington. In that capacity he filed an opinion in a case in which the plaintiff was a private citizen and the defendant was the Great Northern Railway. The opinion which Judge ROOT filed was written for him by M. J. GORDON, Spokane attorney for the Great Northern Railway. Before being filed it was submitted to and approved by W. R. BEGG, chief counsel for the railway at St. Paul. This episode, giving a new light on the range of corporate corruption, has aroused the State of Washington; beyond the boundaries of the State it has led the public to look with new care at the relations between corporations and courts. Both these effects are wholesome. But to guard against the possibility of a very cruel kind of injustice, it should be borne in mind that

supreme court is no more a single unit than a legislature is. No more in one case than in the other does proved corruption of one member reflect upon the others. Judge ROOT'S act was individual; his associates on the Supreme Bench of Washington had nothing to do with it, and it may be safely presumed that they received the shock of discovering judicial iniquity in their associate with surprise and indignation even greater than the public's.

Raw Material of the Race

THE PARENT OF POSITION, who puts every possible shield of circumstance about his boys, keeping them from contact with the world and laboring to make their future comfortable, may occasionally achieve security against temptation at the cost of developing moral resistance and strength of fiber generally. He is prone, in the goodness of his heart, to think with sharp compassion of children who are not so safeguarded. These unprotected boys are not always in so bad a case as might at first appear. The report of the Education Committee of the London County Council, recently published, indicates that children who, early in life, come before magistrates and are committed to industrial schools, as a rule prosper and grow up to be successful, worthy citizens, whereas hordes of well-behaved boys settle down into colorless lives, exercise little initiative, and are more or less dead timber, so far as any value to the community is concerned. Isn't it a common impression that the sons of ministers grow up to be rakes, and that boys nourished by kicks and cuffs make strong men? This interesting report gives a list of forty-two boys once considered incorrigible, who now are successful citizens. This is reassuring to those whose money, effort, and influence are expended upon such institutions as the vacation schools, the juvenile courts, the "little republics," and the fresh-air holidays. The children of misfortune, tempered by resistance, have potentialities that can not be estimated. They are the raw material of the race, and hardly any amount of labor in behalf of them may be considered inordinate.

One Corner of Romance

FROM OVERSEA comes word that the house wreckers are at work upon the Quartier Latin. Six months from now not a hint of the alluring twist of ancient streets will be left to remind the Parisian or foreign visitor where genius throbbed and mediocrity masked itself in an elation so fine that none might know it for what it was. The dark, historied rooms are to give way to bright and sanitary apartments looking upon broad streets; all will be clean, obvious, up-to-date. The shades of Mimi and Musette, wandering by the light of that bland moon which shines upon the chestnuts of Paris, will be twice bereft, and a second time will encounter death. Rodolph, Benoit, Schaunard, and Jacques—who "was buried somewhere"—may as well keep them in their last narrow beds, for their buoyant and excursive spirits will recognize nothing of their old retreats! There will be no welcome for Mareel, no greeting for Little Billee, no place of shelter for the happily vagrant "Child of the Century!" Who will know where ABELARD walked, or guess where VILLON skulked? Who say where XAVIER taught or little good Ste. GENEVIÈVE went her sweet way? However, the dead are dead, whether they be the creation of GOD or man, and the streets of Paris ought to be for living Parisians. Let sunlight pierce the dark old lanes and streets; let modern rooms replace the sodden chambers and attics. They may make no appeal to the imagination, but they are excellent for health of body and nimbleness of mind. As for genius, it needs no "atmosphere," as good wine needs no bush.

Woodland Imaginings

OF CUVIER IT WAS SAID that he could reconstruct any extinct creature, entire, give him but "a rag and a bone and a hank of hair" from the original. A modern Cuvier makes himself known through the columns of the London "Globe." From the mere sound of a name he predicates confidently the habitat and haunts of wild American creatures which he has met with only in print. Describing the country home of a distinguished American, himself a fervid and occasionally emphatic naturalist, he writes:

"The chipmunk and the woodchuck dart to and fro among the woodpiles."

The method has a sweet simplicity. From the woodpile the scientific mind deduces chips, and from the chips, chipmunks. As for the woodchuck, the connection is obvious. It recalls to mind that time-honored saw of the crossroads grocery:

"How much wood would a woodchuck chuck,
If a woodchuck would chuck wood?"

How fascinating and improved a system of natural history could be built up on this basis! Behold a new and logical world of the wild, wherein every creature lives strictly up to the requirements of its name; where the startled fawn flees, shrieking, from the winged onset of the killdee plover; where the grasshopper sparrow leaps from verdurous blade to verdurous blade, rubbing its hind legs together in an ecstasy of song; where the strawberry bass leaves its watery haunts and clambers painfully into the garden patch, seeking its favorite food, only to be attacked and skinned alive by the scale beetle; and where, true as the polecat to the pole, the patient nuthatch, undismayed by years of disappointment and failure, steadfastly sets beneath the tree striving to bring forth its long-awaited brood from the fruit of the thankless chincapin and the unresponsive hickory.

On the Big Road

ONE THINKS OF ROADS mostly in connection with adventure. The very name suggests encounters with bandits, coaching incidents in which beautiful ladies figure, pursuits, alarms, elopements, the chapter ending in a toby of mulled ale around the fireside at the sign of the Black Lion, where the landlord's daughter is a buxom lass. At least, that was the order on the English roads in the days of the Georges, and most of the good old stories are road stories. . . . "It was on the Great Northern road from York to London, about the beginning of the month of October, and the hour of eight in the evening, that four travelers were . . . driven for shelter into a little public-house on the side of a highway." Could anything—even "once upon a time"—be more auspicious? Ah, the great North road, SMOLLETT himself had fared over it, seeking his fortune, to London. Rory Random and his friend Strap had come by the same route, their money sewed between the lining and waistband of their breeches, and had fallen in with the pedler and the formidable desperado. Such roads, if they do not lead to Rome, lead to some other golden city. One can imagine that Crusaders once traveled over these highways, and that soldiers had come straggling home from war. The businesslike aspect of the open road never fails to impress. It has none of the turnings of the byways or the brambly paths, but forges on, "speeding you along with a strange uplifting of the heart." Now it takes a sudden dip, and on the other side of the valley you can see teams crawling perpendicularly upward, like ants. Like a broad river it seems to flow onward to far-away cities by the sea. It carries you through darksome forests, the abode of owls; it broadens into the market street of a country town. If the road chances to be a pike with toll-gates, you will see frosty old men hobbling out to collect their tribute. You are liable at any time to meet a gypsy band, a pedler with his wares, or a traveling photograph gallery. 'Twas always on the "big road" in the Uncle Remus stories that things happened, and Brer Rabbit waited for Brer Fox with the wonderful "Tar baby." . . . In some Spanish colonies they have the proper appreciation for roads expressed in naming them. To set out over the "Calle de Paz y Bien Viaje"—the Street of Peace and a Good Journey—is like being speeded on the way by a kind host.

Villon

He Still Complaineth of His Piteous Plight

By EDWIN MARKHAM

HERE am I in a piteous plight,
Driven and dour in a hell, pardee;
For I slipt and fell in the mortal fight:
I was one, but the Fates were three!

I LIVED the life of the kites and crows
Up in the boughs of a tossing tree;
And went to the wind as a dead leaf goes:
I was one, but the Fates were three!

HERE are Lais and Lesbia, too,
Ladies that once were the world to me.
Now they are less than the foam that flew:
A man is one, but the Fates are three!

Advice Gratis

WITH TOUCHING FAITH in editorial omniscience, a troubled householder of Newark, New Jersey, asks one of our esteemed contemporaries how to get rid of an escaped tarantula. If the "Times" can not answer the query, up goes our editorial hand, signaling eruptive wisdom below. We know a baker's dozen of ways to delete a tarantula, from turning on the gas while he is asleep, to mowing his legs off with a scythe, and handing the harmless remnant over to the appreciative chickens. But, after all, why exhibit a spirit of destructive criticism toward the guest of the cellar? Certain defects may be, it is true, alleged against him. He has long, unkempt hair, a low forehead, and unpleasantly piercing eyes. These be but surface blemishes, the marks of the ugly but beneficent sprite who is an acquisition to any household. His tigerish leap means death to many a fly, each victim far more perilous to the welfare of the household than is the grisly and far-traveled spider himself. He will feed and fatten upon the loathly water-bug and the nauseous roach. It may be that, by virtue of his horrific aspect, he will even scare that bugaboo of madame, the local mouse, away from the premises. He will do no harm to any reputable member of society. His evil reputation is mainly the terror of a name and of superfluous and sprangly legs. Let the Jerseyman be wise and leave his tarantula in peace. Soon enough will come the nipping airs of November to pierce through his shaggy but insufficient tropic coat and clog up his air-tubes with whatever form of influenza the Arachnidæ succumb to. Or, failing that, the genius of the kitchen, descended from the Great Exorciser, St. PATRICK, will one day terminate the humble, timorous, but serviceable career of the exile with a determined and flat-footed scrunch.

"Was it you," demanded young Andrews in a puzzled tone, "or your brother who tried to knife me?"

A Wasted Day

The Wisest Man in Wall Street, and His Call at the Criminal Court

Illustrated by
HENRY RALEIGH

By RICHARD HARDING DAVIS

WHEN its turn came, the private secretary, somewhat apologetically, laid the letter in front of the Wisest Man in Wall Street.

"From Mrs. Austin, probation officer, Court of General Sessions," he explained. "Wants a letter about Spear. He's been convicted of theft. Comes up for sentence Tuesday."

"Spear?" repeated Arnold Thorndike.

"Young fellow, stenographer, used to do your letters last summer going in and out on the train."

The great man nodded. "I remember. What about him?"

The habitual gloom of the private secretary was lightened by a grin.

"Went on the loose; had with him about five hundred dollars belonging to the firm; he's with Isaacs & Sons, now, shoe people on Sixth Avenue. Met a woman, and woke up without the money. The next morning he offered to make good, but Isaacs called in a policeman. When they looked into it, they found the boy had been drunk. They tried to withdraw the charge, but he'd been committed. Now, the probation officer is trying to get the judge to suspend sentence. A letter from you, sir, would—"

It was evident the mind of the great man was elsewhere. Young men who, drunk or sober, spent the firm's money on women who disappeared before sunrise, did not appeal to him. Another letter submitted that morning had come from his art agent in Europe. In Florence he had discovered the Correggio he had been sent to find. It was undoubtedly genuine, and he asked to be instructed by cable. The price was $40,000. With one eye closed, and the other keenly regarding the inkstand, Mr. Thorndike decided to pay the price; and with the facility of long practise dismissed the Correggio, and snapped his mind back to the present.

"Spear had a letter from us when he left, didn't he?" he asked. "What he has developed into, *since* he left us—" he shrugged his shoulders. The secretary withdrew the letter, and slipped another in its place.

"Homer Firth, the landscape man," he chanted, "wants permission to use blue flint on the new road, with turf gutters and to plant silver firs each side. Says it will run to about five thousand dollars a mile."

"No!" protested the great man firmly, "blue flint makes a country place look like a cemetery. Mine looks too much like a cemetery now. Landscape gardeners!" he exclaimed impatiently. "Their only idea is to insult nature. The place was better the day I bought it, when it was running wild; you could pick flowers all the way to the gates." Pleased that it should have recurred to him, the great man smiled. "Why, Spear," he exclaimed, "always took in a bunch of them for his mother. Don't you remember, we used to see him before breakfast wandering around the grounds picking flowers?" Mr. Thorndike nodded briskly. "I like his taking flowers to his mother."

"He *said* it was to his mother," suggested the secretary gloomily.

"Well, he picked the flowers, anyway," laughed Mr. Thorndike. "He didn't pick our pockets. And he had the run of the house, in those days. As far as we know," he dictated, "he was satisfactory. Don't say more than that."

The secretary scribbled a mark with his pencil. "And the landscape man?"

"Tell him," commanded Thorndike, "I want a wood road, suitable to a farm; and to let the trees grow where God planted them."

As his car slid downtown on Tuesday morning the mind of Arnold Thorndike was occupied with such details of daily routine as the purchase of a railroad, the Japanese loan, the new wing to his art gallery, and an attack that morning, in his own newspaper, upon his pet trust. But his busy mind was not too occupied to return the salutes of the traffic policemen who cleared the way for him. Or, by some genius of memory, to recall the fact that it was on this morning young Spear was to be sentenced for theft. It was a charming morning. The spring was at full tide, and the air was sweet and clean. Mr. Thorndike considered whimsically that to send a man to jail with the memory of such a morning clinging to him, was adding a year to his sentence. He regretted he had not given the probation officer a stronger letter. He remembered the young man now, and favorably. A shy, silent youth, deft in work, and at other times conscious and embarrassed. But that, on the part of a stenographer, in the presence of the Wisest Man of Wall Street, was not unnatural. On occasions, Mr. Thorndike had put even royalty—frayed, impecunious royalty, on the lookout for a loan—at its ease.

The hood of the car was down, and the taste of the air, warmed by the sun, was grateful. It was at this time, a year before, that young Spear picked the spring flowers to take to his mother. A year from now where would young Spear be?

It was characteristic of the great man to act quickly, so quickly, that his friends declared he was a slave to impulse. It was these same impulses, leading so invariably to success, that made his enemies call him the Wisest Man. He leaned forward and touched the chauffeur's shoulder. "Stop at the Court of General Sessions," he commanded. What he proposed to do would take but a few minutes. A word, a personal word from him to the District Attorney, or to the judge, would be enough. He recalled that a Sunday Special had once calculated that the working time of Arnold Thorndike brought him in two hundred dollars a minute. At that rate, keeping Spear out of prison would cost a thousand dollars.

OUT of the sunshine Mr. Thorndike stepped into the gloom of an echoing rotunda, shut in on every side, hung by balconies, lit, many stories overhead, by a dirty skylight. The place was damp, the air acrid with the smell of stale tobacco juice, and foul with the presence of many unwashed humans. A policeman, chewing stolidly, nodded toward an elevator shaft, and other policemen nodded him further on to the office of the District Attorney. There Arnold Thorndike breathed more freely. He was again among his own people. He could not help but appreciate the dramatic qualities of the situation; that the richest man in Wall Street should appear in person to plead for a humble and weaker brother. He knew he could not escape recognition, his face was too well known, but, he trusted, for the sake of Spear, the reporters would make no display of his visit. With a deprecatory laugh, he explained why he had come. But the outburst of approbation he had anticipated did not follow.

The District Attorney ran his finger briskly down a printed card. "Henry Spear," he exclaimed, "that's your man. Court III, Judge Fallon. Andrews is in that court." He walked to the door of his private office. "Andrews!" he called.

He introduced an alert, broad-shouldered young man of years of much indiscretion, and with a charming and inconsequent manner.

"Mr. Thorndike is interested in Henry Spear, coming up for sentence in Part Three this morning. Wants to speak for him. Take him over with you."

The District Attorney shook hands quickly, and retreated to his private office. Mr. Andrews took out a cigarette and, as he crossed the floor, lit it.

"Come with me," he commanded. Somewhat puzzled, slightly annoyed, but enjoying withal the novelty of the environment and the curtness of his re[illegible]. Mr.

Thorndike followed. He decided that, in his ignorance, he had wasted his own time and that of the prosecuting attorney. He should at once have sent in his card to the judge. As he understood it, Mr. Andrews was now conducting him to that dignitary, and, in a moment, he would be free to return to his own affairs which were the affairs of two continents. But Mr. Andrews led him to an office, bare and small, and offered him a chair, and handed him a morning newspaper. There were people waiting in the room: strange people, only like those Mr. Thorndike had seen on ferryboats. They leaned forward toward young Mr. Andrews, fawning, their eyes wide with apprehension.

Mr. Thorndike refused the newspaper. "I thought I was going to see the Judge," he suggested.

"Court doesn't open for a few minutes yet," said the assistant district attorney. "Judge is always late, anyway."

Mr. Thorndike suppressed an exclamation. He wanted to protest, but his clear mind showed him that there was nothing against which, with reason, he could protest. He could not complain because these people were not apparently aware of the sacrifice he was making. He had come among them to perform a kindly act. He recognized that he must not stultify it by a show of irritation. He had precipitated himself into a game of which he did not know the rules. That was all. Next time he would know better. Next time he would send a clerk. But, he was not without a sense of humor, and the situation as it now was forced upon him, struck him as amusing. He laughed good-naturedly, and reached for the desk telephone.

"May I use this?" he asked. He spoke to the Wall Street office. He explained he would be a few minutes late. He directed what should be done if the market opened in a certain way. He gave rapid orders on many different matters, asked to have read to him a cablegram he expected from Petersburg, and one from Vienna.

"They answer each other," was his final instruction. "It looks like peace."

Mr. Andrews with genial patience had remained silent. Now, he turned upon his visitors. A Levantine, burly, unshaven and soiled, towered truculently above him. Young Mr. Andrews with his swivel chair tilted back, his hands clasped behind his head, his cigarette hanging from his lips, regarded the man dispassionately.

"You gotta hell of a nerve to come to see me," he commented cheerfully. To Mr. Thorndike, the form of greeting was novel. So greatly did it differ from the procedure of his own office, that he listened with interest.

"Was it you," demanded young Andrews, in a puzzled tone, "or your brother who tried to knife me?"

MR. THORNDIKE, unaccustomed to cross the pavement to his office unless escorted by bank messengers and plain-clothes men, felt the room growing rapidly smaller, the figure of the truculent Greek loomed to heroic proportions. The hand of the banker went vaguely to his chin, and from there fell to his pearl pin, which he hastily covered.

"Get out!" said young Andrews, "and don't show your face here—"

The door slammed upon the flying Greek. Young Andrews swung his swivel chair so that, over his shoulder, he could see Mr. Thorndike. "I don't like his face," he explained.

A kindly eyed, sad woman with a basket on her knee smiled upon Andrews with the familiarity of an old acquaintance.

"Is that woman going to get a divorce from my son," she asked, "now that he's in trouble?"

"Now that he's in Sing Sing?" corrected Mr. Andrews. "I *hope* so! She deserves it. That son of yours, Mrs. Bernard," he declared emphatically, "is no good!"

The brutality shocked Mr. Thorndike. For the woman he felt a thrill of sympathy, but at once saw that it was superfluous. From the secure and lofty heights of motherhood, Mrs. Bernard smiled down upon the assistant district attorney as upon a naughty child. She did not even deign a protest. She continued merely to smile. The smile reminded Thorndike of the smile on the face of a mother in a painting by Murillo he had lately presented to the chapel in the college he had given to his native town.

"That son of yours," repeated young Andrews, "is a leech. He's robbed you, robbed his wife. Best thing I ever did for *you* was to send him up the river."

The mother smiled upon him beseechingly.

"Could you give me a pass?" she said.

Young Andrews flung up his hands, and appealed to Thorndike.

"Isn't that just like a mother?" he protested. "That son of hers has broken her heart, tramped on her, cheated her; hasn't left her a cent; and she comes to me for a pass, so she can kiss him through the bars! And, I'll bet she's got a cake for him in that basket!"

The mother laughed happily; she knew now she would get the pass.

"Mothers," explained Mr. Andrews, from the depth of his wisdom, "are all like that; your mother, my mother. If you went to jail, your mother would be just like that."

Mr. Thorndike bowed his head politely. He had never considered going to jail, or, whether, if he did, his mother would bring him cake in a basket. Apparently there were many aspects and accidents of life not included in his experience.

Young Andrews sprang to his feet, and, with the force of a hose flushing a gutter, swept his soiled visitors into the hall.

"Come on," he called to the Wisest Man, "the court is open."

IN THE corridors were many people, and with his eyes on the broad shoulders of the assistant district attorney, Thorndike pushed his way through them. The people who blocked his progress were of the class unknown to him. Their looks were anxious, furtive, miserable. They stood in little groups, listening eagerly to a sharp-faced lawyer, or, in sullen despair, eying each other. At a door a tipstaff laid his hand roughly on the arm of Mr. Thorndike.

"That's all right, Joe," called young Mr. Andrews, "he's with *me*." They entered the court, and passed down an aisle to a railed enclosure in which were high oak chairs. Again, in his effort to follow, Mr. Thorndike was halted, but the first tipstaff came to his rescue. "All right," he signaled, "he's with Mr. Andrews."

Mr. Andrews pointed to one of the oak chairs. "You sit there," he commanded, "it's reserved for members of the bar, but it's all right. You're with *me*."

Distinctly annoyed, slightly bewildered, the banker sank between the arms of a chair. He felt he had lost his individuality. Andrews had become his sponsor. Because of Andrews he was tolerated. Because Andrews had a pull, he was permitted to sit as an equal among police-court lawyers. No longer was he Arnold Thorndike. He was merely the man "with Mr. Andrews."

Then even Andrews abandoned him. "The judge'll be here in a minute, now," said the assistant district attorney, and went inside a railed enclosure in front of the judge's bench. There he greeted another assistant district attorney whose years were those of even greater indiscretion than the years of Mr. Andrews. Seated on the rail, with their hands in their pockets and their backs turned to Mr. Thorndike, they laughed and talked together. The subject of their discourse was one Mike Donlin, as he appeared in vaudeville.

To Mr. Thorndike it was evident that young Andrews had entirely forgotten him. He arose, and touched his sleeve. With infinite sarcasm Mr. Thorndike began: "My engagements are not pressing, but—"

A court attendant beat with his palm upon the rail.

"Sit down!" whispered Andrews. "The judge is coming."

Mr. Thorndike sat down.

The court attendant droned loudly words Mr. Thorndike could not distinguish. There was a rustle of silk, and from a door behind him the judge stalked past. He was a young man, the type of the Tammany politician. On his shrewd, alert, Irish-American features was an expression of unnatural gloom. With a smile, Mr. Thorndike observed that it was as little suited to the countenance of the young judge as was the robe to his shoulders. Mr. Thorndike was still smiling when young Andrews leaned over the rail.

For a moment Mr. Thorndike stood irresolute and then sank back into his chair

"Stand up!" he hissed. Mr. Thorndike stood up.

After the court attendant had uttered more unintelligible words, every one sat down; and the financier again moved hurriedly to the rail.

"I would like to speak to him now before he begins," he whispered. "I can't wait."

Mr. Andrews stared in amazement. The banker had not believed the young man could look so serious.

"Speak to him, *now!*" exclaimed the district attorney. "You've got to wait till your man comes up. If you speak to the judge, *now*—" The voice of Andrews faded away in horror.

Not knowing in what way he had offended, but convinced that it was only by the grace of Andrews he had escaped a dungeon, Mr. Thorndike retreated to his armchair.

THE clock on the wall showed him that, already, he had given to young Spear one hour and a quarter. The idea was preposterous. No one better than himself knew what his time was really worth. In half an hour there was a board meeting; later, he was to hold a post mortem on a railroad; at every moment questions were being asked by telegraph, by cable, questions that involved the credit of individuals, of firms, of even the country. And the one man who could answer them was risking untold sums only that he might say a good word for an idle apprentice. Inside the railed enclosure a lawyer was reading a typewritten speech. He assured his honor that he must have more time to prepare his case. It was one of immense importance. The name of a most respectable business house was involved, and a sum of no less than nine hundred dollars. Nine hundred dollars! The contrast struck Mr. Thorndike's sense of humor full in the center. Unknowingly, he laughed, and found himself as conspicuous as though he had appeared suddenly in his night clothes. The tipstaff's beat upon the rail, the lawyer he had interrupted uttered an indignant exclamation. Andrews came hurriedly toward him, and the young judge slowly turned his head.

"Those persons," he said, "who can not respect the dignity of this court will leave it." As he spoke, with his eyes fixed on those of Mr. Thorndike, the latter saw that the young judge had suddenly recognized him. But the fact of his identity did not cause the frown to relax, or the rebuke to halt unuttered. In even, icy tones, the judge continued: "And it is well they should remember that the law is no respecter of persons and that the dignity of this court will be enforced, no matter who the offender may happen to be."

Andrews slipped into the chair beside Mr. Thorndike, and grinned sympathetically.

"Sorry!" he whispered. "Should have warned you. We won't be long, now," he added encouragingly. "As soon as this fellow finishes his argument, the judge'll take up the sentences. Your man seems to have other friends; Isaacs and Son are here, and the typewriter firm who taught him; but what *you* say will help most. It won't be more than a couple of hours now."

"A couple of hours!" Mr. Thorndike raged inwardly. A couple of hours in this place where he had been publicly humiliated. He smiled, a thin shark-like smile. Those who made it their business to study his expressions, on seeing it, would have fled. Young Andrews, not being acquainted with the moods of the great man, added cheerfully: "By one o'clock anyway."

Mr. Thorndike began grimly to pull on his gloves. For all he cared now young Spears could go hang. Andrews nudged his elbow.

"See that old lady in the front row?" he whispered. "That's Mrs. Spears. What did I tell you; mothers are all alike. She's not taken her eyes off you since court opened. She knows you're her one best bet."

Impatiently Mr. Thorndike raised his head. He saw a little, white-haired woman who stared at him. In her eyes was the same look he had seen in the eyes of men who, at times of panic, fled to him, beseeching, entreating, forcing upon him what was left of the wreck of their fortunes, if only he would save their honor.

"And here come the prisoners," Andrews whispered. "See Spear? Third man from the last."

ALONG line, guarded in front and rear, shuffled into the court-room, and, as ordered, ranged themselves against the wall. Among them were old men and young boys, well dressed, clever-looking rascals, collarless tramps, fierce-eyed aliens, smooth-shaven, thin-lipped Broadwayards—and Spear.

Spear, with head hanging, with lips white and cheeks ashen, and his eyes heavy with shame.

Mr. Thorndike had risen, and, in farewell, was holding out his hand to Andrews. He turned, and across the court-room the eyes of the financier and the stenographer met. At the sight of the great man, Spear flushed crimson, and then his look of despair slowly disappeared; and into his eyes there came incredulously hope and gratitude. He turned his head suddenly to the wall.

Mr. Thorndike stood irresolute, and then sank back into his chair.

The first man in the line was already at the railing, and the questions put to him by the judge were being repeated to him by the other assistant district attorney, and a court attendant. His muttered answers were in turn repeated to the judge.

"Says he's married, naturalized citizen, Lutheran Church, die-cutter by profession."

The probation officer, her hands filled with papers, bustled forward and whispered.

"Mrs. Austin says," continued the district attorney, "she's looked into this case, and asks to have the man turned over to her. He has a wife and three children; has supported them for five years."

"Is the wife in court?" the judge said.

A thin, washed-out, pretty woman stood up, and clasped her hands in front of her.

"Has this man been a good husband to you, madam?" asked the young judge.

The woman broke into vehement assurances. No man could have been a better husband. Would she take him back? Indeed she would take him back. She held out her hands as though she would physically drag her husband from the pillory.

The judge bowed toward the probation officer, and she beckoned the prisoner to her.

Other men followed, and in the fortune of each Mr. Thorndike found himself, to his surprise, taking a personal interest. It was as good as a play. It reminded him of the Sicilians he had seen in London in their little sordid tragedies. Only these actors were appearing in their proper persons in real dramas of a life he did not know, but which appealed to something that had been long untouched, long in disuse. It was an uncomfortable sensation that left him restless because, as he appreciated, it needed expression, an outlet. He found this, partially, in praising, through Andrews, the young judge who had publicly rebuked him. Mr. Thorndike found

him astute, sane; his queries intelligent, his comments just. And this probation officer, she, too, was capable, was she not? Smiling at his interest in what to him was an old story, the younger man nodded.

"I like her looks," whispered the great man. "Like her clear eyes and clean skin. She strikes me as able, full of energy, and yet womanly. These men when they come under her charge," he insisted, eagerly, "need money to start again, don't they?" He spoke anxiously. He believed he had found the clue to his restlessness. It was a desire to help; to be of use to these failures who had fallen and who were being lifted to their feet. Andrews looked at him curiously. "Anything you give her," he answered, "would be well invested."

"If you will tell me her name and address?" whispered the banker. He was much given to charity, but it had been perfunctory, it was extended on the advice of his secretary. In helping here, he felt a genial glow of personal pleasure. It was much more satisfactory than giving an Old Master to his private chapel.

In the rear of the court-room there was a scuffle that caused every one to turn and look. A man, who had tried to force his way past the tipstaffs, was being violently ejected, and as he disappeared, he waved a paper toward Mr. Thorndike. The banker recognized him as his chief clerk. Andrews rose anxiously. "That man wanted to get to you. I'll see what it is. Maybe it's important."

Mr. Thorndike pulled him back.

"Maybe it is," he said dryly. "But I can't see him now. I'm busy."

SLOWLY the long line of derelicts, of birds of prey, of sorry, weak failures, passed before the seat of judgment. Mr. Thorndike had moved into a chair nearer to the rail, and from time to time made a note upon the back of an envelope. He had forgotten the time or had chosen to disregard it. So great was his interest that he had forgotten the particular derelict he had come to serve, until Spear stood almost at his elbow.

Thorndike turned eagerly to the judge, and saw that he was listening to a rotund, gray little man with beady, bird-like eyes who, as he talked, bowed and gesticulated. Behind him stood a younger man, a more modern edition of the other. He also bowed, and behind gold eyeglasses, smiled ingratiatingly.

The judge nodded, and leaning forward, for a few moments fixed his eyes upon the prisoner.

"You are a very fortunate young man," he said. He laid his hand upon a pile of letters. "When you were your own worst friend, your real friends came to help you. These letters speak for you; your employers, whom you robbed, have pleaded with me in your favor. It is urged in your behalf, that at the time you committed the crime for which you are found guilty, you were intoxicated. In the eyes of the law, that is no excuse. Some men can drink and keep their senses. It appears you can not. When you drink you are a menace to yourself —and, as is shown by this crime, to the community. Therefore, you must not drink. In view of the good character to which your friends have testified, and on the condition that you do not touch liquor, I will not sentence you to jail, but will place you in charge of the probation officer."

The judge leaned back in his chair, and beckoned to Mr. Andrews. It was finished. Spear was free, and from different parts of the court-room people were moving toward the door. Their numbers showed that the friends of the young man had been many. Mr. Thorndike felt a certain twinge of disappointment. Even though the result relieved and delighted him, he wished in bringing it about, he had had some part.

He begrudged to Isaacs and Son the pleasure of having given Spear his liberty. His morning had been wasted. He had neglected his own interests, and in no way assisted those of Spear. He was moving out of the railed enclosure when Andrews called him by name.

"His honor," he said impressively, "wishes to speak to you."

The judge leaned over his desk and shook Mr. Thorndike by the hand. Then he made a speech. The speech was about public-spirited citizens who, to the neglect of their own interests, came to assist the ends of justice, and fellow creatures in misfortune. He purposely spoke in a loud voice, and every one stopped to listen.

"The law, Mr. Thorndike, is not vindictive," he said. "It wishes only to be just. Nor can it be swayed by wealth or political or social influences. But, when there is good in a man, I, personally, want to know it, and when gentlemen like yourself, of your standing in this city, come here to speak a good word for a man, we would stultify the purpose of justice if we did not listen. I thank you for coming, and I wish more of our citizens were as unselfish and public-spirited."

It was all quite absurd and most embarrassing, but inwardly Mr. Thorndike glowed with pleasure. It was a long time since any one had had the audacity to tell him he had done well. From the friends of Spear there was a ripple of applause, which no tipstaff took it upon himself to suppress, and to the accompaniment of [illegible] Mr. Thorndike walked to the corridor. He was pleased with himself, and with his fellow men. He shook hands with Isaacs and Son, and congratulated them upon their public spirit, and the typewriter firm upon their [illegible] spirit. And then he saw Spear standing apart regarding him doubtfully.

Spear did not offer his hand, but Mr. Thorndike took it, and shook it, and said: "I want to meet your mother."

And when Mrs. Spear tried to stop sobbing long enough to tell him how happy she was, and how grateful, he instead told her what a fine son she had, and that he remembered when Spear used to carry flowers to town for her. And she remembered it, too, and thanked him for the flowers. And he told Spear, when Isaacs and Son went bankrupt, which at the rate they were giving away their money to the Hebrew Hospital would be very soon, Spear must come back to him. And Isaacs and Son were delighted at the great man's pleasantry and afterward repeated it many times, calling upon each other to bear witness, and Spear felt as though some one had given him a new backbone, and Andrews, who was guiding him out of the building, was thinking to himself what a great confidence man had been lost when Thorndike became a banker.

THE chief clerk and two bank messengers were waiting by the automobile with written calls for help from the office. They pounced upon the banker and almost lifted him into the car.

"There's still time!" panted the chief clerk.

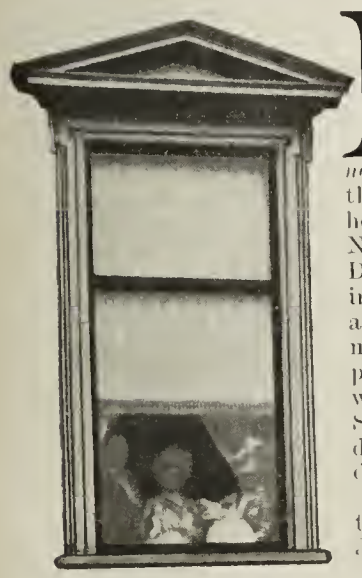
"There is not!" answered Mr. Thorndike. His tone was rebellious, defiant. It carried all the authority of a spoiled child of fortune. "I've wasted most of this day," he declared, "and I intend to waste the rest of it. Andrews," he called, "jump in, and I'll give you a lunch at Sherry's."

The vigilant protector of the public dashed back into the building.

"Wait till I get my hat!" he called.

As the two truants rolled up the Avenue the spring sunshine warmed them, the sense of duties neglected added zest to their holiday, and young Mr. Andrews laughed aloud.

Mr. Thorndike raised his eyebrows inquiringly.



"I was wondering," said Andrews, "how much it cost you to keep Spear out of jail?"

"I don't care," said the great man, guiltily, "it was worth it."

Little Juliana of Holland

The Royal Infant Whose Birth Becomes the National Defense of the Netherlands

By FREDERICK PALMER

The Queen, the Prince, and the Queen-Mother, who is holding the baby

LITTLE JULIANA, who is now old enough to have her photograph taken, is the greatest *Dreadnought* of them all, under the direction of Queen Wilhelmina as Secretary of the Navy, with a nurse in a Dutch head-dress as admiral in immediate command. All armed in eiderdown, you may see her cruising any pleasant day in The Hague, which is the home of peace. She is the cheapest, most delightful policy of national defense in the world.

William the Silent raised the siege of Leyden and Juliana raised the siege of the stork. Her birth was like the gift of squadrons, armies, and forts overnight by magic. For the Germans had begun to call the Dutch blood brothers, which the big fish, if he were polite, might say to the little fish before swallowing him. "Don't we belong to the same mother stock of Rhenish tribes?" asked the Germans, trying to be most agreeable. "How can we?" answered the Hollanders, bruskly. "We are the Dutch"—which is the way the Dutch feel about everything.

The Kaiser's eye was on the port of Rotterdam, right under England's fifth rib; on a frontier line which would let him catch the French army in a wedge; on Java and all the rich Dutch colonies. The Dutch knew it was, because he denied any selfish aims of the sort and talked so blandly of the mother stock. Any suggestion of actual German aggression would call the Powers to arms. But what that terrible Prussian—if you would know really how wicked he is read the British newspapers—can not accomplish in one way, he will in another. Europe, which in the name of the *status quo* and the delicate balance of power holds as the cardinal article of faith the royal rules of descent, could not object if this technicality slipped a German prince on the Dutch throne after Wilhelmina.

Prince Henry of Reuss was next in line. In Germany princes are born with such frequency that the "Almanach de Gotha" will soon have to be published in two volumes to accommodate their names and pedigrees. Nothing was so rare in Holland as royal births. One little red lump of humanity, certified and labeled, according to custom, by a premier as being of the royal Orange brand, would close the door to the Germans. It was the more exasperating because the Dutch themselves have such large families. Babies thrive like tulips in Holland.

Thus, throughout the years from Wilhelmina's babyhood to maturity, the Dutch saw their kingdom hanging by the thread of one life. She was the last of the House of Orange, and the only reason the Dutch, who are real republicans, have for royalty at all is that theirs is of the superior Dutch brand, and royalty is the fashion for neutrals, approved by the Powers. After her marriage they lived through harassed years of false alarms. They heard the stork knocking, but when the chamberlains rushed to the door with satin-lined cradles, he had gone.

An heir seemed out of the question when the word was passed which made all the wooden shoes clatter with hope, and with fear as well. What if they should lose their Queen and gain no prince or princess? The States-General did the best it could under the law. It arranged that if the mother should die, Prince Henry, who is a German, would not have the guardianship of the child—a pleasant reminder to the consort of his purely technical position.

A postcard which was widely circulated throughout Holland as a souvenir of the event

The heralds of The Hague proclaiming the news of the birth

In the days of suspense preceding the event, when I happened to be in Holland, one saw a whole nation on the verge of paternity. A young married man, expecting news over the telephone any minute as he works abstractedly at his desk, expressed the feeling of all the Dutch. The needles of the women and girls, knitting wool socks to go in wooden shoes when the icy wind blows and the skates ring over the canals, in their nervous elation must have clicked out an oversupply for the coming winter. They did not drop any stitches, however. Any such intimation is a slander on Dutch feminine character, which William the Silent would rise from his grave to resent.

Jan might remark that his good vrouw had presented him with another, but not until after he had asked: "How is the Queen? Any news?" After Juliana came, no one said: "I wish it was a boy!" Such ungraciousness might have offended that

The carriage of state, in which the little Princess was carried to Willemskerk

coy stork and made him fly away with the bundle. Boy or girl, Holland had won. 'Twas a famous victory. The doctors in attendance are enshrined in the national pantheon beside Admirals Van Tromp and De Ruyter.

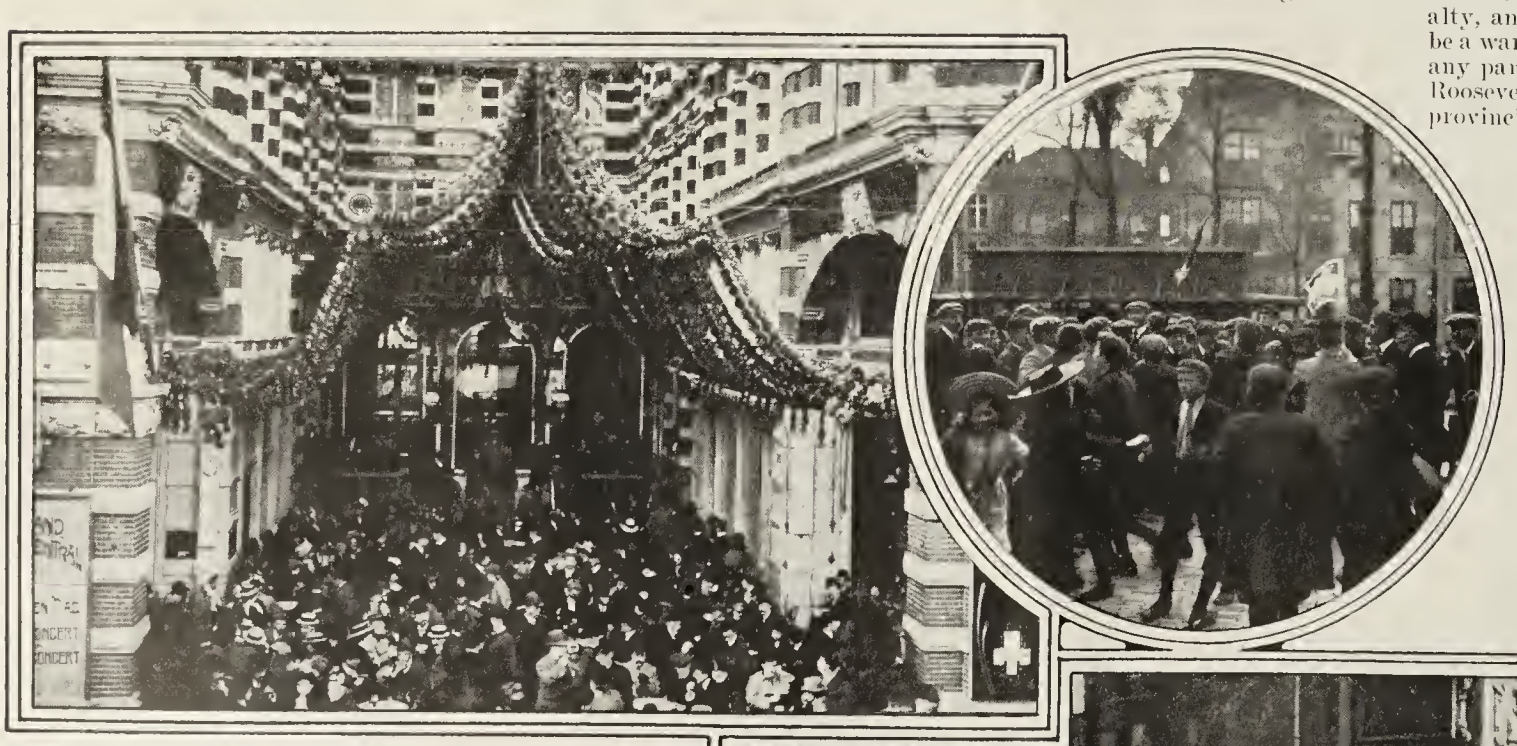
The Dutch did not go into the transports of the French when the King of Rome came to Papa Bonaparte, for they are not a mercurial people. But they gave the best imitation of excitement of which they are capable. Serene old burghers of The Hague drank champagne for breakfast; vrouws stopped knitting and put on their head-dresses, starched for the occasion; the blooming tulip beds made garlands for the picking; the supply of gin held out along the banks of all the canals, and it is said that the portrait of himself by Rembrandt in the Ryks Museum nodded.

From all parts of that little country, so small that if a resident wished to be a commuter in our sense he would have to sleep in Germany or Belgium, pilgrimages are made for one glimpse of the marvelous child. Old ladies are always authorities on family resemblance. Dutch grandmothers, with their barrel-like bundles of skirts and tight head-dresses at the apex of the pyramid, return to their villages, saying: "She's not a bit like her father. She's the picture of her mother." In Delft they say she looks like the Delft babies; in Volendam, like the Volendam babies.

The Orange blood in little Juliana is about as thin as that of the Stuarts in Edward of England and the *Mayflower* blood in some of the ten million descendants of the original passenger list. Her father is German, her grandmother is Russian; but she is all Dutch to the Dutch. They have made her so by law and by faith. In her looks and acts they see a mirror of their national traits. Some even find a likeness to William the Silent, which is no compliment to her beauty according to the standards of outsiders. She refuses to yield her rattle at the nurse's command, and stiffens her lips and sets her chin firmly. That is character—Dutch character.

The holiday crowd on christening day waiting for the royal procession—Pilgrims from every part of the little kingdom to see the child

Wilhelmina's insistent choice against all advice of a German as her husband reflected in its stubbornness the only satisfaction the Dutch have found in the alliance. Henry can never be popular. He has faithfully tried to speak the language without an accent, but has failed; and that damns him. But the Queen's fondness for him is well known. By her wish he accompanies her in public. "You are my loving husband, but also my obedient subject," she tells him; which all the Dutch repeat to one another in solemn gratification.



With all this mothering and grandmothering there is no danger of Juliana being spoiled. On the contrary, the whole nation of self-appointed parents are looking on critically to see that she is not. Her daily life will be as carefully appointed as a West Point cadet's. She may not go for vacation to Denmark, where the royal folk visit Grandfather Christian, who is related to them all, and enjoy a human, natural, and restful time like poor people on a picnic or rich people at an Adirondack camp. The average American girl knows more conventional gaiety in a week than she will know in a year. Like the lone son of a duke or a multi-millionaire, who is watched lest the draft from a keyhole will give him his death of cold, she is too much and too carefully beloved to have a good time. Of course she must learn to knit or offend all the women of Holland. Her mother, it is said, is the richest woman in Europe in her own right, which means that Juliana will have a great deal to give to the poor, but little to spend on herself if she follows Wilhelmina's example.

She may promenade in the garden; she may walk in the street—quietly, sedately, Dutch fashion, however—and she may accompany the Queen on a shopping tour, which is a grand spree. That two-story palace will be her home for all her years, with the statue of the stern, monitory William staring at the entrance.

Henry and Wilhelmina now have the baby to talk about. Except when there is a public dinner, they spend the evening playing piquette and studying the signatures in the visitors' book. If the Queen Mother drops in, they may have a three-handed game of dominoes.

Dutch royalty can associate familiarly only with royalty, and royalty is very scarce in Holland. There would be a war of jealousies if the Queen should be intimate with any particular one of the old Hague families, who view the Roosevelts, the Stuyvesants, and the Van Rensselaers as provincial upstarts. She is their social head, who knows them formally. Blandly, circumspectly, they live in their ancient, quiet village with its drives to the sea and to Leyden under the great forests. Few are very rich, but many have good securities in colonial or American companies laid away.

Heavy burghers and plodding fishermen and boatmen all see in the Princess a national insurance policy paid up for her lifetime. Let the other nations build *Dreadnoughts* and pay war taxes. Comfortable and unchanging, richer in the per capita wealth they draw from their colonies than the British, all the Dutch ask is to keep on wearing wooden shoes, washing the pavements, and starching the doorsteps, and knitting, while the clocks tick in their snug little neutral corner behind the dikes as they gaze at the picture of their little Juliana on the lap of their Wilhelmina. They are the happiest people in Europe.

The Jungle Renegade

The Pure-White Negro, His Single Friend, and the Massacre Which He Forestalled

By A. W. ROLKER

Illustrated by H. REUTERDAHL

ALL day long we had pulled the two mine boats inside a lead pot through driving rains against the current of the Saramaeca. Toward dusk the cloud broke, and we, thirty of us, white men and black, made a landing, cutlassed a maze of macca, brush, and bush-rope, and, after a meal of plantains and river water, swung our hammocks and turned in. But the big rains had brought forth the black mosquitoes and legions of them were down upon us. The hammocks tossed and squirmed, and men swore softly, each in his mother tongue. I was aflame from head to heels with the inflammation. Clearly, there was no sleep in the jungle that night. So I tumbled out and stumbled and floundered toward the dying campfire. Then a lantern came toward me, and I knew by the gleam of a pipe that it must be the six feet of bone and gristle known as Old Man Smith. He raised his lantern toward my face and shook his head.

"How often must I warn you boys to light lanterns and hold low when you walk in the bush at night?" he said. "One of these days you'll feel a couple of needles shoved clear into an ankle or a big toe and how long you have to live will depend upon what kind of a snake it was."

To win back grace I hunted wood and helped stoke and blew myself red in the face. As the fire snapped and leaped and shed red against the dangling speeters we were joined one by one by the other white men. And there we sat, chilled to the marrow on one side and roasted on the other, wearied and hungry, with one exception, as disgusted a lot as ever penetrated the South American jungle—but none ever had accused the Old Man of being a mere human.

Smith was a horse of sixty, with keen, twinkling eyes, deep blue as the sheen of a rifle-barrel, and he had a mane of white hair and a white mustache, yellow in one spot from smoking black pipes sixteen hours at a stretch daytimes and at four-hour intervals at night. He had a wrist thick as a hickory limb, carried a single-barreled rifle instead of a magazine shotgun, and told a funny story how once upon a time he had been separated from his grub and had to walk ninety miles through the jungle without food excepting his pipe. He had a young woman and two fine little boys in the city on the coral sands, four hundred miles behind us, and he had photographs of all three of them, and used to look at these in the middle of nights when he would get up and smoke. Also, he was sole owner of "The Renegade"—the richest placer mine in the gold district of Saramacca, whither as guests traveled we tenderfoots.

Far and wide in all Saramacca not another was there like Smith. He knew the jungle by day or by night, and knew its people and their tongues. He had come to Saramacca right after its slavery was abolished, when twenty thousand disgruntled savages were turned loose of a day and when all that prevented white throats from being slit was a little black corvette with black guns trained ready to raze the town. Therefore he had enough tales to fill sets of books. I knew this and asked him a question. He preambled. Then he said:

"It's forty years now since I first came to Saramacca, intending to go down in time for the next ship for the States. But the blister of the sun, the drench of the rains, the screech of the macaw, and the lure of the gold got into my veins, and I'm here yet. And ever since I have lived and slept and ate and drank in these forests and hunted beasts—and once I hunted Man. That was the Jungle Renegade. But I suppose you've heard that story."

We sat back and pricked ears as behooves white men when a master tells not what was poured into his ears, but what he has seen and felt and smelled and what went into his ear direct. Quietly, with the air that comes with the assurance of owning his audience, spoke the narrator:

"He lived alone, in a palm-thatched hut in the outskirts of the town on the very jungle edge. He was an outcast among his own people, for he was the white son of coal black parents, was a freak and a natural monstrosity that communed with the fiend at night, and upon whomever he cast his evil eye to him befell misfortune.

"In the midst of a busy, scrambling, throbbing community he was as cut off from human companionship as if he were a running-sore leper. Time was when he had looked for work,-on the cocoa plantations, on rubber expeditions, and with the gold hunters; but no white man would hire him, for wherever he went there black men fled.

"In time it dawned on him that he was not wanted. So he built himself a hut near the bush and brought forth gorgeous skins. But the lumpy jaw got into the skinman's herds, and he blamed this on the Renegade,

"When well beyond the hiding-place I gave the peculiar whistle he had taught me to lure the conie-conie"

and thereafter the Renegade could sell no more because none dared to buy. Not long afterward old Mobo, she with a warty leg big as an elephant's, dropped dead after selling him mangoes, and thereafter the Renegade could not buy because none dared to sell. Wherever he went in the streets he was pointed out, and men and women fled from him, and nothing but superstitious dread prevented open attack. So he kept to his hut and the jungle.

"Often he sat on the sill of his shack listening wistfully to the distant hum of the bustling city where black men cursed each other and black mothers frightened bad black children with the name of the gorilla man. It had been years since he had last been seen in town, and now he feared to go there lest he be stoned to death. Not a soul dared go near him save Ista, a young negress who sometimes stole forth dark nights with rice and tobacco and cartridges to exchange for skins worth ten times her price.

"For a white man I had heard too much against the Renegade. Besides, he was said to be the most wonderful big-game hunter in the land, and I had traveled 1,500 miles to learn to hunt the jaguar. I made up my mind to see him.

"I saw him at dawn on the jungle edge. I recalled afterward that I stood stock still at the apparition. Evidently he was returning from a night's hunt. Not a twig snapped, not a leaf stirred as he strode out of the thicket. The bush simply parted as if pushed aside by unseen hands, and forth strode the monstrosity, naked to the waist, gaunt as an ape, a long-barreled shotgun in the crook of one arm and the green skin of an anaconda across one shoulder.

"He was a giant in stature, six and a half feet tall, and of the prodigious strength of a gorilla and the lightning swiftness of the cobra. His joints were loose as if swiveled. Knots and pads of muscles and sinews played beneath the taut skin of ponderous long arms and between shoulder-blades. On this body, splendid in hideous strength and ugliness, was a small bullet head with hair black and straight as an Indian's and a face of death-gray complexion, with the features of an African and the insolent eyes of a cut-throat.

"I sat in his hut and forgot that for which I had come, wondering why the good God permitted such a creature. But as we talked there came a revulsion of feeling. His voice was strong as a bull's, but, contrary to his general repulsiveness, was low and not unmusical.

"At times, it seemed to me, it struck a note of pathos and it tremored as if from inward agitation. I could look at that villainous head with the red-brown eyes that would have frightened a white woman into hysterics, and could understand why men would wish to crush it as they would crush the head of a viper; yet, behind the affront of that gaze lurked the appeal of utter helplessness and the pitiful craving of a deserted creature for the voice of a fellow human. To me he seemed like a man persecuted unto death, pleading for a shred of human sympathy. The bare prospect of this sent the blood surging dark brown to his ashen face. Why, he had unlearned intercourse with man, had unlearned to exchange ideas and to exult or to complain and to show pleasure or displeasure and to laugh or to cry.

"Next morning at dawn I saw him from [illegible] seated

on knees and chin in palms, looking his eyes out for my coming. And when I came he knew not what to do with me. He gaped and stood with downcast eyes. He was like a child that has found its first playmate and can think only of the dread hour when it is again to be left alone.

"I hunted much with the Renegade following that morning. He was the most skilful shot and the most marvelous swimmer I have ever seen, and he seemed utterly indifferent as to his existence. I saw him dive off a twenty-foot embankment, fetch under a sleeping cayman, fourteen feet long, bury his knife to the hilt in the hideous belly, and outswim the infuriated monster to shore. I saw him start a jaguar and a jagnaress, bring down the male through the head, break his gun, slip in another cartridge, and take the female through the heart before she had sprung thirty paces.

"Day for day I was with the Renegade. He taught me the call with which to lure the eonie-eonie, and how to read the trail of the tapir and the deer, and how safely to grasp the bushmaster behind the deadly head. He taught me how to tell south in the jungle. From him I learned never to kill the beast I could not use.

"Once, as we passed through a swamp, a flat-headed viper struck into the shin of the Renegade. He grasped the reptile behind the head, threw it into a thicket, cut open the puncture with his hunting-knife, and sucked the poison from the wound. 'Why did you not kill the snake?' I asked. 'Baera, the viper was only afraid,' he said: 'the jungle is long and it is wide. There is room for the Renegade and its beasts.' The bite almost killed him.

"For months we shot up the jungle, traveled rivers and creeks, up falls and down rapids in canoes, and we ate and drank and hunted and slept together. No white man could ever have learned to love that creature; but no white man that knew him as I knew him could have helped pitying that wretched dog. Like the lonely child, it seemed as if never could he get enough of his playmate. Often, middle of nights as I lay stretched in the bush, I awoke to find him sitting on heels beside me. Ever before him was that dread moment when he would be left again alone.

"One night, after I had left the Renegade in his hut, I sat on the rear porch of the old Martin Hotel when a shot came at me out of the lime grove and took off my hat. An hour later when the Chief of Police came he wanted to see me alone. 'You're not long in the country and do not know the natives or you'd respect their superstitions,' he concluded. 'Never mind what *you* think. It's what these pesky niggers think. Let the Renegade alone, I tell you—let him alone.'

"Next morning I told the Renegade, and then I realized for the first time all I must have been to him. As it dawned on him that I would come no more, that again he would be cut off from all human companionship, and that he must go back to the beasts of the jungle, not a word of complaint escaped him. 'The Baera Chief speaks true,' he said simply. But his breath came very fast and the giant chest rose and fell with the storm that raged beneath. I turned to go. With a groan as if his throat had rent he sank to the ground and buried his face in his arms. All night he must have lain there, for through my glasses I saw him there at noon next day. Then he arose and slunk into the forests.

"It was as well I said farewell to the Renegade when I did. Forty-eight hours later the streets of Saramacca were black with people. The town was in an uproar. Her Majesty's garrison of four hundred loose-breeched soldiers and five thousand blacks were beating the bush: for Ista had disappeared and had been found in the lair of the Renegade—too dreadful to describe. Nowhere was trace of the Renegade. He was thirty miles up the Saramacca, hugging the shore with long, steady strokes, sending his craft seething through the waters and keeping well under cover of the overhanging brush.

"A great vague fear was upon him, and this sent steel into his muscles; but his brain was awhirl and he was incapable of clear thought. He knew that even now boats with twelve sweeps and loaded with loose-breeches must be after him. But he knew he could outdistance these whenever he pleased, for soon they would be among the rocks where they would not dare proceed at night. Had it been merely a matter of endurance he might have paddled on, three hundred, five hundred—one thousand miles into the wilderness where no white man would have dared follow him. But he was like a man trying to escape on a tight rope fetching up against the wall of a precipice, for far and wide in the jungle not a thing was there to eat. Nothing was there except giant trees and macca and bush grass and thorn and brush and briar and bush rope so thick that none could see through the maze ten feet ahead. Only now when too late he remembered that a handful of rice would mean either life or death to him. As it was, nothing stood between him and starvation except three cartridges and his rifle.

"Never before had he felt the heat of the jungle sun. Now it scorched and broiled and boiled and parboiled him, sending rivulets of perspiration trickling down his chest and arms and between shoulder-blades. He paddled on and on, now lapsing into a steady stroke and again bursting feverishly into frenzied bursts of speed. Occasionally he stopped long enough to scoop a handful of the lukewarm river water and drink it greedily. Once he stopped to search under the seat of the canoe to see if there was not a forgotten mango. Excitement and anguish were doing what no mere physical exertion could have done, but he did not realize this. All afternoon he paddled through the broiling sun, every muscle strained and distended to its utmost, his face screwed into a grimace of pain, and he paddled as the sun descended on the west[illegible] line of tree-tops and long after pitch [illegible]ness, wh[illegible]gray fog settled over all and the heat of the day had given way to the penetrating chill of night. More than one hundred and twenty miles he had raced his frail craft against the current, with nothing to eat except the brown things in the river water. Now, after twenty hours of inhuman exertion, weakness came upon him. His bones ached in every joint. The palms of his hands showed raw in spots. But he estimated he had left the pursuers at least sixty miles behind. Once more he searched the canoe for a possible mango. As he made a landing against the steep embankment his legs gave way with the stiffness of the crouch, and he had to rub and knead them before he could stand. Then he fastened his canoe, used the butt of his rifle to beat down the underbrush, and lay shivering in the cold until he fell into the fitful sleep of exhaustion. At intervals he awoke, teeth chattering and shivering all over and with the splash of oars in his

A mine boat was seen grappling as if for the cable

ears, and then he sat bolt upright, trained ears alert, but each time he sank back.

"He awoke with a start toward morning, and with a groan of pain he jumped to his feet. Head extended, one ear turned down stream, he stood like a jaguar scenting the hunter. Then he limped frantically down the embankment, brought his ear to the surface of the river, scrambled to his feet, and jumped into his canoe and paddled madly.

"Every bone, every joint, every muscle and sinew and tendon felt as if it had been stretched to breaking and allowed to snap back. His back, his arms, even his neck, pained him excruciatingly. His hands, too, were in a serious condition. Blood had flown out of the palms and the wounds showed inflammation. But the beat of the twelve sweeps was in his ears. He realized now the heat of the chase and his mistake in lying down to sleep and trusting that his pursuers would not dare proceed through rocks at night. As it was, it would require all his gigantic strength to keep ahead of the boats. Worst of all, he was starving and would not dare bring down game for fear his rifle would now betray him.

"This thought made him frantic, and he paddled blindly with might and main, bringing every ounce of his wonderful reserve into play. But once he was simply obliged to stop. Then he tore strips from the bottom of the leg of his overalls and wrapped the blue cotton about the palms of his hands, and mile after mile, hour after hour, he struggled with desperation.

"As the sun rose higher and began again to blister and scorch he began to feel weak. At times lights passed from before his eyes, and he saw only dark blue amid myriads of stars. Besides, a heaviness seized him, an almost uncontrollable weariness, as if he must keel over and sleep even if the next moment should be his last. A thick leaden taste was in his mouth and in his veins a peculiar cribbling. But whenever he ceased paddling, from afar through the oppressive stillness came the steady beat of oars.

"He knew now that it was useless to try to outdistance his pursuers. If he could hold out but for another mile where the river-banks were less steep, and where the growth grew rank over the river edge, there was still hope. He paddled with the desperation of one doomed, now almost ready to surrender, now calling up every ounce of reserve of his enormous strength. A half-mile ahead he saw his thicket, and with one last, grueling, heart-breaking effort he sent his canoe under the protecting branches.

"It was not an ideal cover. Nine out of ten jungle-men would have seen the canoe. I saw it as I came abreast in the last boat. But I had long since regretted taking part in the hunt for the Renegade. Besides, Lord bless you, it would have been murder to point him out to the men in that boat. They would have sent a volley into the bushes and looked for the Renegade afterward.

"When well beyond the hiding-place I gave the peculiar whistle he had taught me to lure the eonie-eonie. Minutes afterward, weakly, faintly, from out the thicket a eonie-eonie sent answer to the call.

"Much that the Renegade did after our boats passed him he never remembered clearly and much he never knew at all. He managed to drag himself up the embankment and to squirm among the underbrush, and there he fell into a deep, feverish sleep. He awoke with intense pain in his hands. They were bloody and swollen and raw and inflamed, and they burned like hell fire as if they had been poisoned. His body was as if whipped and bruised and battered all over. He felt an intense cold in his veins and tried to crawl toward the embankment, nearer the sun. But the jungle fever overtook him and he shook and trembled all over. It shook him until his teeth chattered so that they lacerated his tongue. It shook him until he felt as if knives were shoved through his entrails, and when he tried to stand up after the first attack he collapsed like an empty bag. What happened after that only God knows.

"Ten days later, provisions low and half our men down with the fever, when we passed the thicket on our way home, the canoe, still tied, had drifted into view. I feared the Renegade was dead, but feared more he might not be, for they would have shot him down like a dog at first sight. So I offered to search the bush alone. I found him—a skeleton without reason, with eyes like burnt holes in a wooden blanket. His hands were festered, swollen to double size and turning black. His shred of clothing had mildewed, and face and chest were marked where in delirium he had sunk his nails into the flesh.

"We carried him into the boat. There was no need for chains. The wonderful muscles lay limp and harmless like those of a child. Not a sound escaped him. Only once, then he raised his head wildly, gazed with frightened eyes, and gave the call for the eonie-eonie. For three days I kept the poor beast alive pouring gin down his throat while he lay flat on the bottom of the boat, an empty burlap bag under his head. Then we landed and they sent him to a hospital like good Christians, where they nursed him tenderly during long weeks, so they might fasten a noose about his neck and push him off the fortress wall.

"I saw him often during those weeks in the big white hospital: saw him on the white pillows as he lay with hands bandaged and eyes wide open, still as if dead; saw him later as the head began to roll from side to side and as insanely he chirped the call of the eonie-eonie; saw him as the spark of reason came back to the red-brown eyes, and saw him, many weeks later, weak as a child, gaunt body stretched in a hospital chair, the first time in months exposed to the outdoor air.

"Save the Chief of Police, who came now and then to see his prisoner, I was the only visitor that came to the convalescent man. One morning as I came he held forth a long, lean paw. It was the first time he had asked to take my hand. Likely mine was the first to touch his in friendship since his mother had held his hand long ago. The hand was warm and firm. As I gazed into his face a puzzled expression came into it as if he did not know what was happening him. Big tears welled out of his eyes, and he did not even know enough to wipe them off. 'Baera,' he said brokenly with a voice almost soft as a woman's, 'I, too, am a man—a man like you—but—but,' I thought I knew what he would have said.

"A month later I saw him in the prison of the fortress to which they took him after a farce in a courtroom, to give him a decent Christian hanging. He had twenty-four hours to live. The hole was dark and foul and damp. He wore wristlets connected by a two-foot chain. But the Renegade was himself again and more. The muscles of his hands and arms stood forth like whipcords. And now that the hunt was ended, a wonderful transformation had come over the man. The gigantic figure, once hunched and slovenly like a gorilla's, was erect, alert, and I knew he was unafraid and would stride forth to the end without a flinch.

"'Baera,' he said as I was about to leave him for the last time, 'to-morrow at this time the Renegade will not be here. He is not afraid. When he is gone, let the Baera go up the Saramacca to the Red Creek. Let him take long-toms and let him not take top-boats, for the creek is much bridged with fallen timbers. Let the Baera follow the Red Creek to the twenty-fourth turn. Midway between this and the next is a rock tall as the Moravian steeple. From the middle of this, due south, let the Baera walk six hundred of his steps, and there, anywhere in the ground before him, let him *dig*. The White Baera never will forget the Renegade.'

"I left him, not thinking I'd see him alive again. Outside the fortress I met the Chief of Police on his way to the Governor's palace, where a reception was on for that night. 'To-morrow—sure as hell is hot,' he said cheerfully.

"But they never hanged the Renegade. The Almighty Himself stuck a finger in that pious pie by scheduling a very different event.

"Down in the dungeon of the fortress, head bent in the crook of an elbow, alone with his God, sat the Renegade. He had heard taps sounded at the stars from the fortress wall; yet the noises of the city continued unabated. High up on one wall of his narrow cell was a narrow window, and through this came to him the muffled sounds of many voices, and he guessed what these meant. He shivered. But it was not for the fear of death. It was at thought of the rabble gloating for the feast. He saw himself on top of the fortress wall, ninety feet above the brown-gray waters of the harbor, above him the dangling noose, and about him seas of upturned faces. He imagined the laughs and jeers and coarse jests as they would at last see him helpless, and he shivered again at the shout of derision as, noose about neck, the file of soldiers would advance with lowered bayonets and send him over the edge of the parapet.

"A low, droning wail, like the first note of a rising gale, wafted through the window, but for some minutes

he did not notice this. When he finally did, it struck him that he had been hearing this for some time, and as he recognized the sound he was on his feet like a flash.

Years ago, the night of the Tyndell rebellion, he had heard that weird wail—the one sound no human ear ever forgets—and then he heard a distant shot, and then another and another. Then the sharp tattoo of a horse's hoofs, galloping at full speed toward the fort, were heard, and within thirty seconds blared a call to arms by the bugle, and the very ground under the man's feet trembled as the fort sent two cannon shots roaring into the night. In an instant the fort seemed alive with men. From overhead the Renegade heard the tramp and shuffle of many feet, heard the clatter of bayonets and the thump of rifle butts, the rumble of the wheels of machine guns, the bellowing of commands, the squeals of fifes, the roll of drums, and the tramp, tramp, as four hundred troops broke into a double quick out into the night.

"What it all meant the Renegade had not the least idea. Things, however, were developing with alarming rapidity. He could tell that the wail of the mob was coming steadily nearer. Shots came thicker and faster until they sputtered almost continuously. Above the distant rumpus he heard much nearer the excited voices of men, the screams of women, and the cries of children apparently running toward the fortress for refuge.

"The soldiers could not have gone more than a mile, he estimated, when he heard the four hundred rifles crack a volley at the onrushing mob, and heard the machine guns loosen up. He could tell the fight was hot, for volleys came with deadly regularity and the sputter from the machine guns was incessant. He heard the yells and cries of wounded, and the howls of infuriated men, and he could distinguish from the sharp cracks of the rifles the deeper, looser crash of shotguns, and what chances rifles or machine guns had against these when loaded with buckshot and fired at close range, none knew better than the Renegade.

"Within ten minutes of the opening of the fight the volley-fire became irregular. Then it broke completely, which was bad. Also, there was perceptible slackening in the fire of the machine guns. Whatever the reason, one after another they began to drop completely off. Yet the Renegade had no doubt as to the outcome of the fight, whatever its cause, for the black corvette with her twelve black guns lay anchored in mid-stream ready to hurl shot and shell and grape and canister, literally to mow down the town and the mob. Dreadful unto the last babe would be the revenge of the ship. He did not know, however, that by trickery or otherwise His Excellency had been induced to send the warship fifty miles down the coast to show herself at the threatening uprising in the Commoweyine District. But he did know that if the warship should not soon come to aid her Majesty's men would be cut up to the last drummer boy.

As the fire of the troops slackened, the Renegade could hear refugees piling faster and faster into the fort. He could hear even now that the place must be fairly alive with them, for he heard the drone and buzz of voices and the cries and lamentations of hundreds of persons, and then above all this he heard the tramp and shuffle and scuffle of a little army in retreat, loose breeches mowing down heads with clubbed rifles, trying to back into the entrance of the fortress walls. Inside that fortress, the Renegade well knew, were big guns enough to sink an ordinary fleet, but these pointed toward the entrance to the harbor, and could not be brought to bear on the town. It looked to him as if all must be lost for those inside the walls, when of a sudden the ground seemed fairly to creep under his feet, and a score of terrific explosions merged into a single one came to the aid of the routed ones. The ruse of firing the big guns of the fort took the mob by surprise, and at that instant a half-dozen one-pounders and a machine gun began to open from the top of the fort wall, and, terror-stricken and in want of a leader, away fled the victors while the hard-pressed escaped through steel-bound oak doors to within. Besieged and besiegers awaited the coming of the day.

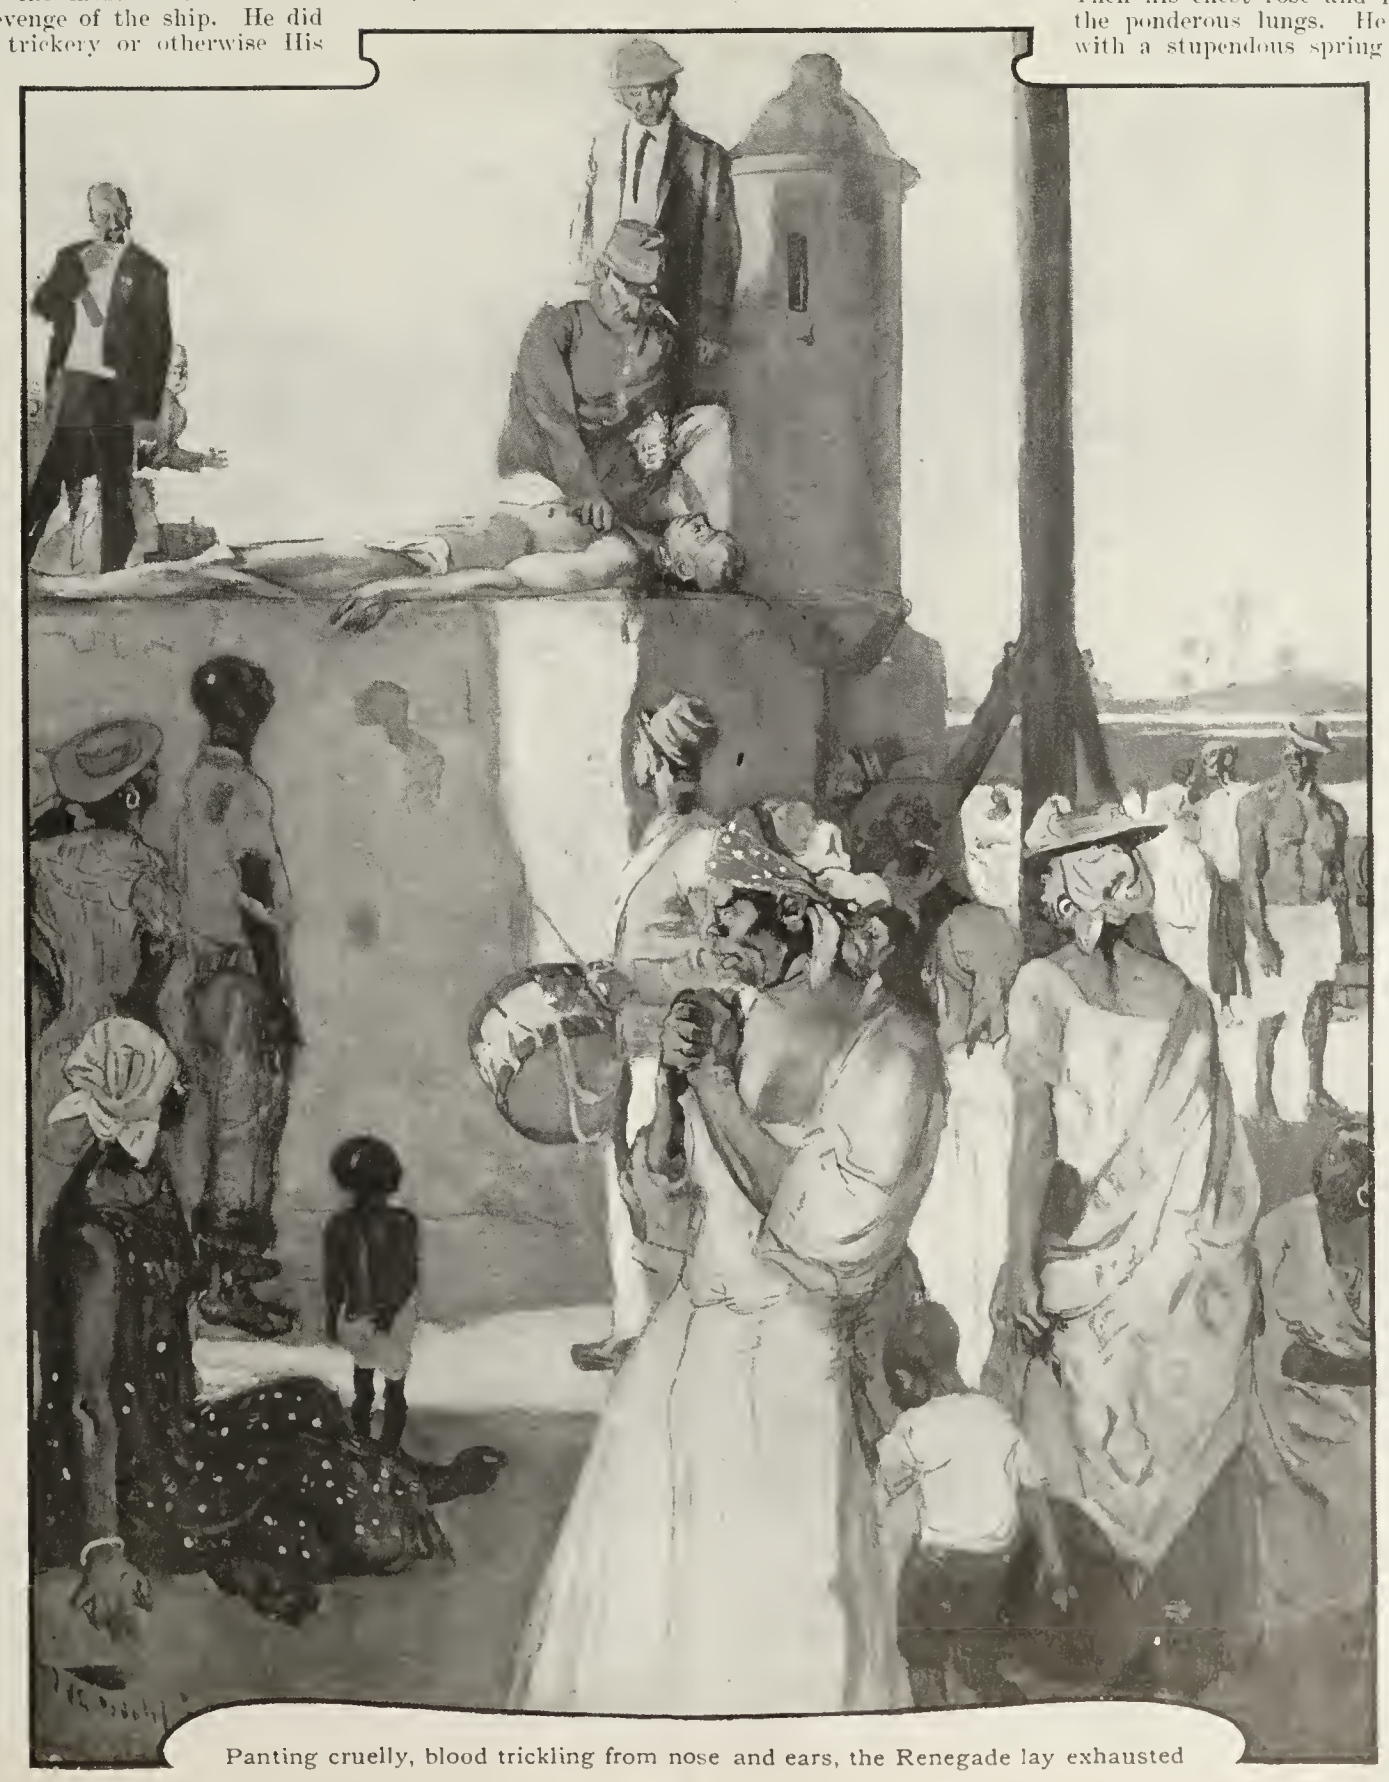
"Things looked desperate inside the walls. This was no squirt rebellion with a saddle-colored general and a handful of boys trying to shoot holes through a mulatto with a red sash across his shirt front. It was a genuine race war—twenty thousand ugly, treacherous blacks with an old grievance, fighting the fight of the Witwatersrand, and with the only object to slit the throats of some fifteen hundred whites, most of them women and children. No provisions were in the fort. Ammunition was all but out. Worst of all, they had known enough to cut the telegraph cable so the corvette could not be recalled. Now that the trouble was on, it was recalled that a mine boat had been seen grappling as if for the cable directly at the foot of the fort wall. Only one hope was left.

"The clock in the Moravian steeple struck four as His Excellency and I walked into the cell of the Renegade. His face lighted when he saw me. He noticed not His Excellency in evenings togs with a bloody rag around forehead and one arm in a sling. 'His Excellency has come to offer the Renegade a chance for his life,' I said. 'The Renegade's people have risen against the White Bacras. The White Bacras and their wives and children have been driven into the fort. There is no food. Cartridges are low. The thunder ship has gone and the cable with which to tell her to come back has been cut. The Renegade must help. He must go down and make fast a rope to each end of the cable, so it can be spliced that the White Bacras can call back their thundership, and in less than four hours these men will flee like the loose sands before the wind. Will the Renegade make fast ropes to the end of the cable? His Excellency offers him life and safe conduct with troops wherever he wants to go.'

"But the Renegade answered not. I could see a mighty fight was going on in the breast of the savage. He knew he had only to decline and the whites would be massacred to the last child, and then whites would come back, rending, tearing, slashing until the last wounded black had been driven starving into the jungle. The revenge of a lifetime was within his grasp.

"'Renegade,' I said, 'the lives of fifteen hundred white creatures rest in the palm of the Renegade's hand. He has that in his arms and between his shoulder blades which is not in any other living man. Or—does the Renegade so soon forget the call of the conie-conie?'

"I had won; but it was not to me who had come nearest to being a friend—it was to the other that he spoke; his voice was deep and musical as the distant drone of a cathedral bell, and grew deeper and deeper with emotion. He drew himself up to his full enormous height and gazed down upon His Excellency. 'Listen, white man, that calls himself master, that talks but that can not do, that laughed when his men hunted [illegible] of [illegible] subjects, like a beast of the wood—not because [illegible] offer me life, not because the faces without the walls are black, not because the throats within the walls are white, will the Renegade help. Go, master that is not a master, say to them that it is to the White Bacra and not to the Renegade that they will owe their lives. And tell them this—' and as he spoke he brought his shackled fists together in front of him and with one terrific, lightning-like jerk swept both wrists apart. The torn steel links clattered to the concrete. Nostrils distended, eyes flashing fire, the savage towered above us like a lion at bay.



"Never shall I forget the dive of the triumphant Renegade. Diving through fifty feet of water, groping amid pitch blackness of mud and slime, finding the severed ends of the cable and securing these to a light line was a feat requiring such strength, such quickness, such resistance, and such dexterity that I doubted even the strength and the skill of the splendid savage. In order to penetrate to this depth at all, it would be necessary to dive from the highest point of the fort wall, ninety feet above the water's surface; for the strain of the water pressure alone was so excessive that a second descent would be out of question. In short, both ends of the cable must be found and lashed to ends of the line at one descent. None knew this better than the Renegade. But in his veins seethed victory and triumph. Shunned, despised, loathed, and persecuted for a lifetime, he had been brought out of a murderer's cell, the last hope of the very masters of the land. In that hour it was as if his gigantic height had been increased by six inches, and as if his fabulous strength and dexterity had been trebled.

"Naked, save for a breecheloth, the lone figure stood in the pink rays of the new day, high on top of the fortress wall. Chin high, shoulders back, gigantic and yet lithe and erect, he stood proud and motionless as the statue of an avenging god. He gazed neither behind him at the multitude of ghastly faces upturned with desperate hopefulness, nor to the side where only a short mile away the earth was black with the squirming, seething mob, black eyes riveted upon the Renegade. Across his shoulder he wore a snowy coil of rope. Steadfastly he gazed as if his eyes would penetrate to the bottom of the gray-brown depth which in another minute would swallow him. Like a tiger calculating his spring, he measured the distance to the spot where he would strike head first like a missile out of a catapult. Then his chest rose and fell, pumping reserve air into the ponderous lungs. He crouched, bent forward, and with a stupendous spring shot into the yawning abyss head first, body stiff as an iron rod. A cry of horror, out of fifteen hundred throats, rent the air. Then fifteen hundred breaths were held in an agony of suspense, and even the black mob in the distance surged, puzzled, toward the water side.

"I did not expect again to see the Renegade alive. I lay with watch in hand flat on my stomach, peering over the wall, each second like an eternity. At the end of a minute I would not have given a cent for his life. At the end of two minutes I turned away, and just then a mighty shout went up. There was the Renegade, trailing the loop of the white line behind him and swimming with desperate strokes. 'The cable! the cable!—he's got the cable!' cried a hundred voices, and as we pulled the dripping swimmer to the top of the wall there was a scene no tongue can describe. Men shouted and yelled and danced and wept and hugged each other and surrounded the Renegade, and patted his back and his arms and his legs and his shoulders, and women held close their children and knelt down and prayed.

"Panting cruelly, blood trickling from nose and ears, the Renegade lay exhausted on the fort wall, stolid and indifferent to all about. His lips moved and his eyes were closed, but his lips gave forth no sound. The surgeon and his men rubbed and chafed. His Excellency himself held brandy to the swollen lips, but the Renegade turned his face away. Men could not know as I did who knew him so well, and I knew his heart was full unto bursting and that he was talking to Some One Else just then.

"When he had finished, he saw me before him, and a light came into his eyes as he passed a forearm across his face as if to brush away a cobweb, and staggered to his feet [illegible]

Panting cruelly, blood trickling from nose and ears, the Renegade lay exhausted

'll live as long as Saramacca,' I said. For the first time, then, I saw a smile light up his face, but it was a smile to make an angel weep. 'The White Baera says it is good. That is enough for the Renegade,' he said. It seemed as if never would he let go my hand.

"'Baera,' he said sadly, 'the Baera always knew it was not the Renegade?' This was the first time he had alluded to the crime. His voice sounded far away and tender as a woman's. 'The Renegade came home, and he saw and he fled, for he knew none would believe,' he said.

"We were standing at the edge of the fort wall at the spot from where he had dived only a short half-hour before. Below was a boatload of loose breeches splicing the ends of the cable. Beside us were the machine guns, ready to open fire in case canoes tried to interfere.

"Thoughtfully the Renegade stood gazing at the work. 'Soon the thundership will come,' he said. 'Then let the Great White Baera have mercy on my people. If the Great White Baera must, let him sweep down the huts. If the Great White Baera must, let him even drive the black man into the jungle; but there let the white man's wrath be satisfied. Let him permit the black brother to come forth again to rebuild his hut. Let him not stay too long alone with the beasts of the jungle. Baera, tell the Great White Baera, the Renegade, he who called the thundership, begs mercy for his own people.'

"A cheer broke spontaneously from the crowd below, and above these sounded hoarsely: 'Renegade! Renegade! Renegade!' I myself was carried away with the adulation paid the Renegade in that hour of triumph.

"'Look, Renegade, is it not good—does not the Renegade feel a swelling there? (I pointed at his heart.) To-day the Renegade is *Master*. He is bigger than the Great White Baera. Look, do they cheer *him?* No. They cheer the Renegade. Is it not good, Renegade, *good?*'

"He turned slowly and faced the crowd, which broke wilder than before into huzzas, but he raised not so little as a finger. 'Baera,' he said as he turned again to face the harbor, 'the White Baeras and their women do not cheer the Renegade. The White Baeras and their women cheer the cable the Renegade brought up for them. To-morrow they would forget. The Renegade would be the Renegade again.' Then I saw that all this had come too late. I saw the great heart had broken within him.

"Standing at the very brink of the wall, he gazed into the blood-red sun as it rose over the green jungle on the opposite shore. Then his head sank till chin touched his chest, and he murmured a prayer.

"God knows why I never suspected his intentions. But He knows I would have given the ten best years of my life to have saved that man. Just as another tumultuous cheer broke from the crowd, I saw the Renegade spring, saw his body hurl downward in an enormous arc, and saw it disappear head first with the speed of a gigantic arrow. For an instant we gazed at each other bewildered, unable to understand. Then, horror-stricken, a hundred heads thrust over the edge of the wall and breathlessly glued eyes to the red-brown waters.

"As before, I drew my watch. One minute passed, two minutes, three, and still we lay gazing near and far for a white arm of the marvelous swimmer.

"At the end of five minutes I arose and stood gazing helplessly at the blood-red glare dancing on the rippling waters. Then I saw that next me was His Excelleney, the Governor. In silence we gazed at each other, unable to say a word.

"Then His Excelleney turned on his heel with a sob and strode to the flag-pole. With his own hands he loosened the halyards. With bared heads we stood. Down to half-mast sank the blue and white and green flag of Saramacca, in honor of the Jungle Renegade."

Flashlighting The Jungle Beasts

Hid in the Thornbrush, the Photographer Watches a Water Hole Throughout the Night Until the Thirsty Hartebeests and Hyenas Are Finally Caught on the Plate—Treed for a Day by Lions

By A. RADCLYFFE DUGMORE

A herd of Coke's Hartebeests at night approaching a pool in the Yata Plains—Exceptionally timid, they circle around the water, fearing a lion or other beast in the shadow of the rocks, and as they draw close and retreat again, the flashlight takes them unawares

COPYRIGHT 1909 BY P. F. COLLIER & SON

THIS is the second in a series of articles by A. Radclyffe Dugmore, the nature photographer commissioned by COLLIER'S *to describe and make photographs of the wild beasts and scenery in British East Africa.*

OF ALL branches of animal photography there is none that offers a greater fascination than flashlighting, whether one's subject be big or little, dangerous or harmless, whether one uses an automatic device by which the animal photographs itself, or whether one sits up all night and springs the flash as the animal approaches. In British East Africa flashlight photography is at its very best, the possibilities are unlimited, and the conditions most wonderfully favorable. One can not tell what animal will come within reach of the camera; it may be a lowly jackal, a mighty, snorting rhinoceros, an exquisitely beautiful zebra, or a stealthy, silent-footed lion; but whatever it may be, it is game for the photographic bag.

In selecting a place for flashlight work, it is necessary that there be some reason that the animal should come to the place chosen. A water hole, a trail, or, in the case of the carnivora, a kill. We selected a water hole in the dry region where we were camped. At first the automatic device was tried—that is to say, the animal, by touching a thread, would take its own picture. This proved an absolute failure, as the nocturnal birds invariably flew against the thread, and, of course, released both shutter and flash. So I decided to do the photographing myself, and in order to do this with safety, we built a boma, or zareba, of thornbrush, which, while offering more or less protection against a surprise attack from lions or leopards, afforded us a good view of the water hole, which was a small one, scarcely twenty feet wide. Near this we placed two cameras well concealed, and a flashlight device, all connected by an electric arrangement which simultaneously released the shutter and the flash on the pressing of a button in the boma.

In lion-infested countries one does not prowl about at night, so we took our places in the shelter at dusk and arranged ourselves comfortably with blankets (for the nights are cold in East Africa), some food, arms, and the various photographic accessories which might be needed. One of us was to keep watch while the other slept. Never shall I forget that first night spent directly under the tropical moon, then at its full. Scarcely a breeze stirred the air, yet it was cool and delightful. No insects bothered us, and we watched and hoped. There is not, as a rule, much to be expected during the early hours of the night unless lions are coming to their kill. Therefore we were not greatly surprised that for some time nothing occurred.

It was about nine o'clock that, while gazing out in the soft moonlight, we saw several hartebeests approaching. How cautiously they came! For over an hour they continued their investigation, and during that time we were in a state of breathless anxiety. The slightest sound would prove disastrous, for it is wonderful how keen of hearing the wild animals are. As they finally drew near, my heart beat with excitement as I saw they would soon be within range of the cameras. On they came until they reached the pool, and then, to my intense satisfaction, they began drinking; with trembling hands I almost unconsciously pressed the button. Off went the flash and away scampered the frightened hartebeests, leaving their pictures imprinted on the photographic plates. These were our first flashlight pictures, and we were thoroughly happy. Armed with lantern and rifles, we crept forth, changed the plates, reloaded the flash-lamp, set the shutters, and returned to our cover, there to wait for what the night might bring us.

Searcely an hour had gone by before we heard the crunching of the grass. Footfalls and eating could be clearly distinguished. It sounded like zebras; and we hoped that such it might prove to be. We were not kept long in suspense, for within ten minutes we could hear the animals coming down the hill back of us, and soon they were in full view, one after another, until there were perhaps thirty or forty of them. What a sight it was! their beautifully marked coats glistening in the clear moonlight with startling distinctness one minute, then, as the animals would turn so that the angle of light changed, they would melt away into faint shadows. They didn't come near the water, but maneuvered round it, starting every once in a while at some cause we could not see, and off they would scamper, then back again, and so on for three long hours: they were more or less in sight all the time, yet not once would they approach the water. Either we had not hidden the cameras sufficiently well or they felt convinced of our presence. Whatever it was, they left us about dawn, and we were thoroughly disappointed; but then one must be ready to accept disappointments in such work. Were it too easy there would be no pleasure in it.

The following night we were at our post again, and succeeded in getting two photographs of a hyena and two more of hartebeests, but the zebras, a few of which came in sight, were too wary and would not drink.

Beating the Thicket for a Lion

ONE morning, while we were taking a nap after being up all night with flashlight work, we were aroused by the magic word "Simba" (Swahili for lion). The porters, while gathering wood, had seen a lion about a mile from camp. Needless to say it did not take us long to get ready, and off we started with nearly the whole outfit following. It appeared that the men had seen a lion going into a little gully which was filled with a dense growth of papyrus. We decided to beat this thicket, and accordingly the men (who had been promised lion baksheesh) began howling, beating tin cans, and throwing stones. I carried my rifle, while the camera-bearer followed close behind with my camera ready for use. It was not long before something was seen to move in the papyrus not more than eight or ten yards in front of me. At that distance I foolishly thought shooting was a most imminent necessity, and so I fired where I believed the animal to be; apparently there was no result, for the papyrus continued moving, and I fired again. Just then out rushed a lion cub right into the middle of the men, who finally succeeded in catching it, and a more ferocious little beast I have never seen. Our idea was to use it for a lure for the old lions, and with this idea we bound its feet. During this operation the men found that my shots had killed two other cubs, which was very unfortunate, as they were far more useful to us alive than dead.

Hunting from a Tree

I NEED scarcely say that while my companion, with the help of the men, was trying to secure the live cub, I was keeping a sharp lookout, and soon had the satisfaction of seeing my first wild lion. Not one, but the pair, attracted, evidently, by the cries of the young one, they came within three hundred yards. A finer sight I have seldom seen than those two big tawny creatures. For a minute or so they watched us, then turned and disappeared; incidentally, I may add, so did most of the men, tall trees being considered the favored retreats.

Believing that the lions would return, we selected a tree with large horizontal branches from which I hoped to be able to use the camera, and there we proposed to stay. Unfortunately, the cub soon died from its violent struggles, so that we no longer had its growling to attract the old ones. Just as we were about to take our places we were surprised to see the old lion and two lionesses appear about four hundred yards away. The wretched men in their flight made such a noise that the lions would not come nearer, so I got no photographs. Later on they came back again and I was equally unfortunate. All day we stayed in the tree, but nothing further occurred, and we finally decided to spend part of the night there in hopes of getting a shot. Shortly after sunset, while we were eating our meal, the lions appeared once more. We could just distinguish them in the dim and rapidly vanishing twilight, but they were too far to fire at with any degree of certainty. In a few minutes darkness had set in and a darker night I have never seen. We sat in our uncomfortable perch in a state of great excitement, and soon we heard something approaching through the high grass; nearer and nearer it came, and the low, growling purr of the lioness added to our excitement. I thought if I could get down to a lower branch I might be able to see a little better, and so as noiselessly as possible I got down to within about eight feet of the ground. Just as I reached this place the lioness or lion passed directly under me, but the darkness was so intense that I could see nothing, though they were probably not more than twelve or fourteen feet away. We heard them continue their way up the bed of the stream, stopping once to drink at a pool, and that was the last we heard of the lions. About ten o'clock the moon rose, and as we were too tired to stay any longer in our uncomfortable position we started for camp, and it was not a particularly pleasant walk, as every bush assumed the form of a lion to our overwrought imagination. We were thoroughly glad to reach camp in safety and get a good night's sleep. Not even the roars of lions could disturb our well-earned rest.

The upper pictures show a rhinoceros who came walking down the wind toward the photographer. Four others waited in the distance for his report. When he got within twenty feet of Mr. Dugmore, and while his likeness was being taken, he decided not to charge, but turned and ran to his companions

The center picture displays a herd of buffalo seeking water. The other photographs are flashlights of hartebeests drinking at night, and also a hyena come to water—the frightened hartebeests dimly visible in the background, where a company of several zebras also lurks in the tall grass

What the World Is Doing:

One Week

ONE of many peevish peers, the Marquess of Waterford, writes: "I regret to say that the effect of the Budget proposals will necessitate my cutting down my subscriptions to charities, etc., practically to vanishing point."

To all the grieved lords and persecuted millionaires, Winston Churchill replies, saying: "There is the woful wail of the wealthy wastrel, the dismal dirge of the dilapidated duke, and the hard case of the substantial citizen, who is angry at having to pay his share. Then we have the harsh gibberish of Mr. Rudyard Kipling, who is astonished when he is asked to contribute to all the *Dreadnoughts* for which he has yelled."

Menacing words grow frequent as the time approaches for the Czar's visit to western Europe. Jaurès, the French radical, refers to "the vessel of the murderous Czardom." Bernard Shaw writes that: "When kings behave in England as czars behave in Russia, we either cut off their heads or replace them by their nearest well-behaved relative." He advocates chartering a canal barge, decorated with union jacks, surmounted by caps of liberty and black flags, in mourning for the Czar's victims, and placing it "well in evidence in the Solent on the day of our national disgrace."

From the Conservatives honied words trickle out to offset this bitterness. Thus the "Standard" celebrates him: "Esteem for the Czar is general among the English people. The quiet courage with which he has borne the enormous weight of responsibility that falls upon his shoulders compels admiration even in those who do not know how much he has done for Russia."

A twelve-year-old boy has been called upon to put away childish things and rule Persia from the Peacock Throne. The Shah who failed to enforce the paper constitution of 1907 has been deposed by the triumphant advance of the Constitutionalists.

When a king is one of the Unemployed, his rôle is perilous and humiliating. He treads close to assassination and to ridicule. If he grows strong, he will be shot down. If he is pompous and innocuous he will be drowned out in laughter. Don Carlos de Bourbon, Duke of Madrid, senior male representative of the House of Bourbon, Pretender to the Spanish throne, who died on July 18, was convincing, and chronically picturesque.

Germany changes pilots without upsetting the boat, and Dr. von Bethmann-Hollweg becomes Chancellor in place of Prince von Bülow.

While the East lay dust-choked and gasping for breath, the waters have been rising in Kansas, Missouri, and in sections of Arkansas, Oklahoma, Nebraska, Iowa, and Illinois.

Pittsburg, which has shown a knack for enlivening summer months, is wrestling with its second strike of the season—this time steel workers, blindly, unadvisedly, and rather pathetically fighting for what they believe to be their "rights."

Good citizens everywhere have been relieved by Mr. Taft's use of his blue pencil in toning down the exuberances of the tariff document. The spectacle is gratifying of Senator Aldrich as a cub reporter whose "copy" is to have edited out of it most of the high places and top notes. The English "Nation" says of the editor:

"Everybody appears to be drawn toward this good-humored, unconventional, rollicking giant, with his frank, free bearing, his massive look of power and adequacy, his radiating air of jollity and zest."

Unless more foot-pounds to the inch of pressure can be laid upon the lid, the underworld of gamblers, bomb-throwers, and vice-merchants in Chicago is about to open up and out and let us smell some of the smoke that ascends forever and ever. Minnie Everleigh is just preparing for an extended Continental tour. Like the famous women of French history, she has been close to the rulers of the city, and, as a bird of passage and stormy petrel, she foretells the tempests.

In New York one more Borough President has been too good to his friends, too slack with his accounts. The city is shocked for a day, but straightway will forget what manner of man he is.

With the cattle on a thousand hills, the regattas on a hundred lakes, the summer is under full swing. The pale city folk are lifted out of the furnace by the trainload

by an English four in 1886, but the subsequent development of the play on this side of the Atlantic has enabled a team composed of Devereux Milburn, J. M. The matches were noted for their excellent feeling and thorough sportsmanship. They were attended by large crowds both of English people and American visitors

A Record of Current Events

and released into green fields—later to return with fiery faces. It is the month when the Fresh Air Funds are doing the Lord's work on sea and land in transplanting battalions of little children.

Sky-Scraping

AIR records are being made and smashed every other day. Fifty-two minutes and twenty-nine miles was the admirable aeroplane record of Glenn H. Curtiss on July 17 at Mineola, Long Island. Over French soil, Bleriot has traveled twenty-five miles in a straightaway line by monoplane. On July 18, Paulham at Doue, France, beat the world's aeroplane height record, sailing along at an altitude of 450 feet.

The person who grows excited over the Wrights and thinks they are going to fall down, hasn't sized up the gaunt, long-limbed Wilbur, who comes from the same section of country which raised Lincoln. He hasn't looked into that perspicuous eye, and watched the patient, sardonic grin lurking at the corners of a strong mouth. A hard shell and slightly bitter to the taste, Wilbur is sealed of the tribe who do not fail. They merely try again, with all eternity to work in.

When the Wrights are good and ready, they will fly. If not at Fort Myer, then in France or Germany, and once again the world will watch and applaud.

Victor Murdock, member of Congress from Kansas, has chafed at their bland front. He says:

"If the quarter section next to Wrights' field of trial were to suddenly burst forth in volcanic action and begin to throw lava, Orville and Wilbur would consider it a serious infraction of their carefully built up frame of mind if either one or the other should turn around to see what happened.

"It would be as impossible for a stranger to approach the shed where they are tinkering with their machine as it would be for the ordinary citizen to visit the Sultan of Turkey before breakfast.

"In the midst of a circle of four thousand people Orville and Wilbur Wright, waiting for the wind to lull, will sit down on a board, and, unless they do it furtively, never look at the crowd once."

It is easy for War Department officials, politicians, and journalists to criticize their risings up and comings down. No man has gone that route but they.

Georgia's Gallant Statesmen

IT WAS a gallant piece of legislation which the Georgia Senate put through on July 14, making it a penal offense to utter any false or defamatory remark about a woman.

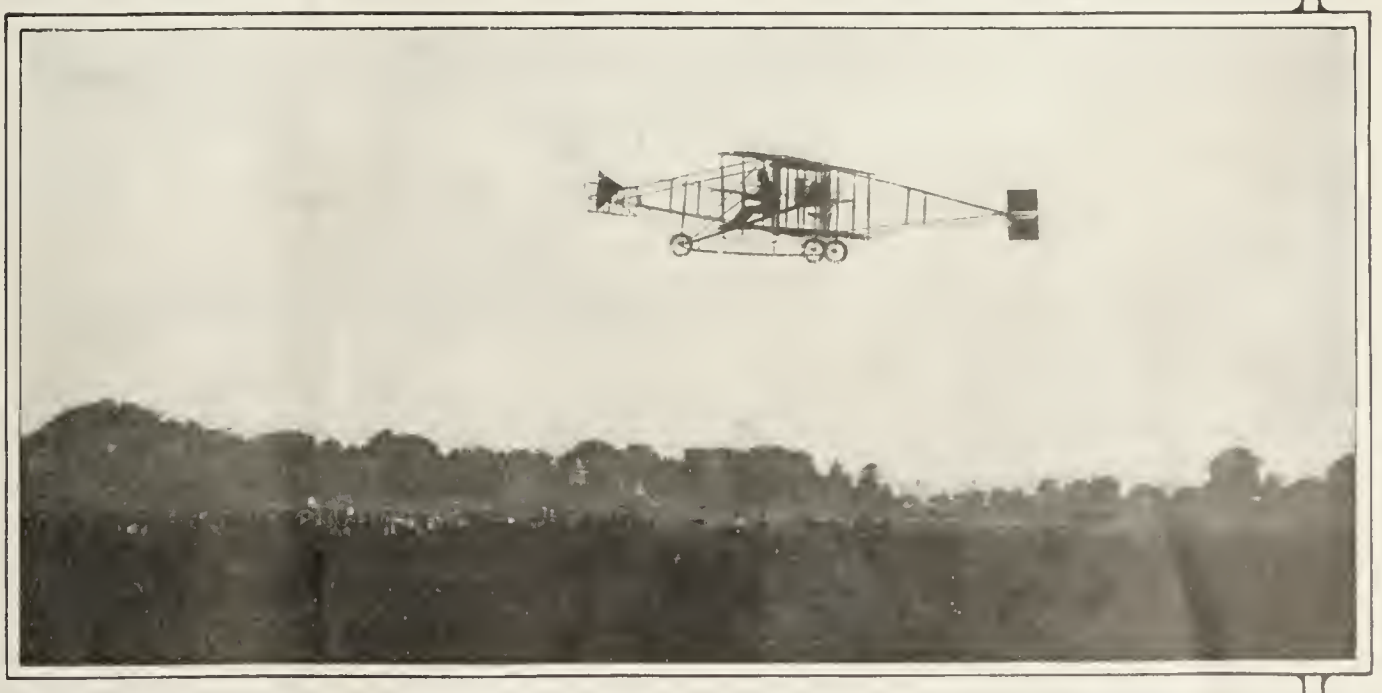
It will be diverting if not exciting to see how the thing works out. If the housemaid breaks the oatmeal dish, will it be unwise and expensive to rebuke her? Is it defamatory to resent a German pancake hat inserted in the eye or pounding the back of the neck at each throb of the trolley-car. It is plain to see that the State will become the refuge of all persecuted suffragettes. No officious policeman will dare to wag finger or tongue against the militant daughters on Georgia territory. Yonder is the State for all "perfect ladies" who have been misunderstood in harsher localities.

However much the chivalrous Senators may suffer for their latest lawmaking, muleted in fines or languishing in prison, there is something lovable in their enactment.

Jungle Copy

MEANWHILE Mr. Roosevelt keeps the typesetters of "The Outlook" busy lining out the type for his long-distance contributions. Still in the flesh in the jungle, swamp, and forest, he is yet able to project himself into intrepid, vigorous paragraphs of New York's leading religious weekly. After a few swift articles on Socialism and the misconduct of certain preachers of the doctrine, he made a breezy attack in "The Outlook" of May 15 on the venerable figure of Leo Tolstoy, whose teachings, he believes, do not appeal to "men of action."

He summed up the Japanese question on May 8 in the sentence: "It is not for the advantage of either people that emigrants from either country should settle in mass in the other country."



On June 5 he discovered an American author, Warrington Dawson, author of "The Scar" and "The Scourge": and wrote a generous, warm word for a Southern writer read in Europe and neglected at

The President Drives—Mr. Taft and his partner defeat the Vice-Presidential side decisively. The President played in excellent form, adding to his laurels as a golfer

COPYRIGHT 1909 BY HARRIS & EWING

The Curtiss Aeroplane Flies Fifty-Two Minutes

Glenn H. Curtiss on July 17 broke all American records for this type of machine, except those set by the Wrights. At Hempstead Plains he flew 29½ miles, averaging 40 miles an hour

Collier's

Comment on Congress

By MARK SULLIVAN

THESE are the ten Insurgents. They are the Republican Senators who, throughout the session, persistently fought Aldrich, threw the searchlight on his statements, defied his threats, voted against his schedules, and, in the end, broke away from the party and cast their ballots with the Democrats against the Aldrich tariff bill:

Albert J. Beveridge
Joseph L. Bristow
Norris Brown
Elmer J. Burkett
Moses E. Clapp
Coe I. Crawford
Knute Nelson
Albert B. Cummins
Jonathan P. Dolliver
Robert M. La Follette

The Insurgent States

NO EULOGY upon the Insurgent Senators can speak louder than the scorn and threats that Aldrich has heaped upon them. For them, their deeds speak. But it is not amiss to say a word for the communities who have sent these men to Washington and have supported and approved their position. To utter generalities about States whose population numbers millions, to draw comparisons between sections, is almost as futile as to attempt to indict a commonwealth. Yet some things about the Middle West may be said without dispute. These

States are to-day a better New England than New England itself. The dominant element in at least three of them is composed of those New Englanders who most inherited the spirit of the Pilgrims and went away from home for principle and opportunity to grow. Many of the New Englanders who came to Kansas set out to fight for a principle, and brought with them rifles in boxes labeled "Bibles." Wisconsin and Minnesota contain some of the best alien strains that have come to the American blood. The Insurgent States are:

Nebraska Minnesota Wisconsin South Dakota Iowa Kansas Indiana

They are States of small cities and large towns, of rich farms, where economic and political independence is man's highest prize.

Protect These Men

AMONG the ten Insurgents, four must soon come before their people for reelection. They are:

Beveridge of Indiana
Burkett of Nebraska
Clapp of Minnesota
La Follette of Wisconsin

These men should be supported in their several States by every man who admires independence and courage. Beyond their States those who approve the records of these Senators should contribute the powerful aid of outside public opinion. If these men are returned to the Senate it must be accomplished through the unselfishness of individuals. Every selfish interest, the organized wealth which contributes money, manages campaigns, and gets votes by purchase or persuasion—these interests they have opposed. It is no secret that Beveridge has been marked for slaughter. When he rose to cast the first Republican vote against the Aldrich bill (he leads the Insurgents in the alphabetical list, and important issues often hang on that position) Aldrich followed him with a bitter speech which was intended to excommunicate him from the Republican Party. Beveridge will need the help of all who approve his courage. The presence at Gary of the new plant of the Steel Corporation makes a new and dangerous element for Beveridge in his State. A similar effort, and a powerful one, will be made to retire La Follette; but, if nothing else, Wisconsin's pride in the thing that most distinguishes it among the States should be enough to save the man who was an Insurgent when there was only one. In Minnesota it is said that Frank B. Kellogg, the Government prosecutor of the Standard Oil Company, would like to displace Clapp. There is not one good reason for such a change, and a hundred sound arguments against it. Minnesota has reason to be proud of Clapp and of Nelson as well.

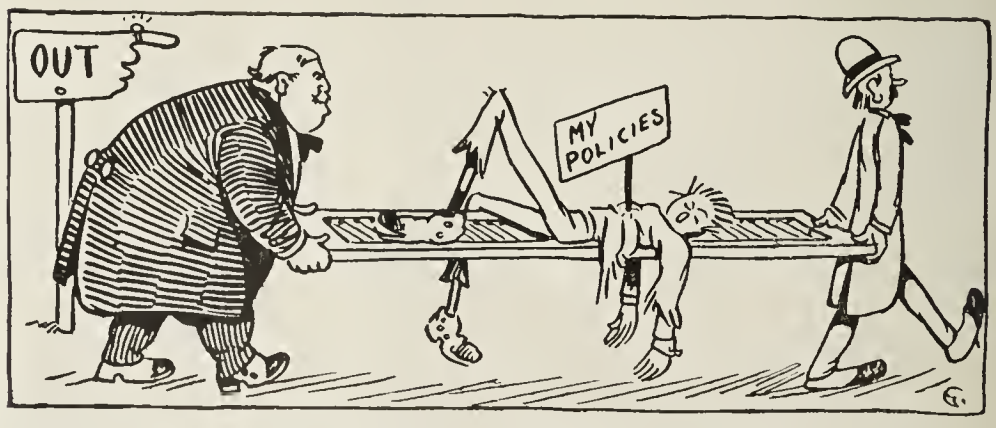
States Which Can Join the Insurgent List

WITHIN a year, in each of the following States, the people will have the opportunity of choosing a Senator:

Michigan Ohio Wyoming Montana California Utah

In the character of their population and in their political ideas these commonwealths are akin to the Insurgent States. What is the matter with Michigan? It should not be different from Minnesota and Wisconsin. Both its Senators, Smith and Burrows, have been servile followers of Aldrich. The term of Burrows expires with the present session. A new man would better represent the sentiment of Michigan.

In Ohio not even the machine will try to return to Dick. Impossible as it may seem, it is said that Foraker will try to come back. Has Ohio no other public man fit to stand beside Burton? Burton is not an Insurgent; but he obeys his conscience and his intelligence more than he does Aldrich. He is a satisfactory Senator, and Ohio should have either two like him, or him and one like Beveridge.



Wyoming, Montana, Utah—all these are communities of spirit. Do they relish the idea of being represented by Senators who play into the hands of Aldrich? They would laugh at Aldrich if he himself asked them to elect him to the Senate; they will do what amounts to the same thing if they return the Senators who always vote as Aldrich dictates. We think the next Senate will contain at least fifteen Insurgents.

A Name

SOME persons and papers prefer "Progressive Republicans" to "Insurgents" as a name for a possible new party. We like "Insurgents" partly because it is more colloquial, partly because we think it is more promising as the name for a new political party. History most often calls upon contemporary slang for names for new parties. A "Whig" was originally a poor Scotch mountaineer who lived upon whey. Similarly, "Tory" was a name for outlaws in Ireland. "Sansculottes," literally "without breeches," was not too undignified for the name of a party that included half of all France. "Roundhead" and "Greenbacker" are well known. The "Barnburners" were a powerful political group in early American history.

A Cartoon

THIS cartoon has been printed in some scores of newspapers throughout the West, including the Cleveland "Press," the Cincinnati "Post," and papers in St. Louis, Toledo, Los Angeles, Seattle, Spokane, Kansas City, Omaha, and St. Paul. In reprinting it we don't vouch for its entire accuracy, but do go farther than assert that it is interesting and amusing. Early in the present administration some one in Mr. Taft's Cabinet was credited with saying that "Roosevelt's policies will be carried out, but not with such flamboyant beating of tom-toms as characterized Mr. Roosevelt's own administration." That is the point of this cartoon. To represent Mr. Taft as playing the willing and conscious undertaker to Roosevelt's policies does him a definite injustice. He will never, as a positive action, repudiate the Roosevelt policies.

"Carrying out Roosevelt's policies"—"Not with such flamboyant beating of tom-toms, perhaps." One of Taft's Cabinet was credited with these words

He may, through inaction, or through easy-going acquiescence in the actions of those who are close to him, inadvertently become a party to the demise of the Roosevelt ideas. The difference between the recent and the present President has been said by Taft himself to be chiefly "a difference in method and in temperament." Still more is it a difference in energy. The same good intentions largely are common to both. But Taft lacks the energy, the love of action necessary to overcome the inertia of fixed ideas. If Roosevelt's policies are not perpetuated, this will be the reason. Mr. Taft has in his Cabinet at least one man who has, within his department, treated with violence all that Roosevelt had done. One such man, if active, may create such an impression as is pictured in this cartoon. That such an impression is gaining momentum throughout the West is a matter sufficiently serious to engage President Taft's attention.

Don't Throw Dull Blades Away-Strop 'Em!

DOES THE STROPPING FOR YOU AND THE HONING TOO!!

AND BETTER THAN THE MOST EXPERT BARBER CAN DO IT

FLEMING RAZOR STROPPER AND HONER

PRICE **$2.00**

NO SKILL REQUIRED

All you have to do is to lay the Stropper flat on the strop, and move your hand back and forth, producing in a minute the keen, sharp edge necessary to a clean and satisfactory shave.

STROPS AND HONES ALL RAZORS AND SAFETY RAZOR BLADES

The Fleming Stropper and Honer can be used on any strop or hone.

Any dealer who sells cutlery can supply you. If not, write to us.

We will send the Fleming Stropper and Honer by registered mail on receipt of $2

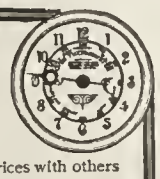
At Last—The Perfect Garter!

You who know the discomfort of tight leather garters:
You who know the disagreeable, clammy feeling of wet, clinging elastic bands with their rusting buckles:
You who know the unsightliness of wrinkled socks, when common garters slip and stretch:
You will be delighted with

"THATs ALL" Garters



For here, at last, are sensible garters—clean, cool, comfortable garters, that can't possibly bind your legs or slip down. They support your socks perfectly. Yet they don't pull. They can't come undone. Yet they are easily put on and taken off. They can be worn with either long or short drawers. And new elastics cost but 5 cents a pair, if you need them.

Be comfortable this summer. If your dealer can't supply you, mail us 25 cents for a pair of "**THATs ALL**" Garters. Try them 10 days. See if they're not better than common elastic or leather bands. Then, if you're not satisfied, we'll refund your money. And we'll even refund your postage if you're not contented with the garters. It costs you nothing. Get a pair of sensible garters today. Write to

"THATs ALL" Garter Co., 41 Union Square, Room 521, New York

"A Kalamazoo Direct to You"

What the World Is Doing

(*Continued from page 19*)

home. Lightly, in a June 19 issue, he abolished those who make a fetish of words—mere words, names, such as "liberty," "order," "reason," "authority," when they might be fighting for good government.

Latest of his jungle copy, hot from the inaccessible swamps, in the issue of the "Outlook" for July 17, he elongates and popularizes the Prayer of Agur, titling his little homily: "Give me neither poverty nor riches."

He conceals the sting of his discourse in the tail of it, where for the heir of the multi-millionaire he advocates the imposition of "a heavily graded progressive inheritance tax." He says "it would be a particularly good thing if the tax bore heaviest on absentees."

Galvanizing Asia

ONE more world's capital has fallen into the hands of its friends, and Teheran is added to Constantinople as the scene of victory by Constitutionalists. The Shah had kept the constitution of January 1, 1907, for ornamental purposes, and the Progressives grew restive.

One by one, silently, but with a rush in the final moments, the nations of Asia are stepping over into modern life. In greater or less measure what has happened to Japan is apparently about to be reproduced in each of the Asiatic peoples.

India is in the same painful and unlovely state of finding itself. Transition gives frictional heat and fanaticism. Out of that hot-box sprang the murder by a Hindu student of Colonel Sir William Curzon Wyllie and Dr. Cawas Lalcaca. It was a political murder. Sir Curzon Wyllie was political aide-de-camp to Lord Morley, Secretary of State for India, and had previously been Resident in the West Rajputana States.

The soul of a race changes as the surfaces of its civilization change. And a railroad will banish a theory of transmigration. It is to be fervently hoped that the life of invention, science, constructive ability, engineering advance, commerce, industry, practical politics will not flatten off the East into a dreary pattern of commercialized life.

Some by-products of the East are undesirable. Dirt, ignorance, superstition, cruelty, and tyranny are not in themselves estimable.

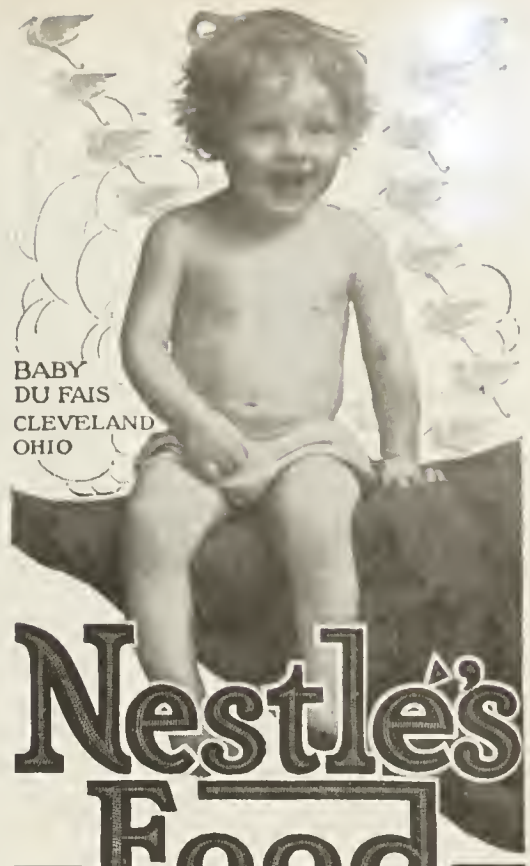
But the cult of beauty, the reverence for old age, the pursuit of the life of the spirit, the poetic interpretation of the outer world, the absence of hustle, and the presence of calm, are contributions which the East could make to our brittle Western civilization.

The Downfall of the Villain

ARE we to be robbed of all our villains and favorite monsters, and to live in a dull gray world of virtue, where heroes are diversified but by saints?

In the audience of the people, Mr. Rockefeller has exposed himself as a gentle-souled old philanthropist. In his old age he has shown himself naked to his enemies, and challenged them to find a cloven hoof where the O'Sullivan ought to be. Instead of conferring cat-calls merely, the people have let him make out his defense and flattering exposé.

Then came Ferrero, the Italian historian, to clear the name of Nero from all taint. He pricked the bubble of his reputation as a tyrant, and showed him up in all his hopeless mediocrity as an essentially commonplace personage.



And now comes the rehabilitation for Russia and its rulers. The conservative London papers are diligent in creating friendly atmosphere for the Czar, about to visit Albion's chalk cliffs, and for the Duma members, who have already tested the roast beef and heart of oak.

The "Spectator" says of the Czar and his clemency:

"The Labour Party have proved themselves strangely blind to the extraordinary difficulties with which the Tsar has been confronted. We may be quite sure that the fate of Louis XVI has constantly been kept before his eyes, that he has again and again been warned of the danger he is running by not crushing the revolution in its cradle, that he has repeatedly been implored to make his subjects feel the full strength of their sovereign's arm."

A Human Scientist

SIMON NEWCOMB, who died at Washington on July 11, was able to do his thinking in terms of the common man. It was this skill in translating the technicalities of science into human speech that made him widely known, where his mathematics and his astronomy would

Nestlé's Food

BEST FOR BABIES

Electro Importing Co., 86c West Broadway, New York
"Everything for the Experimenter"

Develops 60 H.P. on the Brake

Everyone should see the New

BEGINNING the design in 1907, and the construction in 1908, we group in one car all the well-tried improvements of great merit that have been evolved in automobile construction for the sole purpose of eclipsing all the highest-priced competitors in the 30 to 40 H.P. class in power, silence, flexibility, smooth running, efficiency and reliability.

Among the improvements we have included the new "long stroke engine" with large, easy, gas passages of one half the piston diameter, and the completely water jacketed valve-seats and stems which result in:

Motors that give vastly increased power with same piston area. The new "long stroke" has revolutionized motor construction abroad.

(Note Great Improvement in Power.)

We rate our 6-cylinder, 4¼ x 5½ Model "M" motor at 40-H.P.
(A.L.A.M. rating is 43-8/10 H.P. at 1090 revolutions.)
A stock Model "M" motor will develop 50-H.P. at 1090 revolutions.

IMPROVED NICKEL STEEL TRANSMISSION GEARS

Short rigid shafts only 8 7/16 between centers of bearings. Imported annular ball-bearings throughout. Accessible and oil-tight.

All the newest foreign models of popular makes include 6-cylinders—the new "long stroke" motor design and the short transmission.

In addition to this, the 1910 Thomas Flyer "M" has all the niceties, refinements and improvements:

Engine base one-piece construction—crank shaft of large diameter which can be removed with fly-wheel as a unit—forged steel herring-bone timing gears—fly-wheel and all rotating mechanism perfectly balanced, both statically and dynamically—valve plungers cushioned to insure silence. Large water jackets insuring against over-heating—motor suspension three-point—large brakes—very long Silico Manganese springs—Two universal joints between transmission and clutch preventing any strain on bearings—the old reliable three-disc Thomas clutch (patented)—large manifolds—low center of gravity—125-inch wheel-base—chrome nickel steel frame—extra

The Thom

The Thomas Flyer

MODEL "M," 1910

Six-Cylinder; 4¼ inch bore; 5½ inch stroke; rated 40 H.P.

Touring Car, Flyabout, Tourabout, $3,500.00. Limousine, $5,000.00

Candidate for Public Favor

large bearings throughout—long propeller shaft—slight angle dust-proof universal joints—geared force feed oiler—two separate and distinct systems of ignition—axle clearance 11 inches. These points are combined with

Refined Simplicity *Speed and Power*
Economy *Durability* *Reliability*
Quiet Easy Riding *Beautiful Design and Finish*
Wonderful Flexibility
Superiority

The above points are easy to claim for any car, but are substantiated by the performance of few.

They are attained by only those cars which are the product of a wide experience, an unlimited expenditure of brain and money for experiment, and the conservative employment of those things which have been thoroughly tried out and found suitable for their intended purposes.

The Model "M" 1910 Thomas Flyer is the product of just such a course of procedure.

It is refined and simple in design because we have found that only such design will meet American road conditions.

It is speedy, and a powerful hill climber and endurance car as a result of this design.

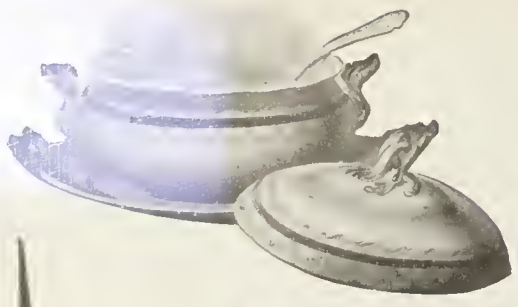
It is economical and durable because only the best talent that can be had has planned it and only the most select labor and material enter into its construction.

It is the quietest, easiest riding and most beautifully designed and finished automobile made because we have been satisfied with nothing short of absolute superiority for the Model "M" 1910 Thomas Flyer.

Our reasons for assuming that we could build such a car are our long experience in car building; what we learned as to the requirements of a car's durability in the New York to Paris contest; the testing of the good points of both foreign and domestic cars, holding fast to the proved Thomas features, and more than all else to the fact that we make all the important parts of construction in our own shops, which are now equipped with the best of machinery. Rigid limits of inspection are demanded of both material, in our physical and chemical laboratories, and of labor in the shops.

We are satisfied as to our claims for its merits.

You can prove our claims by inspection and demonstration. We will abide by the result.



If you wish larger cars with more power, we have the great Model "F" 4-60-horsepower, a duplicate of the New York to Paris car, which sells for $4,500.00, and the greatest of all cars, the Thomas Flyer 6-70 Model "K" which sells for $6,000.00. This car this year is equipped with 38-inch tires and has many other improvements. It has the greatest reserve of power and strength of any car in the world, and every owner will back up the statement that the Thomas Flyer 6-70 for 1910 is the last word in smooth running, hill climbing ability and all that is good in automobiles.

Fine-Form TRADE MARK. **MATERNITY SKIRT**

Registered in U.S. Pat. Office

of great interest to

Every Prospective Mother.

Something new — only scientific garment of the kind ever invented. Combines solid comfort and ease with "fine form" and elegant appearance in the home, on the street, and in society. — **Always drapes evenly in front and back** — no bulkiness — no draw-strings — no lacing — no ripping or basting — **Can be worn the year round.**

Made in several styles, and at prices lower than you can buy the material and have them made at home.

FREE Send for our **Fine Illustrated Book — "Fine-Form Maternity Skirt"** — It's FREE to every woman writing for it. Tells all about these skirts, their advantages, styles, material, and cost. Gives opinions of physicians, dressmakers, and users. **10 Days Free Trial.** When you get our book, if your dealer has not yet been supplied with Fine-Form Maternity Skirts, make your selection of material and style, and we will make the garment to your order. When you get it, **wear it ten days,** and **if you don't find it exactly as represented,** send it back and we will cheerfully **refund every cent** paid. **Other Skirts** — If not in need of a maternity skirt, remember our famous B & W dress and walking skirts will positively please you — **same guarantee** — Illustrated book free. Which hook shall we send? Write to-day to

Beyer & Williams Co., Dept. 51, Buffalo, N. Y.

WARNING

To protect you against disappointment we caution you that the **Fine-Form Maternity Skirt** is the only "Maternity Skirt" on the market, as it is the only skirt which can always be made to drape evenly, front and back—all substitutes offered will rise in front during development—a fault so repulsive to every woman of refined tastes. No pattern can be purchased anywhere for this garment. Its special features are protected by patents.

WM. F. NYE NEW BEDFORD, MASS.

have left him the admiration of a handful of specialists.

Recently he gaged the orbit of the aeroplane, and discounted its future. He was convinced that the aeroplane—which can not be navigated out of sight of the land or in a fog, which can not pause in its flight for any repairing or readjusting of its delicate machinery, which "makes toward the ground like a wounded bird the moment any stoppage occurs"—will never be of much use as a carrier of passengers and freight. The same handicaps would, of course, fatally limit its efficiency against an enemy in time of war.

All Cities: Please Copy

WORK—there is work for the luckless, the unemployed, the pale scholar, the ambitious, for all but the laggard and the sluggard. Hundreds of harvest hands are still needed in Kansas. Dickinson, Graham, Rooks, Smith, Trego, and Phillips Counties are crying for men to the harvests, which are maturing under the level sun.

The Swiftest Creature

COVERING 1,600.05 yards a minute, a homing pigeon, on July 12, flew from North Bay, Ontario, to Baltimore. It was 510 miles in an air line, and the total time was 9 hours and 17 minutes; 486 birds were liberated. The record for 500 miles is 1,705.62 yards a minute.

Racing pigeons are the fleetest of all creatures. They have maintained a speed of a mile and a half a minute for a hundred miles, and they have flown 700 miles between the rising and setting of the sun.

The bird that made the 700-mile record on the day of toss was "Wilkens," owned by W. J. Lautz. The average speed was 1,546.97 yards a minute. Three other birds covered the distance. The four were blown home by an 80-mile-an-hour wind in their tail feathers. That record will probably stand for all time, as weather conditions were unexampled over all the course.

A hundred-mile record was established in 1900 by a bird who clipped off 2,511.87 yards a minute. That is at the rate of a mile and one-half a minute.

Pigeons have flown a thousand miles back to the home loft. In 1904 a bird covered that distance in 5 days, 2 hours and 15 minutes, proving "how unerring is the mysterious homing instinct that will drive them across a continent without swerving. But the test is no more true sport than a six-day bicycle race. The birds simply hurl themselves against time and space till they are played out. They can never race again."

The perfect pigeon-racing distance is 500 miles. The racing bird weighs from twelve to fourteen ounces, and measures eleven to twelve inches in length from tip of tail to beak. It stands strongly, is full-chested, and has broad flight feathers, well protected by secondary feathers.

The racer rises into the air with heavy, slow wing pulsations, then once poised over the starting-point, there is a swifter, shorter beat, and then the time is hit up to the "third and permanent wing rhythm, rapid and steady as a pulse beat, which sees them homed before dark."

They fly 300 feet high over land, but low over water. Their enemies as they fly are wind, rain, gunners, and hawks. They do all their flying between sunrise and sunset. If caught out overnight, they fend for themselves till dawn.

The homing instinct is lifelong. During the Franco-Prussian War the Germans caught a homing pigeon which was on its way into beleagured Paris. The bird was kept prisoner for ten years. It was then released and immediately returned to its old home.

The Critic

WE IN the United States have been breaking our bones on a rock-ribbed conservative, while England has been trying to extinguish a red-flag radical. Pretty much the same things have been said of Senator Aldrich as of Lloyd-George.

A strong man taking definite action will set the critics yelping in the time-honored vocabulary of stricture, which is much alike for all occasions. Here is the "Saturday Review" on the present English Government. (Substitute the names of Senators and you get proper words for the Rhode Island chieftain and his clique.)

"The present triumvirate of Messrs. Asquith, Lloyd-George, and Churchill rule Great Britain as absolutely as ever three men ruled Rome. The degrading feature about the present situation is that it is the autocracy of the demagogue. We seem to be within measurable distance of the untempered reign of the political lawyer, the labor delegate, and the politician of the American type."

MORGAN & WRIGHT TIRES ARE GOOD TIRES

Why should *you* put up with *less* service when such service as this is *customary* with users of

MORGAN & WRIGHT TIRES

Peerless — Cadillac

Automobile Sales Corporation

144 & 146 North Broad Street

Philadelphia, June 1st, 190 9

Morgan & Wright,
Detroit, Mich.

Gentlemen:—

We are pleased to inform you that the set of tires just taken from the demonstrator which we received last November has run nearly 11,000 miles, and but two of the casings have undergone repairs during this mileage. The repairs were of a sectional nature caused by stone bruises.

The other Cadillac demonstrator upon which we have just put new tires ran 7852 miles, and would perhaps run over a thousand miles more, but their appearance is no longer good enough for a demonstrating car. This is an average of about 10,000 miles on the two cars.

These tire showings have made it possible for us to get all our customers to specify your tires, which will number over 200 Cadillac cars this season.

Yours very truly,

AUTOMOBILE SALES CORPORATION,

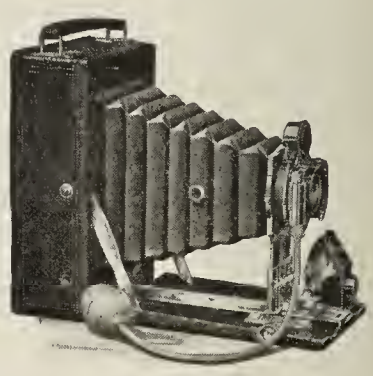
PER. [signature]

We have selected this letter from among the many reports of similar service we receive because of this significant fact: A demonstrating car, by reason of the various "stunts" it must perform in exhibiting its selling points, gives its tires much harder usage than they would receive in ordinary service.

You, as a motorist, may therefore reasonably accept the average service these eight tires gave on Cadillac demonstrating cars as a fair sample of the service Morgan & Wright Tires would give on your car.

Morgan & Wright, Detroit

FILMPLATE PREMO

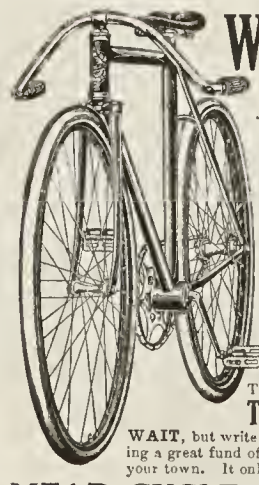


A camera of the highest efficiency, taking plates or daylight loading films with equal facility.

Permits ground glass focusing with either, and yet is as light and compact as exclusively film cameras that have no ground glass.

Fitted with automatic shutter and a splendid lens. Has rack and pinion focusing attachment.

Easy to load; easy to operate. Development by the tank method with either films or plates.



$3\frac{1}{4}$ x $4\frac{1}{4}$, $24.00; $3\frac{1}{4}$ x $5\frac{1}{2}$, $26.50; 4 x 5, $26.50; 5 x 7, $35.00.

Catalogue of this and fifty styles and sizes of Premos at the dealer's or mailed free on request.

IMPORTANT—In writing, please be sure to specify PREMO catalogue.

ROCHESTER OPTICAL DIVISION, Eastman Kodak Co., **Rochester, N. Y.**

WANTED---A RIDER AGENT IN EACH TOWN and district to ride and exhibit a 1909 Model "Ranger" bicycle furnished by us. Our agents everywhere are making money fast. *Write for full particulars and special offer at once.*

NO MONEY REQUIRED until you receive and approve of your bicycle. We ship to any one, anywhere in the U. S., *without a cent deposit* in advance, *prepay freight,* and allow **TEN DAYS' FREE TRIAL,** during which time you may ride the bicycle and put it to any test you wish. If you are then not perfectly satisfied or do not wish to keep the bicycle you may ship it back to us at our expense and *you will not be out one cent.*

FACTORY PRICES We furnish the highest grade bicycles it is possible to make at one small profit above actual factory cost. You save $10 to $25 middlemen's profits by buying direct of us and have the manufacturer's guarantee behind your bicycle. **DO NOT BUY** a bicycle or a pair of tires from *anyone* at *any price* until you receive our catalogues and learn our unheard of *factory prices* and *remarkable special offers* to **rider agents.**

YOU WILL BE ASTONISHED when you receive our beautiful catalogue and study our superb models at the *wonderfully low prices* we can make for 1909. We sell the highest grade bicycles for less money than any other factory. We are satisfied with $1.00 profit above factory cost. **BICYCLE DEALERS,** you can sell our bicycles under your own name plate at double our prices. Orders filled the day received. **SECOND HAND BICYCLES.** We do not regularly handle second hand bicycles, but usually have a number on hand taken in trade by our Chicago retail stores. These we clear out promptly at prices ranging from $3 to $8 or $10. Descriptive bargain lists mailed free.

TIRES, COASTER-BRAKES, single wheels, imported roller chains and pedals, parts, repairs and equipment of all kinds at *half the usual retail prices.* **DO NOT WAIT,** but write today and we will send you **free** by return mail our **large catalogue,** beautifully illustrated and containing a great fund of interesting matter and useful information; also a *wonderful proposition* on the first sample bicycle going to your town. It only costs a postal to get everything. **Write it now.**

MEAD CYCLE COMPANY DEPT. P-54 CHICAGO, ILL.

An Epidemic of "African" Books

ON HUNTING in British East Africa books multiply. Partly this is so because British East Africa is the most accessible and easiest traveled of African game haunts, as well as because it abounds in wild animal life to a greater extent than any other spot on earth. Partly also it is because so many men who go a-hunting appear to feel the desire to write a book, regardless of their fitness for the task. And so it is that we have volume after volume of commonplace hunting experiences set forth in colorless, uninviting style. More boresome books are written around hunting trips than on any single subject, and that's too bad, for there is no subject more replete with interesting material or more inspiring.

"On Safari," by Abel Chapman, is an example. It is no better and no worse than the average of these hunting books without which one could get along so well. It is the commonplace talk of the ordinary hunter in Africa. Mr. Chapman proclaims himself an ornithologist, though giving little more than a catalogue of the birds he sees. For example—the rare sight of a Goliath heron moves him to no other comment than that it was "tall and gray." Indeed, the most noticeable feature of the book is its dearth of comment on the birds and animals encountered. "Thus ended our Twelfth on the Equator. We had brought in five heads of as many different species and three of them new to us!" Perhaps the author realized his limitations in this respect, for I find him referring to the cheetah as "in general appearance closely resembling a leopard"!

The volume is generously besprinkled with the author's poorly drawn natural history sketches, although there are also several very good full-page studio hunting pictures, not by the author. There is some good stuff in the book, but one must dig for it. The best thing in the volume is the author's account of his first elephant and a photograph of a live cobra. I note also some moral reflections on game protection—at the end of the volume, after the author had satisfied his lust for elephant killing. It will be a relief when Roosevelt comes out and puts into print the story of his experiences. However personal it turns out to be, it will, at any rate, be accurate and satisfactory to the man who wants to know. C. W.

Four Cheering, Unsung Books

FOR that convenient shelf on which to stack the good stories that will want occasional rereading, please consider these four volumes:

"The Belted Seas," by Arthur Colton.
"The Delectable Mountains," by Arthur Colton.
"The Fugitive Blacksmith," by Charles D. Stewart.
"The Boss of Little Aready," by Harry Leon Wilson.

They have all been published within the past ten years, and none of them has ever come within a thousand miles of the best sellers. Each is a contribution to American humor. Colton is whimsical, glancing, and, in "The Delectable Mountains," purely native in his humor. "The Belted Seas" episodes preceded the better-known tropical extravaganzas of O. Henry. In them are delicious characterization, pure comedy of situation, and a happy wilfulness of plot. Here is their tone:

"Cold are the feet and forehead of the Earth,
Temperate his bosom and his knees;
But huge and hot the midriff of his girth,
Where rolls the laughter of the belted seas."

Whoever loves Huck Finn and the Mississippi will give "The Fugitive Blacksmith" a good place on the shelf. It is illuminated with the big river's hilarity, and, in pages, becomes tragic and intense. Stewart writes without considering tradition—his tale jumps here and there unexpectedly. You may be sure, however, that there always exists the raconteur's best reason for the shift—the necessity of following the vital thread of narrative. Drop in behind this fleeing, handy man on his way up from New Orleans, across Arkansas, and into Texas, and you will remember the flavor of these parts, primitive, sinister, populated by a volatile people.

"Little Aready" can be found anywhere in the Middle West. It is a small town (village it would be in the East), full of comedy characters. In reading Mr. Wilson's book you will have the impression

The Master-Builder Knows

THAT is why the Carey Roof stands first in the choice of leading architects, contractors and artisans everywhere.

They know that the perfect roof must be, beyond question, an absolute protection against the ravages of time, wind and weather, for generations, in every emergency.

Carey's Flexible Cement Roofing is the highest type of modern roof construction. It has withstood the severest tests for a quarter of a century.

It will be found today covering more great factories and other large, flat and steep-roofed buildings, than any other construction—and giving better service.

Its unique inner plastic compound — prepared and tempered by a special process—means a flexibility that never dries out. The outer coverings are of wear-resisting materials that actually improve with age.

It is proof against heat, cold, dampness, wind—an unequaled fire retardent.

There is always an element of risk in the quality of a roof built upon the building because to make a good roof, machinery, scientific manufacture, expert supervision are required.

Carey's Roofing is the product of special machinery—in our vast factories. It is absolutely *standardized*—never varies in weight, thickness or quality.

Carey's Roofing is easy to buy; 46 distributing points; leading dealers everywhere.

STERLING BLUE TUBES

Can Your Advertising Agent Outsell All the Rest?

This is the vital question.

Advertising agents are bad, better or best, according to their selling ability.

Nothing else matters at all.

Advertising has only one purpose. It is done solely to sell the goods.

If ads can be written to sell a tenth more than yours, you are wasting a tenth of your money. You are losing a tenth of your sales.

Suppose you could hire the best salesman you know at the price of a tyro. Which man would you take?

In advertising, you can do exactly that.

High-class agents, whether good or poor, all charge the same commission.

Ads that sell the utmost cost no more to insert than ads that sell nothing at all.

Getting the best is not a question of price, but of shrewdness.

Your degree of success depends entirely on your selection of salesmen-in-print.

We solicit business solely on the basis of results.

We might talk age, for this agency is 36 years old.

We might talk size, for we have outgrown all rivals.

We might talk buying power, influence, knowledge of mediums—a dozen such matters of course.

But what do they all matter when compared with results?

Our only claim is that we outsell all others. We have proved it to hundreds. We can prove it to you.

This fact is so certain—so invariably true—that we handle advertising without any contract whatever. We rely solely on results to keep it.

That is why our Copy Chief is paid $1,000 per week. That is why each of our brilliant men holds the place he holds.

Working together—as they do—they can sell more goods per dollar spent than any other men in existence.

Suppose these claims are facts. And suppose they apply to you.

Suppose these men, at the same expense, could bring twice the results you are getting.

How much would it mean?

There is a way to find out—easily, quickly and certainly.

It can be done without any commitment on your part, and without disturbing your present agency connections.

The answer will be clear and final. It may be worth thousands of dollars to you. And it may be worth millions. That depends on the article advertised.

If you are interested, ask us to explain the way.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

that he took a sympathetic witness's interest in setting down truthfully the qualities that make Little Arcady's people absurd, narrow, prying, helpful, impulsive, likable. The book is real, clean, native comedy, and accurate enough to save as a historical document. J. M. O.

Illinois in the Fifties

IT IS the Load-Bearer in Francis Grierson's recently published volume of recollections of the Lincoln country who speaks:

"The difference a-twixt Lincoln en Douglas warn't so much in Lincoln's bein' a good ways over six foot en Douglas a good ways under, ez it war in thar eyes. The Jedge looked like he war speakin' agin time, but Abe Lincoln looked plumb through the meetin' into the Everlastin'—the way Moses must hev looked when he see Canaan ahead."

Mr. Grierson was born in England in 1848, emigrated with his father to Illinois in 1849, and returned to Europe while still a young man. In Paris he became the friend of Alexandre Dumas and other brilliant people, and developed into one of the musical celebrities of his time—he was an untaught genius. From music he drifted into literature. He chose criticism as his field and French as the proper language in which to express himself. "Modern Mysticism" and "The Celtic Temperament" give the clue to his work.

Now, at sixty-one, Mr. Grierson digs into his memory and reproduces successfully the rough world of the Illinois prairies, and the "mystical" spirit that pervaded the people and preceded the coming of the new era. The settlers were busy with ax and plow, but behind their practical striving and sure common sense there was an impulse toward the spiritual. It was a day of great religious revivals, politics was taken seriously, Mrs. Stowe's book was a flame, and the two bright comets that appeared in the sky became divine warnings to prepare for some great change. Promise, the great hope, vigor, humor, crudity, the shrewd philosophy of the country preacher and doctor, the fierce energy of the abolitionist leaders, cornhuskings, the Frémont campaign, Indian dances, life on the Mississippi, the glare of war—these are some of the pictures and moods preserved in the book. It is, in detail and dialect, exaggerated, and it is highly colored by sentiment. Yet the big impression is true—and many of the stories are worth remembering. J. M. O.

One More Social Crusader

OUR attention has been called to a volume, translated from the French. It is written by a person signing himself "Victor Hugo"—obviously, a pseudonym. The book is rather ambitiously named "Les Misérables," and aims to be the voice, or better, the chorus and orchestral interpreter, of the submerged millions of mankind, who live in poverty, disease, and crime. It is one more of the multitudinous class of treatises that preach humanitarianism—what they call "social justice." To the author of these lay sermons, poverty is a disease of the community, and not the bitter fruit of individual incompetence.

The "Brotherhood of Man" idea obsesses the author at all times. He would probably deny that there is such a thing as a "criminal class"—to be harried by the police power of the State. Certainly he would have small sympathy for the old-time division of the cohorts of wo into "Worthy and Unworthy Poor," with Thrift and Individual Initiative as the cures for misery.

"Les Misérables" contains two characters that possess elements of fascination. These are the Good Bishop and Jean Valjean. It is the author's attempt here to express the wo of the race as it flows through the person of men that have suffered much, and learned pity from tribulation.

These suffering, strong and tender characters are movingly, even passionately, rendered, and in spite of their central impossibility, they do have their way with the reader while he is under the spell of the surging prose.

And so one closes the book with the lament of the poets, "*Ay de mi.* Alas, poor humans."

Against our very conviction, against all the formulated laws of progress, one is almost persuaded that here in "Les Misérables" we have the Christian program, the beautiful dream of the evangelists, in modern guise. Dared one but believe that there is one fairer than all the rest, that there "is a heart even as mine behind this vain show of things." A. H. G.

A PLEASING DESSERT

always wins favor for the housekeeper. Dilute Peerless Milk to desired richness and use same as fresh milk or cream.—*Adv.*

The music of Victor Herbert's orchestra under his personal direction will be reproduced exclusively on Edison Records

*Victor Herbert

Victor Herbert is now the musical adviser for the National Phonograph Company. He will select much of the music for Edison Records, recommend, in many instances, the singers or musicians best qualified to produce it for reproduction and pass upon the master records.

No other man could be found so perfectly fitted for this position. Mr. Herbert has done more to teach Americans to like good music than any other man, because he has made the kind of good music that is likable.

He is a master of music. He has built up and leads one of the best orchestras in the country and has written more successful operas, two-steps, marches and other kinds of music than any other American composer.

He will create, through Edison Records, a distinctly American school of music, good as well as popular, liked by everybody.

Edison Records, by Victor Herbert's orchestra, will be ready in September.

LEARN TO SWIM
BY ONE TRIAL
Ayvad's Water-Wings

Price 25c and 35c
GREAT SPORT IN THE WATER
A person weighing from 50 to 250 lbs can float on them without an effort. Inquire of any one who has used Ayvad's water-wings and be convinced you can learn to swim the first day you are in the water. For those who can swim they furnish a source of amusement nothing can equal. Easily adjusted. Take no more room than a pocket handkerchief. Sold by Dry-goods, Sporting-goods, Druggists, Hardware dealers, etc. Ordering from us direct, enclose price to Dept. B.
AYVAD MANUFACTURING COMPANY, Hoboken, N. J.
London Branch, 8 Long Lane, Aldersgate St., E. C.
NOTE—Educational Dept. London County Council classified Water-Wings with books, etc., as necessary school supply.
Bright Young Men wanted to act as Agents. Liberal inducements offered. Send for particulars.

P. F. Collier & Son, Publishers, New York, 416-430 West Thirteenth St.; London, 10 Norfolk Street, Strand, W. C. For sale also by Daw's, 17 Green Street, Leicester Square, W. C.; Toronto, Ont., The Colonial Building, 47-51 King Street West. Copyright 1909 by P. F. Collier & Son. Entered as second-class matter February 16, 1905, at the Post-Office at New York, New York, under the Act of Congress of March 3, 1879. Price: United States and Mexico, 10 cents a copy, $5.20 a year. Canada, 12 cents a copy, $6.00 a year. Foreign, 15 cents a copy, $7.80 a year.

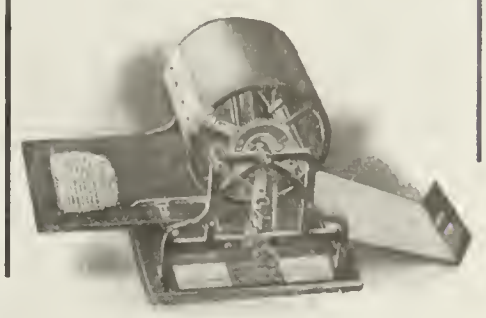
NOTICE TO SUBSCRIBERS.—Change of Address—Subscribers when ordering a change of address should give the old as well as the new address, and the ledger number on their wrapper. From two to three weeks must necessarily elapse before the change can be made, and before the first copy of Collier's will reach any new subscriber.

ADVERTISING BULLETIN

NO. 15

ADVERTISING DECREASES THE COST OF ADVERTISING

THERE are 139 advertisers in this issue of Collier's. If they attempted to reach you, a possible purchaser, with their catalogs, it would cost them each one cent for postage alone; $1.39 in total. If they sent their catalogs to *every one* of our 500,000 subscribers, it would cost them $695,000. You can see that this method would be prohibitive on account of the immense cost.



These advertisers are, however, placing their announcements on your library tables for a very small cost per home. For instance, the 28-line advertisement (two inches) costs $70.00 per issue, and based upon this expenditure, Collier's carries this announcement into 64 homes for one cent. The 56-line advertisement (four inches) costs $140 per issue, and reaches 32 homes for each cent expended. The quarter page (the size of this Bulletin) costs $400 per issue, and reaches 12 homes for one cent.

These figures will prove to you that there is no truth in the assertion which you hear people make occasionally, that advertising increases the cost of merchandise to the consumer. Hundreds of commodities, either necessities or luxuries, that you are enjoying to-day, are made possible because manufacturers have access to the advertising columns of the magazines to tell you of their products. The remarkably large sale of advertised goods also proves that there is no more economical method of reaching the purchasing public than by magazine advertising.

The Quick and Economical

Rotary Neostyle

is the most satisfactory office duplicator. There is no soiling of hands and no complicated type setting. The original stencil is written on typewriter as easily as any letter. Our composite stencil paper is now put up with backing sheet, etc., all ready to use.

The Neostyle prints neat, clear copies, all exact duplicates, at rate of 60 to 100 a minute.

Merely turn the crank and feed the paper—the rotation of the drum brings the printing surface of the stencil to the paper and the ink supply is automatic.

Address for booklet and prices,

Neostyle Co.

PAY THE
Canadian Pacific Ry.
62½c Per Acre
And Take Immediate Possession of
Wonderfully Productive
Farm Land In Southern British Columbia

Yes Sir, Wonderfully Productive land for 62½ cents per acre down and 62½ cents per acre once a year for seven years—that's the maximum you have to pay us for the land.

If you select land slightly timbered you pay in addition only two dollars per thousand for the timber which you sell, all that you use on the place is free.

At these prices we are almost giving it away, but the Canadian Pacific Railway wants YOU, not your money.

As a matter of fact that first 62½ cents is all that need come out of your pocket direct, the land itself if properly handled can be made to yield a comfortable living and pay for itself. And, when fully developed, it will yield a good living and a comfortable surplus.

These lands are suitable for general, truck, fruit, dairy and stock farming.

120,112 lbs. of Vegetables From 10 Acres

Mr. D. E. Gellatley and Sons shipped from Gellatley, British Columbia, over one hundred and twenty thousand pounds of mixed vegetables in one year—all raised on ten acres of what was just such land as you can buy for 62½ cents per acre per year.

$5,030 in Fruit from 6 Acres

Mr. T. W. Stirling of Kelowna, British Columbia, sold the fruit picked in one season from 6 acres for $5,030.00.

An advertisement can't tell the whole story. But, if you men and women who are fighting a hopeless, up hill battle will send me your names, I'll see that you get good hard facts about this country of opportunities by the thousands, enough to go round and to spare.

If you have any idea that Southern British Columbia is a far off barren waste, cold and uninviting, you were never more mistaken in your life.

There is no more delightful country to live in anywhere. Let me send you the facts.

We will satisfy you that you can enjoy life and prosper in Southern British Columbia.

Then come up here and buy a 160 acre farm for 62½ cents an acre down and 62½ cents an acre a year and the Canadian Pacific Railway will hand you back half your fare over its own line of railway.

Fill out the coupon now—You'll get the facts by return mail, and you'll then know how to fix yourself comfortably for life.

J. S. DENNIS, British Columbia Land Commissioner,

J. S. DENNIS, British Columbia Land Commissioner,
Dept. A, Canadian Pacific Railway,
Calgary, Alberta, Canada.

I want information about Southern British Columbia, and your 62½ cents per acre per year land.

The Hippopotamus at Home

THESE pictures of a herd of hippopotami in their native wilds were taken by COLLIER'S photographer after several days of vain attempts to photograph them. The beasts are exceptionally shy and object particularly to being seen out of water. After maneuvering a long way to keep clear of their wind, the photographer reached an advantageous point in sight of the rock about which the animals congregated. Since they were eighty or one hundred yards away, a telephoto lens was used. On the following day Mr. Dugmore could not approach near enough to the herd for a second set of pictures. The upper view shows the birds which sit on the backs of the animals, eating the leeches which cling to the huge beasts.

August 7, 1909

A Speech

PRESIDENT TAFT is about to spend six weeks at Beverly, Massachusetts. That pleasant seacoast town is something less than fifty miles from the southern boundary of New Hampshire. Two or three hours of agreeable automobile riding would carry the President to Portsmouth, to Manchester, Nashua, or even Concord. At all these places, during September, there will be fairs, or other public events at which people gather. We wish that one or the other of these towns would persuade the President to be their guest; and on that supposititions occasion we wish the President might deliver this speech. We give only the essential point of it; the President may surround its beginning and its end with those apt expressions of a genuinely charming personality which make friends of every crowd that he addresses:

"I am anxious that the Democratic Party in New Hampshire should be strengthened.

"Political divisions in this State, in Pennsylvania, and in other Northern States have continued in such a way as at some times to seem to perpetuate the lines which were made at the time of the war, but even these lines are rapidly disappearing, and *it is the duty of all of us, with respect to political partizanship, to wipe out those lines as far as we can and to see so far as we may that in each State the tolerance of opinion shall continue until there shall be respectable parties on both sides, because it is essential to have a good opposition to have a good government.*"

This is a good speech. The sentiments are sound. With "New Hampshire" substituted in place of "North Carolina," and "Democratic" for "Republican," and the addition of nine words to make the transposition clear—*this is exactly the same speech that President Taft delivered at Charlotte, North Carolina*, on the twentieth day of May. That speech, exhorting the South to be less uniformly Democratic, justly attracted wide attention. This supposititious speech, urging New Hampshire, Vermont, Maine, Pennsylvania, and various other Northern States to be less hidebound in their Republicanism, would attract even more attention. Justice to the South requires that it be delivered. Its delivery would be a guarantee of the good faith of what Mr. TAFT has said to the South. Partizanship gone too far is no more to be deplored in North Carolina than in New Hampshire.

Circumstantial Evidence

HERE is a case of circumstantial evidence that may give the reader more insight into our political system than one usually gets from the pages of the Congressional Record or the Government Blue-Book. The citizens of Los Angeles have for three years attempted to prevent the control of San Pedro Harbor by the Southern Pacific Company. To thwart Mr. HARRIMAN's plans, the people of Los Angeles brought suit to set aside certain tide-lands claimed by the railroad. The Southern Pacific, seeking to offset the possible result of this suit, applied to pliant trustees for fifty-year leases of equivalent lands. These leases would give the railroad the control it sought, whatever the result of the suit. Captain A. A. FRIES, the Government engineer in charge of the harbor, in public interviews and addresses, warned the people in time to arouse a public sentiment which alarmed the trustees and induced the Southern Pacific to withdraw its request. At the very moment Captain FRIES's efforts bore fruit in these results, a telegram was received in Los Angeles, through one of Mr. HEARST's newspapers, announcing Captain FRIES's removal to other scenes of usefulness. Perhaps it was a mere coincidence. It is to be hoped, also, that there is nothing more than coincidence in the fact that Captain FRIES's chief, JACOB M. DICKINSON, was the attorney of the Illinois Central Railroad, one of Mr. HARRIMAN's properties, at the time of his selection as Secretary of War by President TAFT. This fact ought to make Mr. DICKINSON cautious, even of appearances. In any event, the moral of all this is that militant patriotism of the kind that protects public property from the spoiling hands of corporations is neither a necessary nor a commendable quality in a Government engineer.

California's Servitude

"FREIGHT RATES" is not a term to beckon the eye on a hot summer day. But to the generation that lives upon this continent to-day it is a good deal more important than Fourth of July. It affects the quantity of food every human being may have for breakfast, and much more the quality and variety of that food. It determines for millions of heads of families whether or not they may own homes of their own, and leaves them able or unable to send their sons to college. Moreover, there is, in this particular story about freight rates, the human interest of a king and his people—the successful effort of Mr. HARRIMAN to make the Pacific Coast pay tribute to him; their unsuccessful efforts to shake off his chains. The facts, necessarily complicated, may try the patience of the uninitiated; but, if only for the benefit of the Pacific Coast business man who understands, the statement of them is well worth while.

The American-Hawaiian Steamship Company has been sailing its vessels around the Horn for seven or eight years. It has a fleet of some fifteen ships. They carry sugar from Hawaii to Philadelphia and New York. Their return cargoes consist of merchandise for California. Since January 1, 1907, this company has been using the Tehuantepec route from Salina Cruz on the Pacific side to the Port of Mexico on the Gulf side. It is claimed by officials of the American-Hawaiian Company that the Mexican Government has spent sixty million dollars on the Tehuantepec route. The American-Hawaiian Steamship Company, as soon as it got formidable, however, was compelled to capitulate to E. H. HARRIMAN, who is President of the Pacific Mail Steamship Company, which uses the Panama route, and which is the property of the Southern Pacific. The American-Hawaiian Company does not touch at any ports which have Southern Pacific terminals. Some years ago the San Francisco merchants organized the North American Navigation Company and supported it by subscription. This company competed by sea with the Southern Pacific freight rates between the Atlantic and the Pacific. The Southern Pacific reduced its transcontinental rail rates and drove the North American Navigation Company out of business at a heavy loss. It is said to have cost the Southern Pacific nearly seven million dollars, but the road got the money back as soon as it destroyed the competition.

It is rather a pathetic story, this attempt of the Pacific Coast to break its transportation chains. When the Panama Canal is completed the railroads will make Denver, Salt Lake, Butte, Spokane, and other Rocky Mountain points terminals and distributing points. Then the railroads can afford to be indifferent to the coast competition by water which the Government is seeking to create by the building of the Canal. In the meantime California pays tribute to Mr. HARRIMAN for every pound of freight it receives, whether by sea or by land.

Tendencies

AMONG the farming papers of the United States two of the best are the "American Agriculturist" and the "Rural New Yorker." The first of the two paragraphs printed below comes from the former; the second was written by a contributor in the "Rural New Yorker":

"The plain truth is that the foreign element is increasing very rapidly in the rural districts throughout most of the Middle and Eastern States. In many cases it is the very best blood of the Old World. By this we mean that it is the strongest, healthiest, and most virile blood. The best blood among the native stock in America is found on our farms. But until within a few years the young men and women have been forsaking the farms of our Middle and Eastern States, either for the Western country or for the city. This has come to such a pass that in many rural communities children and young people are relatively few, while the older people constitute the great majority. In not a few sections of New England, New York, and Pennsylvania any great gathering of rural people to-day will be characterized by a preponderance of gray heads among both the men and the women."

"Not far from where we live is a fine farm which for several generations was in the hands of excellent farmers. . . . Finally the farmer who represents this generation became disgusted, chiefly with the hired-help question, and sold the farm. It was bought by the son of a man who came from the Danube region in Europe. The new owner can not read or write. He . . . and his wife work long hours and drive their workmen like cattle, through rain and shine, weekdays and Sundays. This man, by sheer brute force and 'instinct,' is able to produce a small fortune from that farm each year. The amount of produce he turns off is astonishing. If you and I could do it we could go to Europe every year, if we wanted to, and live like princes. Yet not one of us would do it if we had to pay the price of living the narrow life of the drudge and brutal driver."

Here is the plain tale of the disappearance of the native American from the farm—his minor place in the population of the cities has long been a known story. It appears to be a case of grinding physical competition in which the foreigner excels. It is impossible to view this economic phenomenon without regret. On the other hand, there are no better commonwealths than some in which the foreigner and the son of the foreigner is numerous, like Massachusetts and Wisconsin. After one generation, as a rule, the alien is a foreigner in blood only—he has absorbed American institutions and republican ideas.

One Man's Feelings

OCCASIONALLY a single personal experience may epitomize the emotions of a whole community. W. J. HENDERSON, with his son, keeps a grocery store in Tifton, Georgia. Mr. HENDERSON is seventy years old and a Confederate soldier. He suffers from a broken leg, which he got at the Battle of the Wilderness. Mr. HENDERSON has sent us a genuinely interesting contribution. We haven't room to print it all, but we think the point of it may be indicated in two sentences:

". . . old SOL. PAGE of Boston, Massachusetts, sold my grandfather twenty-two negroes for $18,000. Right away after this transaction SOL. PAGE saw a great light and began to advocate freedom for the slaves. . . ."

If we were in Mr. HENDERSON'S place, we think we should probably feel exactly the same way he does. His point of view should not be wholly inexplicable, even to Boston.

The Men in the Navy

WE ARE FURNISHED with this extract from "A Heart-to-Heart Talk with the Jackies," published in the California "World," and circulated among the enlisted men of the navy:

"Are you brave enough to repudiate the Jingo patriotism of your country? Are you brave enough to defy your officers? Are you as brave as the Russian and French soldiers and sailors who mutinied?"

It must be admitted that this is as strong as language can well be made. That the good sense and humor of the enlisted man has been sufficient to deal with it is a very satisfactory reflection.

A Man

"THIS IS the most crushing failure I have encountered in my career. . . . I am in the best of health, but much depressed in spirits," wrote EDWARD PAYSON WESTON when the expiration of his hundred days found him still a few days' walk from San Francisco. Examine the facts. A gentleman of seventy-one sets out to walk alone from New York to San Francisco within the span of one hundred days. Trudging along stony roads, wading through mire, forced to make much of his journey along railroad tracks, buffeted by head gales, pestered by insects, injured by frequent falls, constantly handicapped by needed food—he plows indomitably ahead. Fighting day and night to make up an almost impossible schedule, he finally arrives at his destination a few days later than his original intention. And he calls this failure. At an age when most men are sitting by the fireside telling old wives' tales to their grandchildren and complaining of "rheumatics," Mr. WESTON is up with the sun and away across the countryside. This is the elemental being with all his fine old pristine impulses and capacities. Neither creeping age nor the languors of civilization can quench the spark once it is implanted in the heart of a man. And EDWARD PAYSON WESTON is a man; on his tramp he depended upon himself. That he arrived a little late does not affect his performance. He calls his trip a failure. The world can not have too many such failures—to plump out the pun boldly—in every walk of life.

To Replace the Loan Shark

REMEDIAL LOAN COMPANIES are no longer experiments merely. Years of successful work lie behind such organizations as the Chattel Loan Association of Baltimore, the Citizens' Mortgage Loan Company of Cincinnati, the Provident Loan Societies of New York, Detroit, and Milwaukee. Ten others, in various cities, are also making their influence felt. Last year these fifteen rivals of the unscrupulous sharks loaned at fair rates, and at an average loss of less than one half of one per cent., more than twelve million dollars. Springing up in response to more or less spasmodic demands, in widely separated communities, these good loan shops have developed different methods. Some have been retarded by lack of knowledge. Now, in emulation of the methods of the sharks, the managers of the fifteen remedial companies have organized an Association. What is hoped for next is the opportunity to employ a man of experience to investigate the business throughout the country and to help organize new companies in those cities where the business of loaning to the poor in pocket is in the hands of thieves and robbers. No need is more pressing. The loan sharks multiply surprisingly, and there is no hope that the number of borrowers will lessen. The sooner the business is made respectable and legitimate, the better for all of us.

City Vespers

By EDITH WYATT

COME home, my child, come home. The fogs are falling:
Along the blue-walled street the whistles calling:
Along the street ten thousand footsteps falling,
Through steam and smoke-wreath's foam.
Bells cry afar: afar the darkness winging,
Soars throbbing with the chimes and whistles ringing,
The breath of night, the twilight city, singing:
Come home, my child, come home.

LOCK fast the locks, drop down the shutters shading,
From shop and counter, counting-house and trading,
From dock-yard, stock-yard, derrick, crane, and lading,
From caisson, clay, and loam,
Come home, my child, come home, in many-chording
And rushing voice, the city sings, from hoarding,
From spending, grudging, judging, and recording,
Come home, my child, come home.

COME from disgrace and honor, craft and scheming,
From work and shirking come, from deed and dreaming,
Success and failure where the lights are streaming
Azure and chrysolite,
Yellow and crystal, where the mists are falling,
The yard-bells ringing, engine whistles calling,
Along the street ten thousand footsteps falling
Come through the dark-blown night.

WHERE tall-piled height and dusky cornice lower
On storied citadel and tall-crowned tower,
Corner and curb a million arc-lights flower
Full in the twilight air.
If all the foot-falls spoke the destinations
Of all the dreams of all the generations
Upon their way, all shames, all aspirations
Would find their kindred there.

HERE steps your fate, my child, your generation
That walks through time to some far consummation
Unknown along the blue street's destination
Through fog and smoke-wreath's foam.
Here flies your life, for worse or better winging
And pulsing with the bells and whistles ringing,
The heart of night, the full-thronged city singing:
Come home, my child, come home.

The Parasol

THE PARASOL is a fit frame for feminine loveliness. Tilted across the shoulder of youth it is like the sheltering leaf which protects the flower-face beneath. There is also the solemn black parasol which screens the lineaments of staid maturity. But, frankly, we regard this as a mere sun-umbrella. The true parasol should be white, or of some cool tint to fit the summer landscape. It is in sunshade-time that we most heartily congratulate the girl—we speak out boldly—with red hair. To be sure, with such an aureole she has in all seasons an advantage over her less lucky sisters. But in summer she can set off those strands of gold against a background of shrewdly selected silk. Nor need the delicate sun-shield necessarily be silk. We confess to a weakness for linen as it is now used. It has a certain distinctly "summery" character. "But how," we hear a captious critic murmur, "how do you reconcile your interest in the sunshade with your rhapsodic appreciation of freckles and tan?" Good friend, we don't have to reconcile them. The parasol is versatile. It has many other rôles than that of screen. Next to the fan it is the most deadly weapon in the arsenal of coquetry. It is not rendered impotent by being kept closed; if anything it becomes more efficacious. Observe it as it supports some gently leaning form, watch it twisted in delicate fingers, mark how it punches holes in the beach or embroiders quaint patterns in the sea-sand. It is itself human, feminine, and full of pretty wiles. After all, its chief charm lies in what it derives from her who carries it. It has a history of many centuries of effective aid to feminine purpose.

Somebody Else's Moon

BEING somebody else's moon for a change ought to be fair enough, inasmuch as we borrow our own moonlight from another planet. Venus, a sister world of ours, which is probably inhabited by a sort of Turkish-bath kind of people, hasn't any moon so far as known. According to Mr. F. W. HENSEL, of the Royal Astronomical Society, she depends on us for a lesser luminary. The phenomenon of earth-shine is well understood, and the terrestrial ball, with its illuminated surface turned full in the direction of Venus, presents undoubtedly a pleasing spectacle, the earth for certain reasons being far more brilliant to Venus than the morning star is to us. Ah, those warm planetary nights, when the sweethearts of Venus gaze rapturously up at the "full earth!" Who knows but that the earth-light season on Venus is a time of glad festivity, when maids dance to the jingle of the tambourine, and merrymakers throw confetti and drink wine? Or it is not impossible that concealed amid the tropic vegetation of the planet there are shrines and temples dedicated to earth-worship, where curious priests and dusky virgins chant paeans and make sacrificial offerings. Children, maybe, are told about the "Man in the Earth." In some planetary Mother Goose book may occur a rime about the cow that jumped over the earth. What ragtime songs the musical comedy composers of that far-away sphere may not have written about us! "Don't Be Anybody's Earth but Mine"; "Earth, Dear"; "Same Old Earth"; "Shine On, Harvest Earth"—all the gems of the opera. The "Venusian" audience sits spellbound while the calcium light plays on the leading lady, and the earth song is rendered, while the radiant earth, sailing in splendor through the sky, is silvering lonely planetary wastes of sea, beaming down upon slumbering hamlets, peeping into cottage windows, or shedding its benign light over tropical forests and steaming marshes.

Comment on Congress

By MARK SULLIVAN

IN THE Kansas City "Journal" we find this assurance that peace of mind will be the portion of at least one Congressman during the next two years:

"Victor Murdock, Congressman from the Eighth Kansas District, can spend his vacation where he pleases this summer. He has no grounds for worry over the political situation in his district, and it won't be necessary for him to spend the hot summer months patching up his fences. He will have no opposition at the Republican primaries next year. 'Aspirants for Congressional honors are not manifesting their generosity just to show their friendship to Vic,' said a reform, or rather a reformed, statesman recently. 'They are keeping out of the race next year because they know they have no chance to win. If any single one of them thought he could lick Vic he would be an avowed candidate for the place in thirty minutes. It is conceded by all that next year is Vic's easy year.'"

Mr. Murdock was the leader of the Insurgents in the Lower House who opposed Cannon. We think most of the other Insurgents, all of whom come from the Middle West, are sharing Mr. Murdock's serenity. It is said that Uncle Joe intends to discipline the Insurgents by removing them from all the desirable committees on which they have been serving. That would be a grave public loss. Murdock, for example, has saved the Government a great deal money through his work on the Post Office Committee. But the visible evidence of Uncle Joe's resentment will be the final touch to make the Insurgents solid with their people.

The Iowa Delegation

IOWA is one of the strongest of the Insurgent States. Both its Senators and a large portion of its members in the Lower House are Progressive Republicans. From Mr. E. T. Donahue of Burlington we have this letter. The Progressive idea in the Middle West is not a spontaneous thing—it is the fruit of several years' growth:

". . . We citizens of Iowa are proud of our representatives in the Senate—Senators Cummins and Dolliver—and of a majority of them in the House. We have been fighting this thing over for several years past in this State, and are now rewarded with a representation in Congress that is a credit to the State."

Iowa has good reason to be proud of the virility of its delegation at Washington. And in every district represented by an Insurgent the people are determined to express their pride by making reelection easy. The Kansas City "Star" says that the two Insurgents from Kansas are the only Congressmen from that State who have not found it necessary to come home and look after their fences.

"A Man of Great Prominence"

SENATOR BEVERIDGE was delivering his principal speech of the session, the one about the American Tobacco Company. He had described the elaborate system of lobbying practised by the company a few years ago. There ensued this exchange of question and answer:

"SENATOR DIXON of Montana: Is it any secret who the general lobbyist of this great trust is?

"MR. BEVERIDGE: I do not believe that I care to bring names in. It has been published—the whole thing has been published.

"MR. DIXON: In what magazine or paper?

"MR. BEVERIDGE: The original letters have been published in COLLIER'S WEEKLY. The general lobbyist lived in New York—he is dead now. He was a man of great social and political prominence, and his letters to a State lobbyist have been published. However, there is no use of going into specifications."

We hope Senator Beveridge's restraint was not inspired by the fact that the lobbyist in question was, at the time of his corrupt activities, a member of the National Committee of the Republican Party.

Hamer's House

WE ARE in agreement with the neighbors of Congressman Thomas R. Hamer of St. Anthony, Idaho. They think his house needs painting, and we admit that it looks that way. If house paint is too dear, then the obvious course would be for the Congressman to try to reduce the tariff on lead. That would make it possible for Mr. Hamer to paint his house. It would also make a new coat of paint, every third spring or so, easier to achieve for many folks who aren't rich, as Congressman Hamer is, and who don't get a salary of $7,500 a year, as Congressman Hamer does. But, on the contrary, Mr. Hamer's one conspicuous contribution to the tariff discussion in Congress was a long speech, in which he brought poetry, music, and mathematics to the demonstration of his argument that the tariff on lead ought to be higher. Mr. Hamer, after the manner of Congressmen, has been distributing this speech among his constituents. When they read it, and look upon the house, they are puzzled as to which is the more effective argument.

The House of Congressman Thomas R. Hamer

It is located in St. Anthony, Idaho, and the Congressman's neighbors say it hasn't been painted for nine years. They think that if the tariff on lead were reduced, house paint might become sufficiently cheap to enable Mr. Hamer to put a coat on his house, and they are puzzled to receive from the Congressman many copies of his speech calling for a revision of the lead duty upward in the direction of more costly paint

A Repudiated Promise

WE HAVE a more serious quarrel with the Idaho Congressman. When he was running for office he was against Cannon. On the stump and in his personal interviews with citizens whose votes he was seeking he expressed his disgust with all that Cannon stands for. During his campaign he stopped at Sandpoint and was interviewed by the local editor. We copy, headlines and all, from the "Pend Oreille Review":

"'NO JOE CANNON FOR ME!' Hamer, Congressional Candidate, Says He Will Not Vote for Speaker if Elected.—In a conversation with Colonel Thomas R. Hamer, Republican candidate for Congress, during his stay in Sandpoint, Monday, Colonel Hamer stated that if elected he would not vote for Cannon for Speaker. 'I think Uncle Joe is too strong a reactionist,' said Colonel Hamer. 'He stands against the Western spirit of advancement. I am personally acquainted with Speaker Cannon, came from his district in Illinois, and he and my father were close business and political friends, and, although I have a high personal regard for him, I think he is not in the trend of the times.'"

Congressman Hamer did not vote against Cannon. On the contrary, he gave that "strong reactionist" the aid and comfort of his vote on every ballot during the reorganization of the House. If every man who promised to do so had voted against him, Cannon would not now be Speaker.

A Side-Light On a Congressman

CLARENCE B. MILLER is the representative in Congress from Duluth who defeated J. Adam Bede on the issue of Cannonism, who described himself as "the voice of the people," and who promised on every stump in Northeastern Minnesota that he would oppose Cannon and Cannon's rules. That—having won his election on this issue—he voted for Cannon and for Cannon's rules, and with the House Republican machine on every one of the five ballots which constituted that fight, is a matter of history. The Duluth "Evening Herald" describes Mr. Miller's present position in these words:

"It is impossible for any man to more thoroughly repudiate reform, root and branch, than did Mr. Miller by his complete and unequivocal alinement with the standpatters in the House. . . . When he voted against the revision of the rules which made Cannonism possible, he betrayed the trust reposed in him by the people of the Eighth Congressional District."

This language of the "Herald" is just and accurate. Mr. Miller is now sending a circular letter to his constituents. The first paragraph deals with the tariff. The last paragraph reads as follows:

"*During the organization of the House I was a member of the so-called insurgent band*, and in Republican caucus voted against Mr. Cannon and against adoption of the old rules. Being bound by rule to support the majority will of the caucus, I did so until released; then acting with others of liberal views, I was instrumental in securing beneficial changes in rules, as follows: (1) Calendar day, when any member can bring up his bill for passage; (2) unanimous-consent calendar; (3) selection of members of Committee on Rules by the two parties acting in caucus. I sincerely trust you will look upon me as your personal representative in Congress, and call upon me whenever I can serve you."

There is much more of interest in this letter than the direct false statement of fact. It would probably be hopeless in any brief way to explain to Mr. Miller's constituents, unfamiliar with Congressional procedure and not knowing in detail exactly what happened at Washington the afternoon of March 15, just how cunningly Mr. Miller's letter is worded to deceive, while artfully presenting an appearance of candor. To his fellow Congressmen this letter will be as illuminating a flash as if Molière had constructed it to portray a character

"Solemnity underlies these Buffoons, Wags, and Cut-ups of a Dozen Nations, who, Pitted Against Each Other in a Tournament of Wits, Sound the Death Knell of Dame Trouble, Until the Sourest Cynic Feels as if His Ribs Had Been Tickled with the Funny-bone of a Mastodon." — *Page 9.*

"Circus folks take on a curious potentiality—nearly every one had risked his life that afternoon; in a few hours, quite as a matter of course, he would be risking it again. Every one had a control over, and power with, his muscles which, in comparison with most of us, amounts almost to genius or a seventh sense."—*Page 10.*

PHOTOGRAPHS OF A REAL COUNTRY CIRCUS

UNDER CANVAS AGAIN

A Day with the Big Circus as It Started Its Summer's Pilgrimage

By ARTHUR RUHL

THE circus is the circus even in Brooklyn—in a vacant lot by the melancholy waters of the Gowanus Canal. At least there is earth underfoot and canvas overhead—lifting and swaying in the wind just above the heads of the trapeze performers—the smell of horses and hay and trampled turf, and the red-and-gold wagons all round. That is one reason, I suppose, why I was able to tramp past the Madison Square Garden for weeks with a stout and fairly complete heart, only to succumb on the show's last day in Brooklyn and trek incontinently across the East River through the rain.

They said they'd had everything but a "blow-down" that week, and one could readily believe it. Rivers of icy water poured from the sagging canvas eaves-troughs. The elephants, going through their parts in the animal tent—"Come—come—come, now! *Up!* Up with those feet!"—blinked their tiny eyes indignantly and blew out their breaths like steam from exhaust pipes. In the side-show the Cingalese warriors shivered until their chain-mail rattled, little Lord Robert, Miniature Man Personified, had a hot-water bag buttoned up under his vest, and a blue-nosed lady in a white sweater, sitting in front of two brass-bound boxes labeled "SNAKES"—"I will not insult your intelligence, ladies and gentlemen, by talking of snake-charming. Miss Stuart will give an exhibition of *trained* snakes"—glared defiantly over her tightly folded arms at a cold and difficult world.

It was grateful, therefore, to creep into the dressing-tent where the whole circus family was hurriedly putting on the Pomp and Splendor of the Ancient Egyptians in preparation for a Procession of Nobility and Richly Equipped Caravans of Camels and Elephants and Various Accouterments of Travel on a Journey of Inspection through the Provinces of their Empire.

A circus dressing-room is always a cheerful place, with its scores of athletic young men hopping out of one suit of tights into another, clowns climbing into canvas crocodiles, and rows and rows of battered little wardrobe trunks, with photographs and press-notices on their inner lids whispering of every queer corner of the universe, from Baraboo, Wisconsin, to Bombay. And this one was especially cheerful by reason of the red-hot charcoal buckets set every few feet down the aisles, making the whole place warm as toast.

"Beefsteak three times a day"

And here, after stepping over the legs of various unsenlar and capable-looking young men, we come upon our old friend Mr. George Hartzell, Sr., the ancient clown. Naturally, being a clown and about to paint a vast vermilion grin on his ordinarily grave and kindly face, Mr. Hartzell is engaged in reading the Bible, and he carefully marks his place—the fifth chapter of the Gospel according to St. Matthew—before rising to greet his guests. I am not one of those who would entertain the notion that Mr. Hartzell saw me coming. Undoubtedly he was reading Scripture because he liked it, just as Mr. De Marlo, the contortionist, a few seats away, was perusing an afternoon paper with both legs twined round the back of his neck, because he preferred that position, as less gifted men prefer to rest their feet on the desk or the window-sill.

It seems to be a rule that clowns are either profoundly religious, great students, or gnawed by some inner care. I remember that when I first talked with a clown, some years ago at the Garden, I was surprised to find him regarding me benignly through a pair of steel spectacles which he put on his chalky nose as soon as he left the ring. But, as a matter of fact, solemnity underlies these Buffoons, Wags, and Cut-ups of a Dozen Nations, who, Pitted Against Each Other in a Tournament of Wits, Sound the Death Knell of Dame Trouble Until the Sourest Cynic Feels as if His Ribs Had Been Tickled with the Funny-bone of a Mastodon. And if you see one with imitation bare feet a yard long hit another with a stuffed club, while a small fountain spurts from the top of clown No. 2's head, you can be reasonably certain that the first is a victim of a hopeless love and the other has just received a telegram announcing the destruction of his entire family in a railroad wreck.

Our friend the ancient clown

"I enjoy reading it," said Mr. Hartzell modestly. "Of course it *has* its contradictions, but then it's kinda interesting hunting 'em out. And besides, I've got to keep posted to hold up my end with old Jules Turnour." The latter, the oldest of the clowns, in addition to being the show's postmaster and a dabbler in six or seven languages, is interested in the doctrines of the Latter-Day Saints.

Hartzell had just pulled out of his trunk a photograph of his winter home—a circus man and his wife, both earning good salaries and having no living expenses from early spring until the snow flies, become astonishingly prosperous—and telling how he swore he would quit the circus business when he married, and here he and his wife had followed the show for thirty years, and their son, a clown, too, when—

All at once something happened. The dirty gray roof grew suddenly warm and incandescent. The charcoal fires were dazzled down to mere sparks and the dull world suddenly seemed to lift radiantly and expand. A confused sort of cheer went up from the men: "Yay-ay-ay!" and from across the canvas partition where the women were dressing two or three shrill and rather shaky voices began to sing:

"Oh, say, can you see by the dawn's early light—"

It was a hymn to the sun from these children of the summer and the open road.

I can imagine the look of anguish which will cross the press-agent's face as he reads the above lines. Once I spoke of the weather and casually mentioned having nearly frozen to death during the performance.

"*In* the tent?" he asked, his face suddenly assuming the gravity of a parent shocked by a child's blasphemy. "Not *in* the tent?"

I explained that I had been plowing about four hours in the mud and that a damp mackintosh was a cheerless garment.

"Well," he replied, somewhat mollified. "Of course you know we never use the words 'mud' or 'cold' or 'rain.' If we do have a week like this, we just make our stories tell how warm and dry it is in the tent, how well the private electric-light plant works, and how the circus is the only place to be.

"I don't believe," he concluded gently, after meditating for a time, "it could have been *in* the tent."

The Saxon Trio are "the strongest men in the history of the world—Samson not excepted." They are vast Germans, blond and smooth and placid, with limbs like trees. Their tight-fitting shirts, cut from the left shoulder diagonally across to the right hip, leave the right shoulder and arm bare. The eldest, lying on his back, lifts a plank on the soles of his feet and twelve canvasmen climb upon it. Then he puts up an enormous dumb-bell with his arms, and upon this his brothers, also carrying dumb-bells, hang. Two of them hold up with their legs a heavy wooden bridge and an automobile with six passengers rolls up and down across it.

We met just outside the entrance-curtain as he was strolling majestically up from the dressing-tent, a dressing-gown flung over his shoulders, the mist sifting down on his bare head and throat.

No, there never had been anybody like him, he said, and folded his great paws in front of him and smiled a far-away Teutonic smile. Sandow was well enough, but not what you could really call *strong*. Training was no use. Vat you haven't git inside you, how can you get it out? You must haf dose big limps. His father and mother both had dose big limps; and he stretched out his arms and yawned. Vat to eat? No use this eating a little of everysing. Have one sing and plenty of it. Beefsteak fried mit butter he liked very much—three times a day. He sighed and stirred his great shoulders.

"Unt bacon fried is goot too," he nodded profoundly as he moved away.

When an Accident Occurs

WHATEVER happens, the show goes on.

In Ring No. 3 the Navarros were performing on the tight wire—a young man in satin knickerbockers and two girls with parasols and stiff encrusted skirts. They danced and cake-walked along the wire and leaped to and from a narrow barrel set five or six feet above it with the ease of dancers working on the solid stage. It was remarkable, but then all these things are remarkable and nothing ever happens—and all at once there lay a little bundle in the sawdust, quite still.

The younger of the girls had fallen. Somebody called for water. Half a dozen other acts were in progress and the band went dinning on. Two of the canvasmen lifted her up and carried her out between them, her arm swinging limp as they walked. An old ringmaster, glancing at the white face as it passed, mentioned the technical name of the bone on which she had probably struck. The others went on with their work, skipping and smiling and throwing out their arms toward the audience. And so they came out, smiling and bowing up to the very entrance-curtain, where they grabbed their cloaks and hurried to see what had happened.

Display 10 ended, there was a quick whistle, the music changed, others hurried in, Display 11 began. It's all in the day's work. No flowers, solicitous telephones, cancelling of engagements for this little girl. To-night when the whistle blows again for Display 10, the younger of the Navarros will trip out into Ring 3 with the other two. She may be a bit pale, her smile somewhat mirthless, she may mount the dozen steps up to the wire a little slowly, as if it hurt. But the audience won't know. As for the circus folks, they must keep their eyes on their own jobs or they may not get off so easily as she. Perhaps the clarinet player in the band, pausing to rub off the mouthpiece of his instrument, may glance toward the middle ring and observe: "Yes—she isn't workin' well to-night."

The "concert-top" is the small dressing-tent used by those who appear in the vaudeville after the main show. From here, too, comes the fidgety mother with the

small boy who gets into so many kinds of trouble. She never can find her seat, and sooner or later the wailing small boy is taken in charge by an usher or a policeman. His mother becomes quite furious at this, threatens the policeman with her umbrella, and as she hurries away, dragging her weeping offspring, she turns every now and then and answers the taunts of the audience. And of course that is the funniest part of all and the crowd fairly roars.

"It went big last night! A regular scream!" The muscular gentleman who plays the irascible lady was hooking himself into a corset as he uttered these remarks. He clapped on a blond wig and rubbed a powder-rag over his rough cheeks. "Don't need much a day like this—it's so cloudy in there they can't see you. You oughta seen me last night, though—had on all my swell stuff. Huh?"—this in answer to a query from over the partition—"Is Taft out there? Well—what's the use of dressing up?

"But say—it went big last night. One kind old gink comes down and takes me by the arm and says: 'Don't be afraid, madam, they will not hurt your boy!' And after I sat down a couple of women said: 'Well, if we all had the spunk *you're* got these here ushers wouldn't get so fresh!' And to hear 'em say: 'Oh, you can't fool *me! She* belongs to the show! I can see *that. She* belongs to the *show!*'"

The end of their act

The muscular gentleman repeated the "she" with peculiar relish, that identification being, of course, the highest compliment he gets, except perhaps when, as not infrequently happens, some real policeman arrests him for making disturbance and they have to send out in front to get him released.

There are make-believe girls who become real visions of loveliness on the big white "rosin-backs" or seen at the distance of the high trapeze. With a blond wig covering the ears, a bit of rouge, and a little "business" like adjusting one's shoulder-straps or carelessly brushing back an unruly curl, wonders can be done. They are very useful because they do things that most women aren't strong enough to do. The audience is thrilled in every fiber and the athletic young man gets much better pay.

There was such a girl a few years ago at the Garden on the high trapeze. At the end, after all the rest had jumped, she daintily patted her pompadour, ran a finger round the velvet ribbon about her neck, and with a little gasp which electrified the audience somersaulted into the net. You could generally see her, a neatly built, elegant young man of twenty or thereabout, leaving the Fourth Avenue entrance about the time the chariot races began.

The best girl of this sort I ever saw was with this year's Ringling show—so good, indeed, that it would be scarcely fair to tell what he did. I attempted to congratulate him in the dressing-room.

"That's what they say," he admitted shyly, and with the very evident air of one saying to himself: "Who the devil put *you* wise!" He didn't know that I "fell" for it with the rest until told. It was a blow to his professional pride, and, far from wishing to be interviewed, he went on with his dressing, downcast and shy, as if he were a small boy caught smoking cigarettes.

The Human Butterflies

WHEN the announcer proclaimed the Human Butterflies in the Most Beautiful, Spectacular, and Dangerous Suspension Net Ever Presented Beneath the Dome of a Circus Arena, and two rather delicately pretty sisters, in ordinary dresses, stepped out into the middle ring, one promptly felt that strangers were entering our honest old circus world. The two young ladies hooked their fans to ropes hanging from the tent roof, took the handles of the fans in their teeth, and, thus airily suspended, were hauled to the dome, where they spun about like tops, did aerial skirt-dances, and, finally, whirling dizzily, swooped down to the sawdust to be caught, ere striking, in the arms of two fortunate ringmen.

There was a certain sophistication about their act, a languid serenity in the way they walked and moved their arms, quite different from the brisk, taut, businesslike motions of regular circus folks. And when they paused helplessly at the entrance-curtains until their manager lifted them, one after the other, across the mud to the dressing-tent, it was plain that they were more used to footlights than to this outdoor gipsy world.

"Really," explained the elder Miss Curzon that night with what languor one could maintain and still make oneself heard above the crashing of the band—their act was through and they had stepped in to watch the performance for a moment in their neat little mushroom hats and street clothes—"really, we should *much* rather not have had the money."

Much rather, that is, stay on the regular vaudeville circuit than subject one's self, for a mere few hundreds one way or the other, to this mud and mixed society. It was at once apparent that the Misses Curzon were of an old Southern family, that they had stepped to the vaudeville stage directly from a young ladies' seminary in Mississippi, and were appearing thus under canvas merely while the show was in New York and Brooklyn.

"Of course we're quite out of place here," continued the elder sister. "What do these people know about a real refined, aristocratic act like ours? It's all lost on them—quite, you know. All the little things. A vaudeville audience is so sympathetic, so quick to grasp! They come *to* you, don't you know? One does so like to play to the real aristocratic vaudeville audience."

A crowd of tumblers and trapeze artists rushed past on their way to their appointed stations in the different rings.

"Well, *good* night!" said Miss Curzon, while her younger sister sent back a languid smile. Then she cast a last inclusive glance at the benches, where the bone and sinew of Brooklyn was roaring and rocking in delight. "Oh, these *people!*" she concluded, and, picking up her skirts, disappeared into the night.

A Circus Family

REAL circus folks are the Jordans, who, while we talked, were swinging like radiant, disembodied spirits far aloft on the high trapeze. Real circus folks, simple, fearless, going about their business whether within sight of the avenue's brilliant stream or following

> "—*the Romany patteran west to the sinking sun,*
> *Till the junk sails lift*
> *Through the homeless drift,*
> *And the East and the West are one.*"

Mother Jordan, now past the more ethereal expressions of her art, hangs from the middle trapeze, there to catch and swing in her strong, sure hands her more nimble daughters as they swoop and turn, swift Aphrodites of the air, across the yawning tent. The fourth member of the family is a sturdy boy, obviously different from the rest, with the broad face, high cheek-bones, and curly blond hair of a Russian peasant.

"We were in Vladivostok just before the war," one of the daughters said good-humoredly, pausing to tell the story, although still panting from her work, while the cold mist fell on her bare head and throat. "Papa had a little circus of his own and we were playing through Siberia. And that little boy—of course he was only a little boy then—used to hang round the show every day. And after the performance he would crawl around under the seats and pick up cigarette-butts—you know how those Russians smoke cigarettes. He took the tobacco out and baked it or something and sold it over again."

One day he wanted to show her what a contortionist he was. He was barefoot and he wore a funny little short shirt, and when he stretched over backward—"he certainly was a great bender," said Miss Jordan—the shirt pulled away from the top of his trousers and he would jump back and pull it down again—"like a regular comedian he was, too."

The end was that they took a great liking to him, but before they could take him with them there was all sorts of trouble with the police. Miss Jordan told the police sergeant he must either buy the boy some shoes and clothes or let him go with them. Finally, the day they sailed, he came running down to the dock at the last minute and passed the man at the gangway by saying that he had a message for some one on board. "Quick as a wink I shut him up in a big basket under my berth, and before they knew what had happened we'd sailed away. You could write a book about that little boy."

Doubtless one could. He is quite wonderful now, and at the end of the act, after Mother Jordan and the girls have somersaulted beautifully into the net, he lifts himself on his hands on a bar at the very top of the tent, and dives head first—down—down—like a shot, until, just before he strikes, he doubles somehow, with a motion as neat and instinctive as the turn of a violinist's wrist, lands lightly on his back, and rebounds to his feet.

A cheerful place, with rivers of icy water

There was to be a quick show that night, Brooklyn being almost as hard to get out of as San Francisco, and as the cook-tent is among the first to go, the last call for dinner was at five o'clock. The tables were full even before the chariot races were run. The Hartzells—father, mother—Mrs. Hartzell is wardrobe-keeper — and son sat together, as quiet and circumspect a family party as you could have found in any of the nearby Brooklyn flats. The foreigners were chattering, and in a far corner the Armless Wonder was leisurely eating with his feet.

The places that each then had were to be their seats during the long summer's pilgrimage. It was merely a huge boarding-house, exactly like an extension under canvas of any boarding-house dinner in a New York side-street. Across the partition several hundred canvasmen and teamsters were stoking up for the night's work—the same dinner except for the oilcloth tablecloths and steel forks and knives.

It is a comfort to circus folks, generally, to get on the road. The cars are their homes, then, the nearby tent their dining-room, and they are far from alien city crowds and city lodging-houses. I remember sympathizing with a young lady who rode bareback in the Garden some years ago about what I had assumed were the discomforts of the road. She expressed great surprise at this point of view and said that she hardly could wait till she got away from New York—there were so many stairs to climb!

Seen thus, with their wonderful bodies masked in common and even dingy clothes, the circus folks take on a curious potentiality. Nearly every one had risked his life that afternoon. In a few hours, quite as a matter of course, he would be risking it again. Every one had a control over, and power with, his muscles which, in comparison with most of us, amounts almost to genius or a seventh sense. Something of the picturesqueness of their environment always attaches to them, and as they strolled out, busily applying their toothpicks, their traveling coats and commonplace mackintoshes seemed part of some quaint Cinderella's mask, through which their radiant strength and grace might at any moment shine.

Educated—but uncharmed

Now, were they in the country, they would loaf about on the grass or along the river-bank, the women knitting, perhaps, the men playing ball or picking a mandolin. Then the cook-tent would collapse and disappear, the side-show barkers start their earnest clamor, and presently the town folks—that vague, grinning, gaping, gullible outside world—straggle toward the main tent, beginning to glow in vast and alluring incandescence against the evening sky.

The heavens were drying and bright with the last sunlight as I left the mess-tent to take a car down-town. When I returned, two hours later, darkness had shut in, a brisk wind bellowed the canvas, and through scudding clouds the cold stars looked down now and then on the dull-glowing main tents.

The horse-tents, the cook and mess-tents were already gone, and where I had left the circus family dining now stretched a bare field of mud. Dull white patches speckled it—the four, six, and eight-horse teams—dozens of them—huddled each by itself, ready for the night's work. Beside each, like a cavalryman waiting the order to advance, lounged a teamster silently puffing his pipe, and up from the gloom came a warm, cheerful odor of animals and hay, the munching of many mouths, and an occasional rattle of trace-chains.

Striking the Tents, and Away

AND smoking and waiting thus, they talked of *their* part of the day's work—the colt that was more trouble than all the other seven of the team; getting from the docks across to Jersey City; the long outward trail—south, west, over the Rockies with half a dozen sections of the train all creeping up the grade below; the long, hot "three dookey" runs across the desert; down the Slope from Seattle to 'Frisco—"and a hell of a place to get into, it is"—and so round to Texas and the season's end.

The ancient Egyptians were just finishing their journey of inspection when I crossed over to the animal tent. As the last elephant lumbered up, the arena entrance closed behind him. Off came howdahs, camel-cloths, and saddles. The camels were looped in fours, the elephants herded for the march. With one slam, almost, the cages closed, and over them fell their canvas covers. Down came quarter-poles, and as the work-horses jangled in, canvasmen were scampering like sailors up the outside, untying loops and dividing the great gray roof into sections. Then, as the wagons clanked out, it sagged slowly down the middle poles and was rolled into bundles as it fell.

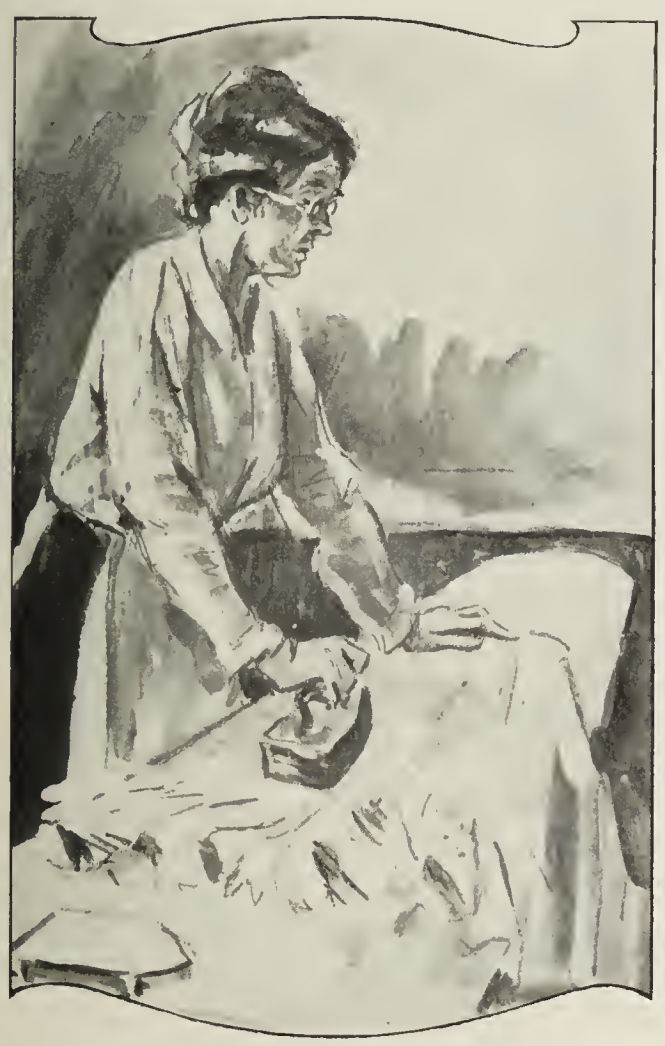
In the big tent the band was still dinning, and the Navarros—the younger a bit paler than usual—tripped to their tight wire. By the time their act was done, the menagerie and side-show space lay bare under the brisk night wind and the cold stars.

A circus is like a ship, busy and sufficient unto itself, as stakes are pulled up, cables loosened, and it sets sail for pastures new. Before the audience was half out of the big tent, the teams and red wagons were already inside, swallowing section after section of seats as fast as they collapsed. The quarter-poles were down and the roof sagging before the "concert" was over, and the three German giants, unhurried and emotionless as ever, were still dismembering their plank bridge and placidly unscrewing bolts with their bare, blunt fingers. Outside, everything had gone but the dressing-tent. Mother Jordan, traveling satchel in hand, was talking with one of the foreign acrobats. They would breakfast in Philadelphia, where, before sun-up, their canvas home would magically have risen and taken shape again.

The herd of ring-horses, clattering to the cars, showed out under the corner arc-lamp two or three blocks away as I looked back from the Subway, and then the stale air, breakfast-food advertisements, and tired people shut me in. Possibly it was the touch of spring in the air, but the town itself seemed washed-out, dull-eyed, and tired. After all, we've only the fire-engines left, and they're taking the horses out of those.

0

door banged, and then a crisp new runabout, flying pink chiffon, whirled past the window. Mrs. McClung returned to the kitchen and chose an iron and stretched a puff of lace and tucking upon the sleeve-board.



"I believe if I hurry I can get every one done before the child gets back. Most likely they'll go to her cousins' for dinner, and they won't remember to come home till supper time. . . . I don't see how we're to have that musicale in the morning, but she says that's the way they're doing now." She sighed and smiled. "When *I* was a girl I never tried to stop a harvest," she reflected aloud.

The Penalty of Conveniences

ON ANOTHER occasion, when the time was early morning and the place was an orchard, I felt that for once I had come upon the Rustic Maiden of tradition. She walked in the orchard, as Rustic Maidens should, and her muslin was blue as of yore and her feet were actually bare in the dewy, not to say chiggery, grass. Her sunbonnet had fallen upon her shoulders, and she held up an apron full of plums and peaches. She must have found berries somewhere to give her lips the correct stain, for stained they were. Such stage noises as the crowing of cocks and the lowing of kine were to be heard, and altogether the setting was complete, not a property forgotten. I longed to be a young nobleman, that I might address her as no young nobleman could have refrained from doing, and see her bosom heave and her eyes become downcast. But I could ask her only a matter-of-fact question as woman to woman.

"You don't mind my looking over your delightful orchard?"

"Oh, do you like it too?" Her face lighted charmingly. "There's nothing as pretty as an orchard, is there? Unless it's a field of alfalfa in blossom. I'll

show you all over the place if you don't mind watching me churn first.

"You see," she went on, "I'm at home so little that I want to help mother all I can when I *am* here—and I like the farm work, too. I go to business college in town."

It was not easy to associate ledgers and typewriters with this Hebe. "You are taking a business course so that you can attend to the farm bookkeeping, I suppose?"

"Dear me, no!" She laughed. "I'm going to get a position in Denver or Chicago."

"A position! But you are not obliged to be self-supporting."

"Not if I stay at home. I can have clothes and parties and a new horse if I stay. But father won't put up the money for me to live in a city."

"You have the conveniences of city life here. You have an excellent house and gas and hot water and mail delivered daily."

Hebe was evidently a philosopher. "Sometimes I think that's just it," she said. "When farm life began to be a little like city life, the young people began to want the real city. When you get a taste of something, you always want more."

Shakespeare and Corn-Shocks

WHEN Gertie Hanford gave a reading for me, I recalled that last sentence. She was Lady Macbeth, and her trailing robes swept the cabbage roses of the Brussels parlor carpet.

"Here's the smell of the blood still; all the perfumes of Arabia will not sweeten this little hand. Oh, oh, oh!" moaned she. A swish caught one of the vases—one of the little old pair of vases, set with mathematical equidistance upon the mantel—and it fell to the floor.

"There, Gertie! Now look what you done. One o' the vases!" Lady Macbeth's mother bustled off for the dust-pan, and when she came back something fell twinkling upon the countless pieces as they clattered into the pan.

"I'm glad of it. Nobody has pairs any more. They're not artistic." Lady Macbeth forgot the smell of the blood and sank with a pout upon the sofa. "Neither are Brussels carpets with dreadful red roses." The pout grew. She was very charming even so, and not at all like the guilt-lashed Lady. Her complexion bore witness to a routine of health such as only the cloister or the farm can preserve.

"Gertie!" protested the mother of the Lady, erecting herself with the panful of shivered bits. "That carpet's a body Brussels from Kans' City, and it cost two-fifty a yard. And it ain't a particle faded, I've always been so careful about the blinds."

Gertie rose and went deliberately to the bay window and threw open the blinds upon its three sides while her mother stood dumbly horrified. "That's so," Gertie said. "I hadn't thought of that. There's some hope for it, after all." She turned back to the room, glancing over its plush "set," its framed marriage certificate, its china dogs. Her face fell again. "Do you wonder I get discouraged in such an atmosphere?" she asked. "What am I to do? When I *live* for art. Fancy a temperament on a farm!"

Beyond the window lay the sweep of cornfields, green and ribbony; the wind that blew in smelled of far-away alfalfa and brought the vision of deep-dyed purple; the whir of a header quivered against the silence. "It seems as if food for temperament might be found out there," I ventured.

"Can I play Lady Macbeth to wheat-stacks and corn-shocks?" she queried scornfully.

"But why play Lady Macbeth at all?" I should have known better; my bad angel pushed me into it; it forced the question. She drew herself up; Lady Macbeth towered there at last.

"Then you doubt my gift."

"But, my dear girl, the path is so long and briery, even to the greatest." It was the same old vain, stale warning, and she responded as they always respond. "I thought *you* would appreciate."

"How did you come to make a study of the part, Gertie?" I temporized.

"We gave it at college. I go away to school, you know. I *will* say this for father and mother: they were bound I should have a better education than they ever had. We give a Shakespeare play every year—I was Portia the year before. But I like this best. It suits my style better. After I played it I knew I'd got to go on the stage; there was no use talking."

Her eyes fell upon the carpet where great blotches of afternoon sun were doing their best to quell the offending roses. Her face softened. "Poor mother!" she said suddenly. "I suppose I was hateful. But something gets into me sometimes." She drew the blinds shut gently. "Let her keep her carpet as it is. And I'll send home a new pair of vases the next time I'm in Topeka.

"A farm's a farm," she resumed, stroking the Lady's robe thoughtfully and fondly. "I don't care if a president does make the men wear evening dress when they harvest after dark, or if he does turn the cow lot into a salon at milking time. You talk about the peace and beauty and healthfulness of the farm—why don't you live on one, then, instead of in the biggest city there is?"

Her eyes trailed off toward the long, silent lane bordered with the restful green of osage orange.

"When I've exchanged that for Broadway I'll be satisfied, and no sooner," she said.

Enter the Paper Pattern

MISS CRANE is the house-to-house music-teacher who drives through the rural districts of a certain county, leaving classical selections for the Daughters to practise between bread-kneadings and pie-bakings. She took me with her on her rounds one day.

As we passed a farmhouse that stood near the road, we caught a glimpse of two girls busily cutting and sewing in a window.

"Former pupils of mine," said Miss Crane. "Now they're going away where they can study more advanced music. They're making their trousseaux."

A bit of tissue paper fluttered from the window, caught in a clump of red hollyhocks, fluttered on to the buggy. Miss Crane held it up. It was yellowish and perforated.

"This," said Miss Crane dramatically, "I look upon as one of the chief influences. It is the paper pattern.

"Time was," she went on, "when the Daughter of the Farm wore a wrapper. But the paper pattern insidiously began its work. It has become one of the great influences that have aroused the Farmer's Daughter."

"Aroused her to what?"

Miss Crane shook her head. She was so deep in reflection that the horse found opportunity to lop a sunflower stalk. "To what? That's what we all want to know," she said.

"In some cases she makes her home on the farm, and it's a lively place when she does. The farmer is rich nowadays, and with very few exceptions the girl has the good of the money. She goes away to school, and when she comes home she keeps the telephone buzzing and gives parties and makes her father buy ancestral clocks and secretaries that somebody brought from New England in prairie schooners, and marcels her hair and goes traveling.

"But again she doesn't stay on the farm. One of my pupils rejected a rich young farmer to marry a St. Louis man on almost nothing a week, and for no reason but that she wanted city life. Many girls go to work rather than live on the farm where they could be supported."

The last Daughters that I saw before turning back eastward were announced by a braying honk-honk and a whiz, and I plucked my horse from the middle of the track while the Lord of the Road rushed by—scarlet, blatant, swift. There were three of them within—I had a vision of a straight nose and a retroussé and a slightly aquiline—of yellow hair and brown and black—of a general flutter of chiffon and locks and laughter. They were deliciously regardless of any responsibility toward human life and they were wonderfully pretty. Just beyond a huge bulk loomed dimly ahead at a fork in the road where cottonwoods and walnuts made a screen; reaching it, the horse grew perverse. [illegible] ings had accustomed him to the automobile and the cyclone thrasher, but a full-grown house on wheels disturbed his nervous system.

"I'm looking for Mr. Doyle's farm," I said to the oldish man who was driving. "Can you direct me? They say it is the best, the most modern farmhouse in the county, and I want to see it."

The little man pointed to the house on trucks. "Here's what you're lookin' for then," he said. "I'm Doyle."

The House Without a Butler's Pantry

IT IS a trifle disconcerting to go to see a house and find that it is not staying at home to receive you, but I tried to inspect it. "So you decided that it was too fine a building for the farm," I said.

"Too fine!" exclaimed the little man. "It's a shack to the one I'm goin' to put up in its place. That'll be a house you can call a house, I'll tell you right now."

"But this is almost new."

"That's nothin'. I don't stop for a little thing like that when it comes to pleasin' the girls. Them was my girls in the car—you met 'em, didn't you? Ain't they all right? They want a reception hall now besides two parlors, an' they're goin' to have it."

His stained, knotty hands, which had toiled in the fields from the days of the cradle to the days of the binder, fumbled for the plans. He unrolled them. There were large rooms and small rooms, graceful stairways and verandas and minute conveniences, and as he pointed out each feature with a stubby, blackened finger his creased face warmed with pride.

"I'm fixin' up a butler's pantry here," he explained.

"We haven't got a butler, but the girls say it's convenient when they give a dinner party. They give course dinners, they call 'em—that means that the pie ain't put on in the beginnin', an' they take a new fork to it. An' sometimes it ain't pie at all. Seems queer, we used to think a dinner wasn't rightly finished any other way. But they're takin' domestic science, an' they come home an' empty out that ice house o' mine makin' things they call nougats and mousses and all such nonsense. I don't care, though—I'm willin' to eat all the ice in the creek if it'll only keep 'em at home."

He rolled up the plans with a look that was almost imploring.

"Seems like they might be contented in such a house, don't you think so?"

"I should say they might be contented in the one you're moving away."

"Well, I know, but it didn't have a butler's pantry and a reception hall. They kep' beggin' me all the time to move into town. I can't do that, but I can do everything else. Look here—I want to show you." He tied my horse and led the way to the creek, which sped lithely between walls of box-elder and ash and hackberry. "Let me tell you what I've thought of." He dropped his voice like a plotting Santa Claus. "You know those little la'nches—well, don't you think I could have one here for the girls?"

Trying to Stem the Tide

"IT WOULD be a delightful place for one," I assured him, but my voice lacked something. Somehow the picture that rose was not of pleasure parties on a Kansas creek, but of a little, oldish, worn man trying to stem a great tide. He looked at me appealingly. "Don't you think—if they have the house just to suit 'em, and the la'nch—they'll be glad not to leave the farm?" he asked earnestly.

He jogged on with the great, slow-moving house. The sound and dust and whirl of the red car had passed beyond, and only the slow trundling of the house was left to break the silence of the cottonwood road.

What the World Is Doing:

Houdon's "Washington" in Bronze

Virginia gives to Statuary Hall, in the National Capitol, a cast of George Washington, as one of her offerings for the two places allowed each of the States

To Catch Airships on the Wing

Just as aviation has reached a point where machines can sail impartially over land or sea, the armored automobile appears in Germany equipped with high speed and a vertical gun to bring them down. To be protected against the attack of the airship the vehicle is encased in a coat of nickel steel. On the roof is a turret with a single revolving gun with movable screens

Meat for the Sausage Mill

A procession of worn-out horses at Antwerp, exported from England, diseased and otherwise unfit for use, to be made into sausages. This trade has lately become extensive in proportion. The sea voyage through which the creatures had to pass caused great suffering, on account of their decrepit state, and landed them on the Continent in worse condition than when they left Great Britain

The Return of the "Fighting Tenth"

The regiment of colored troopers which saved the "Rough Riders" at San Juan Hill, after several years of Philippine service landed in New York on July 26 for the first time since the Spanish-American war. Their progress of eight miles through the city was marked by a continuous ovation. The horses of the regiment were left in the islands, so that the parade was made on foot. Mayor McClellan and President McGowan of the Board of Aldermen reviewed their march from the steps of the City Hall. They were met at the transport "Kilpatrick" by a demonstrative crowd of colored people

There and Back

OF OLD sat Freedom on the heights, the thunders breaking at her feet. To-day England believes that freedom is resident in ironclads, and in the roar of ten-inch guns she finds her peace. Forgetful of the sources of her power, the "Mother of Ships" drew up her *Dreadnoughts* and destroyers in the last of July, bade them salute the world, and dismissed them. Far-called the navies melt away, the captains and their crews depart. But there was a menace in the song on your bugles blown, "England, my England."

France, preferring change and motion to stability, has overturned its Ministry. Clemenceau lasted thirty-three months, which is a protracted term. They do those things quicker in Paris. The new Premier, M. Briand, is a sharply accented character, of radical ideas. The new Cabinet is said to be committed to an attempt to end the war between labor and capital. If so, it will accomplish what ten centuries have bungled.

The skirmishes between Spanish troops and Moorish tribesmen are unpopular with the Spanish populace.

Too lame to walk, Bleriot flew over the English Channel. In a monoplane on Sunday morning, July 25, he crossed from Calais to Dover, two hundred and sixty feet over the waves. He landed on the chalk cliffs in his tiny three-cylinder car. His flier is like a humming-bird or a dragon-fly, so small it is.

Our own home country is busy, though not overexcited, in following the baseball and tariff scores. It is the fatal ninth, and two strikes have been called on the stalwart Taft at the bat, but the bleachers, full of Plain Citizens and Ultimate Consumers, are still hoping for a Casey-at-the-bat hit.

Washington, loving the harvest of a quiet eye, has decreed that thus far and no further shall the bill-board nuisance proceed, and here shall its proud posters be stayed. No more fences are to be beautified with hair-tonic girls, no more barn doors to blossom in purple and red with the wonderful circus folk.

Unwearied by a non-conviction, the "Graft Prosecution" of San Francisco has again leveled guns at Patrick Calhoun, president of the United Railways, charging him with bribing supervisors. Heney, a "spectacled man with a boyish grin and a peculiar nasal drawl," will soon return from Alaska to handle the prosecution. Turning from these troubled matters to the Portola rejoicing, the city hopes that Diaz of Mexico will help celebrate the festival.

New York and New Jersey are brought within three minutes of each other by the subriver tunnels. The steel tubes that bind the States in amity give the train-sick traveler a cool plunge down a long dark submarine cave that might be fitted up with stalactites and stalagmites. Then breathless and chilled, he is discharged into an underground City of Green, full of miniature stores, twinkling with electric bulbs. The cates and the candies glow with a light that never was on sea or land. It is like one of those mystical Coney Island shows—Twenty Thousand Leagues Under the Sea, or a Trip to the Moon—and all for a nickel.

Breasting the ocean furrows, or with lazy sail a-swelling, men are taking their fun where they find it in the good old summer time. Now the incoming mails are heaped with the letters and tinted geographical post-cards from fortunate friends overseas, telling of hair-breadth motor 'scapes, purple adventures in Lake Country, and walks in the Alpine glow.

Merrily Live and Long

UNCONSCIOUSLY Theodore Roosevelt gives away his secret for a satisfying life in a private letter from his happy hunting grounds.

He says: "I am very much interested in all kinds of things which I see here, from white settlements to missionary work."

There you have the rule unfailing for keeping healthy and cheerful, with the young generations within hail. It is vivid interest in a world that is full of a number of things, with a swift change of focus to keep tuned to the rapid shifts of the outer scene.

One other way there is to give life a joyous stride, not specified by Mr. Roosevelt, and that is unwearied, zestful, passionate adherence to one pursuit, research, quest, activity, in the spirit of the scientist, the reformer, the scholar, the expert. That is just as sure as ceaseless change and the itch for universality.

The New Religion

Placard "Removed" and "To Let" on the rocks
of your snowy Parnassus.
Repeat at Jerusalem.

"LET loose the dogs of war; but gently, brother, gently, pray," is sometimes, at least, the motto of Charles William Eliot, one-time president of Harvard. He has a genius for awakening controversy, and he always does it calmly and graciously. What he said about the new religion to the Harvard Summer School of Theology on July 22 will reverberate for many a day. With tact and polite skepticism, but not the less definitely, he strikes at the underpinning of revealed religion and the Personal God. He said: "It is fair to assume that the progress of the twentieth century will bring about what I call the new religion.

"The new religion will not be based upon authority, either spiritual or temporal. In the new religion there will be no personification of natural objects; there will be no deification of remarkable human beings, and the faith will not be racial or tribal.

A Record of Current Events

"A new thought of God will be its characteristic. God will be so immanent that no intermediary will be needed. For every man God will be a multiplication of infinities. A humane and worthy idea of God then will be the central thought of the new religion."

It is fair to ask if that statement is not merely a phase of truth, held by one type of man, and familiar enough in history, rather than the gropings of humanity toward a new religion. Is not this new religion perhaps the reconstruction of the silvery twilight of faith which has glimmered in all ages? Ample and even homelike enough for the scholar and superman whose mind adds furniture of its own, but rather barren for the common people.

If the folks who are interested will turn to their Froude's "Cæsar," chapter 28 and page 434, they will find these words written of the great chieftain who was born in an age of doubt:

"From cant of all kinds he [Julius Cæsar] was totally free. As he found no reason for supposing that there was a life beyond the grave he did not pretend to expect it. He saw no evidence that the gods practically interfered in human affairs. He never pretended that Jupiter was on his side. There remained of spiritual conviction only the common and human sense of justice and morality; and out of this sense some ordered system of government had to be constructed, under which quiet men could live and labor and eat the fruit of their industry. Under a rule of this material kind there can be no enthusiasm, no chivalry, no saintly aspirations, no patriotisms of the heroic type. It was not to last forever. A new life was about to dawn for mankind. Poetry and faith and devotion were to spring again out of the seeds which were sleeping in the heart of humanity."

That bland unecstatic approach to the higher mysteries, to which the race has risen on wings of song and of prayer, is perhaps forgetful of some of the elements which go to the making of man. Religion has been for the people, and the people are poor, grief-stricken, heavy-laden. Not for them the calm voyage of the intellect on steady keel to the haven of its desire. They find life bleak, and yearn for comfort. Passionate and fierce and struggling, they would like to taste of the peace that the world can not give. The way is shadowy and doubtful, and they want assurance.

Quick-coming death and the pang of the first-born taken will not seem a little thing even in the world of a hundred years away. Masters of every trade, men may fill the sky with their ships, and tunnel the deep for a highway. But still the tale of their dead will go up, and scarcely will they banish fear and anguish. It will still be true that without a vision the people perish.

The Cubs, 4 to 1

IN ONE of his wilder lyrical moments Walt Whitman sang of "a good game of ball." The game of a cloudy Saturday afternoon, July 24, when Chicago trimmed New York by 4 to 1, was such a game. It does you good to see those big raugy men romping around on a beautiful green field, like the Polo Grounds, New York.

Like a lily in the mouth of Tartarus, flowers fringe the perilous regions just back of the catcher. A foul from off a Cub bat beheaded a geranium nodding in the breeze. But mostly they escape and lift their red and yellow heads to the end of the year.

It is the height of the long summer season of balls and strikes, and these three have met again for a neck-and-neck finish—Pittsburg, Chicago, New York. If Chicago emerges for this third year triumphant, it will be right to say of them that they are the best baseball players in all the world. Full of tricks, secret signals, pieces of thought, is the game to-day as it is played by such a team of lightning thinkers.

The crowd did several of those foolish, pleasant things which we are too ashamed to do in real life. At the last half of the seventh, all the spectators rose in hope of a lucky inning. On a bad decision twenty thousand persons let out a jungle roar. Four hundred straw hats rocked like a wind-swept field of wheat when a foul fly plumped into the grand-stand.

"Ster-rike!" bellowed the umpire, whose fog-horn voice reached from the grand-stand to the 155th Street elevated station.

"Robber!" yelled the crowd, none of whom could see whether or no the ball had cut the plate. Toward the end of the game the grand-stand and bleachers began to curse their hired men, swinking down below.

"Wanamaker's could beat 'em."

"Get a team!"

It is almost a national defect—that trick of worshiping success, and then the swift relapse into cynicism when luck ebbs.

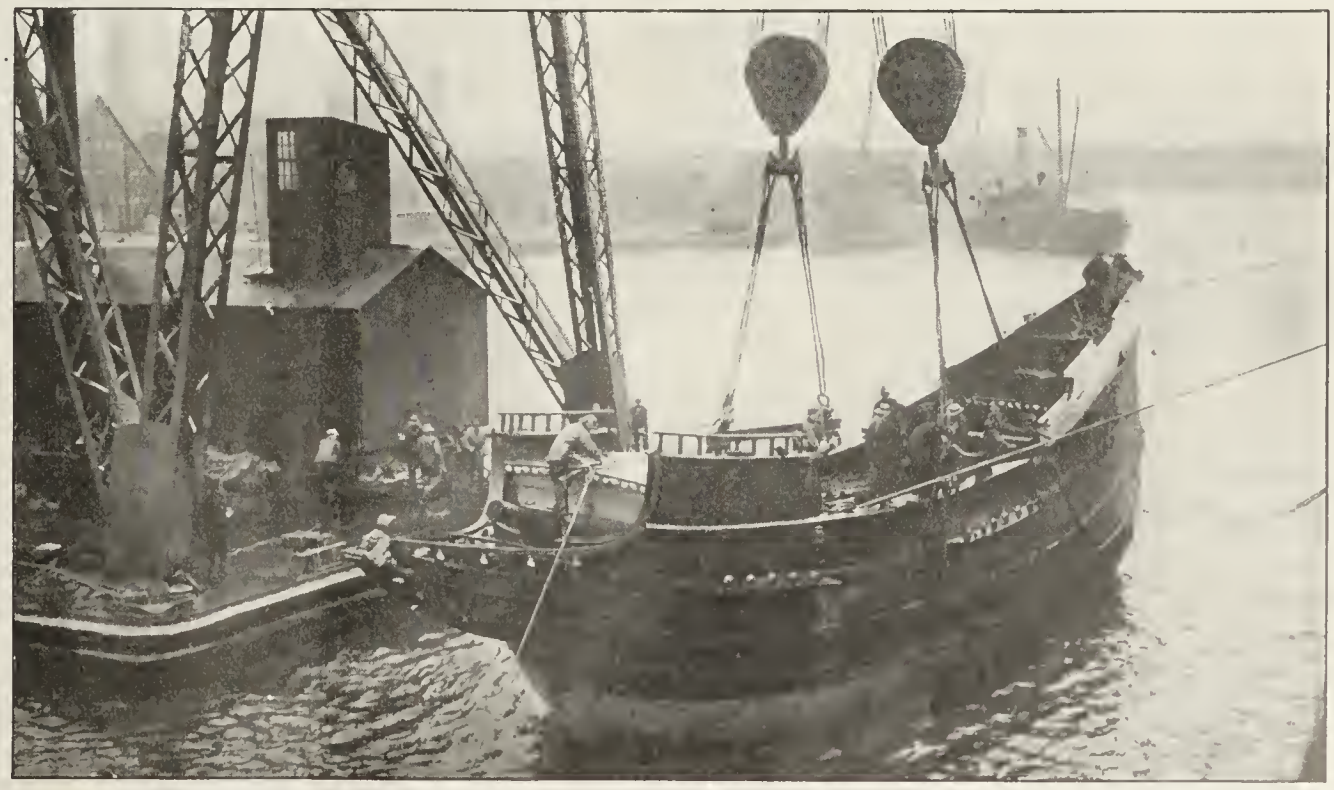
The audience was made up of politicians, theatrical folk, stock-brokers, floorwalkers, solid Americans for the most part, with a sprinkling of the *demi-monde* and of the fat-checked sport with a mint julep floating on the breath. Inspector McCafferty, head of the Detective Bureau, beamed rosily at the players from a dollar upper-tier seat. Tammany election district captains and faithful workers in the ranks were here and there in the crowd. The captain of the Twenty-fifth Assembly District sat opposite first base, friendly and warm-hearted in manner, alert and keen in his talk, as are most of his profession.

The Woes of the Lords

LIKE the Egyptians despoiled by the Lord's chosen, the wail of the peers goes up as the day of their ravishment draws near. The land taxes and motor-car and champagne duties are to impoverish the nobility, who will no longer give largess to the deserving

The First Man to Fly Over the British Channel

The monoplane of Louis Bleriot, a pioneer of French aviation, on July 25 achieved a flight from France to England in thirty-seven minutes, and won the prize of £1,000 offered for this feat by the London "Daily Mail." His arrival in London on the following day was the occasion of a triumphal reception. A luncheon was given in his honor by Lord Northcliffe, owner of the "Daily Mail," at which the prize was given to him enclosed in a silver cup. This is the thirteenth machine of M. Bleriot, and during the last eight years he has spent approximately $2,000,000 in experiments

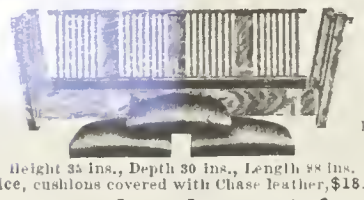


Robert E. Lee in Statuary Hall

Chosen by Virginia as one of her two favorite sons to stand in the National Capitol, thereby erasing the last line of the Civil War

San Antonio's Gift to the Soldiers

A library building and chapel, which has been erected by private subscription at Fort Sam Houston, will provide the men of the post with a place for reading, recreation, and devotional services. President Taft, upon its completion, will accept the edifice from the city in behalf of the regular army



The "Half Moon" Again Drops into New York Harbor

A large crane at the Brooklyn Navy Yard on July 23 lifted from the deck of the steamship "Soestdyke" into American waters the duplicate of Henry Hudson's vessel which had been built in Holland for the Hudson-Fulton celebration—September 25-October 9. Her voyage was made in twelve days, cutting down the record of the original "Halve Maen" by forty-seven days. When fully rigged out, the ship will be presented to the Hudson-Fulton Commission by the group of Dutch citizens who provided the funds to build her. Her crew will be made up from the Dutch warship "Utrecht," and will impersonate the old-time explorers in dress and manner

Put the "Knock-Down" Sections Together Yourself

AND SAVE OVER HALF

As you receive it with fastenings inside, ready to drop in place.

Just six joints to put together in the grooves provided.

poor. The well-springs of sweet charity will be dried at the sources.

But that isn't all. If the Lords let the Budget go through, not only will their own "dirty aeres" be taxed, but they will be damned by former friends. If they manhandle the Budget, they may be abolished by their enemies. In any case, they must rouse themselves from their distinguished inertia and vast hereditary calm. In the good old days of their plenitude of power, they used to laugh derisively and mirthfully when such plebeian measures as Gladstone's Home Rule bill were read to their renowned chamber.

They will not snieker when the Budget invades their presenee, for its clauses touch their peace and permanenee. They are hovering at their own exit, and tuning their lips for a swan-song.

The "Speetator" advises the Lords to split the Budget "into two parts, one of whieh will eontain the old forms of taxation merely increased in degree—possibly to a dangerous degree, but still only in degree—and the other part, the new and revolutionary proposals, and if they then pass the first portion of the Budget and rejeet the seeond, they will be taking a wise and reasonable course." That means to edit out the land taxes. But the "Saturday Review" is eontent with no such self-restraint and winnowing process by the Lord's preferred. This intrepid weekly is all for smashing land taxes, license duties, and death duties in one splendid crash.

Libel

PAUL THOMAS was a God-fearing family man in the North of England. He pieked up his paper one morning and read that he had been misbehaving in Paris in primrose ways of dallianee. He sued for libel and won his ease.

The odd thing in the matter was that the journalist had never heard of the sober Yorkshire citizen, and had used the name as that of a purely fietitions personage for a one-column skit. But the eourt held he had damaged an innoeent man.

There is just one safe way to deal with the situation. Establish a dead-line of names. Deeree a set of fifty-seven eombinations which no true mother will give her offspring. Let "John Smith" be agreed upon among writers and parents as exclusively the property of literature, and to be used for the evil dark eharaeter who makes away with the trust finds. Who but Reginald Ronalds will be the gay blade, full of wit and the lovelight in his eyes, but dangerous, very dangerous, to women? Barney Barnato and Hilary Bell are the adventurers who will kill a man or kiss a woman, without a seeond thought.

Let contemporaneons and snecessive novelists nse these same few stoek names. Soon we shall be saying: "Mrs. Humphry Ward has given us the best John Smith in years—more mellow in evil, keener in repartee, than the Lake Sehool." "Note the infinite vivacity of the Henry Jones whieh Shaw has eomposed. How mueh livelier a Henry Jones than Mr. Chesterton's bungle!"

Ladies and Washerwomen

AN APPEAL is being made in England for a fund "to supply holidays for neeessitous ladies." Clearly shine out the class distinctions in the appeal:

"Many ladies, without means to provide themselves with a rest and change, but who need it most sorely, will be left forgotten in the eity, while women of the laboring class, for whom so mueh is done through other sources, will be enjoying themselves by the sea and countryside. I plead, then, very earnestly for the necessitous ladies, secretaries, musicians, nurses, governesses, typewriters, out of health and out of work and discouraged."

What the appeal says, then, is this:

"Will you let that ungrammatical washerwoman and her ten children go to the mountains when this ladylike stenographer is sweltering at the keys?"

No such ery for help would win a moment's hearing or a dollar's dole in our land, which, with a thousand faults upon its head of graft and materialism, does not yet recognize distinetions of suffering on social lines, and has not so far graded its agony as to differentiate between the prostration of tradespeople and gentry.

A Threnody on Abdul

WILL no one write the drama of Abdul the Damned, that Sultan to the realm of death addressed? A fatigued old man, querulous in the Villa Allatini, he sits waiting for the end of it all, and none so poor to do him reverenee who was onee Dominant Sovereign in Arabia Felix, Iran the blessed, the Greeian isles, Invincible and ever Victorious. *(Concluded on page 21)*

Instant Telephone Service

Private System, Connecting all Departments of Your Business.

Press a button and talk to any department without a second's delay. No switchboard—no operator. Every department under your finger. Instant service, however, is possible only with reliable instruments.

Western Electric Telephone Apparatus has been the world's standard for over 30 years.

Western Electric

Intercommunicating Telephones

are made by the same manufacturers and are of the same high grade as the standard "Bell" instruments, all the apparatus identical with the "Bell" installation. The only difference is, you *own* your service and it is a strictly private one. The cost of maintenance of a Western Electric Service is insignificant on account of its unvarying reliability. Unknown apparatus is a poor investment.

Send for free Bulletin No. 7644. We will gladly give detailed information and estimates if you will write us your prospective needs.

They'll All Be Glad

When you show your folks a dozen cans of Van Camp's, and say "No more home baking; no more soggy, broken beans," every face will smile.

Just as the loom has succeeded the spinning wheel, so must the steam oven succeed the dry—especially for beans.

To bake beans at home, and have them digestible, is utterly out of the question.

Four-fifths of the beans in your baking dish get a heat rarely over 100 degrees. And that isn't enough.

You know that it isn't. You know that home-baked beans are hard to digest—that they ferment and form gas.

It requires a fierce heat, applied for hours, to break up the bean granules so the digestive juices can act.

In our steam ovens we apply 245 degrees. And, by baking in small parcels, we apply that heat to each individual bean.

So Van Camp's don't ferment, don't form gas, don't form a tax on the stomach.

The baking is done by live steam. So the beans are not crisped, and the skins are not broken. Van Camp's always come to you—as all people like them—nutty, mealy and whole.

The tomato sauce is baked with them—baked into them. Thus you get a delicious blend.

If you have ever served a single can of Van Camp's, you know how your people like them.

And you know they digest—by the after-effects. There is no fermentation or gas.

Such beans form Nature's choicest food. They are 23 per cent nitrogenous—84 per cent nutriment.

They contain more food value than the choicest beef, yet they cost not a third as much.

Beans are our premier food, and our cheapest food, when baked so they all digest.

Then why not encourage your people to eat them—by serving the beans that they like?

And why not have them convenient—a dozen cans on hand—a dozen delicious meals ready to serve?

Every housewife living is bound to do this when she learns how much Van Camp's mean.

Van Camp's

BAKED WITH TOMATO SAUCE

PORK AND BEANS

We could buy beans for one-fourth what we pay, and tomato sauce for one-fifth what ours costs. But the dish would be vastly inferior.

Don't judge Van Camp's by other brands, for there are all grades of steam-baked beans.

We use none but the choicest of Michigan beans—picked over by hand. Just the whitest and plumpest beans grown.

And we use none but whole, vine-ripened tomatoes—picked when the juice fairly sparkles.

Thus comes our superlative zest.

There is plenty of tomato sauce made from scraps cut in canning tomatoes. There are plenty of beans for makers to buy at a fraction of what we pay.

So it pays to be careful.

Van Camp's are so good that they far outsell all other brands together. If you once compare them with common beans, you will always insist on this brand.

Three sizes: 10, 15 and 20 cents per can

Van Camp Packing Company, *Established 1861* Indianapolis, Ind.

SCHOOLS

Mackay School of Mines

IN ANSWERING THIS ADVERTISEMENT PLEASE MENTION COLLIER'S

What the World Is Doing

(Concluded from page 18)

When that great kings return to dust, there is no degradation in the secular process. But when you strip a Sultan of power, rob him of money, and sue him at law, and feeding him meanwhile and keeping him alive, you add humiliation to tragedy.

Instead of stepping off at tiptoe, he suggests the ebb tide, and the minor key and a dying fall. After reigning to mope—where is now your Willie Shakespeare to sing us a song of the shame and make us a play of the same? If some one could have mercifully murdered the tired old potentate, or if he could have greatly disappeared, like John Davidson, it had been well with him. But to shuffle off into a corner like a sick beggar—there is stuff here for the master-hand, a flash of the finger that can.

No Discharge in This War

TO FIGHT the fight for good roads and keep it merrily maintained for all the years of the future, the American Congress of Road Builders, sitting at Seattle in the middle of July, has resolved itself into a permanent national organization.

A Hebrew of the Hebrews

JACOB H. SCHIFF is a banker, philanthropist, and Hebrew of the Hebrews. He has many times showed wise and sincere qualities of citizenship. By his own race he is regarded as a leader. A section of the East Side in New York venerate him as little short of a prophet.

He spoke words the other day—July 18—at the Jewish Chautauqua Society which touch our future. The massing of the very poor in great cities is the keenest modern problem. He has a solution.

With an admirable broad-mindedness he says of the incoming of his own people that it is "an immigration that has brought problems to the people of New York in particular, and to the North Atlantic seaboard towns in general, which are becoming well-nigh impossible of solution.

"If we want to keep open the opportunity for many more of our coreligionists to come into this blessed land," better distribution must be found, so that the Jew will go direct to sections of the country where opportunities of livelihood, low cost of living, and good health are to be found. Mr. Schiff then told how immigration could be directed to Galveston instead of New York, where, with the aid of a special committee, employment may be found in the territory between the Mississippi and the Pacific Coast.

With the help of the Special Emigration Department of the Jewish Territorial Organization in Europe, it is purposed to plant twenty thousand to twenty-five thousand immigrants in that territory in the next ten years, as heralds and demonstrators of a wisely distributed immigration.

"Nor will the mortifying cry that we need return to the Orient in order to fulfil our destiny thereafter continue to be heard. A well-distributed population of some millions of our coreligionists, brought up under Anglo-Saxon influences, imbued with the Americanism of George Washington, Abraham Lincoln, and Theodore Roosevelt, will form the best and most efficient center our people can desire."

A phrase is running through the Eastern States with the speed of fire in dry bushes and with the stealth of a snake in the grass. "The day of the Jew is ended at Ellis Island." It is believed by the well-informed that William Williams, the new Commissioner of Immigration, makes war on disease and pauperism, but not on a race.

Commissioner Williams is quoted by the New York "Times" as saying:

"I believe that at least twenty-five per cent of the immigrants now necessarily admitted, although they may be able to earn a living, yet are not wanted and are of no benefit to the country."

Where the Sacred River Ran

THE Hindu laborers of Sacramento, California, placed the body of a comrade on a funeral raft to which they were about to set fire and let go blazing down the Sacramento River, when the coroner intervened. It was their purpose to treat the Sacramento as if it were the Ganges, sacred for the last voyage of the dead.

PURITY ESSENTIAL

In no other form of food is Purity so absolutely essential as in milk products. Richness is also necessary, as without richness, milk is of little value as a food. Purity and richness are the embodiment of Borden's Eagle Brand Condensed Milk. As a food for infants or for general household purposes it has no equal.—*Adv.*

You see, it follows the water all the way.

ALONG the Hudson River, through the Mohawk Valley and by the shores of the Great Lakes, the famous

20th Century Limited

makes its one-night run between New York and Chicago over the smooth, easy-riding "Water Level Route."

"It saves a business day," and in addition its luxurious appointments appeal to ladies as well as business men.

Your Complexion

DOES IT NEED A "COLD CREAM" OR A MASSAGE CREAM?

Today one doesn't have to argue the necessity of using *some* face cream. Well-groomed people confess the necessity of *some* face cream for preserving *skin health* just as they confess the necessity of umbrellas or rubbers or raincoats for preserving *general health*.

It is today rather a question of "*Which face cream*," or better still, "*Does my skin need a cold cream* or a *MASSAGE cream in order that I may always appear good-looking, clean-looking, wholesome and, yes, young-looking?*"

"Cold" or "grease" creams have their uses, but are not sufficient for the face any more than one kind of food is sufficient for the stomach, or one kind of medicine to cure any disease. Use cold or grease creams, if you will—there are *hundreds* of brands. But *no matter how many you use* you should always have a place on your dresser for a massage cream, and there is *only one with a national reputation*, namely, POMPEIAN MASSAGE CREAM.

Now for the *difference* between an ordinary cold cream and a real massage cream like Pompeian. Cold creams are merely rubbed into the pores—*and stay there*. This may feel good, but not really improve the looks. Pompeian Massage Cream is rubbed into the pores *and then out again*, bringing with it all the pore-clogging impurities—soap particles, dust, soot, etc. It is this foreign matter in the pores which causes muddy complexions, blackheads, face "shine" and similar disfigurements.

The pores *must* be cleansed before the *rosy* blood can get the circulation it seeks. When you massage with Pompeian Massage Cream you'll be astonished at the results.

"Your Pompeian Massage Cream *positively insulls* me every time I use it," a man recently wrote us. "I had no idea so much dirt could get in the pores and stay there, despite soap and water."

"When first I used Pompeian," wrote a woman, "I was as astonished as at my first Turkish bath."

You see the point. Pompeian being a "rolling" massage cream (that is, it rolls out the dirt), gets at the root of facial troubles, namely, clogged pores. "Grease" or "cold" creams do not—can not—roll out the dirt, and in fact merely rub it in. And *it is the dirt that is in*—not the dirt that is on—that retards circulation, and makes people's faces sallow and muddy instead of being clear and fresh and smooth. For a soft, clear, clean skin use POMPEIAN MASSAGE CREAM.

Get a Trial Jar

You have been reading and hearing about Pompeian for years. You know it is the most popular face cream made, 10,000 jars being sold daily. You have meant to try it, but have not done so. This is your chance to discover what a vast difference there is between an ordinary "cold" cream and a scientifically made Massage Cream like Pompeian. Fill out the coupon today and prepare for a delightful surprise when you receive our quarter-ounce trial jar. A 16-page booklet on the care of the face sent with each jar. When writing enclose 6 cents in coin or United States stamps.

All dealers, 50c, 75c and $1. Cream sent to all parts of the world, postage paid, if dealer cannot supply you.

The Facts About 6% Irrigation Bonds

We are the largest sellers of Irrigation Bonds. And these bonds are, by far, our most popular securities with investors who know them.

Our experience with Reclamation Bonds covers 15 years. It covers the sale of many entire issues from 11 separate states. So we know the facts.

These bonds are farm liens of the most conservative class. Some are Municipal obligations. The interest rate—six per cent—is larger than one can now obtain on any large class of equal security. The bonds are issued in serial maturities, and in denominations as low as $100.

For the information of our customers—present and prospective—we have issued a book called "The World's Greatest Industry." It is interesting, unbiased, clear and illustrated. It tells the facts about this most attractive form of investment. Please write us a postal or send us this coupon for it:

THE AVERAGE MAN'S MONEY

News and Comment for Investors

PARAGRAPH one of this department should give the editor's idea of investment; no other use of the average man's money is of great importance to him. A reasonable hope of a fair return on surplus money—here is a usable definition of investment. It means putting money into business (to work as a junior clerk—and there are plenty of junior clerks to be had at a low cost. Money is, usually, plentiful. Therefore, usually, it does not yield large returns when it is the only capital contributed. Investment bankers of reputation and experience, and the men who handle estate funds and savings bank money, will not consider for a moment a proposition promising big returns. The average man's surplus piles up slowly—fortunately, he is not a speculator. In putting his earnings into concerns which are run by the brains and energy of other men, the investor must not expect to get the larger share of profits. Conservative investment is not alluring—neither are the exercises required to keep the normal man in good physical condition. But it is sure; and speculation is the only alternative for the man who wants to put his money to work. In this department it must be assumed that the average man is not a speculator.

Is This Speculation?

MARGIN buying is gambling, surely. But is it always? Here is the story of a transaction, on margin, that seems to raise a question:

After the panic, United States Steel preferred was selling in the eighties. A man who owned 100 shares of a 4-per-cent industrial stock sold it for $50 a share. Then he bought 250 shares of Steel preferred at 86, putting up a margin of $20 a share. He figured that it was absurd to suppose that the stock would go below 66, and that it was bound to go above 86 if he held on. This he could afford to do, for the stock paid 7 per cent, and the brokers were willing to advance the $16,500 required to complete the purchase at 6 per cent interest. From 86, Steel preferred rose in five months to 121, and the man sold his 250 shares. His profits are easily figured. Before he considered the deal closed, however, he bought back his original 100 shares of the 4-per-cent industrial, paying $55 a share for it.

"I've noticed," said this investor (a speculator?), "that there are bear markets and bull markets, and that one succeeds the other. I figure that in ordinary times I should keep my money in a safe security—some of the good railroad 5-per-cent bonds are excellent. In a bear market, when stocks are cheap, it will pay me to sell my fairly rigid, inactive security to secure a bargain in a fluctuating stock. Personally, I don't consider dealing on a 20-per-cent margin with Steel preferred down to 86 a *speculation*."

Values

WALL STREET is the one big investment market in this country, and, aside from its momentary shudderings due to the flying rumor, it is the one place where real values are studied with exhaustive care. Into the good banking-houses and the offices of all the safe brokers come, literally, tons of information concerning the properties whose shares are traded in. Experts in figures and historians of the Street sift this mass of material as it comes in, and the dependable adviser to the prospective investor has a broad knowledge of the physical worth of the railroad or steel plant or copper mine into which he advises his customer to put money. This and this and this being so, says your sound adviser, B stock has an intrinsic value of 110; it is selling now at 95; it may or may not go lower; later, under normal conditions, it is bound to go to 110; bought now, it will yield better than 6 per cent. Therefore, buy. Or, the facts do not justify the present price of 150 for C railroad stock. Therefore, sell. To realize that Wall Street is not only brilliant, but studious and long-memoried, would help many a man with money to invest and a deadly fear of the stock market. And having made a sound investment, why isn't it the duty of the average man to find out from time to time the condition of the property that stands behind it? People spend money to prevent their teeth from decaying or their suburban house from falling into disrepair; why shouldn't the man with a few thousand dollars tied up in stocks or bonds keep in touch with the conditions that affect his security? It is perfectly feasible and not expensive.

Illustration

A Bishop's Investments

THROUGH a long and active life the late Bishop Henry C. Potter of New York kept sane and level outlook. After his death, a few months ago, a list of securities in which he had invested was published. Title, par value, and appraised value at the time of his death, of some of these securities were:

$21,000 New York Gas, Electric Light 4% bonds, at 86, $18,060.

$10,000 Kings County Electric Light and Power Company 6% bonds, at 110, $11,000.

$6,000 Chesapeake and Ohio, Warm Springs Valley Branch, first 5% bonds, at 105, $6,300.

$10,000 Compania Metalurgica Mexicana 5% 30-year gold sinking-fund first mortgage bonds, at 85, $8,500.

$10,000 Mexican Northern Railway first mortgage 6% bonds, at 95, $9,500.

$10,000 Missouri Pacific first 6% consolidated bonds, at 108, $10,800.

$5,000 St. Louis, Iron Mountain and Southern consolidated railway and land grant 5% bonds, at 108, $5,400.

$10,000 Central of Georgia consolidated 5% bonds, at 107, $10,700.

$11,000 Northern Pacific general lien 3% bonds, at 72, $8,280.

$30,000 St. Louis Southwestern Railway consolidated mortgage 4% bonds, at 67, $20,100.

$28,000 St. Louis and San Francisco Railroad Company 4% refunding mortgage bonds, at 66½, $18,620.

$10,000 St. Louis and San Francisco Railroad Company general mortgage 6% bonds, at 114, $11,400.

$10,000 Mexican Coal and Coke Company 5% sinking-fund first mortgage bonds, at 75, $7,500.

$10,000 Southern Pacific Company, Central Pacific stock collateral 4% bonds, at 86½, $8,650.

$5,000 Rochester and Pittsburg Railroad Company consolidated first mortgage, 6% bonds, at 118, $5,900

$5,000 Erie Railway Company consolidated mortgage 7% bonds, at 120, $6,000.

$10,000 New York, New Haven and Hartford 6½ debentures, at 125¾, $12,575.

Stocks included in the estate were standard five and six per cent dividend payers—the sort that would be recommended to anybody by good banking-houses. Bishop Potter was one of the trusted leaders, not only in the church, but also in the material affairs of his city. In the matter of investments, also, he was wise.

An Answer Wanted

WHO will point a way to this man? He has written to COLLIER'S in these words:

"I desire to secure funds to operate a wheat ranch in Alberta, Canada, and . . . I desire to get some pointers from you. The proposition I have in option is so good and fair in promise of results, both for myself and those who furnish the capital, there surely should be some way to raise funds. If you have any good suggestion which it is convenient for you to hand out, I should be pleased to get it."

The letter comes from a town of 10,000 in Ohio. It is to be supposed that local capital can't be had for the Alberta venture. If the inquirer is capable and his proposition is sound, how can he get money? This department will be glad to receive answers and suggestions.

FRANKLIN 1910 AUTOMOBILES

Franklin automobiles with their present tire equipment will average 2500 miles without a puncture.

Large tires on a light-weight automobile do not puncture easily and blow outs are almost unheard of. Our tire equipment is so generous that it is not necessary to carry extra tires on any 1910 Franklin.

On Model H the rear tires are 37 x 5 inches, front 36 x 4 1-2 inches; on Model D, rear 36 x 4 1-2 inches, front 36 x 4 inches; on Model G, rear 32 x 4 inches, front 32 x 3 1-2 inches.

The Franklin air-cooling system for 1910 has been proved to cool so perfectly and positively that no one but a trade rival would dispute its success. It also dispenses with the fan and other complications necessary in water-cooling systems.

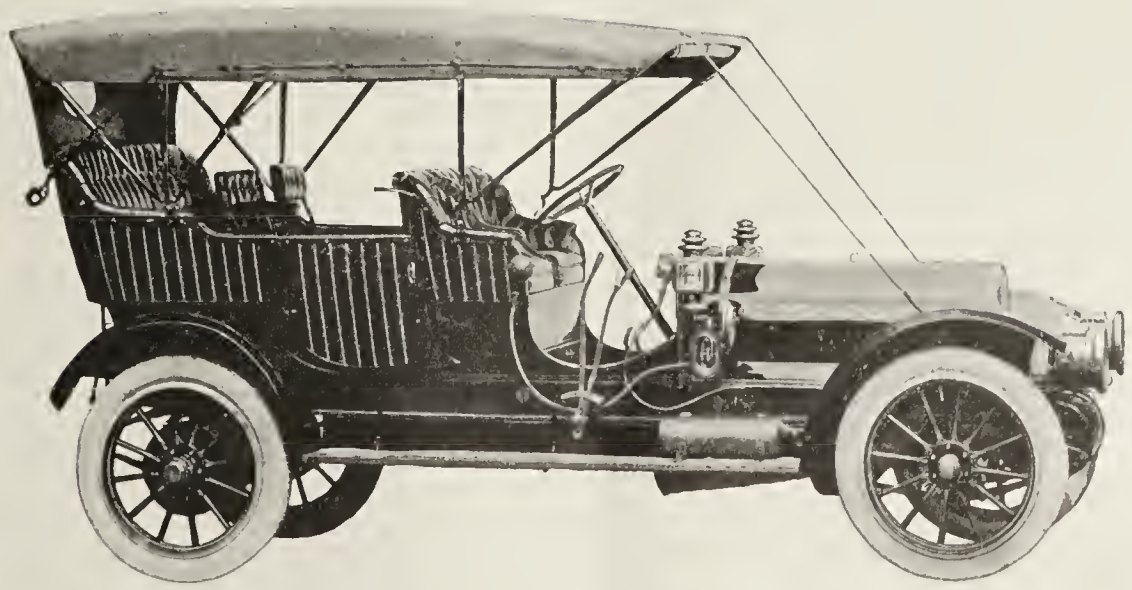
Surrounding each cylinder close to the vertical cooling flanges is a sheet metal casing open at the top and bottom, with a diaphragm connecting the casings and forming with the engine boot an air-tight compartment. At the rear of this compartment is a powerful suction fly-wheel of new type. This fly-wheel draws the air down through the casings equally around the entire circumference of each cylinder.

The Franklin power plant is more economical, more efficient and more powerful than water-cooled power plants of the same weight.

The Bosch magneto high tension single ignition system used on our 1909 automobiles is continued on our 1910 models. In addition we have dispensed with the spark advance lever on all models. The time of the spark is not left to the judgment of the operator. Much better results are obtained at all speeds than by any other system. This was demonstrated on our 1909 Model G.

Cranking the motor on our magneto system is easier and safer than starting on batteries. The reason for the "double" ignition system commonly used is to provide batteries for starting, it not being practical to crank the ordinary motor on the ordinary magneto system. Anyone can see that one perfect ignition system is better and less complicated than two systems both of which lack some essential quality and which must be used together to get results.

A light-weight automobile with proper spring suspension gives the limit of riding comfort and touring ability. All Franklins have four full-elliptic springs and a laminated-wood chassis frame. Road shocks and vibration are absorbed—not transmitted as is the case with the steel frame and semi-elliptic springs commonly used.



The Franklin is the easiest riding of all automobiles. It will also go the farthest in a day and is the fastest over American roads.

All efforts to break our transcontinental record which we have held for five years have resulted in failure. As recently as last June five different makes of automobiles tried for the Franklin record, but the best actual running time made was four days longer than our record. And in spite of the many attempts to lower it, our Chicago-New York record of 40 hours made in August, 1907, still stands.

The first 1910 Franklin to be entered in a public contest established a new world's record for economy. This was on July 7 in the Buffalo, N. Y., one-gallon mileage contest. There were 20 contestants. The Franklin, an easy winner, out-did its nearest competitor by 50 per cent and also beat the former world's record, made by a 1909 Franklin in New York on May 7, by 40 per cent.

Franklin closed cars are now being delivered. These models are not only luxurious in their equipment, but they have the Franklin easy-riding quality so essential to this type of automobile.

Write for 1910 catalogue of all models.

Franklin Model H, 42 horse-power six-cylinder chassis, is made with seven-passenger touring body, surrey body and limousine body.

Franklin Model D, 28 horse-power four-cylinder chassis, is made with five-passenger touring body, close-coupled body, surrey body, limousine body and landaulet body.

Franklin Model G, 18 horse-power four-cylinder chassis, is made with touring body, surrey body, single-rumble-seat body and runabout body with hamper.

Franklin Model K, 18 horse-power four-cylinder chassis, is made with limousine body, town car body and taxicab body.

CINCINNATI, O.

ADVERTISING BULLETIN

NO. 16

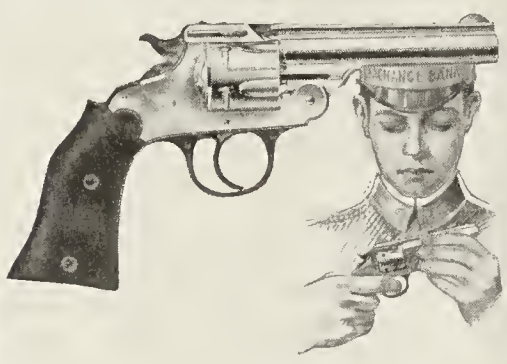
THE NEWS VALUE OF ADVERTISING

TO that happy family looking forward to the building of their new home all advertisements of building improvements are news.

That family is not one whit more anxious to read a good story, a special article or an editorial than they are to read in fullest detail in the advertising columns a description of an efficient heating system, a metal weather strip which will exclude dust and save coal bills, or a new form of tile flooring for bathrooms, kitchens, etc., which is both baseboard and floor in one, thus doing away with the crack—unsightly and unsanitary—which the old-style construction inevitably brought.

Unless you have been reading the advertisements you are not likely to know that three or four reliable manufacturers can very easily make a beautiful opal glass porcelain lined refrigerator built to order for you and made to fit just the space you specify.

Neither will you know—unless you have been reading the advertisements—that two or three very large manufacturers will, *for the asking*, give you very complete color schemes for every room in your house.



You can secure (also for the asking) very complete helpful information regarding bedroom furnishings from an advertiser of mattresses; a beautiful book from another advertiser which gives exceptionally good suggestions for the proper fitting of a bathroom and many interesting facts regarding the arrangement of your other rooms, can be secured for the mere trouble of writing the advertisers who have this information ready to give to you.

Because of this news value—this real value the advertising columns have for the interested reader—it is important that the news given is reliable.

Further than that it is part of the duty of Collier's Advertising Department to seek the advertising of those concerns only which, to the best of our knowledge, manufacture an efficient product—one which will more than fulfil what is claimed for it.

E. L. Patterson.

Triple Action SAFETY POLICE Revolver

Is Safe because its Safety is In-built

When you own a Triple Action Safety Police you have a positively accident-proof revolver. You can see the perfect safety, you can feel it the minute you get this weapon in your hands. You can't help but know it's safe because the evidence is right before your eyes. The triple action is the safety action, and it's built right into the mechanism of the gun.

That's why the Triple Action Safety Police is safe, not once or first, but last and always. It can't go off until you deliberately pull the trigger.

The Triple Action just means Triple Safety. The instant you pull the trigger of this weapon the hammer cocks, then lets drive at the firing-pin straight and hard; the second it hits the firing-pin, the instant the shot is fired, the third movement then lifts the hammer up and above the firing-pin, away above it, out of all possible contact with the firing-pin. There it lodges—securely, safely—firm, fixed and immovable against a wall of solid steel. The weapon will not, cannot, fire again unless you actually pull the trigger all the way back.

32 and 38 calibre, 4 inch barrel, nickeled finish, $9.50; blued finish, $10.00. For sale at all good hardware and sporting goods stores, but if your dealer does not have it, we will send one to you post-paid on receipt of price. Send for our 1909 Gun Guide and Catalog, which illustrates, describes and prices the most extensive line of firearms made.

STERLING TIRES

If Sterling tires are not better than any others, we have no excuse for business life. It isn't a question of profit with us—it can't be. We must make the best tires, irrespective of cost. "Just as good" won't save us—we must lead or quit. Each Sterling tire is the best we can make—we never sell a "second."

STERLING BLUE TUBES Tough tubes for service. Made especially to withstand the heat and strain of fast travel. Nothing in tubes to approach them. "Ask us why they're blue."

Tell us what tires you use and where you buy them and we'll tell you how to get a Sterling Blue Tube—FREE.

CO-EDUCATION

What College?

Sixty-nine per cent of those whose names appear in "Who's Who in America" are college graduates. Since less than one per cent of the total population go to college, this shows that the college graduate's chance of making a name in the world is as 69 to 1.

Therefore the question of a college education is an important one. Scarcely less important is the choice of the college one will attend.

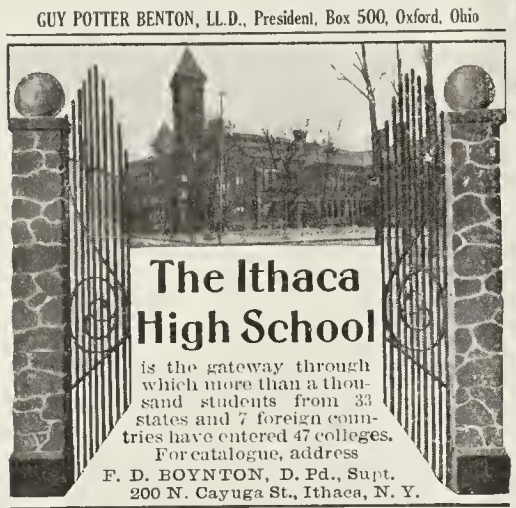
Any young man or woman considering college life will be interested in

"At Old Miami"

an illustrated booklet concerning Miami University at Oxford, Ohio. Dating from 1809, this is one of the historic schools of America. It is a State University insuring the highest standards in equipment and scholarship.

Because of liberal state appropriations, expenses are very low.

It is co-educational and nearly 600 students attended last year.



The Liberal Arts College offers a variety of courses leading to A. B. degree.

The Normal College trains teachers. For years all graduates have secured good positions, the demand greatly exceeding the supply.

A Sub-Freshman class offers an opportunity for students to complete their preparation for college.

The booklet and any information desired will be sent free on request to

GUY POTTER BENTON, LL.D., President, Box 500, Oxford, Ohio

The Ithaca High School

is the gateway through which more than a thousand students from 33 states and 7 foreign countries have entered 47 colleges.
For catalogue, address

Celebrations

HISTORY IN AMERICA thus far has had its most romantic aspects in its beginnings; in those large, clear outlines, full of action, set in stream and forest, where a skirmish in the wilderness, or an exploration in a canoe, was related to the future destiny of a continent. Well may we celebrate HENRY HUDSON in September. An Englishman serving the Dutch, he recalls the CABOTS, who were Genoese serving England, and COLUMBUS, who was Italian serving Spain: men working for empire among strangers, because their services were refused at home; failing all to find the route of empire which they sought, but becoming instead the founders of claims in what was to become of even greater importance than the spice-bearing Indies. We have already celebrated this summer the story of CHAMPLAIN, one of that group of adventurous and able men who were unable to give to LOUIS XIV and LOUIS XV, and later France, a great realm over-seas, because of policies made by Mme. DE POMPADOUR, of victories won upon the Continent of Europe by MARLBOROUGH, of an idea of personal and arbitrary government of colonies ill-suited to make them grow. Englishmen came to America to live, to build homes for wives and children, and if they could not find a form of liberty suited to their taste in one colony they found it near by in another, while Frenchmen in Canada were being governed from across the sea as if they were little children, and therefore could not take root and grow. In Seattle we are noticing a later phase of the story of our continent, after Holland and Spain and France and England have ceased to occupy the leading rôles, and the descendants of these countries are working out their impulses for themselves. It is well, indeed, that our thoughts should be led to dwell upon these things. It makes a larger background, an ampler air, in which to consider the details of every day; why LORIMER is Senator from the rich and educated State of Illinois, what the ticker says to-day, how much more we must have of THAW, and whether Gumshoe BILL'S striking of the Pullman porter redounded to the credit of the statesman. Looking thus further afield, and studying what is meant by celebrations at Lake Champlain, Quebec, New York, New Rochelle, Seattle, we are led to reflect upon what geography does to history; upon useful labor in the fields as the strongest basis of empire; upon religion, race, and government in their relation to the happiness of man.

Once Before

THE PRESENT FEAR of invasion is, of course, not the first that has overtaken modern England. In one particularly like that now beginning to subside her present bugbear was her only ally. In 1757 the same ministry which executed Admiral BYNG to cover its own faults, and, as VOLTAIRE put it, "to encourage the others," brought over German troops to defend the soil of Great Britain against the Austrians, Russians, or French, who were leagued against FREDERICK the Great of Prussia. PITT, however, being soon after called to power, had other things to do than to worry about invasion, and that particular panic passed. No Englishman of to-day could be gloomier than leading citizens then were. "I am sure," wrote CHESTERFIELD, "we are undone both at home and abroad: at home by our increasing debt and expenses; abroad by our ill-luck and incapacity. We are no longer a nation." Yet England was then on the verge of a power greater than any she had ever known.

The Kaiser's Program

BETTER FOUNDED than England's panic has been the anxiety overhanging Holland. The birth of a daughter to the Queen, which much lessened it, by no means brought it entirely to an end. If the child should die, the next heir would still be an uncomfortably close relation of the German Emperor. With Germany's eyes fixed hungrily on her, Holland needs more children in the royal family. She needs also an explicit declaration that on any failure of the direct line no claimant can receive the throne except by vote of the States-General; and for her safety such a declaration ought to be made without delay. The one state in Europe whose determined policy makes the armament race inevitable is Germany. Certainly the Americans are as definitely concerned by the German naval expansion as any other people. Let us indulge in a war with Japan and see how long it takes Germany to gain a footing in South America. If we had our hands thus tied nothing can be foreseen which would be likely to prevent her seizing the opportunity except the possible intervention of England. It would be a singular sight, Great Britain executing the Monroe doctrine after the Venezuelan episode, but it is by no means inconceivable. Great Britain sees nothing but menace in Germany's naval expansion, and, on the other hand, she finds a valued guarantee for peace in the growing commercial power of the United States.

American Opera

THE COMPOSING OF OPERA—though not of musical comedy—finds so little encouragement in these States that our own writers of lyric drama apply to European theaters for performance of their works. Thus, at the Imperial Opera of Berlin ARTHUR NEVIN'S "Poia"—with a legend of the Blackfoot Indians as its subject—is to be given next winter, HENRY HADLEY'S "Safié" having been introduced to the burgesses of Mainz at their City Opera during last spring. The German operatic institutions are especially friendly to novelties from all lands—without showing hostility to Germany. But here, at the Metropolitan, only this past winter, the single American composer set down for a hearing received not one performance. This was FREDERICK CONVERSE, whose one-act fairy opera, "The Pipe of Desire," the management had announced for presentation—a composition, moreover, that had already been rendered with approval under semi-public auspices on a small scale in Boston. HAMMERSTEIN the Hardy—he who prodded up the sleepy Metropolitan—promises something by VICTOR HERBERT—"Natoma," dealing with an episode of Spanish mission life in the California of eighty years ago. "Natoma" will appear on the boards at the Manhattan in January next, it is announced.

Short Fiction

MR. ROWLAND THOMAS, well known to readers of this sheet, protests against certain phrases used by us in trying to analyze—that old and rather hopeless feat—the elements of short fiction. Speaking of "speed in construction," "vibrations of creative energy," and other phrases, equally futile, used by us, Mr. THOMAS observes that other editors talk of "rattling good yarns," as if rattling were in itself a merit. Even from a racing motor boat engineers wish the vibration could be taken out! And if we must cling to the nautical metaphor, is there nothing to be said for the canoe's glide or even for a catboat in a calm? And now, although unwillingly, being ourselves voluble to-day (some would say glib), we must allow our correspondent to use direct discourse, since he is, as it happens, writing better than we can write. Here goes:

> "Of course, if by 'speed in construction' you mean simply the conciseness of the craftsman, the saving of unnecessary labor, the elimination of befogging detail and of dragging episodes, I have no quarrel with you. That measure of intelligence is just as necessary in the writing of a technically good 'short story' as it is in any other sort of workmanlike writing—just as much and no more, so far as I can see. In that good sense even DICKENS was concise, and FIELDING.
>
> "But such intelligent directness is a very different thing from 'speed,' at least as the words have connotation in my mind. And what you seem to be yearning for in the editorial in question is an advanced spark, an open throttle, muffler cut-out, and the tearing of dusty air about your maddened head!
>
> "You ask, too: 'Is there a single leisurely short story that has gripped and held the public?'
>
> "What public? The one that buys Mr. MUNSEY'S admirable antidotes for mental exertion? Or a more sophisticated one? Of the latter, I venture to believe that there are a good many leisurely stories which make good. How about the 'Twice-Told Tales'? And 'The Fall of the House of Usher'? 'The Case of Mr. Valdemar'? 'They'? 'Brushwood Boy'? The cameo which Mr. NORTON considered the only perfect love-story in all literature—I mean the story of Paolo and Francesca as DANTE tells it in Canto V of the 'Inferno' in sixty-five lines? Not one of those stories is vibrant with anything, not one makes any blind and headlong dashes even in the right direction, and not one is memorable in one sense. Not one ever 'gripped the public.' Do you suppose their authors minded that? I doubt it."

Pretty good, is it not, O reader? Mr. THOMAS, from his quiet New England farm, calls us back from too ready acquiescence in the surest pathway toward success; and the voice in which he calls is so rational and pleasant that it is not easy to resist. He reads good books constantly, thinks always for himself, and therefore is able to put into his words that agreeable flavor given by range and consistency, two not unimportant elements of Truth.

The Lane of Many Windings

THE GREAT HIGHROAD along which the red-coated soldiers in the fairy tales, knapsack on back, come marching home after the war are meant for the usual wayfarer. The by-paths and crooked ways which branch off from the thoroughfare, like the brooklets which flow

into the river, are none the less alive. It is in the lanes that come blackberries and elderberries, and hazel-nuts in the autumn. Sometimes these "primrose paths" are flanked by zigzag rail fences, overgrown with ivy and woodbine, or they diverge into cow-paths, which, like will-o'-the-wisps, lead nowhere. There is no fixed purpose or direction to a by-way, and its mood is irresponsible. It takes delight in surprises. Without an object it disappears into the birch woods, or skirts an apple orchard where the fruit hangs ripening. Finally, however, it will straighten itself out at the crossroads, dignified by the red schoolhouse and country church, and emerge into the main highway. There is a metaphor in this paragraph, obvious enough to any who deem it worth the disentangling.

One Sort of Thing

IN FRENCH PUBLICATIONS of good standing may sometimes be read the advertisement of

"FLIRT"
PARFUM
ULTRA-PERSISTANT

Doubtless this idea of allurement is accurate for its special audience. Otherwise why should the owner of the perfume pay the newspaper to praise it in just that way?

In Mexico

ONE WHO GOES to northern Mexico will find much of interest among the common people of the back country. They are good material, with a fine future, if they ever receive educational opportunities and escape from bondage. It is the general testimony that these people are not at all lazy and are most willing and efficient workmen, but lacking entirely in power of initiative. People who see them sitting around in the sun take it for granted that they will not work, whereas when the work is set before them they are faithful and diligent. Their present condition of ignorance and superstition makes it impossible for them to unite for any reforms in government. Perhaps the American influx and the payment of better wages and the raising of the standard of living above a point of chronic freezing and starvation are to effect a quiet revolution. The people are high-strung and sensitive, both from their Indian ancestry and Spanish training, accepting, however, an unreasonable amount of brutal treatment from those they consider their overlords. In the back country no church is regarded with any great amount of affection, and religious views are merely fragmentary superstitions.

Illustrations

ONE TERAZZAS acquired some twelve million acres of land in Chihuahua by letting the Apaches kill off his neighbors at a time when he was Governor, and then foreclosing his loans on the abandoned estates. His system of renting and peonage carries one back to the feudal system. For instance, an American tried to secure the services for a few days of one of his tenants who he had every reason to believe was independent as long as he paid his rent, but when he reported to headquarters permission to accept the work was refused. The local "gratters" of that region also furnish an interesting study. They seem to be prospering greatly and are frequently related to and intermixed with the Terazzas family. The present Governor, CREEL, had a Scotch grandfather, and is a big banker in Chihuahua. The alliance of this aggregation for offensive and defensive purposes is very close and effective. The one thing they are afraid of is the United States. A study of this country also gives one much to think of in regard to land-owning privileges. On the Terazzas ranch are thousands of people who have nowhere else to go and who have to live there under the terms dictated by the owner. Their wages, when they are employed at all, are too low to permit them to have enough to eat or enough clothing and shoes, and when they raise crops they do it on shares, turning over to the ranch half of the crop. On one of the ranches sheep herders were paid as low as eight dollars per month Mexican money. The regular rates for vaqueros is fifteen dollars a month Mexican. When it is considered that shoes are more expensive than in the United States, and that overalls and cotton shirts are also more expensive, there is not much to be expended on luxuries or education.

Brave Words

THE BELASCO THEATER of New York carries at the head of its program certain lines, reading thus:

"They are slaves who dare not be
In the right with two or three."

It is a just and interesting quotation, but we fail to remember any theater run on that principle. One theater is by no means like another in virtue, but none could get along very satisfactorily with the approval of but two or three. For that especial degree of independence it would be necessary to look in other walks of life.

All Men, Etc.

THIS MONTH WILL WITNESS the national gatherings of many fraternal organizations. Thousands take their vacations in participating in these meetings and their incidental festivities. The last twenty years have brought about a phenomenal growth in such fraternal societies. They enable the average man to widen his acquaintance. They draw divergent personalities into closer companionship. They are clearing-houses for that free intercourse which is a part of our national life. The fraternal organization revives the spirit of life for thousands. The West, where these organizations have had their largest growth, is the home of the spirit of equality. Young men of merit rise the more readily in a social atmosphere which is indifferent to the influences of lineage or the ratings of Dun; and these fraternal organizations are often miniature types of that wider democratic structure upon which is founded the political, business, and professional life of the West.

Prophecy

WHO DOES NOT REMEMBER the desolate picture which WEBSTER drew of the Rocky Mountain region? Years ago a writer in a famous review said that Colorado was not a State of homes and never would be a populous State. "Like Nevada," said this writer, "it is a district of miners' cabins and of cowboy huts." Instead of WEBSTER'S regions of perpetual snow, we speak now of the Golden West. One needs only to walk among the homes which fresco the streets of Denver and of Colorado City to wonder if WILHELM GRIMM'S fairy tales ever found their way into the pages of the old "North American Review." Yet these slips of prophecy and of judgment were but natural. California was bathed in summer haze while WEBSTER uttered his distorted picture in the Senate, and Colorado glistened under the warm winter's sun. But how should the untraveled statesman know? Our knowledge of distant lands too often bags at the knees even now. "It is difficult to be accurate in an account of anything, however simple," wrote RUSKIN. The pen pictures of strange countries take on new meanings and unexpected shadings in personal contact. Colorado's agriculture now excels in wealth the output of its mines. Even Nevada, under the magic of irrigation, will in places turn desolate waste into fruitful soil.

Breaker of the Ground

THE FAR WESTERN PIONEER drove the golden spike of that history which had its beginnings at Concord and Lexington. He faced the rigors of unknown climates. He corduroyed the western half of the continent. He joined the oceans. With a courage unsurpassed, he braved sickness and death in a hundred lonely forms. He forewent the nursery of gentle hands. He left behind everything that makes life tolerable to most men to cast his lot among primitive savages that he might subdue them and their wilderness. He it was who discovered the golden treasures of the Pacific Coast. He leveled hindering forests and erected cities and States. He laid the foundations of law and hewed out the last cornerstones of a nation. On the friezes that ornament the better class of our public buildings sculptors have chiseled the figure of his prototype, the pioneer of the Middle West, but the imagination of the poet, the pen of the writer, have not done as much for this last grim figure that looms large in the rounded story of the nation.

Degenerate Days

CONSIDER THE DIFFERENCE between the state of the world now and half a century ago. Then, if you cared for fiction, no one insisted on your reading MEREDITH or TURGENEF or TOLSTOY. SARGENT and RODIN made no trouble then. As for music, the composer of "La Bohême" was scarcely born, TSCHAIKOWSKY a mere youngster, and WAGNER an upstart. One didn't have to listen to MELBA or CARUSO or PADEREWSKI. COQUELIN, SONNENTHAL, IRVING, BERNHARDT, DUSE, MODJESKA—well, the universe did not ring with their names. One rode behind horses on the highways, and there was no talk of flying over the tops of houses, or of getting in a week from Vienna to New York. Neither the telephone nor the phonograph had been discussed, much less the wireless telegraph. EDISON was a child, KOCH and PASTEUR were youths. Radium, the X-ray, typewriting machines, and fountain pens mankind had contrived to do without, and the present methods of street-lighting and harvesting would have caused profound astonishment. Factories and tenements and hospitals and public asylums—how all is changed, and still is changing! Every one worries now about typhoid and consumption, and therefore about water and milk. Look at the mortality rate, especially among babies. There were other questions to be debated in the fifties and sixties; for example, whether it was right or not to make men work without paying them; in Russia and the United States that subject was all the talk. One would hardly recognize this world. Now everybody learns to read and write. There are plenty of free schools, and laws compelling children to attend. Good old times! Degenerate days! As one hears these phrases, he smiles and passes on.

Finis

IF YOU HAVE READ down to here you may have wondered why you found no editorial on the tariff situation, since that is the news topic, par excellence, of the day. The reason lies in the virtues of one MARK SULLIVAN. His "Comment on Congress" is the best writing of its kind now being produced in the United States. He has knowledge, and, what is rarer, wisdom; he is bound by no considerations except the welfare of the ordinary man and woman; and as a writer he has that rare and prime merit of controversy and exposition, the ability to select the crucial points, to clear away the rubbish, and to press the essential things with mastery. We look upon Mr. SULLIVAN as one of the most valuable citizens which the United States possesses, in this year of grace 1909; and his tariff discussions are the most interesting which have been printed since the long comedy began in March.

Comment on Congress

By MARK SULLIVAN

"Tariff reform will not be settled until it is honestly and fairly settled, in the interest and to the benefit of a patient and long-suffering public."—GROVER CLEVELAND'S MESSAGE CONCERNING THE TARIFF OF 1893

IN that final clash Mr. Taft gained something for the people and gained it, after everything else failed, only through resolute courage. We still think he didn't gain enough; more regrettably, we think he didn't gain enough to meet, in fair good faith, the reasonable expectations of those to whom, a year ago, he promised "substantial revision downward." For that we are as sorry for his sake as for those who are deprived of the fruits of their faith. But there is some compensation if he has learned that Cannon and Aldrich are not to be trusted, that between them and him there can be no such thing as a gentleman's understanding, that they are the enemies of that great body of the people who want to look upon him as their friend, that they serve organized wealth, and that if they can not have their way through force, they will get it through deceit and trickery. There are three and a half more years of Taft; through this lesson, if he has learned it, the country may profit much. There is good reason to believe that Mr. Taft has an enlightened economic policy concerning the control and capitalization of corporations, which he will outline when Congress assembles in regular session.

Aldrich—"Aw, Hang the Consumer!"

This is a good cartoon. The paper which printed it is the "Philadelphia North American," and the artist who drew it is Herbert Johnson. The mark of a good cartoonist is his ability to tell the largest possible amount of contemporary history with the smallest possible number of pencil strokes. Here, in the facial expressions and physical attitudes of three men, more is told than could be explained in many pages of this newspaper

Now for the Income Tax

THE income tax is now before the people. To bring it about, the legislatures of three-fourths of all the States must ratify it. There are forty-six States. The necessary number is thirty-four; defeat in twelve States would make the income tax forever impossible. A good many of the Senators who discussed it so thoughtfully during the recent session believe that the interests represented by Aldrich will control twelve States. They have in mind, among others, such States as New Hampshire, Connecticut, Rhode Island (of course), New Jersey, and probably West Virginia. We have more faith in the people. We don't even believe that all the New England States will reject the income tax. In any event, during the next two years, *the position of every candidate for every State Legislature should be known.* No citizen of any State ought to vote for any candidate without knowing whether he stands squarely for the income tax or against it.

Comment on Collier's

THREE weeks ago we published a record of the votes in the Senate up to that time. It showed, among many other interesting facts, that Senator Samuel Douglas McEnery of Louisiana, although nominally a Democrat, had voted *with* Aldrich 38 times and *against* him only 7 times. Now comes Senator McEnery's reply to our logic. We find it in the New Orleans "Item" for July 29. That we may suffer no charge of suppressing or garbling the Senator's arguments, we print what he said in full:

"'Now, who the devil cares a d—n for what that d—d yellow publication has to say about me anyhow?' indignantly inquired Senator McEnery when asked for a reply to an article in COLLIER'S WEEKLY of July 24. . . .

"Senator McEnery was seen in the private study of his residence, 1233 St. Mary Street. The Senator is of medium height, slightly stooped by the weight of seventy-two years. His scant hair is pure white, like his mustache and goatee, which just covers his chin. His eyes peer out, half hidden by wrinkled pouches, beneath a broad, furrowed brow. The whole head, fairly large, is set upon shoulders broad, though bent, the general outline of his features being aquiline. When Senator McEnery speaks it is in a querulous tone, but the voice has little or no inflection, and his face was absolutely expressionless.

"He motioned the reporter to a nearby chair.

"'Now, who cares a d—n what a yellow publication like this says? I have nothing at all to say about it,' stated Senator McEnery. The Senator is somewhat deaf, and as he talks he habitually holds a hand behind his ear as a trumpet.

"'Had you already seen the article?' he was asked.

"'Seen it? Yes, I've seen it.

"'I would not have seen it, though,' he added, with some asperity, 'for I never look at those Northern yellow journals; but a friend of mine stopped me on the street and insisted on reading it to me. I pay absolutely no attention to such things anyhow—all of these Munsey papers are owned by that fellow Spreckels.'

"The Senator was told that COLLIER'S was not a Munsey publication.

"'Do you mean the man who is agitating things in San Francisco?' he was also asked.

"'Yes, that's the d—d fellow I mean. He owns all of these Northern yellow journals. I have nothing to say in reply to that infamous article. I have always been a Democrat—a protection Democrat. My position has always been stated clearly. When I was Governor and during my terms as United States Senator I have always openly expressed my convictions. Look at that last speech of mine—there it is on the table by you. No, not that one—the one underneath that book. Now you have it. Take it with you and read it.

"'Nobody cares a d—n what these yellow Northern papers say anyhow,' said the Senator, as the interview came to an end. 'I am a protection Democrat.

"'I am responsible to the people of this section. I am responsible for my actions to them alone. As for these infernal yellow journals—it is none of their d—d business what I do.'"

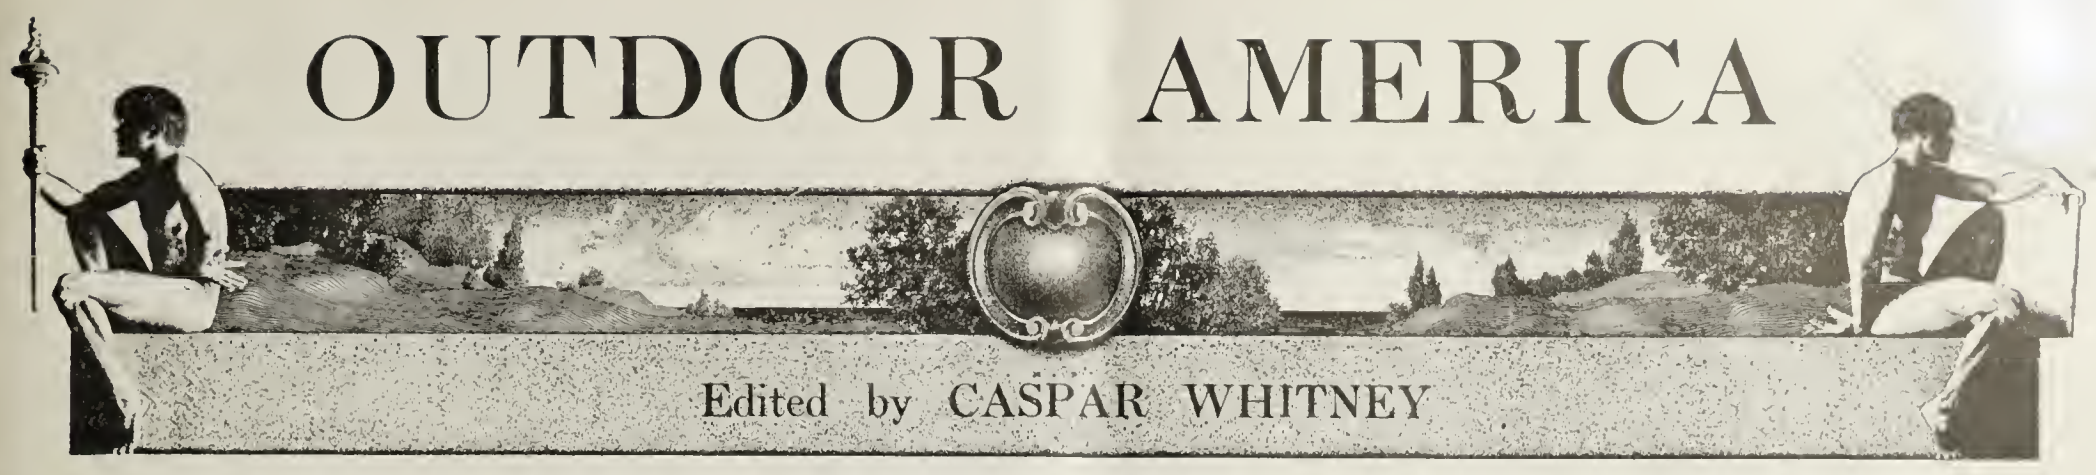
And further than this, Mr. McEnery said nothing.

The Complete Record

NEXT week we shall publish a record of *all* the votes in the Senate during the session—117 of them. The record will show how often each Senator voted *with* Aldrich, how often *against* Aldrich, and how often he didn't vote at all. A complete expansion of this record, constituting a simplified digest of the work of the Senate for the session, is too large to publish in COLLIER'S, but we are eager to get it as widely distributed as possible, in accordance with the announcement below. We wish especially to get it into newspaper offices,

How Your Senator Voted

Collier's has prepared a simplified digest of the votes of the Senate on the various schedules of the tariff. It tells how each Senator voted *on every one of the* 117 ballots *which were taken during the special session beginning March 15. It gives the subject of the vote—"to put lumber on the free list," "to put hides on the free list," "to adopt the income tax," etc.; it tells whether the motion was carried or lost, gives the total vote, tells how many Democrats voted "nay" and how many voted "yea"; how many Republicans voted "yea" and how many "nay." Finally, it tells how, in each case, Senator Aldrich voted. This digest, filled in with the record of the votes of any one Senator, will be forwarded to any person for fifty cents. It is our object to get these records before the public as widely as possible, and the charge is much less than the clerical work involved. If ordered in quantities, the charge will be made as low as possible. A similar record for members of the Lower House of Congress is being prepared and will be ready for distribution when this issue of Collier's reaches its readers. Address: Collier's Congressional Record, 901 Munsey Building, Washington, D. C.*



N. B.—Ordinary questions about the work of Congress or the Government will always be answered by Collier's Congressional Record, free of any charge

The Mountain Peril—An Ice Crevasse, Mount Baker, Washington

Mountain climbing is fast becoming one of the most popular and daring sports in the Northwestern States. In the snow-capped ranges of Washington and British Columbia a difficult and adventurous ascent is offered by every important peak. Societies organized for climbing and magazines fostering interest in this pursuit are bringing out a great number of scalers for Mounts Tacoma, Hood, St. Helen's, or, as in this instance, Mount Baker. The last is 10,827 feet high, and very hazardous in approach. It is a volcano, generally regarded as extinct, but it frequently gives slight indications of activity

OUTDOOR AMERICA

Edited by CASPAR WHITNEY

Keeping Cool

WHEN it's hot everywhere you needn't expect to be the one cool exception to the perspiring community: but by using a little sense you can keep a lot cooler than your neighbor who uses none, and it's surprising how many such neighbors there are. Eating has the most potent influence of any on this subject; not so much what you eat as how. If you are the average normal person, there is no reason why you should not eat whatever kind of food your palate craves. Of course this does not mean yielding to impulse and putting all manner of disturbing combinations into your stomach. I must assume even the unintelligent neighbor to have some wit. But the point is to avoid heating foods, and to eat sparingly. Eat only so much as your appetite demands; don't eat everything that is put before you; don't go through a course dinner from soup to nuts simply because it's provided. If you are exhausted by the heat, don't eat at all; drink a glass of cold milk or milk and vichy, half and half, every couple of hours or so until the exhaustion passes.

Avoid fish and shellfish unless you know it is literally fresh. Eat meat not oftener than once a day; during spells of extreme heat I do not eat meat at all, relying on milk and eggs and on the various dishes of which they are the component parts. Fresh green vegetables in plenty, as usual or as salads, absolutely ripe fruits, and toast or stale bread (always avoid fresh, doughy bread and pastry) will give abundant nourishment. Tea and coffee, iced or hot, as you prefer, and in moderation. Of course, no alcohol.

In a word, eat simply; avoid rich dishes; don't deluge your insides with soda-fountain refreshments, and don't hustle around. Violent fanning is more heating than cooling. It's important to get your sleep. Take a cold bath before retiring, or, if impossible, refresh your wrists and the back of your neck with cold water; and lie on your stomach. These are homely suggestions, some of them trite; all, however, very simple and of assured benefit, as I know, for I've tried them many times under severe and varying conditions of climate and occupation.

Give Common Intelligence a Hearing

OF the making of laws to regulate the speed of automobiles there seems to be no end—and, more's the pity, no sane beginning. The controversy waging between the two groups of irreconcilables—the one classing the automobiles as an invention of the devil, and all drivers of criminal instinct; the other viewing the earth and the fulness thereof as existing chiefly for its benefit—has achieved no result less confusing than to spread on record the most extraordinary job-lot of laws any civilized people ever beheld. To take one State alone, by way of illustration—in a drive of forty-five miles straight out of New York you will go through spheres of local jurisdiction prescribing speeds of four miles, of six miles, of eight miles, and of ten miles, respectively. In a single county of a State will be found several varying legal speeds. Now, it is practically impossible, mechanically, to drive the average high-class car at a four or six mile gait without the risk of doing it harm; and the legislators knew perfectly well when making such regulations that they would not, could not, be obeyed. The entirely natural consequence is that when an automobilist runs upon such a peevish exhibition of legislative stupidity it serves to arouse disrespect for all the speed laws, without distinction, which happen not to coincide with his own ideas of legitimate pace.

The situation is most unfortunate; worse—it is clearly discreditable to the ordinary intelligence of the people. More sense—just common, ordinary barn-yard sense—is needed. If there were more of this kind of sense injected into this rule-making there would be more respect for the law. The one remedy likely to correct the riot of lawless spirit in the United States, and at the same time establish the rights of the community, is to make reasonable laws and to enforce them, subject to heavy penalty for infraction.

The Twentieth-Century Wonder Wagon

EACH side has its grievance and its rights. There is no denying that residents of the country from California to Maine are put to great annoyance by inconsiderate brutes who drive, unmindful of the rights, not to say comforts, of others. Small wonder a hate for the automobile should grow apace—and little less wonder that it should find expression in stringent and impracticable laws. But this does not correct the abuse, while it does strengthen the antipathy and lengthen the period of misunderstanding between the two elements. The country is full of common intelligence—why not give it a hearing? The automobile is no "devil wagon," and only a small proportion of owners are not desirous of of cooperating with the local authorities to make fair laws and to exact respect for them. The automobile is in reality the twentieth-century wonder wagon, and it has come not only to say, but to extend its help to the industrial and the pleasure-seeking fields of America. Therefore to "hate it" and to make laws to unfairly restrict its activities is merely to fly in the face of fate. It must have its way, but that way must be a fair one, respecting the rights of all the people—and automobilists are of the people.

Therefore, good folk of the roadside and the town, get together; both of you are the loser in discord.

Bars and Stripes for Him

BUT there is the reckless driver, common foe of both parties to the speed-law discussion and the prime cause indeed of the controversy. 'Tis a pity we can not hark back to early days when the strong right arm of the backwoodsman served to adequately prescribe and to administer the law—for no man born of woman ever so really needed that kind of discipline.

This is the culprit who has set us all by the ears. With recollection of his unceasing offense, the mere mention of automobile to the countryman is as a red rag to the militant bull; and because of him have we the varied and conflicting and absurd speed laws, which work a hardship on the law-abiding citizen as well as put him out of patience.

And also because of this selfish creature both sides "get mad"—and confusion reigns.

It is not too much to say that the "hatred of the countryside" for the automobile and all the resultant, unfairly discriminating speed regulation, is due to the affronts put upon it by that creature, who may appropriately, if inelegantly, be labeled "speed-hog." It is to the suitable punishment and suppression of this species that attention must be directed before one can hope for fair road speed laws. And the only way to suppress him is to put him in jail. There is a class of men who can only be reached by such means—nor are they all reckoned among the drivers of automobiles. Fines will not avail after the first or a slight offense; repeated reckless, unlawful driving should be punished heavily by imprisonment—no less. That's the first "uniform legislation" which should be undertaken by all the States in the Union.

Let There Be Safety First

I NOTE that the Automobile Club of America is moving officially for uniform speed laws, and has appointed a distinguished committee to that end. Uniformity in speed regulation is, of course, an essential to enjoyable driving; but one thing else is more important, is imperative in fact, and that is safety—safety for pedestrians and drivers of horses; safety for the automobilists themselves; that safety which is now menaced by the reckless and unjailed speeder. Therefore let us hear nothing of uniform road laws until a suit of stripes has been provided for this trouble-maker.

We certainly want a sane and universal speed law; but before it we want chauffeur licenses revoked for cause, jail sentences for the swine, and manslaughter verdicts for those who kill by reckless driving. These would do much toward correcting the present spirit of lawlessness, as well as adjusting the well-established and honest differences between those who use automobiles and those who do not.

Here is worthy work for an organization such as the Automobile Club.

Where the Sailormen Come From

IT MAY be true the sailboat is being hard pressed by the motor craft, but at least the former is making a splendid run of it, for in no season has there been such evidence of real yachting spirit as in this present one. For example, there were—the race to Bermuda (and this is not forgetting the power-boat race to the same port, won by *Heather*, which certainly required pluck and skill and gained our admiration); the race around Long Island for fifty-footers, and the poorly supported New York Yacht Club race to Newport—a gratifying breaking away from the uninspiring cruising of placid waters in favor of offshore yachting, too long neglected.

But the most stirring—shall I say yachtsmanly?—event of the year will be the Navigation Race of the Atlantic Club, scheduled for next month. It is not exaggeration, I think, to class this as next in importance after the international struggles for the *America's* Cup and the transatlantic race for the Emperor's Cup. Personally, I regard it as likely to be of more value to American yachting than either of those cup races: first, because it is confined strictly to amateurs, and, second, because it makes for seamanship.

Apart from its sailor-making, the most pleasing expression of this offshore racing is its indicated revulsion from the racing-machine type toward a healthful cruising model. Certainly it will be well for yachting if the power-boat absorbs the racing-mad element that has supported the freak type of racer.

Rocking the Yachting Cradle

THE Atlantic Club is to be commended for its initiative, and I hope others will help by like example at this point of the yachting game where encouragement is required. When out of a fleet of six hundred the New York Yacht Club can muster but a paltry sixteen for its sporting to-Newport race, or the Atlantic Club secure only eighteen entries for the around-Long Island cruise, while the Larchmont Club gathers entries by the score for its around-the-ring-inshore racing, it is evident that stimulation to real yachting is required. The proportion of yachtsmen to yacht owners is small, and we must needs depend on the sailboat and its youthful helmsmen to displace the rotund members of the rocking-chair fleet. That is why the little sailboat ought to be given every incentive by yacht clubs of both the Atlantic and Pacific coasts, as well as on the Lakes and the Gulf of Mexico; for this same small boat is the cradle of American seamanship. It is here the Corinthian is developed, and from this school must come the captains of future defenders of the *America's* Cup—the blue ribbon of the yachting world—in defense of which every American should be interested, whether he live in Oklahoma or in Maine.

At all events it seems to be an inspiring fact that, though the power craft is winning recruits from the sailboat, it is also bringing the cream of the sailormen to the fore. Thus it appears that the motor boat is actually rocking the yacht cradle while growing lustily itself.

Wanted—A Lawn Tennis First-Class

IN THE development of high-grade exponents of the game the lawn tennis world appears to be standing still, which is somewhat noteworthy viewed beside the general athletic progress. In England the Dohertys have retired, temporarily at least, and none better than A. W. Gore was left to capture first honors last month. Brooke and his helpmate Wilding in winning the Davis Cup, continue in a class by themselves and much above the rest of Australia. In the United States the current season has shown plainly that we have no really first-class player outside of champion W. A. Larned, even performing with an injured knee. Perhaps Beals Wright has it in him, but he must show us, while W. J. Clothier and R. D. Little remain what they always have been, viz., first-grade second-class men, which is also about the ranking of Gore, the British champion; Edgar Larned, brother of the champion, gives promise. We do not get any more Larneds and R. W. Wrenns and Ollie Campbells and Hoveys; apparently we have run out of high-class material; but my own explanation is the hit-or-miss, short-cut-to-success superficial trend of the day, coupled with the strangely near-sighted policy of the National Association, which gives no adequate encouragement to sectional tournaments and local talent.

Among the women more general improvement seems making, and while none yet has succeeded in taking the measure of Miss Sutton, several players give promise of doing so, especially in Canada, where the Misses Lois Moyes, Hazel Keith, Rhea Fairbairn, and Mrs. Hannam have carried off about all the home honors and are threatening to cross the border. Mrs. Hannam is the present woman champion of Canada. An opportunity of comparing the form of these first flight Canadians with that of the corresponding class in the States will produce interesting matches and results.

The loss to England in the Dohertys' withdrawal will be America's gain when it comes to play for the Davis Cup, which still rests in Australia, where Brooke and Wilding took it from England, and where they successfully defended it last year against American challenge. Gore and M. J. G. Ritchie will constitute the bulwark of the English team that will play the Americans in New York next month for the right to challenge the Australians, and the home team, even without W. A. Larned, ought to win hands down—for the so-called first-class players of both England and the United States are of about the same actual grade, the latter having an advantage in being the more brilliant and aggressive.

Unless the national championship at Newport, being decided as we go to press, uncovers some star, the lawn tennis firmament for 1909 seems likely to continue largely unillumined.

IF YOU are skeptical as to the wonderful tonic effect of fresh air, visit the Sea Breeze Children's Hospital at Coney Island and compare those rosy [illegible] paratively bright-eyed, youngsters with the [illegible] ated, and dull-orbed child patients of the [illegible]

The People at Play:

Fresh Air, Exercise, and Health May Easily Be Gained by

By ERNEST RUSSELL

IT CAN be nothing less than the abounding vitality of our race which makes "something to do" the prime quest of the weekday park-frequenter of Boston. Perhaps the invigorating air of a seacoast city has much to do with it; but, at all events, follow where you will, by far the greater number of those you see will be absorbed in activities which recreate minds while they develop bodies and make unerringly for the upbuilding of a great national asset the play instinct of a people. The great "utility park" of Boston, to employ a convenient distinction between the resort of people who "do things" and that where rest and quiet are chiefly sought, is Franklin Park. Here, on any summer's day, if use be the measure of appreciation, do the people of Boston demonstrate their gratitude to the fathers of the playground idea. Upon its nearly six hundred acres twenty games of baseball are in full swing on as many "diamonds"; tennis is going on in a dozen different courts; the familiar warning cry of "Fore!" carries to one's ear from various points on the far-reaching green of the golf links. Thousands of people—the good-natured, pleasure-loving people of a great republic—are here entering into sport, the very intensity and eagerness of their cries, laughter, and gestures testifying to the grasp it has upon them. Not all are in the strenuous mood however; among the shrubbery of many a wooded slope and in the cool shade of little dells between the hills are scattered countless little groups—a mother and her children, a trio of telephone girls, a lover and his lass—in the enjoyment of personal liberty, pure air, and the nearness of birds and trees and flowers.

Over in Franklin Field, the seventy-seven-acre annex to the Park, are more games of baseball, with like crowds of enthusiastic onlookers and supporters cheering the teams of their choice. The "national game" does not, however, attract all the plaudits of the throng nor monopolize their attention. Two "elevens" of cricketers, West Indian darkies all, relieved of their duties as Pullman porters and dressed in purest white, are playing "the Englishman's game" with all the fervor and all the adjuncts of shin-guards and cockney accent which are necessary to the sport. "Clean bowled!" roars a great fat-paunched, ebony fellow at my elbow, and a chuckling, white-toothed, black-faced "side" goes "in" as another similarly characterized side goes out.

On a little terrace overlooking the cricket field another game, also an importation, draws its own little knot of participants and observers. Here a score of bowling enthusiasts—gray-bearded Scots with their black pipes and the real old-country burr in their speech, and native-born Yankees, too—are rolling the lignum-vitæ balls across the close-shaven sod at the little white object-ball on the further side. To be sure, their forebears have been doing this in the old country for a dozen centuries, but it has the charm of novelty here, and everybody is interested. All about—and the perspective is a broad one—youth and middle age alike are "playing the game," no matter what the game may be, with a spontaneity and a zest that are refreshing to witness. You somehow carry away the firm conviction that it is a mighty good use of their time, these hours of spirited, care-free activity spent in Franklin Park—and a mighty good use of money that makes it possible.

IT IS but a matter of twenty minutes' time and a five-cent fare—the miracle of modern transportation facilities in a big city—when another phase of the playground idea is before us—Marine Park in South Boston. Here, where the outlook is upon the harbor and the passing ships, where a cool sea-breeze continually stirs the leaves of the trees, a large playground has been wrested from what was once a line of busy wharfs. Any summer afternoon, and especially on Sundays, one can see great throngs of the many-nationed South Boston populace, either at play or seated in the shade of the pavilion on their pier, idly gazing seaward. As evening draws on, a continuous stream of humanity passes to and fro over the long bridge which connects the mainland with Castle Island. A short distance along the water front stand three large bath-houses—the famous L Street baths of Boston—the only enterprise of its kind in all America. Here, in carefully maintained and separate enclosures, the poor of the city—men, women, and children—may leave their dirty and ill-ventilated homes and bathe in the ocean without the expenditure of a penny, bathing suits being here counted a superfluity and their use an affectation.

I AM told that the prudish element of Boston clamors for the abolition of the L Street bath, that the mere idea of nude bathing shocks their tender sensibilities. To me the sight of hundreds of naked boys and men joyously entering the water, with no more consciousness of immodesty than the country lad feels at the river-bank "after the chores are done," was one of the most inspiring evidences of a rational spirit of charity seen in Boston. The day draws to a close, but it is well worth while to ride on the trolley through the hot city to Charlesbank, where the first outdoor gymnasium for women and children in the world was established. Ten years ago this was the resort of the Irish; five years hence, so rapid are the changes in racial settlement, it may be the Italian or the Greek who seeks the spot, but now hardly a person is visible who fails to answer to the type characteristics of the Hebrew race. If elsewhere they have earned the title of "the sad-faced people," here it is indeed a misnomer. Lolling upon the grass under the willows, or chatting busily together, seated on the benches along the river wall, with the breeze from the Charles River Basin cooling their hot foreheads, or entering in crowds the bath-houses moored along the river, the concourse which peoples the hot alleys and brick walls of the West End sweat-shops receives its daily baptism of freedom and exercise in the open air.

No one who writes of Boston under the heading adopted for this article would dare omit the Public Garden and the historic Common from her breathing spots. No one would wish to. In the way of daily use and in the matter of attractive surroundings, this large tract of land, with its flowered walks and its fountains and its ponds overhung by majestic trees, has long and well fulfilled its mission. Inseparable from New England's history as it is, and stored with traditions of men and times forever memorable, it should figure hardly less importantly as the recreation spot, not only of the tired worker in the city, but the equally tired visitor, far spent from the activities of "a day in town." Surrounded on all sides by the heat, hurry, and turmoil of the city, it daily offers shade and quiet to thousands who can spare but an hour from the day's work.

There is only one sensible way, after all, to end a summer's day in Boston—the evening trip down the harbor to Nantasket. Board any one of half a dozen steamers, and, just at dusk, leave the noise of the Elevated, the heat of Atlantic Avenue, and bear out among the grassy slopes of the islands and the gray walls of

Revere Beach, near Boston

One of the most famous bathing resorts in America. Over two miles of shops and shows stretch along the beach and frequently a crowd of sixty thousand people, [illegible]t-seeing and bathing, appear upon the shore. As a public venture its management resembles the pleasure resorts of such continental cities as Munich

Holidays by Land and Sea

the Shut-in Multitudes of Cities East and West

the harbor fortifications, to meet the cool breath of the sea. Five minutes after you have left the wharf the fifty cents invested in a round-trip ticket have yielded undreamed-of dividends in the way of physical comfort and a cheerful attitude toward life; the faces of those about you — merchants, students, brokers, clerks, and their wives and sweethearts—lose their apathetic, too-much-of-the-city expression, conversation hums to a livelier measure, laughter ripples over the boat. It matters little, on landing at Nantasket, whether you enter with the throng the great incandescent theater of Midway attractions or stroll out upon the famous beach to listen to the whisper of the ocean and glory in the stars, by the time you have returned to Boston you have had two or three hours of wholesome sea air, your mental equilibrium is restored, and you are fitted for a normal night's rest.

IT IS Sunday; however, not the Puritan Sunday of Boston's infancy, but the Sunday conceived of and made use of as a day of rest and regeneration in the widest and truest sense, that witnesses Boston's remarkable diversity of park area at the fullest measure of its value to the people. It is surprising how early the cars are crowded with people who, not only in congenial twos and threes, but in whole family groups of parents and half a dozen children, burdened with lunch-baskets and cameras and hammocks, and manifestly "out for the day," commence their weekly quest of the outdoor panacea.

While the gymnasia and play centers are now deserted, another phase of the same general idea of recreative pleasure receives its tribute; the Arnold Arboretum, Olmstead Park, the Middlesex Fells, the great five-thousand-acre tract of the Blue Hills, the Charles River, Wood Island Park, and Revere, Nahant, and Winthrop Beaches welcome their vast concourses of humanity, and send them home at night, tired, it is true, yet refreshed and strengthened for their week of toil.

The Blue Hills Reservation, though the largest civic park in America, is perhaps the least spectacular in outward appearance of all the breathing spots about Boston. It requires time to "cover" it—a good lot of it, too—and a love of nature to become really intimate with its brooks and ponds, its magnificent oak and chestnut forests, its granite hills and the charming open country between them. But the people have come to know it pretty well and to know what it holds for them. On a fair day car after car mounts the long up-grade from Mattapan, unloads its freight of eager souls, and rattles away again for more. The forest swallows up the newcomers as fast as they arrive, and the only hint of their presence are the cries and laughter and song which filter down through the trees from above. All day the human procession mounts the spiral pathway to the summit of "Big Blue," lingers for a space over one of the most attractive views in all New England—and vanishes into the woodland. One little group seeks out the particular nook that has come to be a favorite through long acquaintance and idles away the day in true picnic fashion: another, more adventurous, sets out on an all-day tramp in the effort to "cover ground" and "see the country"; while another lays its course along Monatiquot Stream for a boating trip on Hoosicwhisick Pond and a dip in its clear waters.

Had Boston no other claim to prominence in the field of outdoor recreation, the Charles River would be glory enough for her. The upper river, or that part between Waltham and Newton Lower Falls, is so distinctive—as much so indeed as the Thames at Staines'—that it can not be omitted from mention here. It is heartening indeed to see how "the common people"—not only the Americans, but the near-Americans, the Syrians and the Italians, even the Chinese—come out on Sunday afternoons and, standing in line, besiege the boat liveries for an opportunity to get out upon the water. Nearly four thousand of canoes alone are for hire in a space not over eight miles in length, yet, on a pleasant day, the supply seldom equals the demand. And what a display of color they make of it! Canoes of every imagininable color, Japanese parasols, dresses of white and of the latest cerulean tint, flags and pennants and cushions of a hundred hues; overhead the bluest of skies, on either shore a mass of foliage in its June prime—a spectacle to be seen nowhere else. All day long, up and down the tortuous river, they paddle—there are three miles of canoeing for every mile of straight-line progress on the Charles—congregating perhaps at Fox Island for a band concert, pausing for an hour's stroll among the attractions of Norumbega, or landing for a picnic lunch under the elms of the river's upper reaches.

BUT of Boston's more than threescore open-air pleasure grounds it has remained for a single one —Revere Beach—to be heralded abroad as "the Wonderful Union of Nature's Happiest Gifts and Man's Most Entertaining Inventions." There may be a touch of the side-show barker's plethora of superlatives in the description, but, even reduced to its lowest terms, it can not be gainsaid that in the great white scimitar of the famous beach, the "two miles of attractions" which line the beach-side walk, and the five-cent fare which literally "admits to all" are comprised about everything that is necessary to bring the people—not infreqnently a hundred thousand of them in a day—to share in the wonder and the pleasure that await them.

There was a day when matters wore a different aspect at Revere. Fifteen years ago, before the Metropolitan Commission entered upon its great undertaking, the place was a low-class resort of "wide-open" dives, the worst possible gathering place for a defenseless and ever-gullible public. It required big men, men with ideals and the force to stand by them, to cope with the conditions—but Boston had them, and out of the ruins of "a house of thieves" has risen a clean and wholesome pleasure resort of the people.

AN ENTIRE page of this magazine might be filled with impressive statistics in an endeavor to show just what it is that Boston has accomplished, to demonstrate how fully the need of city-dwelling people has been met, how heartily it has been accepted, and how great has been the benefit. It is not through statistics, however, that this affair of a single city's accomplishment takes on its true significance and impresses us most deeply. It is only when it is translated into human elements, when we stop to consider that in every instance a human mind had to grasp the city's need, had to convince others and win their support, had to combat inertia and opposition to carry through, in the highest conception of civic duty, a great undertaking, that we thoroughly appreciate its meaning.

STICK a pin in the map at Peoria, Illinois, measure off 400 miles in any direction, and draw a circle. The line passes near Cleveland, north of St. Paul, and some way west of Omaha and Topeka. Discard the lower segment as belonging to the South, and you have within your circle the great Middle West, embracing ten States wholly or in part. The area of these States is 617,410 square miles and their population, in round numbers, 30,000,000.

Until recently these millions were intensely busy making money. They are making it still, but it comes so easily now they have time for other things. Mechanic and millionaire has what each considers the luxuries of life, from talking machines to limousines. When a stream of gold is produced by crops, mines, and factories, it is easy to obtain such trifles. But having

A Summer Camp in the Woods

The Chautauqua meeting began as a summer school, but has in the Middle West developed into a great camping-out party, with an educational feature added. A million and a half is the estimated number of Chautauquans in this section for the summer of 1909, and the system is gaining continually in popularity

Lion Hunting by Flashlight

By
A. RADCLYFFE DUGMORE

Collier's Special Photographer, on the Trail of Nature Pictures in the Heart of British East Africa, Describes Some Nocturnal Encounters with the King of Beasts

OUR first night at Simba Camp was made interesting by the continued roar of lions, so we determined to have a try at them next day. Accordingly we built a thorn boma about twelve yards from a freshly killed zebra, and placed two cameras near it. The first night passed off quietly, but the second proved very exciting. It was a very dark, moonless night, heavy clouds hung low in the sky, just the sort of night, in fact, for lions to be prowling about. My companion was asleep while I took the first watch. As I lay with my head on the ground, in the hope that I would be able to see any approaching animal against the indistinct sky-line, at a few minutes after nine a dark form appeared as though from nowhere. It was so sudden that I could scarcely believe my eyes, but it really was a lion, and a big one too. He stood alongside the zebra as motionless as a statue, and I can scarcely describe my feelings as I watched the king of beasts—perhaps the most feared animal in Africa—as he stood watching us only twelve yards away. Had he decided to spring, it is doubtful whether we would have had any chance of escape, but fortunately, in the excitement, the thought of danger never entered my head. Trembling with excitement, I gently touched my sleeping companion, and whispered: "Lion!" He was awake in an instant, and straining his eyes to see the beast. The next moment I pressed the electric button. The scene was lighted as though by magic. Two photographs were made simultaneously, then darkness more intense than ever after the blinding flash. The lion had gone, but he only went a short distance away, and, as we heard him roar, we wondered whether he was meditating an attack. We heard the blood-curdling roar of another one in a different direction. We took our rifles and a lantern, and we went out of the boma into the darkness, refilled the flashlights, changed the plates in the cameras, set the shutters, tested the electric connections, and with positive pleasure and relief crawled into the little boma as fast as we could. It had seemed as though the four or five minutes had been as many hours while we were outside. We were disturbed no more that night, save that we heard in every direction the continual roar of lions.

Firing Into the Dark

ABOUT nine o'clock the next evening some jackals drew near our boma, then, without any apparent reason, the scavengers suddenly sneaked away as silently as they had come, and while I was wondering why they had gone, a dark, blurred mass broke the sky-line, and with a muffled thud two lions landed on the carcass of the zebra. How quietly they had stalked their prey, dead though it was! Not a sound had I been able to detect. They had probably crawled so close to the ground that they had shown against the sky-line, and so I had failed to see them. To think that such big animals could come through sun-parched grass without making a sound made us realize very fully how easily they could stalk us, however alert we might be, and our respect and fear of the dreaded creatures increased tenfold. Almost as soon as they had landed on the zebra they began tearing at it, ripping the tough skin as though it were paper and pulling the heavy carcass about regardless of its great weight. We both had our rifles ready, and agreed that we should fire as I pressed the button for the flashlight. We both wanted to shoot a lion, and it seems to be a common craving, a sort of natural way of satisfying one's conceit or vanity. To have killed a lion makes a man puff his chest up and say to himself and his friends: "I did it!" My disgust can perhaps be imagined when I say that the flash failed to go off. I had so fully counted on a photograph of the two big animals that it seemed very hard to lose such an unusual chance. We tried to console ourselves by firing, and both of us missed. I was just about to light the lantern, preparatory to going out to investigate the cause of the flashlight trouble, when my companion caught sight of one of the lions about twenty-five yards away. My enthusiasm for camera investigation suddenly vanished, and I decided equally suddenly that the boma was, after all, an extremely comfortable place and the one place on earth that I could thoroughly enjoy. To our great satisfaction the lion slowly walked toward the zebra, and, as we could not photograph him, we determined to shoot, for we did not know what his intentions toward us might be. Both of us fired, the shots rang out almost simultaneously, then there was absolute discouraging silence. Had we hit the lion fatally we would certainly have heard some sound of the death struggle. Had we missed, surely there would have been a sound of his going away, so we wondered and peered fruitlessly into the darkness. I was very anxious to know about the cameras, so, notwithstanding my companion's advice, I ventured forth with him close beside me. We soon found the cause of the flashlight failure—the wire had been disconnected, and as soon as this was arranged we, with pardonable desire to be back in the boma, were about to seek its safety when it occurred to us that we might as well look at the ground and see if the lion's tracks were visible. To our astonishment we found not the tracks, but the lion himself lying stone dead on the side of the zebra. I had shot him directly between the eyes, and he had been killed instantly by the little .275 bullet. The roaring of a lion not far away warned us of the advantage of the boma, and so we quickly retreated. It had all been very exciting, and even though I had failed to get the desired photographs, I had at least got a splendid lion skin.

One of the jackals and a hyena, scavengers of the wilderness, caught by the flash-light, sneaking toward the place where Mr. Dugmore was concealed, near which lay the carcass of a freshly killed zebra

"He stood alongside the zebra as motionless as a statue, and I can scarcely describe my feelings as I watched the king of beasts—perhaps the most feared animal in Africa—as he stood watching us"

The lion which a defective flash-light failed to take; the animal was later shot in the darkness directly between the eyes by our photographer—who is seen looking out from the "boma," a thorn-brush protection such as the party always built for safety when waiting for the prowlers of the night

Riding the Surf in Hawaii

The Daring Sport of the Pacific Islands, in Which Both Natives and Whites Become Adepts at Triumphing Over the Beach-Combers, Kept Afloat by Skill and Speed

By
ALEXANDER HUME FORD

Beginners practising in the small surf, a few hundred yards from the beach, where one may stand waist-deep in the water, and start his board with a strong shove, while throwing himself flat upon it

Surfboards, usually made of native mahogany and pointed at one end, will hold up the heaviest man with the force of a wave behind him, but in quiet waters they will sink with the weight of a child

The most critical instant of all comes when catching the wave on its crest and working the board down the slope—the feet must tilt the plank obliquely so that it will skim on the surface and not drop with a thud into the bottom of the hollow, which would send the swimmer and his vehicle flying apart

PHOTOGRAPHS BY THE AUTHOR . . . COPYRIGHT 1909 BY P. F. COLLIER & SON

THERE are long rolling billows on both of our coasts where surfboard-riding may be indulged in. It has been done at Atlantic City, and is being taught by a Hawaiian youth in southern California, but it is in Hawaii that the waves run best and longest and where the enthusiast may indulge both summer and winter.

At Waikiki the great waves begin to form a mile out at sea beyond the outer reef. It is just before they break for their long foaming run that the expert seeks to catch the billow. If successful he gently slides down the foaming hill of water until near its base, and here he keeps the bit of board, to be carried at express speed toward the beach. The wave dies, but always another forms, and the trick is to carry the board over from one to another; this requires much practise, but there are those who, when there is a half storm brewing, catch the first wave far out, pass over to the next, and sometimes guide the board safely before the third or inner line of breakers to land high and dry upon the beach.

The surfboard of the old Hawaiian was usually of native mahogany, twelve feet long perhaps, for often two stood upon the one board. The surfboard of to-day seldom exceeds eight feet in length and is more often nearer six. On the smallest of these boards—*i. e.*, one six feet long and eighteen inches wide—the heaviest man may stand, if he knows how, while the force of the wave is behind him; but in quiet waters a child may sink it.

Before the big waves can be taught—the water where they form is twelve feet deep—it is necessary to develop muscles in the arms and shoulders that will propel the board at a speed, for a second at least, equal to that of the forward motion at the base of the advancing billow; if this is accomplished, the board is lifted up and carried forward at a blinding speed, and it then becomes a matter of strength in holding on and skill in balancing the frail plank, for even the most expert may slip.

If the rider is confident enough, he may start his own board by standing beside it and giving it a forward shove, at the right moment, just as the wave is upon him. Many, many times probably he will roll over, but at last the knack of balancing comes to him, and he is ready to try to stand upon his board while it is in full forward motion, not such a difficult feat after all, in the small surf where the waves are not more than two or three feet high at most. His real trials commence when he deserts the shallows and strikes out for the deep.

The Supreme Moment

IT TAKES muscle and endurance, lying upon a bit of planking with only an inch or two of the bow above water, to paddle a mile out to where the waves form. There is half a minute of violent, then several seconds of supreme, effort, the board begins to rise upon the wall of water, and then comes the fight to keep it from floating above the crest and sinking back in the rear—of a lost wave. Even on the summit of the billow all is not lost; a few powerful strokes you give with your face flat on the board, then as you feel your feet slightly tilt upward, down come the arms in a twinkling until the hands grasp the board amidship in a grip of iron, the feet are drawn up to the center of the board with a quick convulsive motion and you leap to your feet, erect and balanced—if you fail, the board flies from under you and is tossed in air. But if the wave is yours, there is a thrill like none other in all the world as you stand upon its crest, and look down into the hollow green valley before you. As the wave curls and is about to break, the strongest foot is put forward to beat the bow down in a slanting direction and a quick turn given to the whole body, so that the board swerves and descends the hill of green on the bias.

To-day Judges of the Supreme Court in Hawaii, with their wives and daughters, ex-Governors and their families, and the greater portion of the prominent business men are surfboard enthusiasts, while the schoolboys and girls of Honolulu, now that they have spacious grounds near the beach for their separate bath-houses, canoe-sheds, and surfboard racks, spend much time in the water, and at the recent surfing carnivals in honor of the visits of the American battleship and later of the cruiser fleets, practically every prize offered for those most expert in Hawaiian water sports were won by white boys and girls, who have only recently mastered the art that was for so long believed to be possible of acquirement only by the native-born, dark-skinned Hawaiian.

At the Christmas contest, for the third time a white boy now fourteen years of age won the medal given to the most expert surfboarder; he came in a hundred yards before a monster roller standing on his head.

The white man and boy are doing much in Hawaii to develop the art of surf-riding. Games and feats never dreamed of by the native are being tried. Nowadays the small white boy anchors an inflated bladder where the waves roll by at their best, invites his companions to take out sharpened reed spears and contest with him in puncturing the target, the rule of the game being that the spear must be thrown while the spearsman is actually standing on his board. At night acetyline lamps are strapped to the bow of the boards, and the small boys and even men go out to ride the breakers, only their white-suited bodies being seen as they stand on the waves in a circle of light. This was one of the features of a recent night-water carnival at Waikiki. And again a white American boy came in standing on his hands in the glow of a red signal light [illegible] his board. He had carried matches out in his [illegible] lighted his torch just before he caught the wave [illegible]

An old fashioned round-up of cattle on a Canadian ranch, where they still range by thousands winter and summer over the prairies

The Passing of the Ranch

Like Other Pioneers in America it is Foredoomed to Go, Yielding Place to the Dairy-Farm

By AGNES C. LAUT

THE last ten years have witnessed pretty nearly the end of the old-time big ranch, where the cattle upon a thousand hills were the property of one man. The cattle king, who counted his acres in millions and his herds in hundreds of thousands, is passing into a misty realm of legend and fiction as the fur-trader has passed before him. Instead of the fenceless ranchlands in the South to-day are the checker-board patches of irrigated farms; and in the North, far as Saskatchewan River, the new settler's homestead has carved the ranch country into squares of 160 acres bounded by barb-wire fences. The day of raising cattle "on air" has pretty nearly forever passed in America.

With the two exceptions of Texas as to cattle and Montana as to sheep, there is not a patch in America, from the Mississippi to the Pacific, or the Athabasca to Mexico, which you can describe as entirely a ranch country. Twenty years ago the big ranches strung out in one continuous long trail from Mexico to Athabasca. Even ten years ago you could have found herds by the hundreds of thousands in Texas, in the Indian Territory, in Wyoming, in Montana, in Southern Alberta, in the valleys that lie like pockets in the mountains of British Columbia. To-day you will have difficulty in finding such herds.

Dairy Cows *versus* Ranch Cattle

IT IS a curious fact that the entrance of the dairy herd is the signal for the exit of the long horn. Farmers and ranchers are as antagonistic as ranchers and fur-traders. The rancher proceeded on the assumption that the dry sage-brush lands were not good for anything but to support roving herds of cattle at the rate of twenty acres to a long horn. The farmer acts on the principle that twenty acres must support, not one long horn, but twenty; and a whole family of humans besides. If the land will not live up to those expectations, then the farmer is going to change his *modus operandi*, banish the long horn, turn on the irrigation ditch, and grow fruit or vegetables. In fact, wherever you find ranch cattle, you don't find milk-cows. Wherever you find milk-cows, the ranch cattle are vanishing. Take Texas, for instance, the only remaining ranch-cattle country north of Mexico! In 1907 Texas numbered its ranch cattle at eight millions and its milk-cows at only a tenth that number. At the present rate of transition, in another ten years the cow census will probably be reversed with eight million dairy cows and eight hundred thousand ranch cattle. New York, Pennsylvania, and the big Middle States come next in cow population; but it is a cow country of stock-farms and corn-cribs and silos, not of ranches and sage grass and free air. Texas, Illinois, Iowa, and Kansas stand highest in horse population; but of these States only one—Texas—can be called a ranch country in the old "fenceless, free air" sense of the word. Montana, Wyoming, New Mexico, Idaho and Utah still have vast sheep runs; but already the fenced fields of the sheep pasturages in the Middle States are pushing up the numbers of their sheep almost equal to the special sheep countries; and another ten years will probably witness a transition in the sheep country, too, from ranch to fruit, and mutton to sugar.

The ranch is foredoomed to go the way of all other pioneers in America, foredoomed to go except in one section of the United States—namely, in the national forests. The national forests cover an area that is not farmable by any method; and on the ranges of national forests pasture some seven million ranch horses, cattle, and sheep.

The fundamental cause beneath the passing of the ranch is, of course, the passing of free land. The best of the free land is already all picked out and homesteaded in the United States; and it is held at values of from $14 an acre for arid lands to $200 and $300 for irrigated. When twenty acres can be made to support from five to ten people, your land-seeker is not going to leave those twenty acres as roving ground for a solitary long horn. That is where irrigation has played the mischief with ranching on the arid lands of the South. The Irrigation Department of the Federal Government plans to place (and is now placing) fifteen million families on the arid lands of the South and Middle West. That puts an end to your old-time rancher homesteading 160 acres, then running a barb-wire fence round 160,000 acres more. It also puts an end to the old-time rancher's gentle method of persuading a settler or "nester" to move off the free lands. To be sure, your "nester" could homestead his 160 acres too, and put up *his* barb-wire fence, but mysterious hands cut the barb-wire fence at night, and unseen causes sent the cattle man's big herds stampeding across the young wheat till your new homesteader was glad to sell for any figure offered him.

To all those gentle arts of the old-time rancher, irrigation has put an end. Instead of the 160-acre ranch are 40-acre irrigation farms—fruit ranches, truck gardens, sugar-beet fields—with little colony villages as a nucleus in the middle, whence workers radiate by day and so enjoy all the social advantages of the city and the independent life of the country. Some of the Government irrigation works supply cheap water power; and where the long horn once claimed sole possession in the Southwest are dotted irrigation colonies with electric power for light, heat, and industries. So successful have the Government irrigation colonies been that many big land corporations have bought up arid tracts and gone into the enterprise of similar colonies. These corporations go one farther than the Government. They build the houses in village colonies of eight thousand or ten thousand people with an acre or two round each house; and they run roads like the spokes of a wheel out to the farms of each land-owner, permitting payment for all by instalments. In Texas are dozens of little towns of from two thousand to ten thousand people literally shot up in a night like a mushroom, where ten years ago roamed not a living creature but the long horn and the sagebrush hen. Had any one predicted such a change to the cowboy, the prophet would probably have been shot into the next world as an undesirable "pilgrim" in the cow country.

Irrigation Undermines the Ranch

THE ranch lands of the Middle West have undergone similar translation without the influence of irrigation, though irrigation projects now extend as far north as Alberta, Canada; and still bigger private projects for irrigation are under way. In the Middle West the increase of land values cut the ranches into stock farms. Long as land could be bought for $2 and $3 an acre from "grub-stake" homesteaders, ranchers could afford pasture ground for the long horn; but when values in the semi-arid country jumped to $14 and $17 an acre—as in South Dakota and Wyoming and Montana—no rancher could afford twenty acres for a long horn. No long horn could pay interest on that kind of an investment, so the rancher turned stock farmer, ran the barb-wire fence round his section, drilled for water, got up his wind-mill like a flag on the prairie sea, and began raising corn to fatten his stock.

Where big ranches still exist in the Middle West, it is usually because the ranch owner has access to the national forest ranges, but even there he may no longer range his cattle on free air. For the privilege of pasturing stock on the national range, stock men pay into the Forestry Department a million dollars a year. The *big* cattle men can no longer fence off sections of the national range and run the *little* men off the ground. Permits to pasture the national range are granted only

in order of application and subject to the approval of the forester. Stock is not allowed where it will trample out young trees; nor are sheep permitted in the mountain bunch-grass country at the special season when the trampling of millions of little feet sharp as knives would cut the young grass out by the roots. There is plenty of other grazing ground in the national ranges during the maturing of the young grass. There is the grass of the valleys while the pasturage is in tender blade on mid-slope, and there is the grass above timber line when mid-slope has been grazed down. In fact, before the Forestry Department took hold of the national ranges, much of the bunch-grass had been grazed out and replaced by worthless sedge. This was particularly true of the Wallowa Forest of Oregon, where half a million sheep yearly graze. In return for the fee charged the rancher, the Forestry Department reserves watering-places, so avoiding the old fights for the water hole, poisons wolves that war on stock, kills off poisonous plants, and either reseeds or permits regrowth by natural process by keeping the sheep off the grazed-out areas.

Receding Before Fruit Farms

COME north of the Middle West, and the same passing of the ranch is in process. Less than five years ago the last of the big herds was broken up in British Columbia—herds of two and three hundred thousands in the Nicola Valley—to make room for fruit farms. Land, which the rancher bought there twenty-five years ago at twenty-five cents an acre, has sold to the fruit farmer at $25 an acre. Less than six years ago the big ranches of Southern Alberta began to break up in the same way. The Mormon had come in, proving these russet semi-arid foothills grew good sugar beets. Then the railroads and the Government took hold with huge irrigation schemes. Land that had sold at $4 to the rancher, jumped to $15 and $30 to the small farmer. Fence-posts and barb-wire began to stretch across the range, and the big ranches split up in smaller and smaller holdings.

The long trail that began in Mexico is ending up on Peace River; that is as far as it can ever go, for that is the end of the ranch grass country. The long horn that came wild from Mexico, all bone and muscle, has been moving north for a century with a shortening of his clicking horns and a taming of his wild nature as his blood mingled with the Eastern cattle. You will still see the long horn of Texas in Dakota and Montana. You don't see many in Alberta. As the horns have shortened, the sides have filled out. The change from gray grass to the luscious deep grasses of the far north has put beef on the long horn instead of muscle, so that he is pretty nearly not recognizable as a long horn at all. As the cattle have come north over the long trail, so have the cowpunchers. There are frontiersmen on Peace River who began life as cowboys in Texas.

It would be a mistake to think because the ranch is passing that the cattle are passing too. There never were more ranch animals in the United States than to-day, nor more people making a living from [illegible] based on cattle. Where horses numbered under twenty million in 1907, cattle numbered seventy-two million, and sheep fifty-three million, an increase of nearly five hundred per cent in forty years. The change from ranch to stock farm has increased the number of cattle supported by each acre of land.

When did the strange pastoral migration over the long trail begin from South to North. Emerson Hough says in the forties, but I think it was earlier. Blackfeet and Snake Indians used to raid the Spanish settlements for cattle early as 1817. The animals that survived the cruel drive back north were turned over to the fur-traders for consideration of ammunition and firewater. Certainly the four-footed migration from the Red River of the South to the Red River of the North began long before the forties, for the first settlers of Manitoba and Minnesota brought stock back from the Lower Mississippi before 1824.

An Indian Raid

IT WOULD be difficult for fiction to outdo fact as to the dangers of that winding four-footed trail. Nighttime at some ford or in some narrow pass was the favorite occasion for the Indian raiders. The cowboys would have hobbled their ponies with raw-hide thongs, and rounding their herd up in some sort of natural *k'ral*, would be sound asleep with saddles for pillows, when a wild whoop would give first intimation of danger. While the cowboys fought for their lives behind shelter of ponies, it was easy for the raiders to ride

The Farm of Hope

A Place of Training and Uplift, Where Worn-Out and Discouraged Things Are Made to Look Like New

By CHARLES PHELPS CUSHING

I FIRST saw the Discouraged Man when he was tried in the Municipal Court of Kansas City, Missouri, on a charge of vagraney. The patrolman who made the arrest said that the prisoner had not worked more than three days in two months, and that when the arrest was made he had resisted the officers and made such a disturbance that they had to call a patrol-wagon.

The vagrant stood before the judge with drooping eyelids, sullen and indifferent. A patch of court-plaster on the top of his head substantiated the story of the police that he had resisted arrest. The city attorney read his name and the charge, and tossed a folded paper to the judge. After administering to him a hasty oath to tell the truth, the judge began to scribble the prisoner's name in the court record-book.

"Well, what have you to say for yourself?" the judge asked.

"Nothin' much," the man answered. "I've worked a lot more'n the officer says, but I guess I'm guilty."

"And you've been here before?"

"Four times."

The judge finished writing in the book and looked up.

"Tell the truth," he said, "and I'll make it easier for you. What's the trouble?"

"Ain't much use to talk about it," the man replied. "I'm just down on my luck—discouraged—that's all. Ain't got my health now. Been drinkin'. Don't feel like I had any friends. Don't know no trade. . . . But it ain't goin' to do me no good, nor you no good, to send me back to that castle, judge."

"I'm not going to send you to the castle this time. I know a better place," the judge said. "Your fine is $15. That's thirty days. I'm going to make a special order to send you to the Leeds Farm. Maybe it will be the best thing that ever happened to you."

The superintendent's bungalow, on which all the work was done by the prisoners

The prisoner slowly walked back into the mouth of the black tunnel that leads to the holdover. Dejection showed in every line of his face and in every movement.

At one o'clock that afternoon he was loaded into a cage on wheels and driven through the city. That had happened before, so the edge of humiliation was dulled. But if shame was less, discouragement was deeper.

The wagon stopped at the workhouse and some of the prisoners were unloaded there. The workhouse is built in the shape of a medieval castle, acknowledging in its appearance that the institution for which it stands is a relic of the Middle Ages. The prisoners within its walls wear leg-irons, which jingle as they walk. They are guarded by men who carry repeating rifles, and they do no useful labor but a little drilling and stone-breaking in a nearby quarry. In summer they sometimes vary this with weed-cutting on vacant city lots.

The Discouraged Man in the cage on wheels found much to be thankful for in the fact that he was not to be returned to the castle. In half an hour the wagon was out of the city and rolling along a smooth, well-oiled pike through a land of truck-gardens. Along the side of the road was a little stream, like a natural canal. Soon the wagon rumbled over a bridge. The Discouraged Man looked out and saw a small coffee-colored river shaded with great trees whose trunks bent inward across the water-course, and whose leaves and branches almost made an arch. One of the negro prisoners in the wagon remarked that the water was up and just right for trot line-fishing. "Knead two cupsfull of cornmeal with one of flour in cold water," he said. "Then roll the dough into little balls the size of marbles." He began to show the whites of his eyes and grin. The Discouraged Man could not keep from smiling in sympathy.

"Havin' pereeeded to this, you takes th' balls an' draps 'em in a kittle of boilin' water," the negro said. "Quick as they starts a-rollin' 'roun' on th' bottom, they's done. Spoon 'em out and squeeze 'em. Bounce 'em on th' floor like rubbah balls. That's th' bait that hooks th' bullheads."

The Discouraged Man laughed. After that he began almost to *enjoy* that ride and to notice the scenery. The wagon passed through a suburban town called Leeds; then past some more truck-gardens. Six miles southeast of Kansas City's City Hall it turned onto a dirt road, and climbed a steep and rocky hill. It stopped at last on a ridge from which could be seen farms and orchards in billows for miles around, with the smoke of the city far away to the northwest.

"Pile out, you boys," the driver ordered. "Here's where you spend the hot spell."

The way the driver said it was hardly as unkind as the speech may appear to sound.

Surrounded with Cheerful Ideas

A LARGE white farmhouse in the center of 135 acres of orchard land, hillside, and garden was the wagon's destination. In the nearby fields little groups of men in blue overalls and slouch hats were grubbing and plowing. The striking feature of the scene, to the mind of the man who had just arrived there, was that none of the men wore leg-irons and that there appeared to be no armed guards. Some barb-wire across the windows of the house and a barb-wire barricade around the yard were the only suggestions of a prison. The wagon rumbled away and the prisoners went into the yard, then into the house. It was simply a plain, old-fashioned farmhouse. Two women spoke kindly to the Discouraged Man. In the front room, where they took him to show him the bookcase, he grinned at two happy children, who were playing there. There was something so human and decent about the place that he was touched. A pleasant young fellow, who did not appear to be more than thirty years old, introduced himself as the superintendent. He asked the Discouraged Man some questions, slapped him on the back, and set him to work weeding in the potato-patch.

There was a guard in the field with the new prisoner. The guard was as cheerful as a minstrel and did more work than any of the men of whom he was the boss. He used to be a farmer, he said, and this was living again! Some of the men sang as they worked. None appeared to be unhappy. When the weeding was finished, they did some work with a cross-cut saw on a tree trunk. The saw went back and forth with all the spirit of well-paid labor. A little Austrian boy, who in the city had been so incorrigible that he was given a five-hundred-dollar fine, was the happiest of all. Like the guard, he said he had at last found the work he liked. It happened that he had never been on a farm before. This was a new and wonderful world. The questions he asked were as numerous as those of the small boy of the comic weekly.

A large addition was being built to the farmhouse. The superintendent of the farm took the Discouraged Man to where the carpenters were pounding, and introduced him. The carpenters, with one exception, were all prisoners. In the chicken-yard, where the superintendent led him next, the Discouraged Man watched 125 chickens called into one bunch and fed. He learned that the chicken-house, the store-room, the pig-pens, and the blacksmith shop all were built by the prisoners.

"Here is a buggy that we're as proud of as of the house," the superintendent said. "When we got it, it was such a ramshackle thing you could have bought it for two bits. A man gave it to us half as a joke. But the boys in the blacksmith shop worked up a new body, scraped and sandpapered and filled the whole thing, and gave it seven coats of paint. We had a carpenter and an upholsterer and a blacksmith on the farm. There's the buggy now, almost as good as new, to show what sort of work we can turn out."

By this time the Discouraged Man was catching the idea. This was a place not of punishment, but of training and reform—where worn out, discarded things are made to look like new. Vaguely, he had been wishing for such a place for a year or more—ever since the bottom dropped out of life.

The superintendent and the farmer-guard took the new prisoner and the enthusiastic little Austrian boy and went into the orchard to milk the cows. The Austrian boy sang and skipped like a child. He called the cows in a dozen different intonations, and laughed and whistled for joy. The orchard had been in full bloom, and the white petals now were beginning to drop off. The sight of the flakes fluttering downward [illegible]

with an odd gladness. He was on the point of speaking of it, but felt ashamed.

The guard and the superintendent said they were hungry and this was a mighty fine season for fruit.

The cowyard was not yet finished. So the Austrian boy and the guard milked the three cows in a corner of the pasture on the crest of a hill.

Then the four men strolled back to supper. It was a good farm meal and every one ate ravenously. After that some of the men played catch in the yard and some of them smoked or read books in the front room where the new prisoner saw the two children playing. Then every one went to bed early in the upper room of the farmhouse. Every man had a cot of his own, and there was plenty of fresh air.

In the morning the prisoner awoke to see green leaves and branches waving beside his window. He spent another day working in the open air, with a growing appetite both for food and for asking questions.

The end of a week found him with a changed viewpoint. On Saturday afternoon the superintendent called him and told the Discouraged Man that he was about to ask a favor of him. Would the prisoner go on an errand to Leeds? Hitch up the single wagon. And here was ten dollars.

The man looked at the superintendent half stunned. Then he reached out his arm and silently shook hands.

He hitched the horse and drove down a rocky hill-slope. At the foot of this he forded a little creek, halting to listen to the gurgle of the water around the stepping-stones. The stones made him think of the days when he was a "kid" and spent vacations on his uncle's farm.

That ride to Leeds was an epoch in the Discouraged Man's life. He came back from it with straighter shoulders and a new fire in his eyes. Men still trusted him. Life was worth while after all!

When he had served out his sentence on the farm he felt half-homesick and choked a little when he gave the superintendent good-by. The day after his discharge he found work in the city at good wages as a teamster. He had taken hold on life again with new determination.

This is a typical case that shows the sort of crop that is being cultivated on the workhouse experimental farm. It is not a place of punishment, but of cure. Brand Whitlock, Mayor of Toledo, has pointed out that none but the poor are ever confined in a city workhouse. The rich can escape by paying their fines or by bribing their guards to look at the skies a few minutes. The poverty-stricken and discouraged are punished not only with imprisonment, but also with humiliations, leg-irons, and enforced idleness. They leave jail in a worse temper with the world than when they were first arrested. But the municipal farm encourages its men to work at useful trades and reaches the manhood in them.

Where work goes on with spirit, unhampered by leg-irons, unguarded by a rifle

As a money-maker, the farm may fall short of success, for its superintendent would rather cultivate men than raise a bumper crop of parsley. The indications at this writing are that the farm will hardly meet expenses, but will furnish a large supply of vegetables for the use of the general hospital and the city workhouse and feed its own force. When the addition to the farmhouse is completed, this force will be about fifty men.

The visitor to the farm can not help but be impressed, most of all, with the dramatic way in which useless, disheartened men are transformed here to useful, happy laborers. The superintendent's own versatility, which includes everything from shoeing a horse to drawing specifications and making blue-prints, is shared by the men whom he calls "his help." His bungalow furnishes a good example of what the men can do. Carpenters worked a few weeks to erect the building. Plasterers and paperhangers finished the interior. The bungalow is now ready for the painters. Every piece of the work was done by prisoners.

The expense of opening and maintaining the farm for three months is estimated as about $3,000. That much money can be—and has been—collected in one morning by the judge of the municipal court from gamblers, law-violating saloon-keepers, and bootlegging druggists who can well afford to contribute such a compulsory charity to the men they have helped to ruin. The experimental farm is ceasing to be considered "experimental." The Board of Pardons and Paroles is losing some of its conservatism and is relating stories of Discouraged Men who have found heart there or who, by hard work in the open air, have cured themselves there of drink and drug habits. And one member of the Board, who used to be a farmer boy (and says he is going to become a farmer again), sees a deeper significance in the experimental farm as part of the great movement landward from the cities, which has for its slogan: "Back to the Soil!"

The Subsidized Gardener

Supplying the Suburban Table with the Choicest Issue of the Soil, in Place of the Wilted Wares of the City Markets

By MARTHA McCULLOCH-WILLIAMS

THE growing army of commuters and summer residents needs to learn a lesson from other and more hostile invading armies—namely, to "live on the country." That is to say, to make the country supply its needs edible. Doubtless that is exactly the thing which at least half those who go countryward picture themselves beforehand as doing. Such prevision is commonly contradicted baldly by experience. Suburban living, indeed, largely involves the paradox, that to get country things, as fruits, vegetables, eggs, butter, poultry, really fresh, you must bring them out from town.

Hence the heavy-laden who throng the evening trains: hence, also, that autocrat, the huckster, whose supply, rather than your demands, so often determines dinner. Hence, still further, the supremacy of the can. Small blame to the house mother if, with only the average village markets and marketmen, she chooses canned stuff as the lesser of two evils.

This is all as it should not be. Everything sold in the city markets comes to them from the country. It pays freight and charges—middleman's charges no less than the profits of the actual vender. All of these might be saved, to the manifest betterment of all concerned, by a concerted forethought and foreaction on the part of intending consumers. There may be sands so sandy they will sprout nothing but suburban homes; rocks so rocky they will support nothing more substantial than a real-estate boom, yet always within hailing distance there is sure to be arable land, ready to laugh into market harvests at the tickling of the gardener's hoe.

A Special Boon to Summer People

THE summer people, if only there are enough of them, ought to have their own special gardener to supply their special needs. By getting together they can have him—he will plant for them in quick successions the whole roster of summer vegetables. But he must know what to plant several months beforehand. In fact, he ought to be a fixture—something to be relied on as much as the procession of the seasons. It will help him to that estate to give him charge of deserted lawns and orphan shrubbery. Trimming hedges, rolling turf, stopping washes before they grow deep, spraying vines and woody things, especially fruit trees, either dwarf or standard, may well fill in time for him betwixt growing seasons. He should be so well paid as to make his services cheap. Only good pay will command work of the first class, which is always cheap at twice or thrice the price of bungling.

The agreed dispensation would be a special boon to summer people—those who go to their own houses or hired ones around the opening of spring to stay until late fall. Even more than the hardened suburbanites, they miss the fulness, the ready convenience, of the city market and the corner grocery. Dependence on the huckster with his limp greens, peas beginning to yellow, bruised beets, carrots past all freshness, and radishes wilted beyond hope of crispness, is to them a sort of [illegible]rdom. Moreover, there is often such scant choice in the huckster's wares. Year-round residents naturally get the best of them—the stranger within the gates must accept thankfully such things as he can get.

Here is a point to be considered beyond individual thrift or convenience. In the village, or the suburb, or the country place, even more than the city, no man liveth or dieth unto himself, neither any plant. Insect pests abound—some, like the San José scale, so deadly hope flies when they enter. Eternal vigilance against them, eternal warfare against them, is the price of flowers and fruit and turf and healthy shrubs. A single neglected lawn, even one sucked and starveling tree, may infect the healthy green things of a whole community. Not at once to be sure, but with insidious swiftness. The multiplication of blights, of pests, is inconceivably rapid. The green aphis, for example, is asexual, yet reproduces so swiftly that a single insect within a week's time may be ancestor to above five billions of its kind. It is among places left to take care of themselves, or most casually looked after through the winter, that all manner of plant pests find their breeding ground and special harborage. To fight them requires special equipment—force-pumps, sprayers, insecticides in powder and in solution. Mighty costly if each individual owner had to supply himself, but the gardener, having them in constant use, could afford the outlay, yet make moderate prices to his customers.

It is a marvel that the livery dairy has not yet come to pass. It would deal, not in milk, but in milk-cows, supplying fresh ones at a monthly or weekly hire, taking them back at need and substituting another. The most part of householders are nice, even finicky in their minds, over the milk supply—they have heard and read so much of the dangers that lurk in tainted milk, no less tainted money. But when they go away from the beaten track of things ordered, their scruples do not dissolve in the difficulties they find themselves facing—they are the rather overborne by imperious necessity. Milk there must be—for the children, the cook, the morning coffee, the evening ice-cream. So they take what is offered, often in fear and trembling, or scant themselves to tinned milk—in the heart of the green country. Knowing nothing of cows, how shall they buy? Moreover, the cost of purchase outright is something to shy at. But a warranted cow, gentle, healthy, in full milk—who would not willingly pay for her use and her keep? The livery dairyman might well keep a pasture, and take his hired-out cows to and from it for a small consideration. He might likewise do a thriving business in feed stuffs, to say nothing of profit on the calves raised to the age of veal. He could keep stock of all sorts—Jerseys for uppish folk who like the look of one on the lawn; big, deep-uddered Holsteins for big families, pert small Kerry cows for customers with tiny places, and merely cows for the general customer in want of milk. Milk, indeed, must be the great thing—and often the scrub beats her pedigreed sister at the pail. Nobody would very much mind keeping a cow if she could be got rid of thus handily without recourse to the butcher.

Orders in advance, provided there are enough of them, will insure full supplies of fresh eggs and poultry. If the orders run year round, there may be a sensible saving to the consumer, and the same margin of profit to the producer. The henwife escapes the risk of glutted markets, the housewife equally that of soaring famine prices. Poultry and egg raising have come to be almost exact sciences. There are those still who work at haphazard, by rule o' thumb, but they commonly lose out. An ideal situation would be to have at least half a dozen poultry yards, as much scattered as possible, so far apart indeed that contagion would be out of the question. It would be well, too, to have the egg-raising quite apart from the yards for broilers and roasters—capons require such special knowledge they may be left out of account. Ducks should be sole masters and mistresses in the yard they quack over. As for turkeys, only folk with plenty of range should undertake raising them for market, hence they had better be set out beyond the market gardens.

As to butcher's meat—there is much to be said on both sides. Where neighboring farms supply fine fat animals in prime condition, the local butcher is the man for your money. Otherwise club orders to the nearest wholesale market are preferable. Plenty of reputable market men make such orders a specialty, are careful to fill them with only the best and freshest in market, which, packed in hampers, well iced, and sent by express, can go safely any distance under a hundred miles. But in the matter of hams and bacon, it is a sin against light and leading not to try and try till you find a brand genuinely good—and when found make a note of it.

Elastic Cooperation

THE basic idea of things here indicated is cooperation—elastic and so loosely woven it hampers nobody. What has been set forth is the merest sketching of surface potentialities, but if put in practise it may help to solve the problem of how to be happy though a suburbanite. Man does not live by bread alone, neither by fresh vegetables, nor strawberries still wet with morning dew. Neither does he live—very long—if he makes himself wholly altruistic. It is unquestionable though that in the give-and-take of making up one mind to fit the kinks of another mind, there is some part of a liberal education. It helps to an understanding of many things. The chiefest of them is the solidarity of humanity. It is no bad experience for a man, at whose word "the Street" sits up and takes notice, to find himself no match for an artless horticulturist, grieved, yet strong in the possession of a contract which calls for beets from May till November. Maybe the gentleman don't like 'em constant—he'd oughter thought o' that at the first off—as the gentleman himself after awhile recognizes. He has his reward in a new emphasis on forethought. In next year's contract he will certainly go short of beets.

Amazons of Peace and War

England's Soldier Women

More than fifty members of the "First Aid Yeomanry Corps" encamped not far from London for several days this summer and underwent the most rigid military routine. They held hospital drills, performed camp labor, and groomed their own horses like regular troopers. One of the more vigorous exercises was the jumping practise on horseback. In each tent—which the women themselves set up—three members of the corps were quartered. The only place in which the camp departed from severe masculine methods was the canteen, where cut glass and silver, chairs and a piano, gave to it a homelike and feminine touch

Tennis Experts

The play of the Canadian young women in the last international tournament at Niagara-on-the-Lake so impressed the Ohio delegation that they promised to insert a ladies' open single event in their State program for this year. As a result, the Toronto players entered the Cleveland tournament held on August 2. From top to bottom of the page the photographs show Mrs. Hannam, Canadian champion, Miss Lois Moyes, Miss Rhea Fairbairn, and Miss Hazel Keith

St. Louis to Boston on Foot

Mrs. H. C. Schneider and her husband leaving St. Louis on July 28 for a jaunt to the Massachusetts capital. The couple expect to complete the trip within forty-five days. Mrs. Schneider was aroused to the undertaking by the statement of Weston, the aged pedestrian who recently strode across the continent, and declares that women are not able to walk. She intends by this journey to prove that at least one woman can—even if her husband does carry her satchel

What the World Is Doing:

The Wright Brothers' Final Government Test

On July 30 Orville Wright met the Government conditions with a flight of ten miles, averaging forty-two miles an hour. The picture shows the aeroplane rounding the balloon which formed the stake. As he carried one passenger, Lieutenant Foulois of the army, the trip was pronounced by experts to be the greatest cross-country flight ever made. From Fort Myer the machine flew to Shooter's Hill and back. Every mile over forty miles an hour won a bonus of $2,500, with $25,000 for the aeroplane itself

The Fight for Land

Crowds at Spokane, Washington, scrambling aboard an electric train bound for Cœur d'Alene, Idaho, where they will file their applications for the Flathead, Spokane, and Cœur d'Alene Indian lands, to be opened up by a public drawing on August 9. On July 27 the total number of applications which had been officially registered reached 148,955—the record land rush in the United States

This Busy World

SPAIN, beset at home and in the field, is in the position of a man with a stomach-ache fighting a duel. The internal disturbance is centered at Barcelona, where mob rule took over the city on the very day when Spanish troops were beaten back by Kabyle tribesmen. Spanish history for four hundred years has been interweaved with that of the Moors in a blood-red thread.

Like Portia, wounded in the thigh, Old England punishes herself with bitter self-inflicted blows. Here is the cry of the London "Standard":

"There are unmistakable signs of deterioration in the race; self-indulgence is the rule, self-denial the exception; every class of society contains a rapidly increasing contingent of irresponsible loafers—at the bottom, the tramp and the beggar; at the top, the bridge player and the idle rich."

It is as hard "to tax and be popular as to love and be wise," and with throes and groanings the Budget is fighting its way through a busy but fatigued Commons. The debate is enlivened though not dignified by a noble lord telling a labor member he was drunk, and then apologizing for the lie. The Budget will continue to fill the fag of the summer with voices and the strife of tongues. In late September, pounded by hostile ministers, edited and mangled, it will be passed up to the somnolent lords.

Headed by Talaat Bey, vice-president of the Chamber of Deputies, some Turkish Parliamentary delegates have been visiting Paris and London. Their purpose has been to say Thank You for French and English "moral support" during the enforced removal of Abdul, and to make friends for the new régime.

Attended by 200 spies and fenced in by 150 ironclads, the Russian Czar found it safe to visit Cowes, shake hands with the King of England, and felicitate him on his "arc of ironclads," more beautiful than "a crescent of Nelson's ships."

Earthquake shocks leveled buildings, stopped clocks, and terrified the inhabitants in Mexico City and several smaller towns of Mexico.

The Senate and House have held a sewing bee, and hemmed, stitched, and filled in a crazy quilt, called a Revised Tariff, as gift present for the American people. It will take some scrutiny and figuring with a lead pencil to know just how grateful the Ultimate Consumer ought to feel toward his Washington friends.

Harry Thaw, murderer of Stanford White, struggling to be freed from the insane asylum, has recalled to the public mind the noisome details of that degrading episode, and has added a few vicious items heretofore unheard of. "A plague on both your houses."

Tom Johnson, Mayor of Cleveland, is talking over the traction muddle with his constituents in a series of public debates to fifteen thousand people at a time. Meanwhile the street-car lines are in chaos.

It has been a week brimful of event all the way from the home town to the boreal pole. With gossip of kings, plunder of merchants, the odd ways of statesmen, and murders and suicides of the love-sick, the world has been busy through the seven days. Japan's city Osaka was flame-swept and a noble temple destroyed. A Chinese vice-consul in New York was shot down by a deranged fellow countryman. Famous ball players were injured, batted out of the box, and signed away to alien teams. Two prize-fighters, after insulting each other for weeks in long-distance talk, decided to fight. So the play is played on, while the stars burn, the moons increase, and the great ages onward roll.

The lovely autumn days are close, with the mellow corn and ruddy fruit and the long light of the afternoon lying richly on the crops. Vacations are ending and harvests are ripening under the sun. There is a sense of something flowing by, a river of change, in the rapid light and rustling grass and wayward airs of the days as they go.

Good-by to the Wrights

IN THE final test days, when even their friends were worried, the Wright brothers soared and glided and dipped and won their tests, with wide margins of clear air to spare. In money they pocket $30,000. In fame they date a new era in a department which owns the future.

It was Orville, coached by Wilbur, the elder and more terrible, who cracked all American records for flight on July 20 with an eighty-minute twilight trip. He circled the Fort Myer drill ground like a monster top, staggering to its rest.

Then came the Government test that the aeroplane carry two persons for one hour. Orville elevated Lieutenant Frank P. Lahm of the Signal Corps, chugged through the firmament with his sacred freight, crossing the one-hour line, then nine minutes later smashing Wilbur's record, and from then on leading the world, with a flight of one hour twelve minutes and forty seconds.

Over trees, ridges, hummocks, Orville flew down and back again at sunset, July 30. It was the test for a ten-mile, cross-country flight over ragged territory with two persons in the machine. This time he used Lieutenant B. D. Foulois as baggage, and sped from the drill ground to Shooter's Hill and back at the rate of forty-two miles an hour.

So ends a hot and weary six weeks for the Wright brothers and the city of Washington. Washington, which has survived four wars and the Roosevelt régime, is not easily stirred by the lust of a new thing. And a trifle, like corrupting the law of gravitation and piercing the sky with a misshapen wood and metal hulk,

A Record of Current Events

heavier than the air it displaces, only suffices to call out a regular audience of three thousand, mainly tourists.

Mrs. Nicholas Longworth, daughter of a former President, steamed up in a fairly obedient black runabout, No. 1510. She was a faithful attendant for many afternoons, fetching a hamper of tea and sweets for such friends as braved the heat and believed in the Wrights.

Through the crowd wandered a gray-haired, gentle-faced man, full of words. He was a prophet. He quoted from many books of the Old Testament prophecies which told of the aeroplane. He foretold disaster for the Wright machine, because the planes sloped up instead of down.

Such lawn-makers as visited the drill ground were able to impart the sense of a brief respite from great affairs. They strode through the lowly, curious herd of common folk, patronized the machine, and went home to Washington, North West, peevish.

"I don't see that there's so very much wind," said Senator Stone, as a twenty-mile-an-hour breeze, gusty and a little treacherous, roused the dust of the drill ground.

The gossip factory was as busy at the flight grounds as it is in city offices and Government departments and wherever else jealous men and women are gathered together. "Orville's lost his nerve," was the cry. "The accident last year was too much for him. He'll never meet his tests." So they clouded counsel with their forebodings.

But Orville and Brother Wilbur, Chevaliers of the Legion of Honor, are the captains of their soul and quite at home on the heavenly ferry. So ends the testing of the Wright brothers, publicity haters. This is their positively last appearance in this country for a twelvemonth. Soon they sail for Europe to deal, man-fashion, with the principalities and powers.

Their final triumph was witnessed by the loyal sister who has stood by them with money and faith for many years. She could say with truth to-day: "I backed my brothers, believing them to have genius. They have surpassed my wildest dreams."

Outwitting Coyotes

THE murderous activities of coyotes on herds of sheep have made business bad for ranchmen. Here follows a year of history at Billy Meadows on the Wallowa National Forest in Oregon. The people set to on this—can coyotes be kept away from the sheep? If so, are the sheep healthier, heavier, and more profitable? Does the added profit in the sheep pay for the cost of shooing away the coyotes?

Coyote-proof fence, fifty-nine inches high and eight miles long, was used to fence in 2,560 acres. In three months 136 coyotes came to the fence and not one got through. They were on hand for seventy-two out of the ninety-five days. Seven grizzly bears and eight brown bears got through the fence. Black bears, bobcats, lynx, badgers, and elks also came nosing around the barriers. The grizzly bears passed in by going through the six-inch space between the woven wire and the first barbed wire above, or through the eight-inch space between the two top barbed wires. The claws of the hind feet were hooked into the meshes of the woven wire, giving the bear a pull to force his body through.

The band of sheep consisted of 1,200 ewes and their increase, 1,009 lambs. At the season's end, September 25, the sheep, experimented on, were turned back to the owner. The count gave a total of 2,194, a loss of fifteen since June 21, when the animals were turned into the pasture. The coyote-proof fence gave them free, unmolested grazing, and they began to outgrow their herding methods. There was less massing, less trailing, less close-bunched grazing. This change is good for the range and good for the sheep.

The age of the two bands at the time of final weighing was approximately the same, yet the average weight showed an advantage of 8.7 pounds in favor of the animals from the coyote-proof pasture. After being handled under the pasturage system for three months, between the ages of three and six months, lambs weighed eight pounds more than the best lambs of the same class that has been herded.

The chief drawback to the system at the experimental pasturage was the excessive cost of the fence, which on most grazing lands will approach closely to $400 a mile.

Among the advantages of the pasturage system that justify this expenditure for fence construction are:

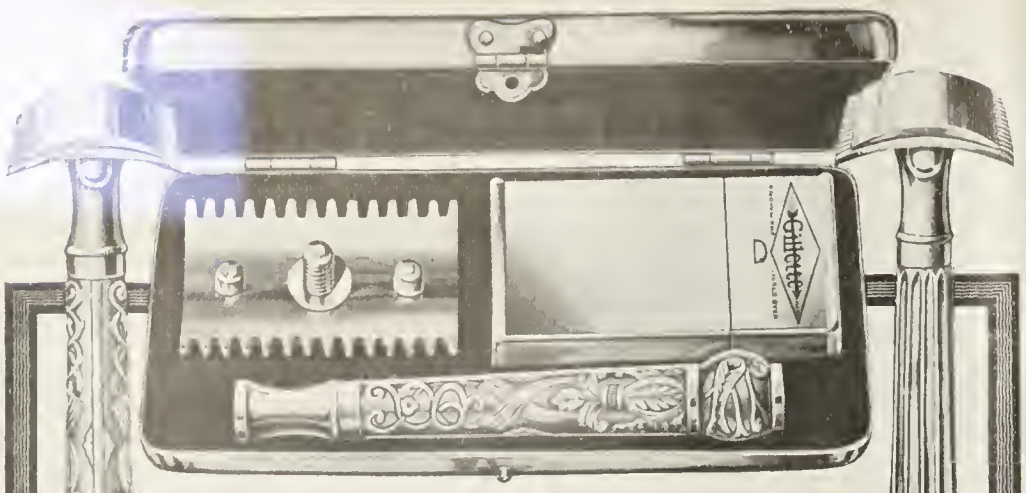
1. Increased carrying capacity of fifty per cent over the customary herding system.
2. Heavier sheep.
3. Decrease from 3 per cent to one-half of 1 per cent in the loss.
4. Less expense for handling.
5. An increase in the lamb crop.
6. Heavier and cleaner wool crop.

The experiments were closely watched by James T. Jardine of the Forest Service, who will shortly publish the results. The coyote is the one great menace to the sheep industry, and in excluding him the fence has served its purpose.

San Francisco's Trial

SAN FRANCISCO is having much trouble in selecting the jury in the second trial of Patrick Calhoun, indicted for attempt to bribe a supervisor. The so-called "Graft Prosecution," headed by Rudolph Spreckels, will thus make its second attempt to jail the president of the United Railways.

Calhoun has circularized the United States of America with a pamphlet making charges against Francis J. Heney of improperly receiving funds from the United



Bleriot Above the English Channel

The monoplane of M. Bleriot, in which he achieved his epoch-making flight from France to Great Britain, was purchased for $2,000—the bare cost of construction—by a French newspaper and presented to the Government for a permanent exhibit in a national museum. The aviator has accepted an offer from the Alaska-Yukon-Pacific Exposition at Seattle to race with the Wright Brothers for a $25,000 prize, but it is probable that the match will not be considered by either of the Americans

Latham Falls into the Sea

Hubert Latham, who has made two attempts to fly across the English Channel in his monoplane "Antoinette" ended both trips by plunging into the water—the last time on July 27, when within two miles of Dover where the population was giving vent to a noisy welcome at his apparent success. The buoyancy of the aeroplane was such that the aeronaut kept afloat until picked up by a destroyer

Gillette Safety Razor

A LARGE number of Gillette Safety Razors are bought by women who give them to their husbands or brothers.

Men are amusingly conservative about new devices for personal use. A man will try a Gillette if somebody gives him one—and immediately become a Gillette enthusiast. Perhaps the most frequent occurrence is that of his purchasing a Gillette after having tried one that belonged to a friend with whom he was visiting, or camping or motoring.

The time to buy a Gillette is now.

It pays for itself in three months and it lasts a lifetime.

The Gillette, illustrated herewith, is so compact that it can be carried in the pocket or slipped in the side of a traveling bag. It comes in gold, silver or gun metal—with handle and blade box to match. *The blades are fine.*

Prices, $5.00 to $7.50. For sale everywhere.

You should know Gillette Shaving Brush—bristles gripped in hard rubber: and Gillette Shaving Stick—a soap worthy of the Gillette Safety Razor.

HARRINGTON & RICHARDSON ARMS CO., 547 Park Ave., Worcester, Mass.

States Government for prosecuting land fraud cases while he was serving as Assistant District Attorney in San Francisco. Both sides are making a nation-wide appeal to public opinion. The "Argonaut" has called the squadron of Spreckles "creatures," nor have the character summaries of opponents by Heney been precisely balmy and full of loving kindness. Whether it is at all times possible to conduct a fight to a finish and include the gentler amenities is an undecided question. It is certain that Heney has lashed out with a two-edged tongue, and extemporized character sketches and word pictures in vitriol. Moving in the sense of imminent peril, which he does not fear, but of which he is always aware, he speaks and acts in a strain of exaltation. The vocabulary and mood are sublimated, like those of one under sentence of death.

Be they right or wrong, friends, society, newspapers, and courts have fallen away from the prosecutors.

One side states: "If the prosecution had stopped after punishing Ruef and Schmitz, it would have been the greatest investigation ever conducted in America; but when they went after the bribe-givers it became persecution."

Those opposed to the present reiterated prosecution of Calhoun state that it is revenge on the part of Spreckles for business rivalry.

The fight is on, soon to be complicated by a municipal campaign in which Heney, whose prosecution in the recent Calhoun trial was vigorous and bitter, will run for District Attorney.

The Place of Delight

FOR years and even centuries the outer world has been fondly dreaming of the intimate pleasurings of the Sultan and his harem. A journalist on the London "Standard" unveils the Yildiz in the following fashion:

"Over against the harem is the artificial lake, or, rather, canal, which runs for about half a mile through the park. It is marked off by various landing-stages named after the villages in the Bosporus touched at by the daily steamers. It was here that the fair prisoners, who could not enjoy the real thing, were wont, accompanied sometimes by the Sultan himself, to make imaginary trips to Therapia or Beïcos on an ungainly and hideous water-bicycle to hold about half a dozen passengers."

Any overworked little shop-girl can have more fun than that at Coney Island.

A Wise Old Man

JOHN D. ROCKEFELLER gave a talk to his Cleveland Sunday-school on the last Sabbath of July. It was full of naïve expressions, a philosophy of life, complete and commonplace, the plaintive appeal to his friends, the audience, as of a gentle-souled, wistful, elderly person who bathes life in rosy kindliness. He said:

"Dr. Bustard and I are attending a little school of our own. We are taking lessons in golf. And every day we promise our teacher that we will be good boys, that this time we won't forget. The teacher warns us continually to keep an eye on the ball, a keen, ready eye on the ball. And we continually say we will; over and over again we promise to keep an eye on the ball. And then, before we realize our blunder, we have forgotten all about our teacher and his warning.

"But notice what a little thing it is to which our teacher draws our attention. Believe me, it is the little things that count.

"I am studying you now. I have studied you for a long time past. How much you have meant to me, how much you have helped me I can not express. For this untold good you have done me and still are doing me I thank you from the bottom of my heart. You have conferred upon me blessings you never suspected, happiness of which you knew nothing.

"In life, as in golf, it is the little things that count, things so small that we hardly realize their existence. The little good thing counts. So does the little bad thing count. But let us learn to overlook the little bad thing, since each of us every day must make some small mistake.

"Do the thing which is right," Mr. Rockefeller continued, "and do it cheerfully. Nothing thereby is wasted. We lose thereby not a thing. For, in truth, it all comes back to us, it all comes back."

His Masters' Voice

THE August magazines are suffering from the silly season, and two of them at least are the vehicles of special-plea articles. By a wordy drive against prohibition, Rev. William A. Wasson, the Riverhead (Long Island) dupe of the brewers, enriches the August "Pear-

BOYS

"My Son Having Failed Completely

on his preliminary examination for college, entered your school, and in one year he covered two regular school years of work as is done at most schools, and not only passed his examinations easily for college, but with credit to himself and his school."

This extract of a letter from the mother of a recent student is one of a hundred or more valued by Mr. Groff, showing the high grade of success he has had for twelve years.

THE GROFF SCHOOL

228 West 72d St., New York

is ideal and exceptional as a boarding and day school for bright boys who wish to enter college early or boys that have never been taught to study properly and need to be treated individually. All boys are closely guarded against the temptations of a large city, but have opportunities for progress and refinement not available to students of country schools. The *very best* athletic facilities to be had anywhere. All kinds of wholesome sport judiciously encouraged.

JOSEPH C. GROFF (A. B., and of Class 1893, U. S. N. A.)
228 West 72d St., New York

President Eliot's "Five Feet of Books" will look very small compared with some other libraries; and

The Somes School

compared in size with many other schools, might well be called "Five Feet of School." But read what President Eliot once wrote of Mr. Somes's boys in Harvard:

"I know no better evidence of the good quality of a secondary school than these young men have supplied."

It is a small school where every boy has *personal instruction* and close association with capable teachers, and where a scholarly spirit and a zest for hard work are evident. The school is a home-like place with excellent table, and every means for wholesome recreation

For catalogue address ALBERT SOMES, Aurora, N. Y.

Mercersburg Academy

A school for boys, healthfully located in one of the most picturesque sections of Pennsylvania. Thorough instruction, college preparatory work being especially successful. Personal interest is taken in each boy, the aim being to inspire in every pupil the lofty ideals of thorough scholarship, broad attainments, sound judgment and Christian manliness. Modern buildings. Fine athletic field. For catalogue and further information address

A PREPARATORY SCHOOL FOR BOYS WHO WANT AN EDUCATION. ADDRESS,

Edwin DeMeritte, 815 Boylston St., Boston, Mass.

What the World Is Doing

(Concluded from page 24)

son's." He calls his output: "Prohibition, the Obstacle of Real Reform." He is laughed at behind his back by the very men whom he serves with such pathetic and servile zeal.

He says: "If all saloons were made decent and orderly, the bottom would soon drop out of the prohibition movement."

Why don't the brewers take that clever and novel method of knocking the bottom out of the prohibition movement which for years has racked their nerves and troubled their dreams?

He speaks of prohibition as a record of "failure, folly, faree." He revels, glories, and chortles over the recent victories for booze in the eastern end of Long Island.

"Many experienced physicians believe that tea and coffee cause quite as much trouble in the world as alcohol."

"What blessing does prohibition furnish as a substitute for the saloon? Absolutely none, unless it be the W. C. T. U. mothers' meeting and the weekly prayer meeting."

"A lot of hysterical women and meddlesome men."

Those nimble paragraphs make fairly lively reading, more because of their holy source than from any real deftness. Mr. Wasson is misinformed when he says that the number of saloon dealers, associated with evil conditions, is "comparatively small." And he omits the heart of the problem. The brewers have so overstocked the market with their helpless pawns, the saloon dealers, that in too many instances the saloon dealer has to run an evil business in order to make profits.

Wanted—A Million Warriors

BEFORE red ruin overtakes England, some of her sons are suggesting a cure. Compulsory military service, conscription, is the remedy suggested by Lord Roberts. He says:

"The country is not properly bulwarked by soldiery and will not be till we have a million armed men equipped to resist the invader."

The British journalists describe him in the act of warning: "So said the gallant little fighter, speaking straight, bluntly, and without oratory to a well-filled chamber. So fervently, eagerly, all the fibers of his frame at tension, he preached the need of a Citizen Army of one million men."

Tess in Music

HARDY'S piteous novel, "Tess of the D'Urbervilles: A Pure Woman Faithfully Presented," has been set to music and made into Italian opera. Lately it has been produced at Covent Garden, London. The music is useful for rendering the "great talking voice of Destiny muttering its majestic monologue throughout the drama," but it omits the "drip and gurgle of the milk-pail."

Whitewashing Tammany

NEW YORK'S Tammany Hall is feebly defended in a publication calling itself "The Editorial Review." Charles F. Murphy, boss of Tammany, Chief of Chiefs, has said of the Apology for Graft, named a "History of Tammany Hall," that he considers it the best written of all articles which have dealt with Tammany.

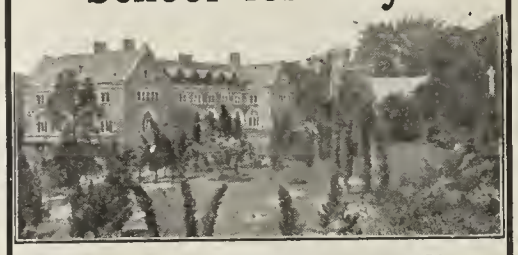
The writer's defense in part consists in proving that Tammany's motto is "Freedom Our Rock." His references to Tweed are in a lovely spirit of tolerance. He says: "Tweed's connection with the organization was most unfortunate."

"Under Tweed's leadership Tammany was committed to a policy of extravagant expenditures." So would the pickpocket describe himself as careless with his fingers.

"After Tweed's enforced retirement"—which is refined language for a thief who fled to the Continent.

"Of course, here and there in the conduct of business of this great metropolis irregularities exist." And, again, this is a kindly way of referring to the numerous city officials who take graft.

"It seems superfluous to defend the character of Charles F. Murphy, whose integrity, steadfastness of principle, and opposition to evil are so well known." Not only superfluous, but supererogatory.



And, finally, "there is no proven corruption in New York City greater than has been alleged and proved as existing in Pittsburg, Philadelphia, and San Francisco!" The point? Why, Republicans are mainly responsible in those cities.

Bernard Shaw on the Czar

"THE Englishman who neglects this opportunity of throwing a brick at him (metaphorically, of course) is utterly unworthy of his country and its traditions."

BOYS

The National Cathedral School for Boys

The Lane-Johnston Building
Mount St. Alban
Washington, D. C.

"An American School for American Boys." A Preparatory Institution offering exceptional advantages. It has an able Faculty of specialists, chosen from the leading Colleges.

All the attractions of the Capital close at hand; delightful, healthful location; campus of forty acres. Magnificent new building, the most modern of its kind in America; large gymnasium.

Daily religious services under direction of Bishop of Washington. Free instruction in music for boys of vocal ability. Fall session opens October 7th, 1909. Bishop of Washington, Pres. Board of Trustees. For Catalogue and information address

E. L. GREGG, Headmaster, Box C

BOYS

College of
William and Mary
WILLIAMSBURG, VA.

Chartered 1693. Healthfully located on the famous Virginia peninsula, where the American nation had its birth. Close to Jamestown, Yorktown and Richmond. Alma Mater of Jefferson, Marshall, Monroe and a host of other makers of American history. Regular Academic Courses leading to A.B., B.S. and M.A. degrees. Offers courses for the training of male teachers. Total cost per session of nine months (board and fees), $186.00. Under State control. Next session begins September 16th. For particulars address

H. L. BRIDGES, Registrar, Box C

Randolph-Macon Academy

For Boys and Young Men. Front Royal, Va.

A branch of the Randolph-Macon System. Liberal gifts make unusual advantages possible. Equipment cost $100,000. Prepares for College or Scientific Schools. Gymnasium, Physical Culture and outdoor sports. Terms, $230. 18th session opens Sept. 14, 1909. For free catalogue and illustrated pamphlet, address

CHARLES L. MELTON, A. M., Principal
Box 400, Front Royal, Va.

YOU cannot be too careful in choosing a school for your boy. Mere "book learning" is not real education. Careful attention should be paid to the boy's development, morally and physically, and habits of self-reliance, self-control and prompt obedience cultivated. Every parent should consider these things.

Peddie Institute For Boys

is an academy of high rank in scholarship and moral tone. It is an endowed school for 200 boys, offering superior advantages at moderate cost. **$375 a year** covers all school expenses, except books. Its equipment is modern. Its faculty numbers 18, each one a specialist in his own work.

Prepares for all colleges, technical, law and medical schools. Certificate accepted by all the leading institutions of learning. Strong, practical business course for boys not going to college. Facilities for study of music. Lower school for boys 11 to 14 years. Forty-third year opens September 22, 1909.

Located in central New Jersey, nine miles from Princeton; region unsurpassed for health. Sixty acres, athletic field, gymnasium, swimming pool, running track. All sports under physical director.

Any boy going away to school will be interested in a little book entitled "A Day's Work for a Peddie Boy," a copy of which will be sent with illustrated catalogue to any address upon request to

Principal R. W. SWETLAND, Box 8-M, Hightstown, N. J.

WORCESTER ACADEMY

All advantages of a large school. Master teachers, comprehensive equipment. Great record for college preparation. Complete laboratory building. Manual training. Isolated infirmary. "The Megaron," a noble recreation hall. Perfect swimming pool. Gymnasium, physical training. New athletic field, eleven acres. Field House with baths and lockers. Quarter mile track; football and baseball fields; tennis courts. 76th year begins Sept. 14th, 1909. Illustrated Catalogue.

D. W. ABERCROMBIE, LL.D., Principal, Worcester, Mass.

Standardized Transmission Machinery

HOW to Lessen Cost of Production is the eternal question that confronts the manufacturer and mill owner today. No factor of this problem is so vitally important as the elimination of Power-Loss.

Leading Power-Users who have gone deeply into this problem of cutting out Power-Loss have standardized their entire equipment of Power-Transmission Machinery. Misfit equipment has given way to the standard Dodge Line of interchangeable, quickly-adjustable transmission machinery.

The unapproachable Dodge Line has not only shown thoughtful Power-Users the way out of Power-Loss difficulties, but has given them at the same time the immense advantages of **standardized Power-Transmission Machinery.**

THE DODGE LINE

of Power-Transmission Machinery

came as the result of the manufacturer's insistent demands. Power lost meant **money lost.** Watchful mill owners and factory owners saw thousands of dollars slipping through their fingers year after year, because they could not deliver to their machinery the greatest possible amount of the power generated in their engine rooms.

Then came the Dodge Line, based upon the study, experience and resourceful brains of practical, mechanical engineers. It was justly regarded, however, as an experiment, until put to repeated, crucial tests. These tests were so positive as to convince even the most doubtful that Dodge Transmission Machinery solved the problems of eliminating, to the greatest possible extent, Power-Loss.

The enormous demand for Dodge Transmission Machinery has resulted in a national distribution. Every city of commercial importance has its Dodge Agent or Representative. They have at hand for immediate shipment a complete line of Dodge Appliances. Power-Users are thus able to get exactly what they want at any time on short notice. A multitude of Booklets and Catalogs, covering every phase of Power-Transmission, are sent **free** to manufacturers and mill owners. The Dodge Mfg. Co. also employs a complete staff of Consulting Engineers who give free professional advice to all Power-Users.

The "Dodge Idea" — A Newsy 36-Page Monthly Free to Power-Users.

We will be glad to send you, **free,** for six months, "The Dodge Idea." This publication is fully illustrated, capably edited and full of interesting reading for Power-Users.

Send us your name, or the coupon.

BOYS

Who Picks the School?

SOME schools appeal only to the boy. Others aim only to please the parents. St. Paul's is a school which appeals to the boy and pleases the parents. To such parents and boys as desire a school with the fullest equipment, where special attention is given to the happiness and comfort of the boys, but which is managed for the boys and not by them, we commend our catalogue dealing in detail with the school. Sent on request.

The Passing of the Ranch

(Concluded from page 19)

off with the herds. This sort of thing was a regular occurrence on the Long Trail.

Indian raiders were not the greatest dangers on the long trail. The bitterest war of all was the one waged against the elements; and that war has come down to the present day. Cold in the North, drought in the South—these two enemies the cowboy must always face unflinchingly. Wherever there are droughts at one season, there are torrential floods at another. These floods carve the arid lands in great trenches deep as a wall. You can't go up and down these entways without breaking your herd's neck. Get a herd scattered over that kind of ground, and your cowboy may search from dawn till dark without finding his cattle! And when water is scarce the herds are restless and rove continually.

In the North the peril of cold falls heavier on beast than on man. A lowering autumn sky is suddenly disturbed by a vague restlessness. Gaunt gray wolf clouds scud across the sky. The cattle begin to rove restlessly; the wind moans as if conscious of impending disaster. There is the long voiceless wail—the rise and fall, rise and fall of the wind voice—then the ear is stabbed with the scream of the storm; and a blizzard is blowing over the prairie in a winding death-sheet! At first sign of storm the cowboys head the herds for home, or, if home be too far, for the shelter of some ravine; but as the storm grows the cattle become confused. They drift before the wind, blinded in the snow with their own frost breath. Singing and shooting off revolvers to keep tally of whereabouts in the white waste, the cowboys try to direct the herd; but the drift may lead over the edge of a ravine, or up against a barb-wire fence. It is on record that a spring thaw has uncovered the bleaching skeletons of as many as seven thousand cattle lost from one herd in a bad blizzard.

The Worst Foe of the Herd

THE blizzard is not the worst foe that comes to the cattle in the North. The worst foe is a hard frost following a slight thaw. Food is locked beneath the ice glaze and the ravines are a glare slippery as glass. Until ten years ago ranchers scorned the precaution of putting up hay against such an emergency as frost after thaw; but two years taught them terrible lessons. After sleet came continuous hard frost for weeks. Thousands of ranches in the Northwest were without a ton of hay. The price jumped from $3 a ton to $32; and there was no hay to be sought. The ravening cattle roamed the hills bellowing with hunger. Gaunt and starving, they came into the towns—to Calgary and Medicine Hat and Macleod—with hoofs worn to flesh, and perished within sight of their thoughtless owners. The ranchers didn't require such a lesson a third time.

Up from Mexico, over the long trail, the cowboy has brought many Spanish customs. He uses the descendant of a Spanish horse, either the bronco or the cayuse, inured to long rides and hardships. He uses the Mexican saddle, which acts like a rocking-chair in the choppy trot of the cow pony. He uses the Mexican "*chaps*," or leather leggings, to protect from the wet and the brushwood. Like the Mexican, he rides straight-legged from the stirrups and never leaves the leather, so that he receives no jar. In the African war all the Westerners rode cowboy fashion. It was found they could do ninety miles a day without fatigue, where the English mounts, men and horses, were exhausted from the same distance.

There are two or three points in Western stories that rouse the cowboy's ire. First of all, he has never milked and *never will* milk a cow. Second, he never speaks of a *lariat* or a *lasso*. It is a *rope*. He doesn't *lasso* things; he *ropes them*. He doesn't say "*cor-rall*," but "*k'ral*," the shortest you can sound it. And he does not talk in dialect. He does not say "his'n" and "your'n" and "plum." When he needs it, he can use a hot one; but it is the same hot one that men in New York use, though ripped out with a good deal more emphasis.

Is there still any "rustling" in the cow country? Does the unbranded stray find a new owner without a bill of sale? If a magazine writer said that rustling still existed in the cow country, the stock men would howl at him as a tenderfoot. Yet last year, when I was driving across the cow country with a missionary, we met a young fellow who had lost twenty of his best long horns amid the cutways of the Missouri.

"If that boy doesn't find the bunch soon," said the missionary, "he will lose them."

"Why, is there rustling in this country?"

"Theoretically, no: but if a man doesn't take good enough care of his stock to know where they are, you can't blame some enterprising stockman for rounding up and branding cattle that don't belong to anybody: can you?"

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

The People at Play

(Continued from page 15)

them suggests something more—the things that money alone won't buy—the enjoyment of the leisure it brings, rather than of the playthings it purchases.

So the Middle West is busy finding out how best to employ its leisure. New parks, country clubs, roads, yacht clubs, golf courses, and summer-cottage colonies show what is being done to this end. The rich have learned it is not necessary to go abroad or to the seashore or mountains in summer to have a holiday. The involuntary stay-at-homes are having fun, lots of good, wholesome fun, in ways they never dreamed of a few years ago.

Parks Beautiful Which the People Use

THE case of Detroit is typical. The city's principal park is on Belle Isle, which lies in the Detroit River. Until comparatively recent years this island was a wild place of woods and swamps. The swamps have been dredged and made into winding lagoons, that are frequented by hundreds of canoeists every summer day. The native forest had been judiciously cleared. Fine macadam roads afford a seven-mile drive under the trees around the island's shores, where a cool breeze from the river is always blowing. There are picnic grounds in the woods, boat clubs and a bathing beach, a zoo, a casino, a "garage" where one may hire canoes, a dining hall, and a bandstand on a Venetian bridge. When a band concert is being given here, thousands gather in canoes on the lagoon, or in automobiles, carriages, or on foot on the shores, and one may see in the crowd citizens of every degree of prosperity in Detroit, with their families. A park more frequented by all classes of society probably does not exist.

Park development in the Middle West is as yet young, but the cities are going in for parks with a free hand. Detroit and Peoria may serve as examples of what different types of cities are doing. These figures show the park acreage of each:

Detroit—Population (last census). 287,104; 32 parks and boulevards, totaling 1,200 acres. Largest, Belle Isle Park, 700 acres; cost of upkeep, $500,000 a year.

Peoria—Population, 56,100; 5 parks and boulevards, totaling 390 acres; total cost of upkeep, $100,000 a year.

Farmers Camping Out

THE chautauqua is the greatest feature of the outdoor play of the masses in the Middle West to-day. Not less than a million and a half people will attend chautauquas in this section this summer.

Primarily, it is educational, a survival of the old New England lyceum lecture, transferred to out of doors and expanded a thousandfold. In the big tent, or the permanent auditorium, that forms the center of the grounds, there are lectures every day by big guns, some of whom make a lot of noise. But they couldn't draw their daily audiences of thousands without the tent life of the chautauqua.

The farmer, while his crops are growing, comes to the chautauqua grove with his family in a wagon. At the grounds he hires a tent at $7 for ten days. The tent is 14 by 25 feet, with a board floor, a sleeping space at each end, and a "living-room," open at the sides, in the center. Cots, a few chairs, an oil-stove, a box of dishes, and a supply of food, all brought from home, furnish the tent.

Every hour of the chautauqua day is taken up per program. In the morning the children have a play hour with the other children in the grove, and are taught outdoor games by a grown-up. There are also physical-culture exercises for both children and adults. After the meetings the farmer sits before his outdoor home of a week, with his family about him, and revels in the luxury of camping out. One would think he gets enough outdoor life at his daily occupation. Not so. That is work. This is play. Therein is the distinction that has made the chautauqua the great psychologic movement of the day in the Middle West.

Milwaukee's Happy Sunday

IN MILWAUKEE Sunday is the great play day of the people, when picnics, trolley rides, excursions, and fishing parties delight the week-day toiler. After church the Milwaukeean takes his family and their lunch-basket and goes to a resort.

On the lake front of Milwaukee the breakwater on a Sunday morning is black with fishermen. Young men sail canoes in the harbor. At the yacht club the members tinker on boats and engines. From the jetties great excursion steamers emerge, loaded with holiday-makers.

At night the streets are filled with promenaders. The restaurants are crowded, and there is music in them. The theaters do the best business of the week. The

—Harvard University Graduate School of Business Administration—

Banking and Finance · Accounting and Auditing · Insurance · Economic Resources · Industrial Organization · Transportation · Commercial Law · Public Service

Graduates of approved colleges will be admitted as candidates for the degree of Master in Business Administration. Two years' course. Mature students not graduates of colleges, if qualified by business experience or otherwise, will be admitted for special studies.

With the exception of three prescribed courses—Economic Resources, Commercial Law and Accounting, the course of study is selected with a view to special training in a particular field of business. The school not only gives the student the theory of business administration, but emphasizes practical work, and offers an opportunity for office and shop experience during the summer in the various lines of business which are taken up during the school year. Training is specialized to prepare for the various lines of commerce and manufacturing.

people are using the city for their pleasure. Theirs is the freest Sabbath observance in the country, yet they are sedately gay, and at eleven o'clock at night one might fire a Gatling gun up Grand Avenue without hitting any one.

In the wheat and corn country you see a survival of the old-time amusements of the farmer before the days of the trolley, the chautauqua, and the new out-of-door life. It is "the show," presented under canvas. Sometimes it is a small circus; sometimes a juggler and his meager family company of "artists," but more often the drama itself. There is still a kind of holiday on the prairie farm when "the show" pitches its tent in the neighborhood, the canvas house of the players loom dun-brown on the edge of the green cornfields.

New York's Breathing Spots

IT WAS a hot Sunday after a sweltering week which had filled the fire-escapes and roofs of the tenement houses and had peopled the parks at night with thousands trying to get a breath of fresh air. In consequence the day of respite from the factory and the office brought out the hundreds of thousands to try to get a change from the glaring brick walls and the pavements which had collected and sent out the sun's rays for so long that they had become soft and exhausted from the task. The subway trains were full, the elevated structure almost bent beneath its human weight, the steamers which go up and down the two rivers and down the harbor were crowded to the rails.

Down at Coney Island and the other beaches the turnstiles were clicking as regularly as clocks. In Van Cortland Park hundreds of golf balls were barely escaping doing murder every minute. There were twenty baseball teams, each with its own crowd of spectators, intent on their own particular game and oblivious to anything else. There were several games of different kinds of football in progress. The teams of the crews of an English and an American liner were playing "soccer" for the ocean championship. Nearby two teams of Irishmen in their underclothes were playing hurley with a soft ball, and on the next lot two teams of West Indian negroes in white flannels and blazers were playing cricket. The lawn of Central Park was dotted thick with children, the crowd had already begun to collect around the grand-stand for the concert, while in front of the little booths beside the lake where boats are rented, there were long lines waiting for a chance to get out on to the water. The little parks scattered throughout the city, the recreation piers, and the public baths, each had its crowd. New York, after a sodden week, was out getting its breath again, laughing as it did it, and collecting, besides fresh air, sunburn and freckles.

Sixty-Five Parks in New York

CROWDED as it is on a narrow island, so full that it pops over the rivers on either side, New York needs parks, needs more than any other city in America, if its people are not to forget what green grass looks and smells and feels like. And luckily for New York, it has sixty-five places which the city keeps, and has given between five thousand and six thousand acres of its land up to breathing spaces. Luckily, too, for New York, it is not dependent on the parks alone, for on one side it has Long Island with two wonderful shores and New Jersey with its Palisades on the other. Below is the ocean, lying alongside its Jersey shore.

New York supports three fine public golf courses, numberless tennis courts, baseball diamonds, cricket grounds, and football gridirons. Of the parks, Van Cortland is next to the largest, covering 1,132 acres at the northern limit of the city. Besides an eighteen-hole golf course, it contains a number of tennis courts, baseball diamonds, cricket fields, football gridirons, and polo grounds, besides a large area of meadow and woodland. The city also provides free golf courses at Pelham Bay Park and in Forest Park in Brooklyn. In Prospect Park, in Brooklyn too, there are tennis courts and baseball and cricket grounds, and there are free tennis courts. Pelham Park, the city's largest, contains 1,756 acres. Central Park, perhaps the most famous of the New York parks, has an acreage of 834 acres, 185 of which are in lakes and reservoirs. More than half a million trees and shrubs have been planted in it, and it contains nine miles of roads and more than five miles of bridle paths. Besides the parks and playgrounds, the city supports a large number of recreation piers and public baths.

REDUCE THE CARES

of housekeeping. One decidedly practical way is to use Borden's Peerless Brand Evaporated Milk in all cooking where milk or cream is required. Results will be more satisfactory than with most "fresh" milk. The convenience and economy will please you. Dilute Peerless Milk with water to any desired richness.—*Adv.*

Great Medical Associations Condemn Benzoate of Soda in Food

The American Medical Association has passed the following resolution concerning the drugging of foods with Benzoate of Soda or other chemical preservatives:

> ***"Resolved,*** *That the American Medical Association respectfully urges upon Congress the necessity of amending the national pure food and drugs act in the following particulars, viz:*
>
> *"(1) To prohibit absolutely and unqualifiedly the use of Benzoate of Soda and similar preserbatives in the preparation and preserbation of foods destined for interstate commerce.*
>
> *"(2)* ★ ★ ★ ★ ★ ★ ★ ★ ★ ★
> *(c), the prebention of the utilization of unclean and offensive waste productions, which now, by the use of such preserbatibes, are branded as foodstuffs and sent through the channels of commerce."*

Resolutions of similar import have also just been passed in the great conventions of the American Institute of Homeopathy, the Medical Society of New Jersey, and the Pennsylvania Pharmaceutical Association.

These resolutions constitute an unanswerable endorsement of the stand taken by H. J. Heinz Company, and other reputable manufacturers, for strict purity, sound materials, and sanitation in the manufacture of food products.

From drugged food there is only one protection—***Read labels carefully.*** The law demands that every article of food prepared with Benzoate of Soda must have that fact stated on the label.

Heinz Tomato Ketchup, Fruit Preserves, Sweet Pickles, Apple Butter, Mince Meat, etc., do not contain Benzoate of Soda or any artificial preservative. These—and all of Heinz 57 Varieties—are prepared from fresh, pure materials, by clean methods, in open-to-the-public, sanitary kitchens which are visited and inspected by thousands annually from every part of the world.

H. J. HEINZ COMPANY.

Members of American Association for the Promotion of Purity in Food Products.

The STYLE BOOK

Copyright 1909 by Hart Schaffner & Marx

YOU will see, when The Style Book comes, just what the correct styles in men's clothes will be for fall. We spend as much care and money to make it reliable as to make it beautiful; it is an authority; concise, definite, intelligible; the styles shown, not merely described.

It is a guide to correct hats, shoes, cravats, also; every carefully dressed man needs a copy, whatever clothes he buys.

We send it to any address for six cents; a 32-page book; besides the twenty-five handsome illustrations, it has an artistic cover that's worth seeing. Ready about September 1.

IN ANSWERING THESE ADVERTISEMENTS PLEASE MENTION COLLIER'S

Editorial Bulletin

Saturday, August 21, 1909

¶ Next week's Collier's will be the FICTION NUMBER for September, and will contain three stories of different type, but of equal interest:

¶ "The Broken Wing," by Frederick Palmer, invades the air. It lifts the reader away over cities and lakes and wrinkles of hills.

Alice Adamson, whose languid, acquiescent life is drifting her into an unhappy dilemma, and Appleton, the limpid aristocrat, meet with a violent interruption to their automobile ride. This by chance brings down the aeroplane of Rodney Sharp—remembered as the son of the village blacksmith, but whose bronzed and aquiline countenance now is known around the world. She enters "The Bolt" in order to reach the railroad station where a party is waiting; but learning that the aeroplane will telescope the time from Indiana to New York, Alice remains aboard.

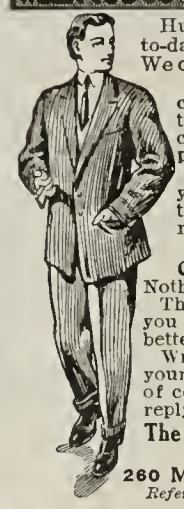
The machine wings on to an adventure above the clouds. In response to the call for exceptional heroism, the woman finds herself.

¶ Perceval Gibbon, in "The Mate of the Gatwick," gives a tale of the sea—the North Sea—where, through the winter winds, the old tramp "Gatwick" flounders. On the lookout bridge Captain Leigh is fixed—bushy, stocky, with a skin of brine. The first mate, with his baffling courtesy, and the second mate, "with no palate for life," are characters whose dispositions will not fuse.

The surprise of Captain Leigh when first summoned to the "Gatwick" sifts into foreboding as the petulant steamer sets off. The faultless first mate perturbs him, while the language of the Scotch engineer about the wretched voyage further ignites his humor. But the great wave which smashes across the forward deck, in its choice of a victim, solves the situation.

¶ Mr. Frederick Upham Adams, Booster for Bill Simms's International Circus, furnishes another report of its spangled achievements. In "The Tame Man of Borneo" he relates how the migratory Mr. Simms and his elephant chum, John L., are found by Captain Blout and the convenient stranger, who have been piloted to their island by the fleet of circus posters. The toothless lion and the battered "Daisy D." also share in the reunion. Incidents have been vigorous, and John L. has been called upon to turn the day upside down. Bill Simms introduces his cannibal constituency, and declares that he could vote them solid for the Republican ticket.

Finding himself in an Eden of show supplies, the manager has drafted an array of human curios. The "Borneo Head-Hunters' Horseback Act" is conceived for the wonderment of Oshkosh.



Captain Blout and the stranger witness unique and startling features.

Prizes for Vacation Stories

¶ It may be well to repeat for the benefit of those of our readers who have not seen the prize offer in Collier's for July 10, that this weekly will pay one hundred dollars for the best 1,200-word account of a vacation received before October 1. For the second best article fifty dollars will be paid, and for all others that are accepted twenty-five dollars. The articles must be typewritten on one side of the paper only, and must he signed on the first page with the name and address of the sender. Good photographs that illustrate and add interest to the account should be sent as a pictorial accompaniment to the article and will really count a great deal in its favor. On its back every photograph should be described, and the name and address of the sender should also be written. Be sure to send the article and photographs in the same envelope, and do not let your manuscript exceed 1,200 words. Manuscripts and photographs intended for this competition should be addressed to the Vacation Editor, Collier's, 416 West Thirteenth Street, New York City.

As was the case last year, the present competition calls for specific stories of vacations, whether in the mountains, by the sea, on the lake, on the farm, afoot, awheel, in camp, on sailboats, in motor boats, or in automobiles—in fact, in whatever way the vacation was spent. Essays or fiction are not wanted; neither is it necessary for you to tell the whole story of your vacation. Use the twelve hundred words for a description of some part of your vacation, if this seems preferable. The more vividly you put on paper in words and in photographs the sense of joy of the summer's outing the more certainly will the story be of interest to others. Do not send sketches or drawings; these are usually unconvincing: photographs are almost always a reflection of real things.

BIG MONEY MADE
WHEN YOU DO BUSINESS WITH OUR CAPITAL

Hundreds of good men doing this to-day have independent incomes. We offer you the same opportunity.

We will send you **free**—express charges prepaid—our **big** outfit of tailoring samples, and a handsome cabinet to carry them. **You don't pay one cent.**

Take orders for tailoring. Show yourself industrious and able and the next step forward we will arrange for a local store for you.

WE PREPAY EXPRESS CHARGES on all your orders. Nothing comes out of your own pocket.

The work is easy for anybody. If you are experienced so much the better.

Write at once and tell us all about yourself. We want a limited number of connections and those quickest to reply will be given preference.

The 1909 Book of

Collier Art Prints

Contains 175 Illustrations

15 cents each

COPYRIGHT 1904 BY COLLIER'S WEEKLY

Nancy

Would you like a copy of the new 1909 Book of the Collier art prints containing 175 illustrations in half-tone of the works of Maxfield Parrish, Jessie Willcox Smith, Frederic Remington, A. B. Frost, Charles Dana Gibson and many other leading American artists?

The engravings are made from the originals which were drawn exclusively for Collier's. They are exact reproductions in miniature and show the entire line with sizes, prices and descriptions. A feature of the book this year is a series of full-page pictures and intimate sketches of the artists themselves.

The book is a thing of beauty and of educational value—too valuable to send free—but if you will send us 15 cents in stamps to cover charges, we will mail you a copy and will

Rebate the 15 cents

with your first purchase of $1.00 or more.

Write your name and address plainly on the order form and send with 15 cents in stamps. Address Print Dept. P. F. Collier & Son, 410 West 13th St., New York City.

ADVERTISING BULLETIN

NO. 17

COLOR PRINTING

COLLIER'S new color press cost $56,000—a big investment, and *a real investment* both for our readers and for our advertisers. It enables us to give you colored covers every week and a beautiful colored frontispiece occasionally.

Do you realize that in the past ten years we have purchased and printed $1,000,000 worth of art features? Remington, Gibson, Parrish, Jessie Willcox Smith, Penfield, have all been represented. These pictures, framed, are decorating many homes in which Collier's is a regular visitor.

In conjunction with the frontispiece, we now sell a companion page in colors in the back of the paper to advertisers who realize the value of representing their goods exactly as they appear on the dealers' shelves. The page is printed on the same presses and at the same time as the colored frontispiece.

Almost every manufacturer uses a colored label, trademark, wrapper or package. Can you think of three who do not? A colored package or label is more attractive than a black and white one; so is a colored advertisement more compelling. There are two reasons: First, 99% of all magazine advertising is black and white; the 1% in color has the advantage of contrast—therefore prominence. Second: You see the goods as they really are, *true to life*, and when you go to your dealer you will not let him sell you something "just as good."

Color printing is another example of unity of interest between publisher, reader and advertiser. It helps the publisher to make the magazine attractive to the reader and at the same time to give the advertiser artistic service by printing a faithful reproduction of his goods in conjunction with the art work.

A black and white advertisement invites attention, but a color advertisement compels it!

E. L. Patterson.

Over the Sea in an Air-Line

Mme. Bleriot greeting her husband at Dover, after following his course on the French destroyer

THE upper picture shows Louis Bleriot being hauled in his monoplane out to his starting-point at Les Baraques, France, which he left at 4.33 on the morning of July 25, and thirty-seven minutes later alighted in England, two miles from Dover. With great speed he leaves the earth at Les Baraques, and finds himself, according to his own vivid description, "without sensation," high above the waves of the Channel. The French destroyer *Escopette,* as escort, has a lead of several miles over the monoplane, but in ten minutes M. Bleriot overtakes her. Through a break in the fog in which he becomes shrouded the aviator sees an opening in the cliff. Without knowing exactly where he is, he brings his machine down upon a greensward. The crowds which rush around him inform him that he has accomplished the flight—the first man to cross the English Channel by aviation. The passage was three times made by balloon over a century ago.

Hubert Latham's second plunge into the Channel July 27—he had come within two miles of Dover

M. Louis Bleriot, upon his arrival in Dover, greeted by the people who had been waiting on the cliffs and peering into the haze for signs of his machine

Education and Danger

THIS BUSINESS OF FLYING, especially across the Channel, has stirred the souls of men. Possibly it may have increased the steady sales of "The War in the Air," in which the resourceful WELLS pictured future science as so powerful in destruction that, as once the invasions of barbarians, it hurls the world back into darkness. Nothing so dire is likely to result from ingenuity. The intellectual and the moral man are nearly one. This is not a universe in which brain tightens its grasp on mechanics without at the same time more highly valuing peace, with humanity and friendliness to trade. The active, producing, advancing intellect is not a peril, although each new shift does mean an altered definition about what constitutes the fit. The youth, for example, who in this day fails to master the German language is decreasing his chance of being among the leaders. Mr. WELLS calculates that there are not more than fifty thousand serious readers in Great Britain, and therefore she can not remain in front with countries like Germany, France, and the United States, where education has ceased to be primarily genteel and has become vigorous, where imagination grows livelier, where science accomplishes the miraculous. Certainly the cerebration exhibited by the British in the Boer war compared absurdly with the intellectual devices with which Japan backed up her physical courage. The same thought that studies foreign affairs, flying machines, and the laws of trade also, because it is flourishing and real thought, invents field telephones and reflects on the military uses of barbed wire. The British universities must give more respect to physical science; the anti-vivisectionist sentimental ignorance, which is kindness without knowledge, must be bound in chains; in drama and fiction, as in business and politics, the mind of Great Britain must be spurred and freed, if the right little, tight little island is to continue—as presumably it will—its history of successful and stable government, longer now than any other since the end of that other island power which once reigned upon the Adriatic.

Reason and Unrest

THE WELL-TO-DO are howling lustily in Great Britain because the Government wishes to make wealth bear a larger share of taxation. The Swedes have been striking violently not so much against specific evils as in favor of doctrines of far-reaching change. France, who now has a mitigated Socialist for Prime Minister, a little while ago saw her postal service tied up by Government employees. Spain's unrest is apparently not part of the sure-footed conduct which seeks change only when it knows what it is seeking. There seems to be going about the earth something like an infection of upheaval. Does such a series of disturbances hint that the world, by too much democracy, is losing its steadiness; that it is starting toward demagogy and the instability which in other eras have destroyed governments and even nations? Peoples capable of governing themselves have not been those which sought convulsion for convulsion's sake. The man is not well who seeks ever stronger drugs to quiet his restlessness. The mind should see a goal before emotions are unchained. Clear-thinking in the people is needed to guide and limit the increasing sense of human inequality and of fate's unfathomable injustice. For this reason it is possible to question the wisdom of allowing Government employees to form unions, and thus by strikes to interfere with necessary services to the whole public. Such a course is too much like allowing the individual to take arms against the nation. Again, there may be found cause for regret in an alliance between Socialism and labor unions, such as has been seen in Sweden, for by such a cooperation the labor union is likely to lose the hard sense and coolly limited enterprise which have made it useful in the past. There will be no more French revolutions and no more Napoleons. If popular government fails hereafter, the aristocracy which succeeds it will not be despotism. Great, nevertheless, will be the disappointment if democracy should prove to be vitally weak, because its desires are stronger than its understanding and its self-control.

Guidance

IN THIS CONNECTION we would recommend to our readers a remarkable little book which can be procured from Grosset & Dunlop, New York, for fifty cents. It is a volume to steady the judgment and clear the mind. The author is FRANCIS G. PEABODY. The book is called "Jesus Christ and the Social Question." Religion and modern industry, ethics and labor—how are these subjects brought together in this day when poverty, family needs, and the relations between employer and employee are the questions of most vital interest? One of the clearest discussions known to us of the views of JESUS, as far as they can be applied to these present-day problems, is given in this book, which has not just been published, but which is not for that reason less worthy the attention of men and women who read in order to obtain information and ideas rather than in order to flock with the crowd. Although the author's own views are clear, he gives conflicting opinions with great fairness, and leaves the reader feeling at the end that he has the evidence on every side of every question that is discussed, so that he is in a position to judge for himself, and to disagree with the writer if his own bent is in another direction. It is the work of an open-minded scholar on a subject which can scarcely be without interest to any one interested in the controversies of his time.

Johnson in Eruption

NOW HERE is an old friend, the popular Governor of Minnesota, urging Western tracts of country to exert more influence in Congress, in proportion to the East. Good enough, Governor, if you know what you wish to have accomplished. You mention the tariff. We observe that most senators and representatives from the West, like those from East and South, favored protection for anything manufactured in their neighborhoods. Just what is it you wish to gain through sectional appeal? Not free silver, evidently. That was the last great sectional division, and Mr. BRYAN exerted as much influence as any one individual, East or West, in the solution. You complain that Eastern statesmen sometimes have undue weight; but how about that bearded Rhadamanthus who dwells not far from you, the Honorable, but not entirely accurate, JOSEPH CANNON? Western opinion found in THEODORE ROOSEVELT a most enthusiastic friend, who seldom entered into conflict with it, and then principally when it was flagrantly antinational, as in the forest policies of certain states. No, JOHNSON, there is nothing in this section talk. Seek popularity some other way. Defend sound causes, expose selfish or mistaken ones, but don't go about agitating for nothing whatever in a loud appeal to local pride.

P. S.—Read WALLACE IRWIN'S new series, which is beginning in this issue. It starts out as if it were to be decidedly amusing and at the same time somewhat instructive, in its light way, about American political conditions. Perhaps Congressman Jones and his constituents will take their place with TOGO.

Forests as Setting

LEGEND SEEMS to love the forest for its home. No other setting has so much fanciful association. It may be a Pan-haunted glade near Athens, the Forest of Arden, or the legendary Schwartzwald, with trolls and nixies. It is amid trees that Titania awakes to find herself enamored of a monster, that Rosalind wanders in hose and doublet, and that the Stauffenberg knight loses his heart to Undine. Here, under the mistletoe, also, the Druids held their solemn rites, to break into actual history for the moment. Here Robin Hood and his Merry Men, Maid Marian, and Friar Tuck drank their nut-brown ale. Here Goldilocks found the home of the Three Bears; Red Riding Hood encountered the fierce wolf, and the careful birds covered with leaves the soft forms of the Babes. Under this century-old beech Vivian tricked Merlin out of his secrets. In the shade of the spotted Jack-in-the-pulpit Robin Goodfellow lies asleep. In the tree trunks are imprisoned maidens awaiting the touch of magic wand. Here is the pious hermit, the peasant with a feather in his cap, the dwarf who offers to grant three wishes, the robber baron who despoils you of your purse, Poppele or the Wild Huntswoman. The bear who comes rolling out of the thicket, as when Snow-White and Rose-Red were admiring the dwarf's treasure, is a golden prince disguised. The little duck swimming in the woodland pond ferried Hänsel and Gretel, when they called. A snow-white bird flies away to the gingerbread cottage where the bad witch kept her jewel bags; a milk-white doe leads to the haunted lake where Waterrose, the Siren of the Wildsee, dabbles her feet in crystal water. Such dreams those blue-eyed Cimbri of the Schwartzwald had, and the woodland fancies are not yet ended, for the same imaginings are shared to-day somewhat by the forest people who make cuckoo clocks and name their sons after the good sylvan saint for luck. Dwellers in modern cities often fail to realize how much credulity is still alive.

Something Done

IN THIS PAPER, last January, Mr. PIERRE JAY, Bank Commissioner of Massachusetts, argued in favor of people's banks, which should make borrowing easier for men without much capital. The progressive Bay State is the first to take the step. An act, passed at the recent session of the Legislature, authorized the incorporation of "credit unions," or cooperative associations formed for the purpose of promoting thrift among its members. The board of bank incorporation is to allow such a company to be formed, and only when satisfied that the intended field of operation and the character of the incorporators promise success. The savings of the members may be received in payment for shares or on deposit; and members may borrow at reasonable rates when the credit committee of the institution approves of the application. The act is well drawn, the conduct of the institutions clearly outlined, and nobody except these corporations can hereafter transact business under any title containing the two words "credit" and "union." We prophesy usefulness and success to this new step, and if it does succeed, the example of Massachusetts will be followed in other States.

A Tale That Is Told

THE OPENING of three Indian reservations in the West and the parceling of their share of the public lands to the Indians marks almost the last milestone in the conquest of the savage. The Indian becomes a homesteader. He takes his place side by side with the white farmer and rancher. He has long since ceased to roam in the old nomadic way. He confines himself to periodical visits to the towns and cities of the whites, where he looks with curious eyes upon the puzzling novelties of civilization. He discards the blanket for trousers and galluses. His daughter, gowned in innocent white, marches under evening shadows, to the far-echoing toll of the vesper bell, a mingling figure in the silent vesper processional. His son is a cornetist in the reservation brass band. Thus the former warrior lives and dies, the last vestige of a dissolving race. Here and there throughout the West still remain remnants of tribal life, pitiful figures that lag superfluous upon a stage once swelling with the pomp of paint and feathers and nightmared with the holocaust of blood. It is not a far call from FENIMORE COOPER'S Chingachgook to CHARLOT, the chief of the Flatheads. One was the warrior of a dying race on Atlantic shores, the other is the aged patriarch of the last of the red man's power on the Pacific. CHARLOT has all the savage romanticism with which COOPER'S glowing pen endowed the character of his hero. He has always insisted that his name was forged to the treaty negotiated by JAMES A. GARFIELD, then chairman of an Indian Commission, whereby the Flatheads were dispossessed of their camping grounds in the Bitter Root Valley. Political injustice it was that fomented the war, culminating in the battle of the Big Hole, historically known as the march of Chief JOSEPH. The policy of the Government which turned these wards over to the care of political carpet-baggers reacted upon innocent heads and left a ghastly trail.

Imitation Trouble

"I AM NOT," said BURKE, "of the opinion of those gentlemen who are against disturbing the public repose." Nor are we, and, like BURKE, we "like a clamor where there is an abuse." Such things exist, however, as imitation evils, and they are lamentable things. A resident of San Francisco writes in protest against the pre-arranged exhibitions of Chinese depravity, which are prepared for the benefit of tourists, and are often all they see of the Chinese quarter. Stereotyped shamming goes on, by collusion between guides and a few Chinese, and the open-mouthed visitor, yearning for sin, beholds and comes away with the belief that he has been seeing life. For some reason, not altogether encouraging, brief sojourners in cities foreign to them seem to nibble at this interest more readily than at any other. "Seeing the town," means seeing something which is not only valueless to see, but which is essentially much alike from San Francisco to Vienna. Naturally, this form of curiosity being known, it is convenient for guides to have a few tasty exhibits arranged, like stage scenery, to give the stereotyped tourist what he wants.

Government Steamships

REPRESENTATIVE JAMES McLACHLAN of California introduced in the last session of Congress a bill providing for a Government steamship line between Panama, the Pacific terminus of the Panama Railroad, and the various ports of the Pacific Coast. The Government already owns the Panama Railroad, and is operating steamers between New York and Colon, the Atlantic terminus of the road. It is in possession of the facts relating to the transportation monopoly on the Pacific Coast, as set forth in the report of Senator JOSEPH L. BRISTOW, when acting as Special Panama Railroad Commissioner. The railroad situation has come to a crisis not altogether unlike that which confronted Germany in the latter seventies, when BISMARCK declared, in an address to the German Parliament, that the railroads of that country had suppressed every means of transportation but their own, and had then proceeded to exploit the country at their will. The railroads control some of the most influential newspapers on the Pacific Coast. They make and unmake Governors, Judges, Congressmen, and Senators. The people of the Pacific Coast have sought a remedy in the establishment of independent steamship lines, which have succumbed to the powerful influences behind the railroads. For the Government to subsidize a merchant marine, it is feared, would lead to abuses as bad as those which now mark our tariff schedules. Government ownership and operation of steamship lines seem to be a policy likely to develop.

As to Wildcats

NEVADA HAS NOW an anti-wildcat mining law. It compels publicity, and is intended to do away with the frauds which have afflicted that and other mining States and hindered the development of the West. Hedged about by good laws, infractions of which will be vigorously and in good faith prosecuted, mining in our Western States may in time be placed upon a basis of fair dealing. The wildcat mining promoter has hit hard the development of the West, and it is to be hoped his day has passed. One of the best provisions of the Nevada law is that which requires all shares sold by mining companies to show by a stamp across their face, in letters half an inch high, whether the stock is treasury or promotion stock. This will prevent the wildcatter from unloading his own shares on the market under the guise of development stock. Stringent laws, which will set legal thorns in the primrose path of the wildcatter, will enable the men who make a legitimate business of mining—and there are some—to regain the prestige lost in recent years.

In Toronto

"THE YEARLY RETURN in dividends of his entire investment is not an unreasonable expectation." Thus, ponderously, the promoters of a company for turning black sand into tool steel speak to prospective investors. Some of the other picturesque and alluring phrases that give distinction to the company's circular promise "an industrial revolution," "untold millions of value in the magnetic sand deposits of Ontario and Quebec," and declare "large dividends a certainty." If we take the Canadian Business Exchange of Toronto seriously, we must believe that when its "Shaw Magnetic Sand Steel Company" (authorized capital $120,000—stock $10 a share) gets under way the Steel Trust and others will surely have to go out of business. The friend who mailed us the circular wrote on it: "Can you beat this in the United States?" Surely. In the hands of Boston or Arizona geniuses, the capitalization of the Magnetic Sand Steel Company would be at least ten million.

The Pacific Hemisphere

JAMES J. HILL HAS SAID that the Alaska-Yukon-Pacific Exposition at Seattle manifestly differs from other fairs, in celebrating no event, commemorating nothing: that its single outlook is ahead. Yet this exposition does stand upon great events already lived through. No one can visit it and not be compelled to think much of nation-builders of the century just past. Mr. HILL, nevertheless, is mainly right; for the energetic people of the Northwest hardly pause upon this fact, and the atmosphere of the fair is charged with prophecy. The exhibits are intended less as objects upon which the Puget Sounders rest their case, than as samples of what they can do and intend to do, and also as bits of the fabric which is weaving around them. Ideas of the Orient are threaded with thoughts of the Occident. There are Asiatic conveniences, as the sandal, the kimono, the jacket of quilted silk. There are the radiant screen and the tinkle of little glass chimes. These trifles are indications of larger things. Japan and China, deeply imbibing American and European impulse, are burning spent traditions. A new era is here for both sides of the Pacific. Each must certainly influence the other. To what extent, and in what directions, are among the most important questions to be decided in the not far distant future.

The Desert Is Real

DID YOU EVER conduct a train of miniature pack-mules (punch a string of burros, to be exact) across fifteen miles of desert with the thermometer 107 in the shade (there wasn't any shade), then, at the top of a sun-seared rincon, come upon a tiny group of utterly ugly, weather-beaten shacks surrounding a head frame and stamp mill, the rough pine boarding-house offering twelve feet of shade, benches, a sight of its drill-steel triangle and beater hanging in front of the dining-room door, its suspended olla wrapped round with a wet sack, a taunt to thirst-parched throat, and proceed patiently to water and feed your pack-mules before coming into the boarding-house for water and food for yourself? It is a mining engineer in Arizona who sends the query. It was a question of getting from Yuma to Salome in the quickest possible time, and the stage ran only sixty miles of the way. By prospector's burro train was the last part of the journey made. One dry camp in the mountains, with the moonlight turned on full, a détour to Squaw Tanks, a slow descent into the Harqua Hala Desert, beginning at three o'clock of a grilling afternoon, a stop at Alamo for water and feed, a night trek down the sandy Alamo wash, then out into the malapai—stony, dead country—into the sandy desert again until two o'clock in the morning. At two o'clock the prospector pointed ahead to a shouldering hill. "The camp's eight miles beyond that, and that's seven miles from here." Too far without rest and some sleep. Then a breakfast of six sardines and a hunk of bread, one drink of water, and the long pull to the mine. At last the supreme luxury of food and cool drink and a shower bath with *cold* water pelting the skin. The desert is not a myth.

Experiences of a Woman Reporter

By ANNE ELIOT

¶ "A Government by Newspapers" expresses what critics of the United States often charge against us. Then, if journalism governs, "What is it like?" they ask, and usually reply severely. This paper's principles, therefore, are of such importance that we plan a whole series of articles on American Journalism: its bright and dark sides, its injuries and its great services. This series will require a long time in preparation. Meantime, we offer to the public the experiences of an honest and clever woman on sensational newspapers—the so-called "Yellows." Many women, in this day of expanding opportunities, consider journalism as a profession. Some find it pleasant and stimulating in small towns; but perhaps an even larger number are revolted by what is demanded, and this is particularly true in great cities. This article tells much that is both dramatic and painful in the author's Chicago experience. The next article, by the same writer, to be published in an early issue, hardly softens the picture

I.— *The High School of Self-Humiliation*

IT IS impossible for a woman to make a success of yellow journalism and maintain her self-respect.

In this country to-day there are thousands of ambitious young women eager to take up newspaper work. This is equivalent to saying they are headed for the yellow journals, for it is mainly papers of this class that offer the big prizes for feminine talent.

The writer feels that it is not only advisable, but urgent, that these aspirants should know before they take the initial step just what it really means to be a woman reporter. For newspaper work, in its most usual application, means reporting.

Here are eight questions I wish to ask the girl candidate for journalistic honors:

Would you be willing to sacrifice a sister woman's reputation in order to gain a piece of news?

Would you be willing to hobnob with servants and bribe them, if necessary, to secure information for your paper?

Could you, after a man had refused to receive you at his office, follow him to his train, force yourself into his private car, and literally hold him up for an interview?

Could you follow a man about in a cab, striving to waylay him and compel an interview; and, as a final desperate move, deliberately block his automobile in order to force his attention?

Could you become sufficiently callous to play spy upon the wife of a bank defaulter, haunting her house, pursuing her to the train, traveling with her, and trapping her into an interview?

Could you bring yourself to "interview" a murderer's wife an hour before her husband was executed, and write of her sufferings and agonies?

Would you be willing to frequent police courts, jails, divorce courts, and murder trials, living in a perpetual atmosphere of crime and scandal?

Pushed Out of the Door

LASTLY, could you endure the personal humiliation of being bodily ejected from a private home—literally pushed out of the door by the head of the house?

These are perfectly fair test questions. They do not in the least exaggerate the nature of the work required of a live reporter by the enterprising newspaper of to-day. The writer, during her six years' newspaper experience, has faced every one of the exigencies mentioned and hundreds of others equally distressing.

For it is only by strenuous methods such as these that the news is obtained. Little does the reading public dream as it hastily devours the contents of the daily paper what labor and struggle are represented by the "interviews" so glibly given. Little does it know of the methods by which such news is obtained, and slight thought if any does it bestow upon the reporter whose loss of self-respect is only too often the price for information gained.

Shunned as a Dreaded Person

THERE is no use attempting to handle the subject with gloves. The only way to treat this question is with strict honesty. Therefore I ask the would-be newspaper woman, point-blank: Are you willing to take up a profession that requires you to do things a gentlewoman would shrink from doing?

It is almost incredible that a profession which is nominally so desirable should in its real nature be so debasing. Indeed, it is doubtful if there is any other calling open to woman which offers her such excellent rewards, and at the same time carries with it such bitter penalties and humiliations.

The newspaper girl should know at the outset that she belongs to a class as unwelcome as the book agent. The revelation of this fact is one of the great shocks that come to disillusionize the beginner.

No doubt the innocent candidate has imagined herself in quite a different rôle. Her fancy has painted the woman journalist as a picturesque and favored individual, with unlimited opportunities for "seeing the world" and coming into contact with its great people.

In mind she has doubtless pictured herself smartly gowned and groomed, going about to the homes of the rich and the studios of the famous, received on an equal footing with other workers who use their brains for a living.

Instead of this she finds that she is a shunned and dreaded person, the very mention of whose errand is the signal for emphatic rebuffs and closed doors. She discovers that her only hope of "seeing people" is by force, or persistence, or stratagem, or by wheedling and persuasion that involve personal humiliation. And that even when she does triumph in gaining an audience with one of the mighty, she is received, not as a woman of brains, but as a distinct inferior.

There are, of course, exceptions to this latter condition, as the writer's own experience bears witness. Nevertheless, these exceptions only emphasize the rule.

If the heckless reporter is quick to comprehend, she soon sees that the private citizen's dread of her is due to the modern methods of journalism, which hold no human being's personal affairs sacred. People run away from her because they are afraid of her. And they are afraid of her because they are afraid of the newspaper she represents. Her presence means publicity—horrible publicity—all the family affairs blazed broadcast for the public's delectation.

Rude, Impertinent, Callous

THEREFORE, in order to make any progress in her work, she must break over the barriers raised against one of her profession. This means that she must be aggressive instead of gentle, pushing herself where she is not wanted. That she must be rude, if necessary, persistent, impertinent, callous—anything to gain her point. In short, she must forget that she is a woman.

To be frank, the girl reporter must be a combination of several undesirable things. She must be detective, adventuress, errand boy, scout, scandal-monger, thief. For is it not thieving if one secures an interview by other than fair means?

None of this is the fault of any special individual or set of individuals. The editors themselves are not to blame. An editor may personally hold the highest ideals of honesty and may wholly disapprove of the methods he is pursuing. But he is helpless in the grip of the present newspaper system. He is a tool, just as the reporter is a tool, to serve the ends of that system. It is a perfectly cold-blooded proposition. His business is to get the news. How he gets it, who gets it, who suffers for it—these questions to him are not germane. The personal equation can not enter into his calculations.

If a woman has scruples against present-day journalistic methods, she should know it before she accepts a position on a newspaper. If she rebels when questionable assignments are given her, if she suffers compunctions and misgivings, it is her fault rather than the editor's. So long as she takes the position, it is presumed she is willing to conform to the conditions. If she can not do so, the only thing for her to do is to resign. The editor has neither time nor patience to listen to her complainings. He will not tolerate anything save cheerful, energetic, whole-hearted work.

The writer, however, has never yet been able to understand how it is possible for any woman to long remain cheerful, energetic, and enthusiastic in the chains of newspaper reporting. So far as my own experience is concerned, I do not hesitate to say that, although conscientiously performing the tasks assigned me during six years of such labor, I worked forever under protest. There was never a time when I was not opposed to the system whose tool I was.

Mine is a history of repeated attempts to break away from a profession which my best self did not approve, yet which necessity forced me to follow. These attempts always proved futile, and I was as repeatedly pulled back to the work I so thoroughly disliked.

Understand, my record is one of unusual honesty and straightforwardness. I can truthfully say that during my entire experience I never knowingly hurt a human being nor did I resort to fraud or trickery to secure what I wanted. I was scrupulously careful not to misquote or misrepresent the persons I interviewed. I was almost morbidly conscientious in my efforts to give every one of my victims a fair show. And yet I could never rid my mind of the realization that they were victims. They

was the whole hateful situation in a nutshell—these people were *victims*.

To begin with, just what do we mean by an "interview"? To the uninitiated the work suggests a conversation carried on between the reporter and the "interviewed" with the full consent of the latter. There is perhaps the atmosphere of a previous appointment or at least an agreement that puts the reporter at ease and justifies the publication of confidences given.

Nothing could be more remote from the truth, as regards the average news interview. I do not refer now to those special talks with noted persons—singers, actresses, speakers, and the like—who belong to the public and are not averse to discussing their views for publication. I mean conversations with private individuals—confidences that have a direct bearing upon the news.

Such an "interview" means, usually, the waylaying of a frowning and impatient personage who "never talks for the press" and extracting one or two words from him by sheer force of advantage. This person may be just leaving his club, or entering a café, or leaping into his motor car. Or he may be about to close the door in his questioner's face. Perhaps he does condescend to "talk"—that is, he utters half a dozen sentences in reply to a rapid fire of questions.

If the reporter is clever enough to take him off his guard, to startle from him remarks that suit the paper's purpose, so much the better for that reporter's "story."

Again, there is the "interview" that is still further removed from the genuine thing—the pilfered confidence obtained by diplomacy—or why not be honest and say deception? This means that the person enters into conversation without realizing that what he says is to appear in print.

This does not imply necessarily that the reporter prevaricates in so many words. It simply means that he leaves his victim in the dark as to his real purposes. He does not say: "This will not appear in print." Neither does he say: "This will appear in print." It is this tacit deception which is, perhaps, worse than any other method of stealing information.

Methods Persistent and Subtle

THE most difficult assignment that can be given to a woman reporter, or to any reporter, in fact, is that of securing interviews with the socially prominent and exclusive. The editor prizes as fine gold a genuine conversation with a real leader of society on some timely topic, or even a little chat with her on any personal theme.

It is practically impossible to obtain such interviews without the use of the subtlest methods or the most persistent. Without persistence the feat is rarely accomplished. Sometimes it happens that one can write an exceptionally persuasive or convincing note that wins the coveted hearing. This may occur half a dozen times in one's entire career.

If the girl reporter imagines for a moment that she can gain admission to the homes of the socially élite by simply sending up her card, or a mere note stating her errand, she is doomed to cruel disappointment. The butler will take her confident bit of pasteboard and noiselessly disappear, to return promptly with the superb announcement that Mrs. —— is "not at home."

What, then, is the snubbed interviewer to do? Report failure to her editor? Not if she seriously expects to hold her position. The rebuff given her is merely the signal that her *real work has just begun*. It is now "up to her" to prove that she is a live reporter and not a pretender. She knows, in every inch of her, that it is her sworn duty to *get that interview*. How she will get it she hasn't the faintest idea. She can only try and try and keep on trying.

So she hangs about the house, in the hope that in due time Milady will appear at the door or descend the steps and that there will be a chance to snatch a word with her. When the hoped-for event does occur at last, and the actual "word" is snatched, it is not at all likely to be the sort of adjective the ambitious one is seeking.

But she can not afford to accept even this curt rebuke as final. Smarting under her second rebuff, she seeks a secluded place where she may gather her scattered forces and quietly plan a third attack. She must still persist.

Later in the day she faces the butler with a carefully written note—earnest, almost ardent in its appeal—a note calculated to break the resistance of the haughtiest aristocrat that ever wielded a social scepter. And again the butler returns, with the still more superb announcement that there is "no awnsah."

What then? Must she give up—this ambitious seeker after journalistic laurels? By no means. There will be a to-morrow. She must try again.

And so next morning she marshals her wits to determine upon some plan whereby the unapproachable may be approached. Does Milady go to a neighbor's house to call? Very well. Thither also the girl reporter follows. If that fails, she is ready to pursue her victim to theater or reception—anywhere that she is likely to intercept her and force an interview.

Perhaps, at last, she faces madam on her own doorstep at night, where she has been lying in wait for her return from the opera. And then, perhaps, with beseechings, or tears, or some clever ruse, she startles the lady into uttering several definite statements.

The latter, however, probably does not in the least realize that she has "granted an interview." All she knows is that a very hysterical young woman stepped out of her vestibule at night and flung questions and beseechings at her, and that on the spur of the moment she gave excited, quick replies. Not until she reads the morning papers does she realize with horror that she has given her family affairs to the public press.

This is the sort of activity that is daily required of the woman reporter. Without such methods she could not succeed at all.

Success Does Not Compensate for the Price

AND so, although I am one who has achieved unusual success in this field, passing rapidly from one position of trust to another, with a steadily increasing income, I feel, in looking back over my career, that my success did not compensate for the distress of mind that paid the price.

As I review my experiences to-day, apart from the atmosphere and environment that produced them, the thing I marvel at is that I could ever have forced myself to acts which wholly contradicted my personal standards of justice—acts which were a menace to my womanliness.

It is this that urges me to warn ambitious girls against the danger of becoming self-deceived about journalism. It is so easy to lose one's own views in the great maelstrom of energy and enterprise that create the daily paper. It is so easy to get the newspaper viewpoint. The more receptive, ardent, and ambitious a girl is, the sooner is she won over.

Presents a note calculated to break the resistance of the haughtiest aristocrat

Under the pressure of an editor's expectation, with the sanction of an entire office to back her, the woman reporter throws herself, heart and soul, into an undertaking which in its real nature is unscrupulous. The newspaper viewpoint makes it seem perfectly legitimate. Even an act which is brazen takes on the color of a heroic performance when the girl journalist attempts it. Deeds of daring and impertinence which as an individual she would regard with horror she executes, in the service of her paper, with all the abandonment of a soldier fighting for his country. But if she is a girl with a conscience, the reaction is inevitable. Away from the office or from the scene of conquest these acts, which had seemed "perfectly legitimate," loom before her in their true light—large, hideous, and impossible.

I went into newspaper work, not from choice, but from necessity. I had always been ambitious to write, but had not thought of the daily paper as the medium of development. Circumstances definitely decided the channel for my efforts.

The Asset of Personal Appearance

TO BEGIN with, my experiences can hardly be cited as representative of the average girl's struggle for honors in newspaper work. I did not go through the weary apprenticeship which most women endure before they have the slightest opportunity to make a record. This was largely due to the fact that I was not afraid of the untried. Almost at the outset I launched boldly into undertakings which are usually given only to the experienced. By such deeds I was able to set aside precedent.

My next important asset was the willingness and the ability to work. I worked early and I worked late, and I worked with the whole of my capacities. I had daring, determination, and enthusiasm that recognized no damper.

I began work in Chicago. Lest this narrative fall short of being strictly honest, I think I should state here that I was considered very good-looking. My friends told me that my looks were a potent aid to me in my work. Be that as it may, I know I did not rely upon my personal appearance to create my success. I always resented bitterly any suggestion that looks had anything to do with my achievements.

It might as well be acknowledged, however, that personal attractiveness has its own value in the eyes of an editor seeking feminine talent to augment his forces. There are some editors who hold the opposite view, but they are in the minority.

It is advisable that the newspaper woman should have nothing about her appearance to betray her profession. She should dress with care and taste, and when she starts out on an assignment should look no different from women of leisure who sally forth for calls or shopping or the theater.

Time was when the mannish type of female reporter was in demand, but to-day the woman who makes the greatest success in reporting is the one who is most truly feminine. She must be the softest, sweetest, gentlest sort of person in appearance, and yet—such are the exactions and inconsistencies of her profession!—she must at the same time equal the strongest man in determination, force, persistence, and physical endurance.

The newspaper wants her tact and charm and poise, and her fetching appearance, but it also demands that she shall have pluck and fearlessness and an iron constitution.

Very early in my career I discovered that if I permitted feminine traits of sensitiveness or weakness to interfere with my tasks, I incurred the immediate displeasure of an editor. There are no special privileges for the woman who goes into newspaper work.

No editor wishes to be reminded that it is difficult to stand in a driving storm seeking to waylay some one for an interview. What he wants is the interview. He will not be bothered with the difficulties in the way.

To go back to my start in Chicago. I did not take up reporting at once. The opening wedge into journalism came for me through writing fiction. I supplied short stories for the editorial page of a leading Chicago daily, and so constant was the demand for them that I made a regular weekly income by that means.

My opportunity for larger work came most unexpectedly. One day the managing editor called me into his office and asked me abruptly: "How would you like to stop writing foolish love stories and really go to work?"

The First "Beat"

THEN he told me that the paper needed some one to undertake a very difficult and delicate assignment, and he was certain I could handle it. A woman who had figured prominently in a recent murder trial had eluded the press by fleeing to a distant city. He wanted me to pursue her and persuade her to tell her story.

I stood aghast, for I had never in my life interviewed any one and I knew nothing of newspaper methods. But I knew my chance had come and I could not refuse. I got the story—what in newspaper parlance is called a "beat." Contrary to the usual experience of that kind, I was not obliged to do the least thing that conflicted with my personal standards of honesty or kindness. It was one of those rare instances in which the "interviewed" is really willing to give her side of the case. Of course I had to convince her that such a step was wise, but I did not resort to any kind of trickery to do this.

After that success my path was clear. I was immediately put on the staff as a star reporter. At first I worked on space, which means that I was paid by the column instead of by the week. But my earnings mounted up so amazingly that the managing editor again had a conference with me, and laughingly suggested that, as I was making too much money, it might be wise for him to put me on a regular salary. He set my salary at thirty dollars a week.

For the benefit of the would-be journalist who would like to know just what kind of work I did and all the circumstances surrounding my daily tasks, let me say that I was sent everywhere that a "story" of real value was in progress. My specialty was to get what the editor calls the "human interest" side of life.

What a strange jumble of activities they were that made up my daily tasks, and what a wide range of subjects I had to cover, running the whole gamut of human experience—joys, sufferings, horrors, crimes, and scandals!

It meant plunging straight into the turmoil of Chicago life at its worst. It meant going into ill-smelling police stations, where tobacco smoke and the whisky-laden breaths of toughs and criminals stifled the lungs. It meant going into the reeking tenements of the poor, to the cells of thieves and murderers, to hospitals, jails, and morgues, and to courtrooms where the most shameless crimes and scandals were described in every detail.

In striking contrast were the assignments that took me to the palaces of the very rich; to operas, theaters, receptions, horse shows, and various brilliant social affairs.

Let not the aspirant for newspaper glory imagine for one instant that there was any glory in this. Indeed, it was assignments such as these that brought the keenest humiliations. Well do I remember the night I went to write up a great ball given by one of Chicago's social queens, and was obliged to stand aside meekly against the wall, like any menial. The society editress of my paper stood with me, and we commiserated with each other on our mutual discomfort and chagrin.

"The guests look upon us as housekeepers or servants!" exclaimed the young woman, with rising indignation. Even as she spoke one of the men guests came suddenly toward us.

"Won't you please get a glass of water for Mrs. A.?" he asked.

The united glance of fury we gave him sent him hurriedly away with a murmured apology.

But even such incidents were no more trying than those fearful occasions when I had to waylay people at opera or theater or horse show and beg them to give me their names and a description of their attire.

Yes, even a star reporter must occasionally descend to that. The exigencies of a great daily paper are such that superior workers are often called upon to perform the humble tasks. It is a tenet of the profession that an all-round reporter should be capable of all-round effort. No loyal journalist, therefore, is "above" any branch of labor, however mean.

The fact that my stories were signed in big black type and my picture frequently used to illustrate them did not give me the right to choose my assignments. I had to obey orders, just like any cub reporter. And so it frequently happened that I had to make myself a door mat for the whimsical rich to step on.

Even in the performance of star feats I was obliged to humiliate myself again and again, so there was really not much choice between the two kinds of work. I recall several instances when doors were closed in my face. On one occasion I barely snatched my hand from the door jamb in time to save it from being crushed. It was when I tried to secure an interview with the President's daughter, who was staying at the home of prominent Chicagoans. I had previously asked the man of the family to assist me, if possible, when the young lady should arrive. He promised to do what he could—probably did it to get rid of me. At any rate, when later I tried to see him at the house, the butler banged the door on me, and only my quick action saved my endangered hand.

One week of such experience is usually sufficient to dishearten any sensitive woman and send her back to her home thoroughly cured of her ambitions. I confess I did want to give up, but circumstances would not let me, so I pushed on.

There were always flashes of lightning to illuminate the gloom. Every now and then I achieved some startling triumph that almost seemed to compensate for the stings and struggles of daily drudgery. These victories had their price, but the reward was sweet when the whole office swarmed about me with congratulations.

I recall distinctly the thrill of the first brilliant achievement following the one that made my place for me on the paper. It was this assignment that impressed upon me fully the deception of the newspaper method in securing an interview. I was still green enough to feel a shock at the revelation—indeed, so very green that I did not realize I had won a victory until I was told.

The wife of a prominent State official had been slandered in a well-known scandal weekly, and her husband threatened to kill the editor of the publication. There was great commotion in social and political circles of the State, and the story made splendid copy for the papers.

No one, however, had been able to obtain a single word for publication from the official or his wife. The situation was maddening to an enterprising daily such as mine. My editor determined that he would not be balked.

Exposing a Woman's Heart

"I'LL wager Miss Eliot can get all the facts straight from the lady herself!" he declared. So he called me to his sanctum and issued the following mandate: "Jump over to Springfield on the next train, see Mrs. ——, and get her to tell you all about this affair. Get her to praise her husband and declare he did the only right and noble thing—that will make a bully yarn."

It was agreed that one of the most capable men on the staff should accompany me and arrange all the details. I was assured that none of the difficult work would fall to me. I was simply to listen when the lady told her story and record it.

Which all sounded beautiful enough. But the cold light of the following morning revealed the fact that the Springfield mansion was a closed castle to reporters. The situation was hopeless, from every angle, so far as my helper was concerned.

"I give it up," he said. "You'll have to make a try at it alone."

Impatient telegrams were coming in shoals from the editors, who wanted to know what all the delay was about. The pressure of the situation fired me to an almost supernaturally confident state of mi[illegible] I felt suddenly equal to the task. Never would I [illegible] down on an assignment as important as this!

Bravely I ascended the steps of the mansion though my heart thumped furiously against my ribs.

A white-capped maid answered my ring.

"Is Mrs. —— at home?" I asked naturally, as if I were a calling acquaintance.

The maid looked me over.

"Yes, miss, but she isn't up yet. She's not feeling very well this morning."

"I wish you would tell her I want to see her—I shall not detain her long."

The maid asked me to enter, and as I did so I gazed at her very earnestly. "I hope she will see me a moment," I said.

I sat in the reception-room, tense from head to foot. The maid returned in a moment. "She's not feeling well and is caring for her little girl, who has been quite ill. She begs to be excused."

I stood looking at her. "Please," I said, "won't you ask her again? I'm very sorry to trouble her just now, but this is most important."

When the white cap appeared again, my heart leaped with joy.

"Madam will see you just a moment," she announced.

I recall so well my excitement as I followed the maid upstairs. In a dainty room, pink shaded, the official's wife lay in bed with her little daughter. Both gazed at me curiously as I approached. Then the lady, from her rose-colored coverlet, smiled graciously upon me.

I did not deceive her. I told her, very early in the conversation, that I was a newspaper representative. She did not appear horrified or indignant, because my manner seemed to inspire trust. I said to her at once:

"Please do not think I intend to annoy you in any way. I can well imagine that you have been bothered to death with reporters, and I know just how you must feel about it. I am simply obeying instructions in coming here to ask if you have any statement to make."

"Statement? Oh, no, indeed—I have absolutely nothing to say for publication. All this notoriety is horri-

The Suppressed Correspondence of Congressman Jones

I—Representing the Home Folks

The Secret Code That Tells How the Middletown Folk Grew Impatient to See Washington Capsized by Their Promising Statesman

Illustrated by F. T. RICHARDS

Divulged by WALLACE IRWIN

FROM *Luther C. White, Dry Goods, Groceries, and Hardware, Middletown, to Representative Daniel Webster Jones, Washington.*

"DEAR SIR:

"I DON'T think Congress is as bad as they say it is. There's a limit to the imagination. But us leading business men of Middletown are pretty well agreed that you'll bear watching. However well brought up a young man is to home, it don't follow that he's going to behave himself when he gets loose among a pack of skallywags and corporation boosters.

"The question being asked on every hand here is: What is Dan Jones doing for his constituents? You've got a good voice and a fine presence. Then why ain't none of your speeches and goings on reported in the daily papers alongside of Victor Murdock and others who have been making the halls of Congress ring with noble thoughts and sentiments? Can't you make them halls ring, too? As I recollect, you was quite a remarkable ringer yourself last election when you was stumping the State for Jones. What's happened since? Is the old bell cracked?

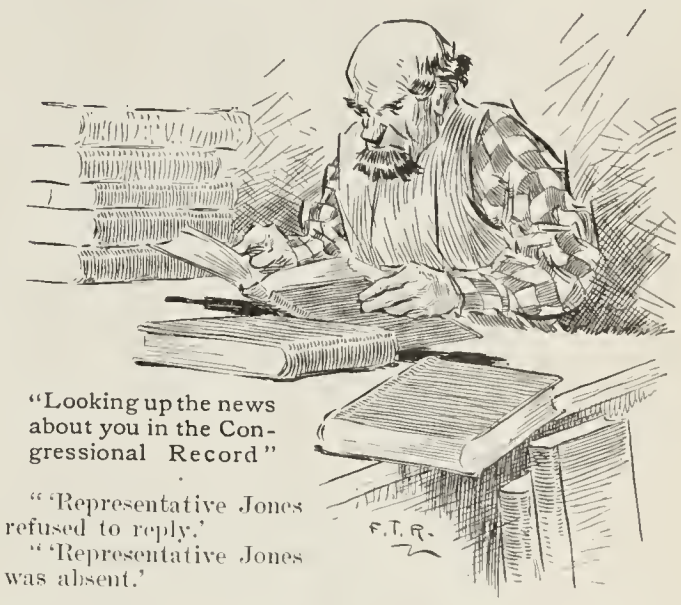
"I heard you speak here on that occasion, and I don't mind saying I was pretty favorable impressed by you. Everybody here—except Mr. and Mrs. Honeycutt—was real inspired and interested in your personality. You was about the grandest sight we ever seen and we was sure you would do credit to the town that born you. You reminded us of Abe Lincoln—only you seemed a lot more sincere. It looked as if Corruption wasn't going to last more'n half an hour after you got your hand in at Washington. J. C. Dawson said: 'What an ornament he'd be to the Supreme Bench!' But I said: 'No, siree! We ain't going to let 'em bury our Home Boy in no living tomb like that!' You see, we had you ticketed for the Presidency. And after you'd served for two terms you'd simply *have* to accept a third, even if a delegation from Middletown had to go up to Washington and *make* you stay on the job.

"Well, boy, you've been up there a powerful long time and all the folks is beginning to wonder what has become of the Trust Defier of Middletown. Where's the young feller that stood right up in meeting here and promised to coax the Demon of Corruption into the Arena of Eternal Truth, and, meeting him as man to man, to tie the fireworks of irrefutable logic to his tail, to light it with a morning star and send the Demon Tempter ki-yipping and skeedaddling into the stygian darkness of innocuous desuetude?

"According to newspaper reports, you ain't done nothing of the sort. Charley Kennedy, the feed and coal man, has been looking up the news about you in the Congressional Record. Charley has sent to the Librarian of Congress for the one copy he missed. He hoped maybe that might have something important about you. The others didn't. Your name was only mentioned six times in two years. If home folks don't get into the Middletown 'Gazette' oftener than that, it's a pretty sure sign they're either dead or moved away. Here's all we could find about you in the Congressional Record:

"'Representative Jones arose to speak, but was out of order.'

"'Representative Jones said he quite agreed with the Speaker.'



"'Representative Jones seconded the motion.'

"'Representative Jones did not vote.'

"'Representative Jones was not there.'

"Mrs. Dan entertained at croquet last Wednesday"

"Looking up the news about you in the Congressional Record"

"'Representative Jones refused to reply.'

"'Representative Jones was absent.'

"It looks to me as if you was either playing hookey or else behaving yourself so good that nobody knows you are there. Seems to me you could jump in once in a while and advertise Middletown. Even if you ain't got the grit to be a good Democrat, you might at least act like an Insurgent.

"Now look here. The Sovereign People of Middletown sent you to Congress with instructions to get a substantial revision downward. We want apples protected—we grow apples. But we don't intend to have our wives paying three cents a yard extra for calico for the benefit of the Cotton Combine.

"You're a bright young feller, Dan'l, and you got a good chance to make yourself and Middletown famous. But we ain't paying you a fancy Congressional salary of $7,500 a year just to keep your family in luxury like Grand Dukes.

"*Remember, the best interests of the community demands a reduced rate on cotton cloth.* Hoping you will get it. Yours truly, L. C. WHITE."

From Bolton Weaver, President Slopshop Milling Co.:

"DEAR MR. JONES—We note that your attitude toward the Cotton Schedules has not yet been made public. Will you have a talk with Senator Gibb before taking a definite stand? We feel sure that *the best interests of your community demand an increased rate on cotton cloth.* Very cordially yours, BOLTON WEAVER."

Paragraph from the Middletown "Gazette":

"Mrs. Congressman Dan'l Webster Jones is in our midst this summer visiting her folks, while Dan is up to Washington attending to what is generally supposed to be the best interests of the community. Mrs. Dan entertained at croquet last Wednesday and wore some New York clothes that made most of our local smart set wish that their husbands was earning $7,500 a year."

From Mrs. Daniel Webster Jones, Middletown:

"DEAR DAN—Can't you send me a little [illegible] for clothes? The children aren't fit to be seen and I've positively nothing to wear. The Hopkin[illegible] and the

[illegible] are here from the East and I look too dowdy to — Tell. Everything I have is at least two years old. I've got to keep up *some* kind of an appearance. I know, dear, it's hard for us to make both ends meet on that horrid little Congressional salary. But you *would* run — and I suppose your family has to bear the brunt of it. Lovingly,

"Emma."

"Take a letter of introduction to Uncle's private office"

From Alex. L. Bellows, Attorney at Law, Middletown:

"Dear Danny—Don't you think you'd better come home before you queer yourself? The old farm and the cows and the horses are still here, to say nothing of a small but dishonest legal practise with a fighting chance to be Governor some day, if you stand in with the Bunch. But what chance has a Democratic Congressman got in these parlous times of Tariff? Politically speaking, he's a sort of cross between a suffragette and a yellow dog. Old Cincinnatus Welch, the village cynic, asked me yesterday: 'What's the difference between a Republican Congressman and a Democratic Congressman?' 'Is there?' says I. 'There is,' says Cincinnatus. 'A Republican Congressman promises revision upward and votes for it; a Democratic Congressman promises revision downward and votes with the Republicans.'

"Take a tip from your old college chump, Danny. Give your constituents some action for their money, if nothing else. They're getting impatient. The Common People here are just as common as ever. If they can't get Justice they want a Circus. If you'll only kick the Octopus behind the gills in the broad glare of noonday, they'll forgive you for holding hands with the Monster at twilight when the gas is low. But, for heaven's sake, kick!

"Being human, the voters of this district can take a broad, patriotic interest only in the things they haven't any direct interest in. The local reformers are very stern about punching the coal-kings and the lumber-barons; but they're more lenient in the matter of coal-oil, because there's considerable petroleum in this district.

"And, by the way, they're speaking very harshly of you in reference to your long-continued silence on the question of cotton cloth. L. C. White, who runs everything here, says that if you don't reduce that cotton tariff he'll throw the Good Government League to the Saloon Push with the result that your political future will look like King Alfonso in a Socialist convention.

"Line 'er out, kid! Nervously, Aleck."

"The eyes of Uncle Joe were fixed on the ceiling looking for the spot where the ideal tariff ought to go"

From Citizens' Committee, Middletown, to Congressman Jones:

"Dear Sir—We, the Citizens' Committee of Middletown, hereby assembled and getting madder every minute, are anxious to know if—

"*Whereas*—We all voted for you and put more than [illegible] campaign fund; and,

"*Whereas*—You was sent up there to represent the home interests; also to get us a revision downward, an appropriation for the Philipsburg Canal, and a D. W. & C. extension to this place, instead of which you seem to be setting around Washington hobnobbing with the rich looters of the Commonwealth; and,

"*Whereas*—You have promised time and agin to call the attention of Hon. J. R. Cannon to tariff abuses which you ain't done yet; be it therefore

"*Resolved*—That you ain't doing your duty by your constituents; and furthermore

"*Resolved*—That you dassn't come home until you do.

"Signed,

"S. Honeycutt (Chairman),
Arthur Ferguson,
Lucas L. White,
Dr. J. Snyder."

From Representative Hardnutt, Washington, to Representative Jones, Washington:

"Dear Jones—For the past two or three weeks I have noticed you trying to get the attention of the Speaker. What result? There's another shapeless blob upon the people's forum. It was a beautiful and impressive sight to see you rise to your feet and bellow 'Mr. Speaker!' to the gentleman with the Lincoln whiskers and the Mark Hanna heart. Nothing doing. The great god Baal was asleep or gone a-fishing. The eyes of Uncle Joe were fixed on the ceiling—looking for the spot where the ideal tariff ought to go, I think. You cleared your throat and tried again. Did you ever see a horse-fly lift up his little trunk and trumpet at an elephant? That was you, trying to flag Uncle during one of his deaf spells. You stood right up and turned around and sat right down again.

"My dear fellow, why don't you learn to stay knocked out when you're hit? You're like Truth—crushed to earth you rise again. But mind you, even Truth will lose its bounce after it's been swatted often enough.

"If you really want to get a speech over to Uncle, cut out the Demosthenes act and take on a little of the Machiavelli. Mack was the smart Dago, after all; he knew the value of gum-shoes long before phonographs were invented.

"Get a letter of introduction from the Sugar Trust and take it around to Uncle's private office. Maybe he'll let you make your little speech there. Who knows? If he likes the speech, maybe he'll put you on the Ways and Means Committee where you can be of great service to your Country through the Corporations who rule it. That's the only practical way. I've tried 'em all. Cordially yours, John D. Hardnutt."

"Asa Bird introduced the distinguished guest with a few well-chosen remarks, and said that they would stand by their representative"

Item from the Middletown "Gazette":

"Banquet to Congressman Jones

"Last night at Odd Fellows' Hall a banquet was tendered our distinguished and once popular fellow citizen, Cong. Dan'l Webster Jones. Quite a concourse of prominent citizens turned out to greet our home boy, who is said to be quite a favorite with Speaker Cannon and Senators Hale and Aldrich, which is very nice for Dan, but kind of hard on the home folks.

"During the function Mrs. Congressman Jones was seen by our reporter sitting apart in the visitors' box with friends from the East and wearing one of the expensive toilettes which made her famous among the smart set of Washington and New York.

"Rev. Lucius Pratt spoke first with a short prayer in which he wished that some young warriors of the present day was like David of old who slew the giant Corruption with a small pebble and refused to loaf around with the dudes and boodlers. Asa Bird introduced the distinguished guest with a few well-chosen remarks, wherein he said that all could not succeed in the battle of life, but that the people of Middletown were willing to stand by their representative whether he stood by them or not. (Applause.) Hon. Dan'l Webster Jones next arose and made the speech of the evening. He praised our climate and our skies, not forgetting to touch lightly on the talents of our sons and daughters and our unequaled output of apples.

"He said further that the conditions of the Country were very bad. If we knew all, he said, our blood would boil in our veins. Not only were the Trusts, observed the speaker, like an Octopus reaching out over our broad land, but they were also employing legislators in the halls of Congress to represent their interests and not those of the people. (Applause.) Consequently, said Mr. Jones, the rich were growing richer and the poor poorer every day. When statesmen like Aldrich and Hale were making a patriotic show of revising the Tariff, who were they seeking to benefit? The People? No! Who, then? Need any one answer? (Cries of: 'They needn't!') But fortunately the American people would not be flim-flammed forever. They might swallow a gold-brick now and then, but they still knew the difference between Up and Down. The time was coming, and that soon, when the Tariff would be revised by the People. And on such a day laws would be made for the interests of the People and not for the people of the Interests.

"It don't do much good talking in Middletown after the damage is done in Washington"

"The speech was greeted with loud applause, and after listening to 'Violets' and 'I'm Afraid to Go Home in the Dark,' as rendered by our Volunteer Firemen's Band, all adjourned, voting the affair a great success.

"When interviewed by our reporter last night, Dr. J. Snyder, our popular painless dentist, said: 'It don't do much good talking in Middletown after the damage is done in Washington. If Dan Jones is such a fine rag-chewer, why didn't he bite off a little of that tariff on cotton cloth? Mr. and Mrs. Congressman Jones depart to-morrow for a short vacation at the seashore. Have a good time, Dan!"

"You was about the grandest sight we ever seen, and you done credit to the town that borned you"

This is the first of a new series of articles by Wallace Irwin, creator of Hashimura Togo, "The Japanese Schoolboy."

Stalked by an African Lion

An Experience of Collier's Photographer, in Which He Has Better Use for the Trigger Than the Camera-Shutter

HARTEBEESTS

By A. RADCLYFFE DUGMORE

PHOTOGRAPHS FROM LIFE BY THE AUTHOR

COPYRIGHT 1909 BY P. F. COLLIER & SON

ANIMALS, though very plentiful near our camp, which was in the neighborhood of the Tana River, were so wild that stalking them was excessively difficult. They were constantly on the lookout for lions, and their alertness was truly surprising. I determined after watching their habits for several days to resort to lying in wait for them at a certain place where they were in the habit of passing each morning. Zebras, hartebeests, and impalas were the only kinds I expected to see, but of none of these had I as yet secured any satisfactory pictures; so one morning, after having spent the night watching for lions in a boma, I started off to the selected place and made a rough blind with leafy branches, and there alone with a camera—and by good luck a rifle—I made myself comfortable. After about an hour's waiting a small herd of hartebeests came out of the sugar-bush, and I wondered whether they would come within range, for they are wonderfully careful animals, and act as the sentries for most of the African game. Hitherto all my efforts to get within camera range of them had been unavailing. I got my camera ready as quietly as possible, and watched. Another small herd emerged from some scrubby woods about one hundred yards away. The two bands eyed each other suspiciously for some minutes, and then slowly came toward me. As soon as they were near enough I made two exposures; but the sound of the shutter frightened them away for good. It was not long before some zebras came walking cautiously along the same path. They stopped before they were near enough for anything but a telephoto picture, and they stood staring in my direction for many minutes. I was sure they could not see me, and wondered what it was that interested them. I was not long left in doubt: a wretched hartebeest was coming to warn them of my presence. For over an hour he had been standing in the open plain, about a quarter of a mile away, watching me, and had evidently made up his mind to keep all animals away from my blind. He passed close to me, and on getting near the zebras gave a snort of alarm, and off they all went together. The special friends of the hartebeests are, apparently, the zebras, and I have known them to go a long distance out of their way to warn these friends of theirs of impending danger. I thought of returning to camp for a sleep, as I was very tired after the long night's watch, but it was nearing lunch hour, so I decided to wait a little longer, and beguiled the time writing letters, keeping all the while a good look-out to windward, which is the direction from which the animals would naturally approach, as coming the other way they would, of course, get scent of me. For some reason or other, just as I was finishing a letter, I happened to glance down wind. It was the most fortunate thing that has ever happened to me, for there, not eighty yards away, were two immense lions stalking me across some open ground. The sudden sight of these two big tawny yellow brutes was enough to stagger any one. They had seen me move, and had stopped immediately, absolutely still, with their eyes fixed on me! My first impulse was to grab a camera and get a picture of them, but as I leaned forward to pick it up they both took a few long slow steps forward, and I decided that it was no time for camera work if I wished to take my own skin safely back to camp. I therefore took up the rifle instead, feeling that it was far more useful than the camera. In my excitement I forgot to look to the sights of my rifle, taking it for granted that they would be set for one hundred yards, as I always kept them. I aimed at the larger of the two lions: the shot struck high, just over his head. I attributed this miss to my own excitement, and, taking more careful aim, fired again, with exactly the same result. Then I looked at the sights, and found that my gun-bearer had set them for three hundred yards. About this time I realized with sudden feeling of horror that I had no ammunition with me except the six cartridges that had been in the magazine and chamber of the rifle. There were no trees near me in which I could have taken refuge. It is perhaps needless to say that the next shot was fired with the greatest possible care and deliberation, and, to my intense satisfaction, I saw the big brute roll over. I had still three cartridges left. All this time the second lion had stood absolutely immovable, staring at me. I fired as quickly as I could and knocked him over. The feeling of relief was greater than can be imagined, but I had another moment of anxiety as I saw that the first lion had not been fatally wounded! Curiously enough, instead of charging me, as a wounded lion might be expected to do, he got up and slowly moved away, going into some thick brush. I signaled to my camera-bearer, who was waiting between me and camp, and he came running toward me. His course led him about seventy yards from the second lion, which had its back broken, and as he rushed past the lion gave a frightful roar: the poor negro thought his last moment had come, and completely collapsed. I persuaded him that he was not in immediate danger, and that I wanted him to go for some more ammunition so that I could take after the wounded beast, and put the other one out of its misery. He went off gladly enough, and returned with the whole camp following. We searched the scrubby woods, only to find a blood-stained track of the wounded lion and tracks of another one close beside. So it was particularly fortunate that I had not followed with my scanty supply of cartridges, and I ceased regretting the loss of the fine skin which I should greatly have liked to keep as a souvenir of my fortunate escape. However, I have the other skin, to say nothing of my own, so it would be ungrateful to complain of my luck.

Two Strong Men of Colombia

The One Who Got Tired and the One Who Stayed,—What They Did in a National Crisis

By PERRY HAMILTON

ONE of the two real men the Republic of Colombia has developed has gone away. General Rafael Reyes, cattleman, President, and a slow-moving, tired mountain of personal force, has renounced his claim to the Presidency, and, in Europe, is seeking the rest and quiet he has not had for months in Colombia. The other is still in Bogota. He is the young, vigorous, and enthusiastic General Alfredo Vázquez Cobo, President of the National Assembly and, for thirty-six hours, Minister of War.

These two men have not been friends; they have not got on very well together. But both have shown rare qualities of courage and patriotism, and it may turn out that one will take the other's place at the helm. Both have played dramatic rôles in Colombia's history. Once, on a rather recent occasion, they came together to save the integrity of their country. It is not a long story, this narrative of how an excited people was brought back to sanity, but it is characteristic of the country which has represented such bitter hostility to the United States and the Panama Canal enterprise.

On the 9th of last January Dr. Enrique Cortés, Colombian Minister at Washington, and Mr. Elihu Root, then Secretary of State, signed a treaty to facilitate the settlement of questions pending between Colombia and Panama. At the same time a treaty was signed between Colombia and Panama recognizing the independence of the latter and making provision for the establishment of a boundary between the two. Both instruments were more generous with Colombia than circumstances required. Perhaps conscience whispered that Colombia, whether through her own fault or not, had not been well treated in the matter of the separation of Panama.

The American Minister to Colombia left Washington for Bogota to secure the ratification of the treaties. To this end also, General Reyes called a "National Assembly," its members practically nominated and, he had reason to suppose, controlled by him. Certainly they should have been. They were, for the most part, Bogota politicians making their living, one way or another, out of the Government, which was Reyes. It is true there were from the start certain constitutional objections to ratification by anything except an elected Congress. Dr. Nicolás Esguerra stated them in a memorial addressed to the National Assembly, but he overlooked the fact that almost all the late treaties with Colombia have been ratified by just such a body.

The Split Over Panama

THERE were also more serious popular objections to the admission that Panama had successfully seceded from her mother country. One does not care to accept this in Bogota. Bogota is very far away indeed from the world, and facts filter slowly into the Colombian mind. The real trouble was, however, that the politicians were tired of the amiable despot who ruled them, and the people of the country were vexed with him. Of course, if it were not Reyes, it would be some one else. But there have been four years of Reyes.

So, with very little warning, on the 8th of March trouble began. The special committee, appointed by the Assembly to consider the treaties, reported in favor of passage. But Dr. Antonio José Restrepo, who presented the report, was followed home by a howling mob of students who accused him of wishing to betray the honor of Colombia. The next day a crowd of students rushed into the American Legation to protest to the American Minister against the treaties. They were met with courtesy. Later a mob shrieked various unpleasant things about Americans under the windows of the legation.

General Reyes designated General Jorge Holguín to succeed to the Presidency in case of accident. General Vázquez Cobo was elected to supplant General Holguín as President of the Assembly.

On Saturday a crowd of students entered the Presidential palace and demanded to see General Reyes.

"We will not stand for these treaties," they cried.

"I have pledged myself to the treaties," replied the President. "If the people of Colombia will not uphold me, I must fall with the treaties. What do you want me to do?"

"We can not say what we want to say, because you are President," they answered.

"Speak to me, then, as Colombians to a Colombian, not as to a President. I shall submit my resignation to the National Assembly at once."

They did not need to be urged, these students. They said what was in their minds with more frankness than caution. The President was as good as his word. He listened to them and tried in vain to argue with them. Then he sent in his resignation to the Assembly, and General Holguín assumed the Presidency, naming a Cabinet in which the idol of the malcontents, Dr. Nicolás Esguerra, succeeded him as Minister of Finance. The latter was for breaking all relations with the United States at once. The treaties were withdrawn from consideration by the Assembly. Bogota went wild.

When the Mob Stormed General Cobo's House

THOUSANDS of people thronged the streets crying: "Down with Reyes! Death to the traitors!"—the last a gentle allusion to those who would admit the independence of Panama. All day a seething mob swept from one plaza to another; the police were helpless; Holguín made no attempt to control the crowd which overturned the city. The Minister of War, Carlos Cuervo Márquez, caught by the crowd while crossing the Plaza Bolivar, made a speech in which he said that it was a time for each man to be ruled by his own conscience, and to say and do what he chose. Speeches were delivered at every moment and some simultaneously. The news spread, firelike. In twelve hours there would have been civil war.

Then suddenly the mob made its fatal error. Crying "Down with the traitors!" they rushed to the house of General Vázquez Cobo. From the street before the house and from the Plaza Santander they stoned the house, breaking its windows and battering at its door, howling for the death of this man whom they believed ready to sell the honor of Colombia.

General Reyes reviewing his troops from the balcony of the Presidential palace, Bogota

Now, General Vázquez Cobo is not a politician. He is rather a business man, a husband, and a father—very recently the latter. His wife was yet ill and the twin babies still nursing. When the ruffians attacked the house, Señora Vázquez Cobo was thrown into a pitiable state. But the state of General Vázquez Cobo was anything but pitiable. The mob left at last. General Vázquez Cobo carried his wife to another house and left her with friends. Then he jammed his hat on his head and set off for the Presidential palace.

Before the palace the street was black with people, screaming: "Down with Reyes, the thief! Let the coward come out! Death to Reyes, the traitor!" Within, Acting President Holguín had called a Cabinet meeting of five badly frightened statesmen. Reyes, the dethroned, was closeted in his own room. Vázquez Cobo elbowed his way through the mob and mounted the stairs of the palace three steps at a time. He entered the council hall unannounced, marched straight to the huddled group of Ministers, and, leaning across the council table, pointed his finger at the idol of the hour, Dr. Nicolás Esguerra, and fairly barked at him: "*Canaille!* You are the only traitor in this country!" Then, with infinite contempt, he turned to the Minister of War. "*Coward!*" he said. "Get out of here!" Facing Holguín, he said: "Has this country a President or not? What are you doing here while a mob stones the houses of decent people? Is there a *man* in this country?" And just then General Reyes appeared in the doorway.

"Mr. President of the National Assembly," he said with quiet dignity, "you forget yourself and your high office."

"*I* forget my office!" shouted Vázquez Cobo. "It is these beings here who forget theirs! If that coward will not keep order in this city, I will go to the barracks and put myself at the head of the troops to guard the lives and property of your people!"

"Leave us, gentlemen," said General Reyes to the Ministers. "And you, sir," he thundered to Vázquez Cobo, "remember that you are speaking to the Chief Magistrate of the nation!"

"You are nothing! You have resigned under fire! You have deserted your trust! Come here!" He seized the arm of the General and dragged him toward the windows. "Do you hear what those beasts are shouting? 'Death to Reyes! Let the coward show himself!' If you allow that despicable mob to frighten you into laying down your authority and your responsibility, you are what they call you!"

There was a moment of silence. The cries of the mob rose through the windows. "*Muera Reyes! Muera el vendedor!*"

"By God," cried Reyes, "we shall see! I haven't had a man among all of these to help me, but you are a Man. I resume the Presideney and I make you Minister of War. Mr. Minister, I command you to order the troops to clear the streets, to place the city under martial law, to restore peace to Colombia!"

General Vázquez Cobo stepped out on the balcony. A roar broke from the mob; then there was silence.

"Cowards!" he shouted; "I will show you who is master here!"

He called an orderly and, in the hearing of the crowd, issued his commands: "Say to the commandant of the troops that Vázquez Cobo is Minister of War. Tell him to bring me a regiment and clear the streets of these swine. I shall wait here to see him do it."

The orderly saluted.

Calm After the Storm

IN TEN minutes there was not a man in the street before the palace. In fifteen minutes, with a great rattle, a company of cavalry escorted a machine gun through the crowd and unlimbered it on the terrace of the National Palace, where it could sweep the main square. In twenty minutes there were only soldiers in the plaza. An hour later, at two o'clock in the morning, a state of siege was declared, and General Nicolás Perdomo, whose reputation for mercilessness is second only to that of General Aristides Fernández, was placed in command of the city, and General Fernández himself, "the butcher," was made Chief of Staff. Reyes was again President. Peace was restored.

Monday was as if nothing had happened, save for a policeman armed with a Mauser at every corner. Business reopened. People in the streets, where most of the business of Bogota is transacted, talked of the rate of exchange and the expected arrival of the mail. The revolution was over. At noon General Vázquez Cobo resigned his post as Minister of War and returned to preside over the National Assembly.

General Reyes looms big in failure—the sentiment against ratification was so strong that a sick man could not combat it—and his country will remember him as a distinguished soldier, explorer (on one expedition he split the South American wilds from Panama to Patagonia), diplomat. For twenty-five years before 1904, when he was made President, he was a power. Now he is old and ill, and the weight of his years presses him heavily. His resignation has been accepted by the Colombian Congress, and General Jorge Holguín, whom he left in charge when he went to Europe, has been appointed to serve out the unexpired term. Another election will be held in a few months, and another President will be chosen. Will it be General Cobo? Perhaps—if he will accept. But, as I have tried to show, he is not a politician. He is a patriot.

The Closing Hour
Boys employed in a West Virginia glass factory. An alternate day and night shift

Midnight in an Indiana glass works. A good place for "intervention"

This lad, working in a Cincinnati box factory, had his right arm cut off by a saw

Boy drivers in a coal mine. Legislation, strictly enforced, is the remedy

This boy remains ten hours a day in a dark mine, most of the time sitting idle. The article tells of him

A boy making melon baskets in a factory of Indiana. These photographs are mostly of "Northern" scenes

The Child Workers

Who Get No Summer Vacation

HERE is a page full of children who work. They are mostly chosen from north of Mason and Dixon's line. They are under a proper legal age, which means that the work is too severe for their health, stunting their growth. The effect of child labor has been proved to be undersized men and women, oftentimes peculiarly susceptible to disease. The census of 1900 gives seven hundred thousand children in gainful pursuits other than agricultural.

Illiteracy goes hand in hand with child labor. Thus, in three States, the illiteracy of the children of the factory families from ten to fourteen years of age is from three to four times as great as the illiteracy of the white children of the same ages in these States at large, so that ignorance is added to ill-health.

The evil of child labor is not confined to any one section of the country. New England, the Middle West, Philadelphia and its environs, and the Piedmont region profit by it. The man who made the photographs on this page has met child-labor conditions in twenty States, and has registered what he has seen in one thousand photographs, distributed over many geographical sections.

The boy sitting at the door on which the cryptic notation has been revealed by the flashlight is a trapper boy, fifteen years old, who has "trapped" for several years in a West Virginia mine at seventy-five cents a day for ten hours work. All he does is to open and shut the door—most of the time sitting idle and waiting for the coal-cars to pass through. The writing on the door was not visible in the dark mine till the plate was developed.

The results of child labor in England were acutely seen in the physique of the men desiring to enlist for the regular army at the time of the Boer War. It was found that the average measurements of the men from certain factory sections were noticeably of a lower standard than those of previous generations.

The Menace of the Still-Devil

Obstacles Met in Following the Whisky Trail Through the Mountainous Regions of the Southern States

By MARGARET BUSBEE SHIPP

A COMPILATION of the records of the Revenue Service would prove the most thrilling chapter in the story of our civil government, for it is a service which demands absolute fearlessness and indifference to weather, bullets, or adverse criticism. If one glances over a newspaper's account of a successful raid, with a quantity of contraband stuff seized and a prisoner captured, the natural comment is: "Poor fellow!" The stir of sympathy is for the illiterate and impecunious lawbreaker; one pictures him at his lonely still, while the armed enforcer of the law creeps upon him unawares. There is the homely rime:

"I care not which dog may be in the wrong,
Nor which begun the fight,
For my heart will beat, while it beats at all,
For the under dog in the fight."

To make up for the lack of public sympathy between the deputies, there exists a loyalty, a comradeship, which seems to take the place of the wider sympathy they lose. This is especially the case where the collector is a man whose forceful personality arouses fealty to him and enthusiasm for the service. Those who war against "moonshine" must soberly realize that they will face the primitive emotions of hate, revenge, and treachery. Instead of the bluish-green stamp of the Government for tax-paid spirits, the find the red smear of blood.

Take the following cases:

Hunting "Moonshiners"

ON THE 23d of October, 1906, a deputy marshal named Jordan was shot at Youngsville, North Carolina, by a blockader named Robbins. His face was peppered with birdshot, of which he claims "nearly all have been extracted, not but nine left." The blockader was sentenced to the United States prison at Atlanta, and by the 23d of August, 1907, Mr. Jordan had forgotten all about the matter. The office had reports of a still five miles south of Chapel Hill. Jordan, Deputy Collector Hendrix, and posseman Banks drove from Raleigh direct to the spot, purposely avoiding going by Durham, and not knowing that a party had been sent from Greensboro with instructions to join them there. In the mean time, at Durham, a new informer told Deputy Henry, with his two possemen, that he had located a moonshine outfit to which he could lead them.

There was a full moon, but it had gone under a cloud and a light rain was falling when Jordan and his party stealthily approached the still. They advanced along the side of a creek, and presently Jordan stumbled over a box. Stooping down to examine it, he said to the others: "Here is the meal and malt!"

As he looked up, the barrel of a revolver was not a foot from his face. Jordan knocked it up with the muzzle of his rifle, and it fired. His pistol was in his pocket, or he would have killed the other man at once. In the flash of a moment there was repeated firing—indeed, Deputy Henry is positive that Jordan fired the first shot. Jordan, wounded, crouched back of the box of meal and malt, firing as well as he could. He could not see his adversary; all that was visible was the glint of his pistol among the elder-bushes. Shots were furiously exchanged, and then as the tardy moon came forth, Jordan saw Hendrix and Riggsbee scuffling in a hand-to-hand combat, suddenly recognized Riggsbee, and called out to him.

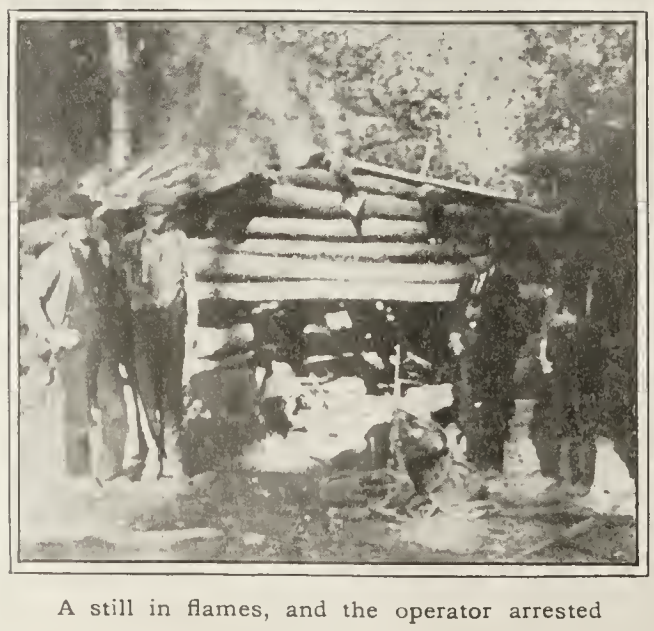
The two parties, each of whom had mistaken the other for blockaders, now had to reckon with the deadly consequences of their blunder. Poor Banks lay with a leg shattered; Henry was hit in the thigh; one of his possemen in the right arm, and Jordan was bleeding from three ghastly wounds, a bullet having passed through his left thigh, and another through his right knee. While the wounded men lay there, their comrades, though fearing their lives might flicker out before relief could reach them, did not forget the purpose for which they had come. The beer was poured on the ground, the still cut to pieces with the still-devils (picks made for the purpose), and they went about their work as if there had been no bloody prelude. It is an interesting point—but a moment's reflection will cause any one to see that the Government can not pay for mistakes. A deputy marshal is paid by fees, so during the time Jordan's condition fluctuated between life and death, and during the weeks of his slow convalescence, among other disadvantages, he had to suffer the loss of his income.

A similar mistake took place on the Virginia-Carolina line, and was as bloody an affray as the old "border battles" of hostile clans. The Internal Revenue office at Richmond had information of a still and sent out a party to capture it. In the mean time, North Carolina deputies had located it as being in their territory, and had gone to the still. They were preparing to demolish it, when they saw men approaching. Mistaking them for the owners making an attack, they called upon them to halt and to throw up their hands. Naturally, the Virginians thought they had to reckon with armed and intrenched blockaders, and they returned the demand for surrender by opening fire. Not until one party surrendered, after every man in it had been wounded and the young leader horribly shot, did they find out the grim truth. This man is now a prominent Presbyterian clergyman, and at the time was working in the revenue service to defray his expenses at the theological seminary.

One familiar with the disposition of the razor-back hog knows that he is but a foolish beast, and that whenever he is called, and from whatever direction, his sole impulse is to make straight to the place where he is habitually fed. For instance, a man in the back of the pasture or by the side of the road may call him, and he straightway rushes for the feed-trough behind the barn. A deputy in Randolph County, North Carolina, put his early training on the farm to good account. Seeing a drove of well-fed "pine rooters," he shouted the familiar, long-drawn summons, and followed them as fast as he could ride, until he came to the still where they were fed upon the spent beer, and there he caught their master red-handed in the act.

The officers leaving Smithtown, Tennessee, after finishing their raid of July 23–25, 1907, where they destroyed four distilleries—thirteen the month before

In Letcher County, Kentucky, Deputy H. B. Taylor was led to a still in the same way by a large white gander which fattened there.



Two years and more have passed since the "ball-bearing raid," yet of all the deputies' many-fold experiences certain points of singularity seem to fix this raid in their memories more vividly than any other. The officers had captured a wily old offender, and he lay in jail and his confiscated whisky was in Uncle Sam's cellars. Yet they were not altogether elated. The captured still could not have furnished a tithe of the contraband spirits they had evidence had been sold in the county. There was a barroom in which whisky was retailed at an astonishingly low price, but a search could discover none that was not tax-paid, nor could they find any evidence to support their conviction that a large amount of "baldhead" (barrels without the stamp) was being shipped. One of the deputies, the Beau Brummell of the force, lingered in the peaceful village, where the fattest hogs he had ever seen strolled about casually by day, and every night at ten the curfew rang.

The "Ball-Bearing Raid"

IT WAS impossible to gain the slightest information, until one day he was surprised to receive a message from the prisoner, advising him to come to the jail, and charging him with strictest secrecy.

After exacting a promise that his information would be brought forward in his favor when his own case came to trial, the man sullenly gave details.

The still was located in a ravine near a saw-mill, the saw-mill being used as a blind to cover the noise of operating, and to account for the number of hands employed. No whisky was moved save at night, on Tuesdays and Fridays. A pair of fine Kentucky mules, rubber-shod, were hitched to the wagon, which had rubber tires, ball-bearing axles, chains covered with rubber, points of whiffle-trees rubber-tipped. So soundlessly it moved along the sawdust road that ten feet away you could not hear. A little in front of it, at intervals, walked armed men as scouts; behind it were two others. The barrels of whisky were covered with planks, so that to a chance observer it would look like a load of lumber. But there was no observer, and this was the main point of strength, for after curfew no man, woman, or child was allowed to appear on the streets. In silence, between one and three o'clock, the load of "baldhead" was moved down the deserted thoroughfare. Those who aided in the distillery by work or outrider duty received their whisky free and enough spent beer to fatten their hogs, as well as good wages.

A still in flames, and the operator arrested

The prisoner minutely described the way to the still, cautioning the deputies about wired communication which might give warning and defeat their plans. Of course the sawdust road was too well guarded to be a practicable avenue of approach, but the wood to the left was safeguarded only by wires. If a friend approached, he twanged it twice, sharp and quick, while the accidental stumbling against it made a jarring ring which showed that a stranger was in the vicinity. The moonshiner laid particular stress upon this.

A Courageous Feat

THE undertaking was one that required picked men, and the deputy wired for the best in the district. Beau Brummell himself was a natural leader, with muscles like steel, unflinching determination, and a flexible courtesy which could adjust itself to any situation. Once, when the wife of a captured moonshiner was shooting at him as fast as she could reload her gun, he did not fail to lift his hat as he made his exit from her gate—just a little hurriedly. There was the tall deputy, who happily combined courage and good-humor, another who had answered the summons in such a hurry that he was wearing his new Panama, and carrying an umbrella to protect it, and two deputy marshals. Then there was the deputy who had led the North Carolina officers in the border battle just referred to, of whom it was said that on every raid he managed "to get a still and a new joke." But he was not laughing now, as with the rain pouring down in steady sheets, the officers met at the appointed trysting-place, having come by different routes to avoid suspicion. Their horses were hitched to trees in the woods, and then Brummell made clear the plan of their expedition.

The men followed the footpath trail through the first wood, stumbling along in the thick darkness. Then they had to cross half a mile of plowed ground, sinking into the black, sticky soil ankle-deep at every stride. The last strip of wood was separated from the plowed acres by a barbed wire fence. Brummell tore his coat almost in two on it, but made no further comment than a quiet suggestion to the others to be more careful. The deputy with the umbrella stopped short.

"I am dead tired and my feet are like lead, and I don't believe we'll ever find a still a night like this, and I am going back."

"Very well," said Brummell, without turning his head.

"Who will turn back with me?" challenged the deputy with the umbrella.

But now the leader wheeled and faced the men, and his voice cut like a lash.

"You will find, sir, that not a man will follow you. Good night."

As the umbrella bobbed in and out of the furrows, the depleted crowd went on their way. As their informer had foretold, they were now obliged to go Indian fashion. Through tangled undergrowth, blackberry brambles, bamboo tangles, they wound their way. Suddenly the tall deputy whispered:

"I struck the wire! Did you hear it ring? I tripped right over it!"

They were afraid to make a light, and feeling for the wire on hands and knees, they could not locate it amid that jungle of vines. So creeping now, their faces torn by thorns, they made their painful progress to the cleared place on the very edge of the ravine.

No sound, no movement, only stillness and night! They made a cautious light with a lantern. The lair was exactly as described; but immediately their trained eyes knew that no still had ever been in that hollow.

In a moment Brummell saw the scheme of revenge. Most safely perpetrated it was, for no court has jurisdiction over a practical joke, and the sympathy is never with the victim.

How cozy, how warm, how homelike, did a bed in jail seem at that moment! They could fancy that their late prisoner, as he lay snug in his cot and pictured them in the plowed field, chuckled most diabolically.

This is as far as the story is given for publication.

"What *did* the deputies say?" Beau Brummell was asked by a persistent questioner.

"I am afraid I have forgotten," he replied blandly.

Comment on Congress

By MARK SULLIVAN

DR. ALBERT SHAW records the progress of the world in the "Review of Reviews." In the current number he adverts to President Taft in these words:

"With all his experience as an executive officer and a statesman, Mr. Taft's greatest qualities are those of judge and umpire."

The conception of Mr. Taft as a great judge is widely and reasonably held. To his judicial mind we should like to put a problem involving intensive consideration of the words "thorough," "honest," and "substantial"—the terms used by Mr. Taft a year ago in promising tariff revision downward. We will consider the evidenee of the defendant only. Sereno Elisha Payne, author of the tariff bill, in the speech in which he begged his fellow-Congressman to accept the bill (July 30, page 4914 of the Congressional Record) used this language:

"Gentlemen, talk about equivalent *ad valorem*. The equivalent *ad valorem* for 1907 under the Dingley law was 42.55 per cent. Upon the same articles coming into the United States under this conference report the equivalent *ad valorem* will be 41.58 per cent, a decrease of equivalent *ad valorem* of 1 per cent."

Not quite one per cent—to be exact, ninety-seven one-hundredths of one per eent. Shorn of its technicalities, Mr. Payne's statement is that the tariff has been reduced ninety-seven one-hundredths of one per cent. Aecepting this view, for the moment, as eorrect—for it is denied by responsible men—the judieial question we should like to propound to Mr. Taft as a great umpire is this: Does ninety-seven one-hundredths of one per eent meet the definitions given in standard dietionaries for the words, "thorough," "honest," and "substantial"? Dr. Shaw says further in his analysis of Mr. Taft's qualities:

"He is conspicuous as an exponent of justiee, as a harmonizer, and as a finder of the reasonable middle course where compromise involves no sacrifice of principle."

Senator Bailey's Prophecy

SENATOR BAILEY was asserting that the Republicans in the Senate were revising the tariff upward rather than downward:

"You Republicans think you dare do anything now, beeause you think the country is afraid of the Democratie Party. I fear the country is afraid of us. If not, they would have turned you out long ago. [Laughter.] But mark my words: You ean proceed too far. You can multiply the burdens until the people will rise up in their righteous wrath and drive you from the high places whose powers you have abused. Even if they do not think we are as wise as we ought to be, they will after a while reach the conelusion that it is better to be governed by fools than it is to be governed by rascals." [Laughter.]

Many experieneed Republican politicians have predicted that as a result of the Senate's tariff performanees, the next Lower House of Congress will be Demoeratie.

Next, the Income Tax

THE income tax is now up to the States individually. In the following States the Legislatures will hold their next sessions the coming January:

New York	South Carolina	Virginia
Massachusetts	Maryland	Rhode Island
Kentucky	New Jersey	Mississippi

The men who will compose these nine State Legislatures will be elected in November. No citizen of any one of these nine States should cast his ballot at this election without knowing how each candidate for the Legislature stands on the ineome tax.

In May next year, the Legislature of Louisiana will meet, and in October, the Legislature of Vermont. The great bulk of the States have their next Legislative sessions in January, 1911. That is when the main fight on the income tax will eome.

234 Days

ILLINOIS is the only State in the Middle West which has no Insurgent representation in either the Senate or the Lower House of Congress. Is Illinois eompletely dominated by the eorrupt politics of Chicago? Is there in all Illinois none of the political sentiment that animates Wisconsin, Iowa, and Minnesota? Illinois has twenty-five Congressmen; six of them are Demoerats. Of the nineteen Republieans not one is an Insurgent. All of these Illinois Congressmen must come before their constituents at the direet primaries the second Tuesday of next April—234 days from the date of this paper.

Will Ohio Remember This?

THE Legislature of Ohio sent a memorial to Congress demanding free lumber. The Republican State Convention in Ohio last year demanded free lumber. The entire Republican delegation at Washington had an opportunity to vote for free lumber—it was before both the Senate and the Lower House. In the Senate, Mr. Burton voted for free lumber and Mr. Dick did not. In the Lower House, some Ohio Congressmen voted for free lumber and some did not. Will Ohio bear this record in mind when it comes to electing a new Congressional delegation? At present, Ohio has no Insurgent Congressman. Yet the political sentiment of the people of Ohio must be much the same as in Wisconsin, Iowa, and Minnesota.

Michigan's Opportunity

THERE are no words too strong to describe how wide apart have been the public sentiment of many communities and the actions of the men who represent those communities in Washington. Michigan is a State whose population is much the same in eharacter as Wiseonsin, aeross the lake. From the newspapers of Michigan and from private expressions of opinion it is clear that the people of that State wanted revision downward and sympathized with the Insurgents in the Senate. Here is one from the Escanaba "Journal":

"The great mass of the people are convinced that there is something radically wrong with the tariff and the manner in which it is being tinkered. Just what it is the people do not know, but they do know that Aldrich and his followers are doing their best to fix it up to suit the great financial and industrial interests of the country . . . without doubt the ten 'insurgent' Senators are nearer aeting in harmony with public opinion than do those who are elinging so closely to Aldrieh. Every person who admires sturdy, true, and courageous American manhood can not but admit that Dolliver, Cummins, Beveridge, and other insurgents are worthy of respect. They have the eourage of their convietions, and that is the kind of men who are needed and who are lamentably too few in Congress."

And yet Michigan's two Senators were at Aldrieh's command on every vote where he wanted them. If Michigan publie opinion is sturdy enough to express itself in action, they will soon have the opportunity. Senator Burrows's term expires with this session. He must come before the next Michigan Legislature for reelection. Among the other States which will have the same early opportunity as Michigan to pass upon Senators who have voted uniformly with Aldrieh are Ohio, Montana, California, and Nevada. Senators Carter and Dixon of Montana both voted with Aldrieh uniformly. It is not to be doubted that Montana would scorn the thought of sending Aldrieh himself to the Senate.

From the Hardware Store

THERON THOMPSON is president of the Thompson Brothers Company. This firm is located in Museatine, Iowa, and they sell hardware, stoves, and farm and garden seeds. Mr. Thompson writes:

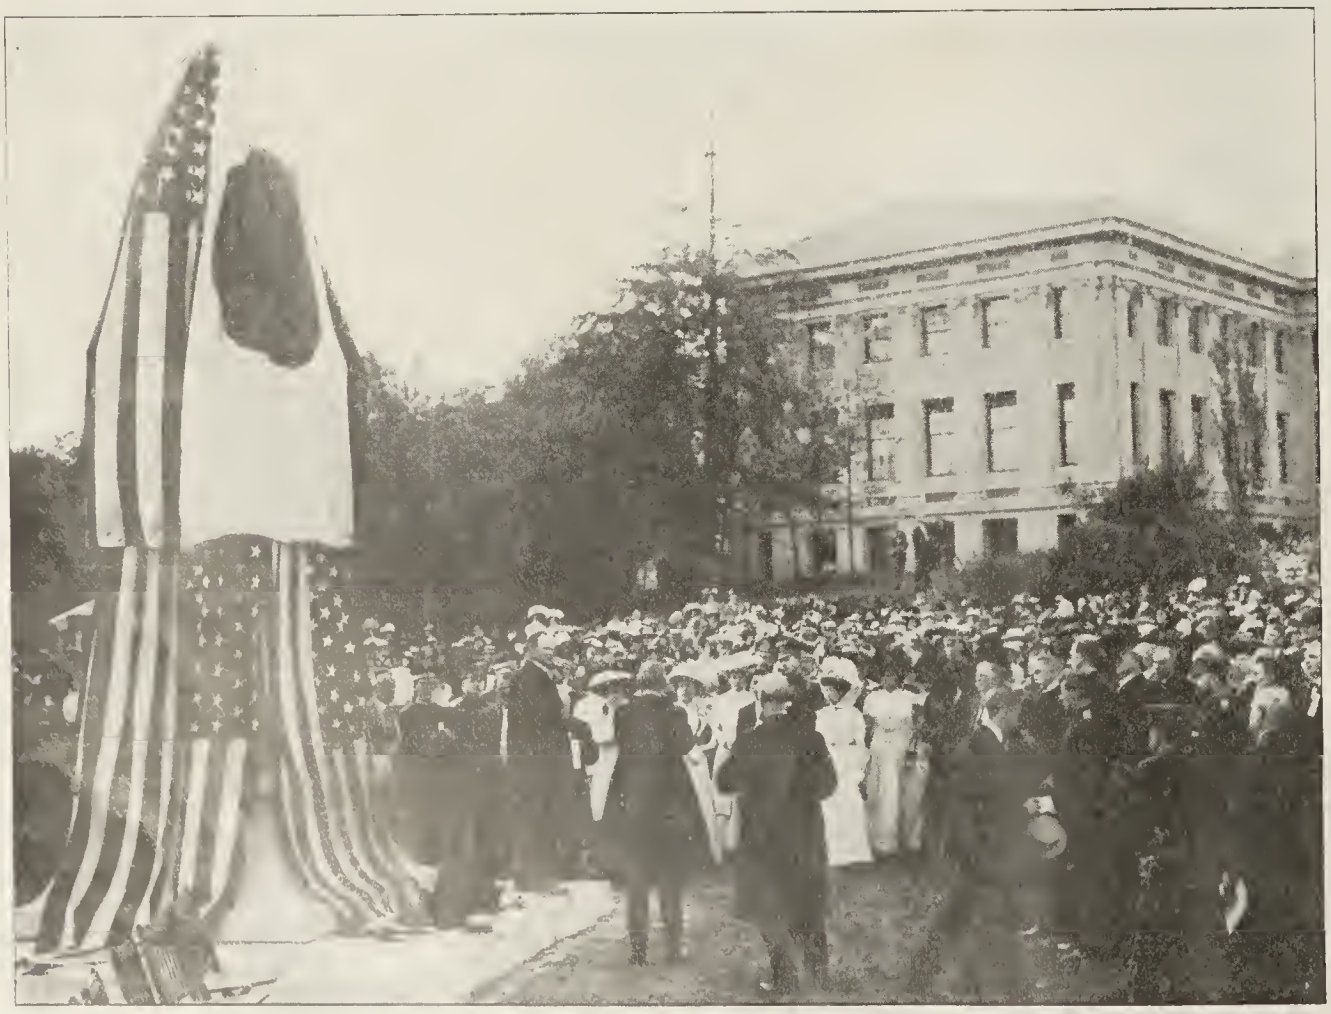
"I have not been able to find one man (Republican) who is with Aldrich and his erowd. For many years I have followed the praetise, when important publie questions are before the people, of asking from men who enter my store as to their views on the questions. Having no ax to grind and seeking no office, I have made up my mind there could be no better way to find the real sentiment of a eommunity. *The voters (Republican) are overwhelmingly with the Insurgents.* When one interviews them, some are vehement in their denmeiation of Aldrieh and his methods; others have a disgusted look, as much as to say, what else did you expect; others, who have their party more at heart, look blne and discouraged. This is no overdrawn statement. Politicians may try to bolster up their courage by statements to the eontrary. They don't feel the people direct. Let no one think the eommon people are not reading and thinking. They are awake and will keep awake until this question is settled to their liking. Actually we do not understand out here why things should go as Aldrich desires them. We try to grasp it, and wonder is it rotten polities or is it graft, or both. In my thirty-five years of business life I have never been more impressed than now with the deep-seated dissatisfaetion among the Republicans on this question alone of tariff revision. I believe Cummins would eome so near getting all the votes for any position in this State as against any candidate who has stood by Aldrich that it would hardly be worth while to count his opponent's votes. One is astonished at times at the expressions that come from unexpected sourees so much so that one is inelined to feel blue over the future of the Republiean Party. It must be that Aldrich and his cohorts believe that the people do not read or think.

THERON THOMPSON."

Next week there will be printed on this page a record which will show just who "has stood by Aldrich." That list of Senators who have voted with Aldrich uniformly will solve the perplexity of Mr. Thompson and many thousand others: "We do not understand out here why things should go as Aldrich desires them."

On this page last week it was announced that we would print this week a record of all the votes in the Senate, showing how often each Senator voted *with* Aldrich, how often he voted *against* Aldrich, and how often he did not vote at all. It has been impossible to complete the record in time—it involves the verification of 14,764 individual ballots. It will be published on this page next week, August 28

What the World Is Doing:



Cornering the Money Market

The line of newsboys and messengers in front of the United States Sub-Treasury in Wall Street, New York, August 4, waiting to obtain new Lincoln pennies. The coins were afterward bartered on the curb

A Diva Becomes a Bride

Madame Lillian Nordica, the famous singer, was married in London to Mr. George Washington Young of New York, on July 29. The ceremony took place in the King's Weigh House Chapel, Grosvenor Square

A Monument to the "Empire Builder"

Governor John A. Johnson of Minnesota unveiled the colossal bust of James J. Hill—the largest of its kind ever cast—at the Alaska-Yukon-Pacific Exposition, Seattle, on Minnesota Day, August 3

Seven Days

FINANCIERS are sensitive recorders. Spanish securities dropped only a couple of points while Barcelona rioted. This unworried money market meant that the strong men of the nation did not take the revolution seriously.

More frank than wise, the London newspapers bubble over with pride in the pageant of English battleships. "It is borne in upon even the most careless that this splendid body of men and these tremendous machines do not exist for fun. The purpose of the navy is war."

With that urbanity which is so much more bitter than a blow, the Duke of Westminster, stung by the phrases and taxes of Lloyd-George, says: "While in other circumstances I should be disposed to attach importance to every utterance coming from the Chancellor of the Exchequer, the traditions of that great office have become so far submerged under the personal idiosyncrasies of the present occupant that a person attacked from that quarter should find all that is necessary in any defense in the fairness and sense of decency still inherent in the community."

Clearer yet, and clearer, it is seen that the British Budget is a revolution. If it is passed, social history will date from that day when the very rich were taxed in a way that hurt.

Very early in the morning, sailing by the light of the moon, Roger Sommer, over French soil, beat all records for a time flight with an aeroplane. He kept moving over the tops of things for 2 hours 27 minutes 15 seconds. This means that Wilbur Wright will have to take a day off, and lead the world again.

In a tone of apology, sincere but shaky, Mr. Taft explains his name signed to the Tariff bill. He says: "The bill is not a complete compliance with the promises made, strictly interpreted, *but*—"

Says the New York "Times": "The verdict must be, we think, that for the most part he was beaten."

The President's trip will consume two months and cover 13,000 miles. The Middle West, the Far West, and the South, the Alaska-Yukon Exposition at Seattle, the New Orleans Convention of the Deep Waterways Association, are a few of the top notes which he will strike. But the picturesque incident of the trip will come when he meets the virile tyrant of Mexico. It is at El Paso that Diaz and Taft will exchange the rulers' grip.

While Seattle and her sister cities of the Pacific Coast greet the unseen with a cheer, the fisher folk of Gloucester and the inland residents of Old Hadley are indulging in birthday celebrations of their most ancient past. It was Hadley's two hundred and fiftieth anniversary.

In electing a woman Superintendent of Schools, Chicago has again shown that great cities are the home of radical thought.

The baseball race grows hotter as the summer goes. Greatest of the world's great hitters, Hans Wagner of Pittsburg, has been injured, and his team of "Pirates" begins to slump, while the deadly "Cubs" climb stealthily toward the top.

The American public, swift to rebuke a monkey dinner at Newport, are pleased to throng two summer shows revealing monkeys who can smoke and skate. Consul and Peter are the star performers during New York's hot and silly season.

Many men of diverse mind celebrated the centenary of Alfred Tennyson on August 6. He wrote in enough moods to reach boarding-school girls, and strong men in the dust and heat of the arena, and those men and women who have passed through the waters of incalculable pain. In person he made the perfect figure of a poet—reticent and prophetic, of noble bearing.

The summer wanes and the season of vivid color is at hand. There's a whisper down the field where the year has shot her yield, and the ricks stand gray to the sun.

Mayor Tom

MAYOR TOM L. JOHNSON of Cleveland has been pounded to his knees. A majority of 3,982 votes was rolled up on August 3 against one of his pet schemes. It is his fourth defeat in ten months. The vote this time was on the "Schmidt Traction Franchise." This was to be the start for extension grants to belt three-fourths of the city with three-cent fare lines. From the start Mayor Johnson's program and battle-cry have been the Three-Cent Fare and Universal Transfers.

Graft and faulty service have been the evils of public utilities, and, particularly, of street-car systems. The street-car lines of Cleveland became muddled, and Johnson sprang forward with a cure-all for traction ills. The Municipal Traction Company was to operate all the street-car lines of the city, and this holding company was to be run by trustees for the good and profit of the community. The scheme only increased the tangle of transfers and other troubles.

The "Outlook" says of Johnson and his works: "His record of disastrous failure as a reorganizer of the street railways of Cleveland is such that he ought to be decisively defeated."

The popular impression is that he has been honest and sincere in his plans, that he has lost much of his own money in trying to carry through these plans, and that he has shown poor judgment and deficient executive skill in his efforts.

Another and more subtle thing operated to defeat him. The American people are loth to have democracy handed out to them on a platter. They resent being hustled into righteousness. They want democracy to come in their own way, worked out by the mass all together, and not too swiftly. Dr. Parkhurst,

A Record of Current Events

Rudolph Spreckels, and Tom Johnson are three shining instances of militant and sincere reformers whose desires outran their public. Their idealism has been too naked, too stringent, and too rampant for the community which they tried to stir.

Arkansas Peonage

FOUR weeks ago we published a two-column item called "The Meaning of Peonage." It was the veracious personal history of one Joseph Callas. Since then letters have tumbled in with nearly every mail, some in praise and with additional details of man's inhumanity; but most in protest from troubled citizens of the State of Arkansas. About a dozen of the Arkansas newspapers have forcefully resented the article.

Here, for instance, is the virile comment of the Dardanelle "Post-Dispatch":

"Manifestly false, unfair, and 'yellow.' The case of Callas is founded upon, constructed of, and embellished with the rankest falsehood. If these things are true, then COLLIER'S is to be severely criticized for concealing the name of that particular locality in which they happened and throwing the whole libelous burden upon the State, and for not making an honest fight against them, in which fight the State of Arkansas would join to its utmost power. But if they are untrue—and we challenge authentic proof of their truth—then COLLIER'S, the National Weekly, has adopted the most dastardly method of a journalistic assassin."

Rather pathetically they add: "We recognize that the efforts of a country journal of local circulation, such as the 'Post-Dispatch,' will avail but little in controverting the effect of the article."

There is exactly one reason why we withheld the name of the village and of the labor camp owner who maltreated his white slaves. He is paying damage money for his cruelty, and, under the cool eye of the Federal authorities, he has promised to clean up the camp. If the program breaks at any point, we shall print his name in capitals, with additional sworn testimony of his methods.

As to the truth of the article. The owner of the labor camp is paying $5,000 to Callas for his illegal detention. John Clifton Elder is the lawyer who has handled the case for Callas. Members of the United States Commission of Immigration have followed the case.

Speed

"A RACE-AUTOMOBILE adorned with great pipes like serpents, with explosive breath—a race-automobile which seems to rush over exploding powder—is more beautiful than the Victory of Samothrace."

In this exalted strain the clever Marinetti of Milan, author and believer in the Future rather than in the moth-eaten Past and the boresome Present, hymns the throbbing motor.

Such things in speed they did at Brighton Beach, New York, on the last day of July as made the Winged Victory a feeble performer. The winning car circled the oval for 1,091 miles in the twenty-four hours. (The record is 1,177 miles, 86 miles better, and made last year.)

Both contests made better going than a thousand miles a day. It is only a hundred years ago that men were stumbling along on a maximum of fifty miles a day. It is to ask whether you change the man when you hurl him from point to point like a hand-guided cannon-ball?

The annual Glidden tour has just run its course and ceased to be. This is the endurance race, when that car wins which shows least wear and tear from all sorts of roads and hazards, after every part has been searchingly examined. Thirty cars started from Detroit on July 12. Twenty-four arrived at Kansas City on the last of July. One of them has emerged with a clean score. It is a queer technical test to which the cars were submitted, with penalties for such damaging items as leather-supporting mud-guards. But you could strap on a loose trunk-rack and not miss a point.

An Uproarious Millennium

YOU start a model town. You build nice buildings; throw in trim fences, and modern sanitation for good measure. You omit saloons, dens, and all vice-joints. You have a wonderful new town, which, if you are a great corporation, weary of being pounded by public opinion, you advertise in many magazines by pictorial articles. A model town, a millennium, is upon us, and you rouse the Philistines and unbelievers to witness the modern miracle.

Then, in a back alley, in a rear room, the same old performances start up again as made night hideous but vivid in unregenerate towns. Again the citizen reels, and groups of men whisper each other behind wet mustaches.

Gary was the model Indiana town built for employees by the United States Steel Corporation. It was to solve the age-long strife of capital and labor. It was to make "dear Mr. Workingman" happy and at peace with the lot in life to which it had pleased God to call him.

Gary was cut in a pattern a bit too icily regular, too uniform, for a community of living beings. And the break came after a few months. More than fifty "blind pigs," where lots of bad liquor could be bought, sprang up in the heart of the immaculate city after it voted itself "dry." Other tough joints kept step with the hilarious progress. Then, with the coming of August, reform set in, and the lid has been clamped down.

The Homecoming of the Channel-Flier

Louis Bleriot, who flew from France to England on July 25, upon his return to Paris was met by officials of the Government, and with a military escort through the streets was given practically royal honors

Reincarnating a Steamboat

The "Clermont," the replica of Robert Fulton's steamboat, launched on July 10, is rapidly being finished at Port Richmond for the Hudson-Fulton celebration at New York, September 25-October 9

A Flowery Tribute to Governor Hughes

The New York Executive on the steps of the Hawaiian Building at the Alaska-Yukon-Pacific Exposition, August 2, where he and his party were hung with garlands, after the custom of the islands

Woman Reporter

(Concluded from page 11)

ble—I am ill over the whole affair. If the newspapers would just let me alone—if they only would!"

I could see how wrought up she was—on the verge of tears. So I said some soothing thing to her, and before I knew it she was opening her heart to me. But she did it believing I was there to sympathize with her, not to betray her.

While she wept and talked, I knew positively that she was appealing to me as one woman to another, and that she had no suspicion of my purpose.

In the midst of the conversation her husband suddenly appeared on the scene. He was furious at finding a reporter in the very presence of his wife.

"I know what I would do to you if you were a man!" he cried. "But I've got to treat you courteously, I suppose."

"I told the young lady I could not talk for the press," the wife assured her husband. "I have no statement to make."

"Certainly not!" he raged. "Statements for the press, indeed! This whole affair is preposterous."

I was in a tumult of consternation when I found the outer air at last. Across the street my assistant waited for me. He sprang forward, in hope and fear.

"Did you see her?" he demanded. "You've been gone a long time—did you see her?"

"Oh, I feel so dreadfully over it!" I wailed. "Because she wouldn't have talked so freely if she had supposed I would print it."

"What!" he almost shouted. "Do you mean to say she *did* talk?"

"Oh, yes—she said lots of things. But—"

"Look here, you come with me just as fast as you can come!" he exulted. "We'll beat it to a telegraph office and have that story on the wires for the noon edition. Hooray! This is bully!"

He had me by the arm, rushing me through the streets.

"But she doesn't know I'm going to print it—she doesn't know!" I kept protesting all the way.

He was an old-timer, was that newspaper man. He threw back his head and roared with the fun of it. In the telegraph office at last, he thrust paper and pencils before me.

"You little goose!" he said. "Just write exactly what happened and what was said, every word of it. We'll take care of the rest."

To this day I wonder just what that State official said when he saw the headlines in that afternoon's paper. Thus was I initiated.

The Eternal Rush

ONE of the first things that impressed me about newspaper work was the continual rush and strain of it. From morning till night I was forever "on the jump." The one precept that is dinned into the reporter's ears is that news is not news if it is an hour old, and that the main purpose of life is to "make the next edition." Editions, like time and tide, wait for no man.

"Jump over to the Harrison Street Police Station," commands the city editor, "and cover that case of shoplifting. There's a good story in it."

And the girl reporter goes on the run, gets her story, rushes back, and sits down to a typewriter. What then? Does the reader imagine that she has time to collect her thoughts for a neatly written, carefully worded article? That she has privacy in which to "get an inspiration"?

The editor calls out: "Rush copy—just twenty minutes, Miss H——; hurry!" And she bends to her task with every nerve strained to make the next edition. All about her there is commotion—typewriters rattling, telegraph instruments clicking, copy boys running hither and thither, editors giving commands.

But this is not the worst. At each elbow stands a copy boy ready to snatch the story from her page by page or paragraph by paragraph. Her thoughts are practically pulled from her brain before they are written. Men say they love this particular demand of journalistic work. The rush is stimulating, they contend. Maybe it is for the masculine brain. I don't believe many women could stand it very long.

Here is a typical day of newspaper work such as I found it on this Chicago daily:

I rose at six-thirty, dressed, breakfasted, read the papers, and was down at the office by eight o'clock. Usually the editor had some assignment that required me to do an hour's telephoning in a closed and suffocating booth. Perhaps some professor or clergyman had come out with startling statements on the woman question, and the paper wanted crisp comments from prominent women.

This task was in itself equal to a day's work. Nobody wants to give an interview over the telephone. When a reporter succeeds in making any mortal do it, he has put forth tons of mental force and nervous energy.

At ten o'clock the courts opened and there was nearly always some trial that had human-interest features. Divorce cases, murder cases, suits for the alienation of somebody's affections—all these afforded plenty of material for good stories. My duty was to interview the women connected with the case and get the "heart throbs."

Physical Comfort Ignored

IF THERE was an afternoon session of the trial, I had my hands full for the rest of the day. But if court adjourned early, I was obliged to return to the office and be on hand for other efforts.

This lengthened my day's duties to an exhausting degree, but I did not complain. It is a rule of journalism that one shall wholly ignore physical discomfort when the good of the paper is at stake. Well do I remember the look my city editor gave me when, in the early stages of my experience, I happened to mention that I had gone without lunch. Breakfasting at seven-thirty, by the way, is calculated to make an active person famished by two or three o'clock in the afternoon.

"I'm very hungry," I asserted.

"Hungry!" he repeated. He said not another word, but simply turned and looked at me. It was enough. Later I observed that he himself rarely had time for lunch, merely snatching a bite of apple or sandwich while still sitting at his desk amid the overwhelming rush.

In addition to my daily news reporting, I prepared every week a Saturday page feature story. This kept me busy during spare hours. One phase of my work, which resulted twice in nervous breakdown, was the extra effort of writing up evening events. Often, after a hard day's labor, I have gone out to theaters, social functions, or public affairs, not getting my story written until midnight. Oh, how terrible it was to force myself up next morning at six-thirty for another day's struggle!

Then there were the really startling stories—the big murders, disasters, and crimes—that required special application and extra effort. There was the car-barn bandit horror, which ended in the hanging of three youths for a diabolical crime. I talked with these boys through the bars of a cell while their heart-broken mothers and sisters wept beside me.

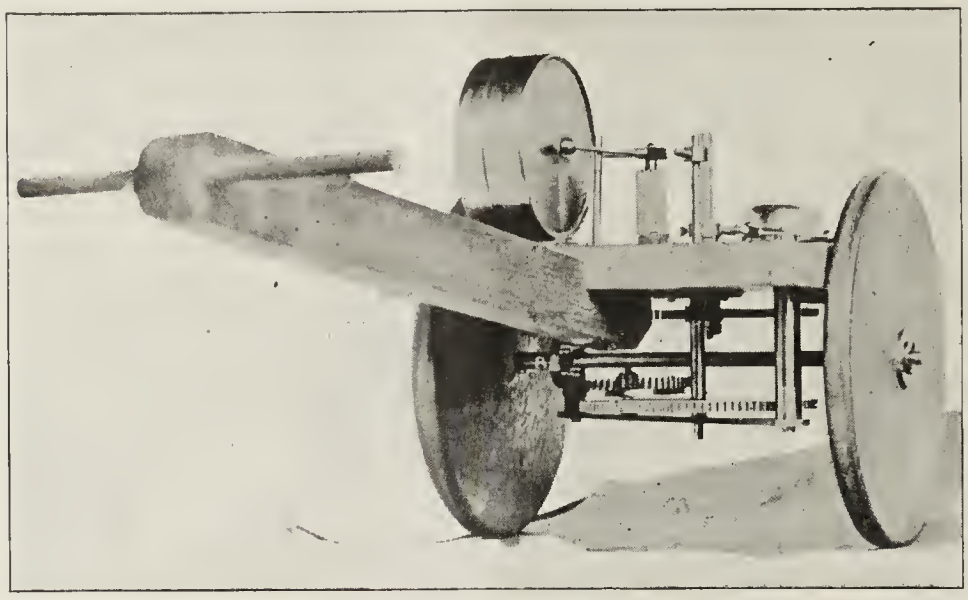
There was the great Iroquois holocaust, which sent a shudder of sorrow over the world. Reporters who worked on this story were ill for weeks afterward. Fortunately I was spared the ghastly part of the work, for my editors were too considerate to expect the impossible of a woman. But my part was sad enough, for I talked with the bereaved, visited morgues and hospitals, and recorded the heart-rending incidents occurring hourly before me.

The pathetic side of life was continually thrust upon me throughout my entire career. One of the hardest things I ever did was to interview a murderer's wife just before her husband was hanged. The woman had come to jail carrying her baby, in the vain hope that the jailer would permit her to see her husband before he left this life forever. Up to this point she had not been able to summon the courage, and now she was frantic at the thought that she had seemed unforgiving.

I felt like a vivisectionist as I drew from her the story of her heart anguish. I put in my plea to help her, but the prison rules could not be broken, and she had to go away, at last, with her prayer denied. Never shall I forget that woman's tears and entreaties.

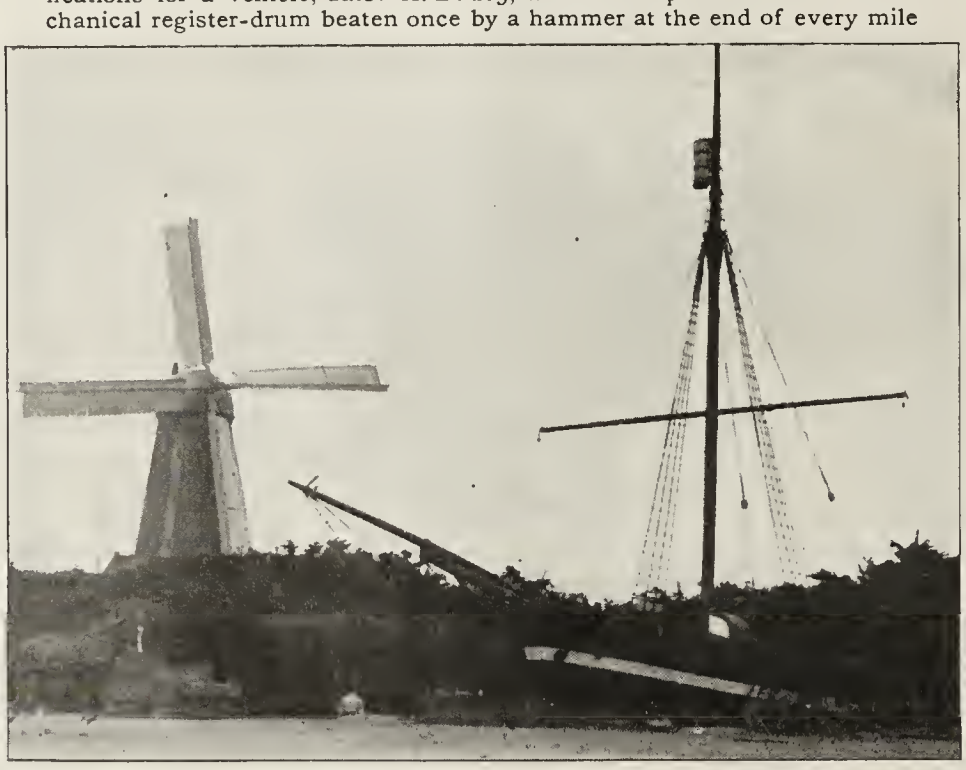
The assignments from which I invariably shrank were those that required me to interview persons suffering bereavement or disgrace. It is no easy matter to approach a woman whose son has just committed suicide and ask her to tell why he did it. Neither is it pleasant to ask the wife of a criminal how she manages to endure the shame her husband has brought upon the family.

Yet the editor insists that these things shall be done, and there is no choice but to close one's eyes, harden one's heart, and ruthlessly force a way into the presence of the most sacred suffering.



THE next instalment gives the writer's New York experiences; tells of daring acts required of her to satisfy the sensational demands of yellow journalism.

She narrates incidents of Newport struggles when she tried to get information about the Vanderbilt-Szechenyi engagement and wedding.



Victims of the Moorish Uprising

Carrying wounded soldiers and citizens to the emergency hospitals at Melilla during the revolt against the Spanish domination. This war was so unpopular in Spain that Barcelona rebelled against it

An Ancient Chinese Taxicab

Professor Giles of Cambridge has discovered in a history of China specifications for a vehicle, dated A. D. 265, which was provided with a mechanical register-drum beaten once by a hammer at the end of every mile

A Ship That Will Be Its Own Monument

The "Gjoa," the vessel in which Captain Roald Amundsen navigated the Northwest Passage and located the magnetic pole in 1905, hauled ashore at San Francisco to stand in a small pool at Golden Gate Park

Fencing Out Forest Fires

The first permanent fire-line in the United States is being cleared at Ray Brook, New York, in the Adirondacks, near the State Sanitarium for Tuberculosis. A ninety-foot roadway is being stripped out through the forest

Five passenger, four cylinder Touring Car

Four passenger, four cylinder detachable Demi-Tonneau

Four cylinder Doctor's Coupe

Four cylinder Landaulet

MODEL 46—$2500

The 1910 Elmore

Model 46

Supplied as

Seven passenger, four cylinder Touring Car

Seven passenger, four cylinder Limousine

The two new Elmore models cost less to operate than any other cars in the world

We will justify, in every car delivered this season, the strong statement contained in the caption:—

That the two new valveless two cycle Elmore models cost less to operate than any other cars in the world.

In addition to this we believe that, from the standpoint of service and economy, the 1910 Elmore valveless two cycle engines are without a peer at any price.

The power-plant of the Model 46, by the incorporation of new features (covered by basic patents), realizes that final development of the valveless two cycle engine, which expert authorities have always predicted would constitute the most perfect engine in existence.

We verily believe this Model 46 engine with its revolutionary improvements to be the most efficient power-plant in the world; and, firm in that conviction, we contemplate with complacency competitive comparison with the finest four cycle cars built during the current season.

We do not exclude any single car—no matter what its price, horse power or the number of its cylinders—from this comparison; and we are serenely confident of the outcome.

No car, no matter how high its reputation, or how costly its construction, deserves to be called a good car if it assesses the owner a heavy tax for upkeep every month.

And if goodness consists in economy and efficiency, the Model 46 Elmore with its radical improvements will prove itself the best car in the world because it costs less to operate than any other car in the world.

The explanation of its economy is likewise the explanation of its efficiency. Its operative qualities are infinitely better because of the valveless two cycle engine—because the application of power is incessant and unhampered by valve uncertainty.

And it costs only a pittance for maintenance ($1.00 per month, perhaps, for every $5.00 the four cycle car costs you) for precisely the same reason—because there is no waste power; and not a single valve, cam, lift, spring or roller to make trouble and cause a money outlay.

Any 1910 Elmore will take a 6 to 8% grade at 35 to 40 miles an hour

Any 1910 Elmore will take a 9 to 10% grade at 25 to 30 miles an hour

Any 1910 Elmore will take a 15 to 16% grade at 23 to 26 miles an hour

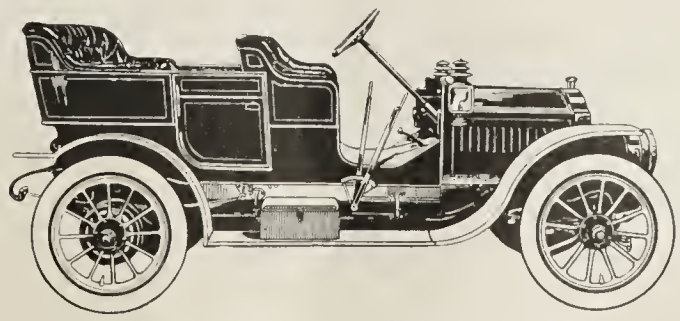
The ability of the seven passenger 46 H. P. Model 46 to travel 60 miles an hour is not the true measure of its merit.

Nor does the capacity of the five passenger 36 H. P. Model for 50 miles an hour give an adequate gauge of its extraordinary value.

Almost any car can furnish you speed on the straightaway. It's the car that eats up the hills without slowing down—that shows its true mettle on the upgrade—that gives you your money's worth.

And no hill-climbing stunt—with a car stripped and tuned for the occasion—should be accepted as assurance of reliability.

That's why we say "any 1910 Elmore will take a 6 to 8% grade at 35 to 40 miles an hour."



We do not, understand, cite this as an extraordinary performance. Racing cars and cars especially built for the occasion undoubtedly could make better speed, but there is no value in such performances; in fact, it has been demonstrated that they are detrimental to the majority of cars.

We say the Elmore is the only car built that can stand the strain to which such performances subject an automobile. The real test that proves a car's value is not what it can do once, or for a week; but what it can do after, say, a year's use.

The Elmore stands unapproached in this:—That it will maintain its power, and speed, and hill-climbing ability throughout the year; and even grow better and better and better.

It is this stability that counts—stability which no other car possesses—and not the record of a few performances.

Combine that capacity with the guarantee of a lower cost of maintenance than any other car in the world.

MODEL 36—$1750

Add to that the simplicity of just three moving parts on the engine—and then ask yourself if there's a four cylinder car on the market that compares in value-for-the-money with the Model 36 36 H.P. Elmore at $1750.00.

Four cylinders; 36 horse power; ample capacity for five passengers; a speed of 50 miles an hour; no valves; only three moving parts on the engine; power on the upgrade as described above; the continuous impulse of the two cycle engine and the superb smoothness known to no other type; luxurious appointments—doesn't this ideal car at $1750.00 shrivel into absurdity, by comparison, the average four cycle car of approximate price with its costly clutter of complicating parts and its stuttering application of power?

An intensely interesting study—these two Elmore power-plants. The repetition of the same magnificent sales success year after year has been justified. The cars are marvels. And the 1910 models go far beyond the previous cars.

If you are not advised concerning them, by all means send for the 1910 literature. If you are an Elmore enthusiast, send for it anyway and see how magnificently your favorite car has progressed.

THE ELMORE MFG. CO.
204 Amanda St.
Clyde, Ohio

Gentlemen:—Send me the advance literature describing the 36 H. P. 5 passenger Elmore valveless two cycle car at $1750; and the 46 H. P. 7 passenger Elmore at $2500.

ART OBJECTS

WOULD YOU LIKE A COPY OF THE NEW 1909 catalogue of the Collier Art Prints, containing 160 or more reproductions, in half-tone and line engraving, of the works of Charles Dana Gibson, Jessie Willcox Smith, Frederic Remington, A. B. Frost, Howard Pyle, Maxfield Parrish, and many other leading American artists? In addition you will find a picture and sketch of each of the leading artists. Address Proof Dept., P. F. Collier & Son, 416 W. 13th St., New York. We cannot afford to send it free, but if you will send us 15 cents in stamps to cover charges we will mail you a copy postpaid.

PIANOS, MUSICAL INSTRUMENTS

IVERS & POND PIANOS. OUR UNIQUE SELLing plan enables you to buy a piano of the very highest quality at a fair price on Easy Payments. Our catalogue for the asking, and if no dealer sells them near you, a personal letter stating lowest prices and explaining how easy it is to buy of us. We ship on approval and pay railway freights both ways if unsatisfactory. Write today for catalogue and full information. Ivers & Pond Piano Co., 137 Boylston St., Boston, Mass.

AUTOMOBILES and SUNDRIES

CLEVELAND-CANTON SPRINGS STAND UP under the heaviest load. It's the method of making. Made for pleasure and business from two grades of steel. Best quality—Chrome-Vanadium. Next best—Special-Analysis. The Cleveland-Canton Spring Co., Canton, O.

$22.50, AUTOMATIC FOLDING WIND shield, polished brass, plate glass; fit any car; best offer ever made; we guarantee it. Write for circular. Geo. Werner & Sons, 1133 Main St, Buffalo, N. Y.

ADVERTISING

THESE ADS MAKE MONEY FOR ADVERTISers. Have you a proposition that you would like to present to over 2,500,000 readers of Collier's? If you have, send us your printed matter or a description of your offer. We will have our Service Department prepare an advertisement and outline a selling plan free of charge and submit for your approval. The cost for advertising in these columns is $2.50 per line. Collier's Classified Department, 425 West 13th Street, New York City.

SCHOOLS

A Professional Career

offers greater opportunities every day to men and women with the **right kind** of a collegiate training.

A strong, able faculty and the notable equipment and facilities at

North-Western University

are such that no student can afford to overlook.

Northwestern was founded nearly 60 years ago and is heavily endowed. It has 300 instructors.

For catalogue, terms, etc., address

A. W. HARRIS, President
Room 205
Northwestern University Building, Chicago

LAW
Three years' course leading to degree of LL.B., and courses leading to degrees of LL.M. and J.D. Practice any state. Tuition $125, a year.

ENGINEERING
Advanced courses in all branches. New building just completed. Technical studies in a University environment. Tuition $100.

MEDICINE
One of the oldest and largest Schools in the United States. Clinical instruction. Seven Hospitals. Tuition $160, a year.

PHARMACY
Seven Laboratories. Time requirement varies. Practical courses in Food and Drug Analysis. Tuition $100, and $145, yearly.

DENTISTRY
Three years' course. Largest dental clinic perhaps in the world. Tuition $150, a year.

Staunton Military Academy

An Ideal Home School for Manly Boys

365 Boys from 45 States last session. Largest Private Academy in the South. Boys from 10 to 20 years old prepared for the Universities, Government Academies, or Business. 1,600 feet above sea-level; pure bracing mountain air of the famous Shenandoah Valley. Pure mineral spring waters. Military training develops obedience, health, manly carriage. Fine shady lawns, gymnasium, swimming pool and athletic park. Daily drills. Boys from homes of refinement only desired. Personal individual instruction by our Tutorial System. Academy forty-nine years old. New $100,000 barracks, full equipment, absolutely fire-proof. Charges $860. Handsome catalogue free. Address:

CAPTAIN WM. H. KABLE, A. M., Prin., Staunton, Va.

Mackay School of Mines

University of Nevada

Best equipped mining school in the country—all buildings of special construction. Faculty composed of prominent engineers and every department in charge of experienced instructors. Located close to great mining district—students obtain both wages and practical experience during vacations. Splendid climate—every opportunity for outdoor life amid beautiful surroundings.

Regular term opens August 23rd. For detailed information address

JOSEPH E. STUBBS, President, Reno, Nevada

Cosmopolitan School of Music and Dramatic Art

Unsurpassed faculty of 50. Course of study based on best modern EDUCATIONAL PRINCIPLES. DIPLOMAS. The best school for earnest pupils.

Fall season begins September 13th, '09.

News and Comment About Business and Industry

A Real Guarantee

A NEW YORK tailor has been advertising that he has been in business in that city for twenty-five years and expects his business to go on for twenty-five more. Just that. It is effective as an appeal to the public for patronage.

The following story comes from London:

A man on his way home from the office saw an old Sheffield teapot in a shop window. He liked it and told the proprietor to send it to his house in exchange for another teapot he had bought, but didn't like. The shopkeeper was to make such allowance for the rejected teapot as was proper, and send the new one up with a bill for the difference. The convenient American friend who witnessed the incident asked after they had left the shop:

"Don't you think you're taking a large risk doing business that way?" The answer was an explanation—complete and satisfactory for London:

"Well, you see, this is one of these old London shops. They have been on that spot for 150 years; they expect to be on that spot 150 more; and they expect to see me again. The extra profit they'd get by cheating me on this particular transaction would fall far short of the value of their reputation in my estimation and that of my friends."

A Way to Market Cream

THE president of the New York Central Railroad, who is a farmer in his spare moments, has lately discovered that the automobile is getting popular with the real farmers. He was in Iowa—Clarinda, Iowa, to be exact—when he was told that in the Fourth of July parade a feature was to be a hundred farmers driving their own machines. This astonished Mr. Brown, and he began to ask questions. A farmer with two big cans of cream in the tonneau of his automobile explained that he used the car as a matter of economy.

"My place is thirteen miles out," he said. "I have to go to town every other day with cream and to do my trading. Before I bought an automobile it took a day for myself and a team of horses to make the trip. Now I am in town in forty-five minutes from the time I leave. I can get back in time to do a day's work and have a fresh team.

"Before the farmers began to use automobiles, there were bad places in the road between my place and town. In rainy weather a loaded wagon couldn't be hauled through them with a single team—it had to be dragged out by doubling up. Now, with automobiles in use, these bad places are fixed up as soon as they develop—even if they have to put plank bridges across. So heavy hauling has been made easier."

According to a fairly recent census, Clarinda, Iowa, is a town of 3,024 population. There are in use in the United States about 250,000 automobiles. Obviously, Clarinda has more than her share. Also, it seems obvious that other farming communities will discover their economic value.

Facts About One Good Man

MRS. FLORENCE KELLEY was once investigating working conditions in a glass factory town in New Jersey. She went about all one night and found the factories running full blast. Little children were at work busily carrying bottles back and forth. One factory was dark, and she supposed it was shut down. To make sure, she went back to it next morning. It was running full blast. The proprietor showed her through the plant. There were no children under age working there. General conditions were good. She asked before leaving:

"You do not run your plant at night?"

"No," he said.

"Do you let your fires go out?"

"Yes."

"That costs you money, doesn't it?"

"Yes."

"The other bottle-makers say that they can't afford to close at night, and that competition compels them to use little children in their work."

"Yes, but I don't try to make as much money as my friends. I do not like to work at night, nor do my employees. I do not care to rob the schools to get my help. My business is profitable enough, and I am satisfied."

College Graduates and the Shop

HOW to get from college classroom to workshop is a seasonable problem. To-day it is not the hit or miss process that it was three college generations ago. Principally the change is due to the initiative of the big businesses into which college graduates usually go. An illustration is the Western Electric Company's method of securing college-trained apprentices.

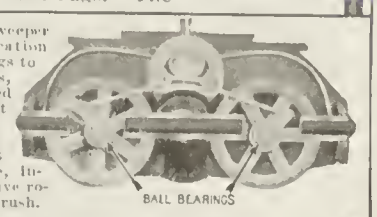
Before the close of the college term arrangement is made with the dean of each of the important colleges for a convenient date on which a representative of the company may call and show the students what it has to offer. At the time of his visit it is the usual plan for the representative to address the students in a body and afterward discuss his proposition with each of them who may be interested. This enables him to "size up" each man and select those who appear to be promising.

Upon taking employment with the company, the student may choose between three courses of training: Telephony, power and lighting, and manufacturing. In the case of the telephone course, the student is first placed in some of the shop departments for a certain length of time, during which period he is under observation to determine if he is a suitable candidate for a three-year-contract course. If he is offered this course and accepts it he is then given an opportunity to work in all the important departments of the business. The courses in power and lighting, as well as in the manufacturing branches, do not provide for a preliminary short course.

During the student's progress through the factory, he is in the care of an officer, who sees him at frequent intervals and advises him in matters pertaining to his training. Some of the students show that they have inventive qualities; some exhibit faculties for salesmanship; some of them indicate that they will be good executives and others lean toward routine duties. At the completion of his course, each student is offered a position in a department of the business where the particular qualities which he has exhibited will be of the most value to him and to the company. This does not mean that he will remain indefinitely in the department in which he is placed, but he has before him the opportunity to progress to a position of large responsibility.

The Small and Shaky Corporation

HERE are some pointers to business men from a man who knows—Judge Hough of the United States District Court for the Southern District of New York:



"Small business or trading corporations . . . are seldom carefully created, the law is rarely observed, and their bankruptcy or insolvency is usually more disastrous in money to creditors and in reputation to incorporators than are the failures of most merchants or traders privately dealing in the same line of business. Bearing this in mind would, I think, save business men much trouble and not a little loss. Trust these small companies, hastily organized under general laws, very little; watch them closely; limit their credit, and, when they seem to be getting into trouble, pursue them with the rigor of the law. The creditor's best chance of being paid is either an early attachment or a successful effort to hold some solvent officer for violation of the corporation statutes."

Comfort, Convenience and Cleanliness are assured by the use of

BISSELL'S NEW "Cyco" BALL BEARING Carpet Sweeper

—Our very latest product, the most highly perfected carpet sweeper ever made. Runs so easily a mere touch propels it; sweeps thoroughly, makes no noise, raises no dust, and reduces the labor to a minimum.

This sweeper contains a brush propelling power not possible in any other construction, insuring the continuous rotation of the brush on all grades of carpets and rugs. The

End view of sweeper showing application of Ball Bearings to driving wheels, which are forced tightly against the brush pulley as slight pressure is put on the handle, insuring a positive rotation of the brush.

Second Article on The American Woman's League: Its Plan and Purpose

By E. G. LEWIS

President of The Lewis Publishing Company and Mayor of University City

IN the issue of Collier's Weekly for July 24th was given quite full particulars of the remarkable organization of women, founded and operated on a purely business basis, which has already spread throughout the nation with over seven hundred branch organizations and a membership of tens of thousands—The American Woman's League.

The signs of the times plainly indicate that the women of America will sooner or later demand the suffrage, and when American women demand it, they will get it.

From time immemorable man has impressed on woman that her sphere was in the home alone. While practically everything that affected the family life was produced in the home, this was largely true. In modern years a vast change has come about and practically everything entering into the home life is now a community interest. Clothing, education, water, light, food are no longer produced in the home, but by the community in the form of factories, industries, corporations, or government, local, state and national. The woman of to-day is vitally concerned in both municipal, state and national government, for their every function affects directly the home life. Government is no longer principally concerned with war, but with the regulation and control of vast industries, and the preservation and improvement of the home. Almost without exception these industries and all legislation and the honesty and fairness of their conduct directly affect the family life. In such states as have already given woman suffrage the result has been so beneficial as to make return to former conditions repugnant to men of intelligence. Yet woman in general in this great free nation has less to say in these matters than the most ignorant and vicious saloon loafer or negro. She is still held as being both incapable of and lacking the necessary qualities to entitle her to a voice in such matters, and the old cry that to vote would destroy her feminine and endearing qualities is still raised, while city, state or nation is largely governed by the vote of the lowest and most ignorant men. A few years ago a woman who entered the fields of business was looked upon in the same light; to-day woman is found side by side with man in the business world, more than successfully holding her own in a million positions of responsibility and business requirement, while the beauty and improvement of both the home and community are distinctly her field.

The right of the franchise in the hands of the women of this nation will do much to insure its future freedom, cleanse its city, state and national governments and restore it to the original principles on which it was founded. It is the rising sun of hope in a republic already rapidly advancing to a stage of luxury, bureaucracy and corruption scarcely equalled in history. To the Revolutionary mothers, wives and daughters we largely owe our national pristine freedom, and to their granddaughters we will yet look for its restoration. The corrupt and unsightly conditions known to exist in most communities, due to the franchise in the hands of irresponsible, ignorant and criminal classes, could not continue if the women had the right to vote. We can not much longer entrust the right to vote to an ignorant foreigner lately landed without knowledge or interest in American institutions or desire for honest, clean conditions, or to the negro, and refuse it to the wife, the mother, sister on the ground that they are less competent. It is not the spirit of this nation or the times. The only real reason why men in America hesitate to give American women the franchise is because *they fear the housecleaning, municipal, state and national, that would surely follow.* They dread any sort of housecleaning, and women know both the necessity of housecleaning and how to clean house. When American women once fully realize their responsibility in these matters, men will be made to more fully realize their own. There is but one answer, and that is that the right of the suffrage for women must come, and it will come in this country FIRST; much sooner than is now supposed. With it will come municipal beauty and the setting of refinement and education above the dollar mark.

The plan of The American Woman's League, while purely a BUSINESS plan, not concerning itself with politics, religion or legislation, or making any pretense of philanthropy, has back of its organization a deeper and more far-reaching thought and a purpose, if successfully carried out, that will do much to prepare the way for intelligent and high use of the suffrage when granted.

Appealing only to the desire for culture, education, cleanliness, the preservation and beauty of the home and municipality, with equal opportunity for women, it is gathering into its ranks the refined, educated and intellectual women in each community throughout the country at large, under a self-supporting, self-respecting, permanent business organization of national scope.

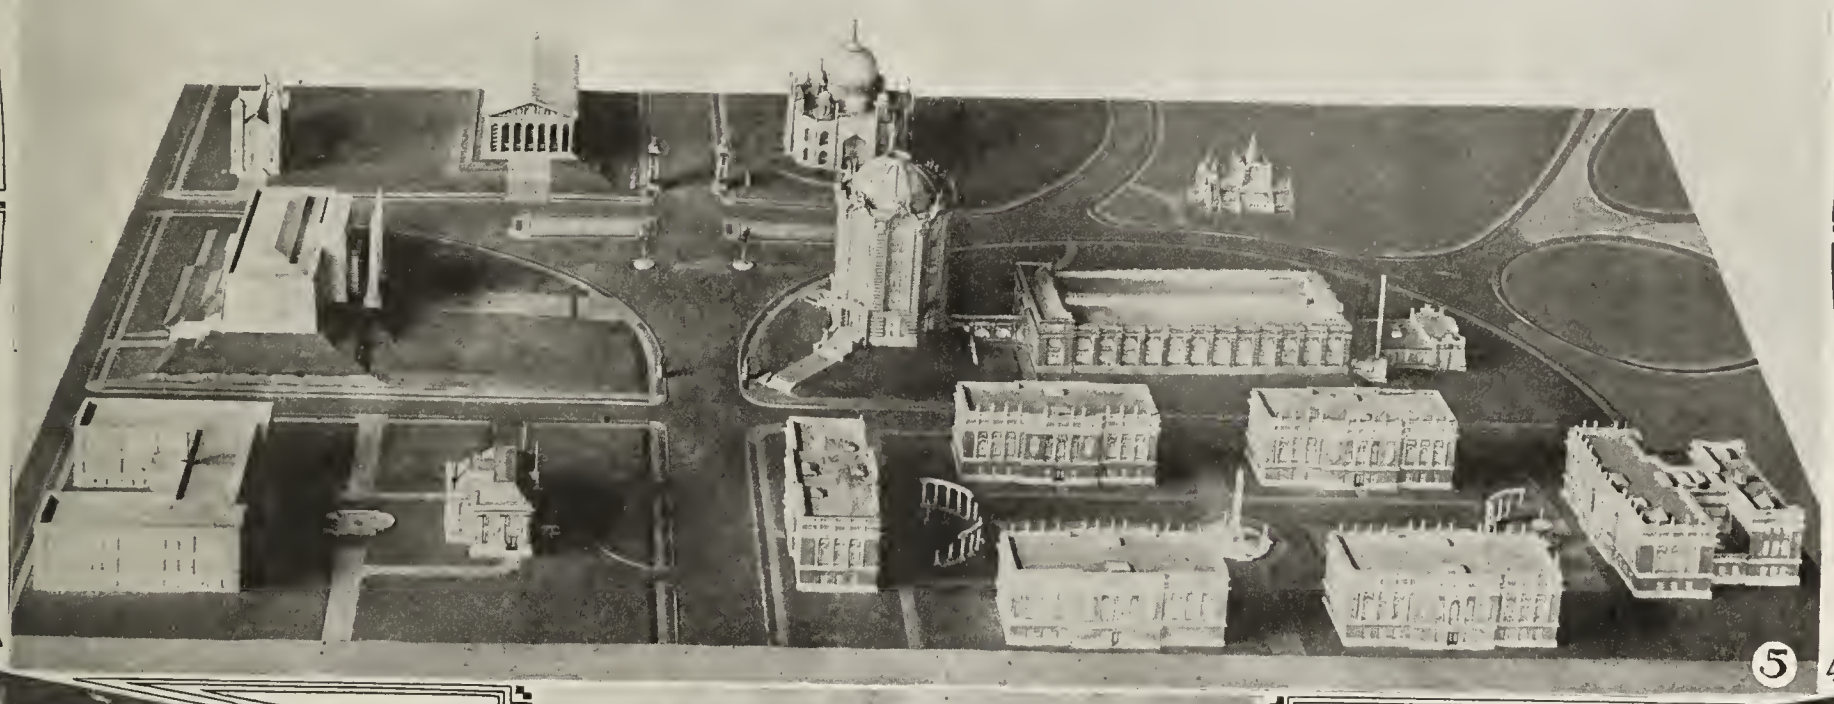
Its organization, deriving its revenue from 50% of the subscriptions to the great journals of national circulation co-operating under it, is divided into three general divisions: The Founders' Chapter, The Capital City and The Local Chapter.

In this article the two latter will be treated of more especially, leaving the particulars of the founders' chapter and The League's organization and work in the rural districts to the third article, which will appear next month.

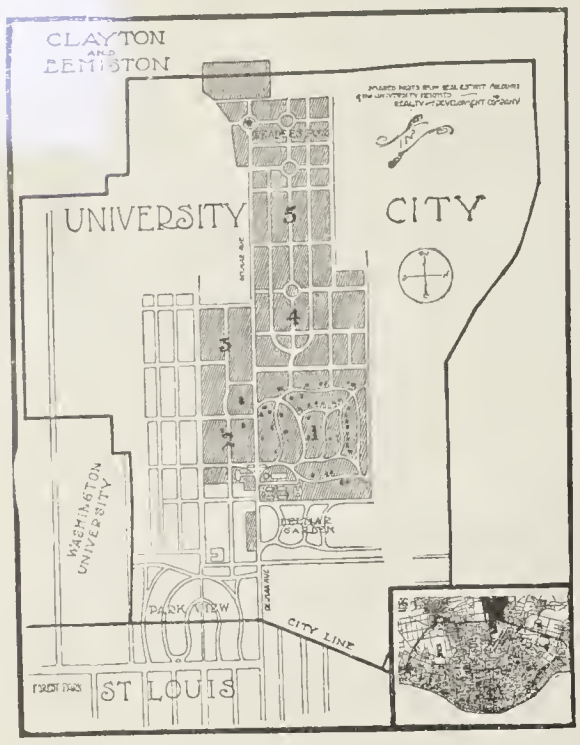
THE CAPITAL CITY

The capital city of The American Woman's League is University City, a separate municipality from St. Louis, but embracing in its borders the most beautiful and desirable residence section of the larger city. The founders of the present League, some five years ago, selected a series of beautiful tracts of land in the West End of St. Louis, now its best residence section, purchased several hundred acres of what were then vacant fields, and later incorporated them, with some fifteen hundred acres of adjoining property, into a separate city from St. Louis. This was made possible by the curious fact that many years ago St. Louis had been separated from the county in which it lay and its boundaries fixed at what was then supposed to be the limits of its future growth, by a charter amendment of the state. St. Louis has long since outgrown these ancient boundaries, and, owing to its topography, being compelled to expand westward, its best residence section of recent years has grown up partly in and partly out of the city. Having no form of rapid transit, the growth has been solid block by block. Unable to expand its city limits, separate from the county, a new and separate city was made possible, but an imaginary line separating the two, streets, sewers, car lines, etc., passing without break from one to the other, yet each as independent of the other in government as though a hundred miles apart. There was a double purpose behind the incorporation of University City: first the preserving to St. Louis of the only remaining area for expansion of its best residence section, placing it under proper engineering and police control, so that its improvement and development would be forced along the highest lines of beauty and protection; and second the establishment, creation and erection of the most beautiful municipality in the world, to be the home of great national institutions for women, the capital city of The American Woman's League, a model in all that was most desirable in home building, municipal beauty, scientific development and artistic adornment.

The development along these lines has been rapid and remarkable. First were erected the great publishing plants of the Woman's Magazine, Beautiful Homes and the Woman's National Daily, structures which have few equals in their beauty and yet are the home of one of the largest publishing industries in the world. Miles of broad, paved boulevards were constructed with the highest type of sewer, water and landscape engineering. Superb entrance gates of stone and bronze surmounted by heroic figures by the famous sculptor Zolnay were erected. An army of gardeners kept at work for years until its open places blossomed in exquisite beauty.



Much is yet to be done, but all that is being done is with the same purpose. This year the city itself, by unanimous vote, gave $65,000 for the erection of a superb, though small, City Hall of marble, while more than a quarter million dollars is being spent on additional street improvements; yet so rapid has been the corresponding increase in the value of its real estate that the tax rate is but 50 cents on the $100, as against $2.30 for St. Louis, an imaginary line and handsome entrance gates alone separating the two. Adjoining the great publishing institutions, erected at a cost of $1,500,000, is now nearing completion the first of a group of magnificent buildings, six in number, to be completed within a year at a cost of a million dollars; they are the buildings of the University of The American Woman's League, all of whose courses in the arts, professions, industries and instruction are free to every member. These six new structures will surround a great central court nearly 1,000 feet in length, at the extreme end of which stands the Art Institute, of imposing design, fireproof construction (as are all the buildings), and which will be completed in September of this year. In its rear will be erected next Spring the largest and finest art ceramic works in the world, at the head of which will preside Mr. Taxile Doat, late of the Sevres Works, Paris, France, the foremost ceramic artist of Europe, temporary quarters being provided in the Art Building. Here will be conceived and executed by the honor students of The League's Art Schools from year to year, under the



View of Parkview in University City, looking towards St. Louis. (2) A private bath in University City. (3) New City Hall of white marble to cost $65,000, voted by the city. (4) Entrance Gates to University Heights in University City. (5) Model of great central plaza of University City. In the foreground are the buildings of the League University now in course of erection; beyond, the buildings of the Lewis Publishing Co., and on the opposite corners the new buildings of People's Savings Trust Co. and Founders' Chapter of The League. (6) Employees. (7) Interior of Woman's National Daily, showing the largest and fastest printing press in the world, built by Goss Press Co. at a cost of $100,000, producing 5,000 copies of Woman's National Daily per minute. (8) New building of People's Savings Trust Co. (9) University City from St. Louis. In center distance are seen the buildings surrounding the great plaza

Map of University City, St. Louis. Shaded part shows the great private residence part of approximately 500 acres laid out by the University Heights Company, the finest residence place in America

direction of famous masters in sculpture, painting, decorating, architecture and ceramics, much of the ornamentation of University City, its buildings and parks, while its correspondence courses are open to all members in their own homes. Dividing University City from east to west runs Delmar Boulevard straight out through the center of the two cities. At its entrance to the great central plaza of University City stand the imposing marble building of the Woman's National Daily, 200 feet in length, and the exquisitely beautiful executive building of The Lewis Publishing Company, known as the Woman's Magazine Building, both decorated with superb mural paintings by Ott. On the opposite corners are shortly to be erected the building of the People's Savings Trust Company, trustee of The League, a reproduction in white marble of the Parthenon; and the head Chapter House or executive building of The League, a reproduction in colored marbles and faience of the Taj Mahal of India. Between them now stand the great entrance gates, 34 feet in height, of carved stone and bronze, while at the far western end of Delmar Boulevard (now rechristened Lewis Place) the Daughters of the Confederacy are preparing to erect one of the handsomest monuments in America, forming the western entrance gate to the city. For a mile and a quarter in length, by close to a mile in width, hundreds of acres, known as University Heights, have been permanently restricted to the exclusive erection of single private homes, costing not less than $4,000 to $75,000, according to location, already rapidly building up with the beautiful residences of St. Louis's leading citizens. Over $2,000,000 is estimated to have been expended during the past two years alone in the erection of handsome private residences in University City, while at the present rate of growth of St. Louis the population forced over into University City will exceed 12,000 to 15,000 within the next three years.

The government of University City is in the hands of a Mayor, Board of Aldermen and the usual officials. All but the police force serve without compensation and have been re-elected unanimously twice since its incorporation.

Such is the capital city of The American Woman's League, and, with the development of its engineering and decorative plan, no city in the world will equal it in beauty and ornamentation, becoming as it will a monument to the skill and genius of the Honor Students in the art classes, while at the same time affording them a practical experience not otherwise obtainable.

THE LOCAL CHAPTER ORGANIZATIONS

Throughout America, in more than 700 cities, towns and villages, are already located compact organizations or chapters of The League. For many of these, beautiful local buildings have already been erected, exquisite in design.

These local buildings range in cost from $1,200 to $25,000 (exclusive of the site, which must be donated), according to the membership of the local chapter and the population. Each of the more than 700 local chapters is rapidly completing the necessary requirement for the erection of its own permanent local building, and additional chapters are forming so rapidly that it is a reasonable estimate to place the number of these beautiful local buildings of The League that will be completed within the next twelve months at one thousand.

While University City is the headquarters of The League, the site of its great Art Schools, University, publishing and banking institutions, yet the local chapter house in each city, town and village is designed to become the local center and radiating point for the education, culture, art and opportunity of the whole, forming in each community a permanent rallying point and organization of its women of ability and intelligence, working in conjunction with the central force towards better conditions, the beauty and improvement of both the home, the individual and the community. The whole plan presents to women of ability unusual opportunity, and to all the best in education, art, culture and an open door to self-betterment.

Back of this organization stands the power of great journals, national in circulation, chief of which is the Woman's National Daily, at $1 per year, the only daily newspaper in America published for women, already having a daily circulation, through the fast night mails, in excess of 200,000 copies, produced on the largest and fastest printing press in the world.

This tremendous organization is independent in its income, and is rapidly acquiring a monopoly of the subscription business, the local chapter organizations each looking after the interests of the journals co-operating in its jurisdiction, half the revenue going to the publishers and half to The League. The single requirement for membership being that the applicant shall secure a total of $52 worth of subscriptions, which once accomplished the membership is for life and carries the free use and right of The League's Art Schools, chapter houses, University, Library, building and relief fund, and many other features, both for the member and minor children of her family. The renewal of these subscriptions is looked after by the paid secretary of each chapter, who is supplied with complete records of all subscription dates and expirations in the chapter's territory from headquarters for each publication, the local chapter receiving 25% of the local income for the maintenance of its chapter house, and 25% going to the central institutions of The League at University City.

WHETHER IT COME SOONER OR LATER, WITH THE GRANTING OF THE SUFFRAGE TO WOMEN, A PERMANENT NATIONAL ORGANIZATION, COMPOSED BY A SELECTIVE PROCESS OF THE WOMEN IN EACH COMMUNITY POSSESSED OF ABILITY AND INTELLIGENCE, WITH A CENTRAL ADMINISTRATIVE AND DIRECTING BODY, BACKED BY LARGE INCOME AND A NATIONAL FEARLESS PRESS, SUCH AS IS BEING DEVELOPED UNDER THE LEAGUE PLAN, WILL BE OF THE HIGHEST INFLUENCE AND IMPORTANCE TO THE NATION, although The League, as such, is purely a business plan of co-operation for mutual benefit and profit, and concerns itself with neither politics, religion, nor legislation.

The entire responsibility and direction of the organization rest for the present with The Lewis Publishing Company. The following publications, Collier's Weekly, Everybody's Magazine, Success, the Delineator, the Farm Journal, and the American Boy, permit The American Woman's League to solicit subscriptions for them, and they pay to The League 50% of the gross amount of such subscriptions. This constitutes The League's income. With the completion of the Founders' Chapter, a national convention will be held of the officers of all local chapters and the permanent trusteeship established under which The League will thereafter be governed, its national officers being elected at fixed periods by general vote of all members of the Founders' Chapter. It is probable that the plan will shortly be thrown open to all other high-class journals on an equitable basis, as many of the leading magazines have already applied for entry.

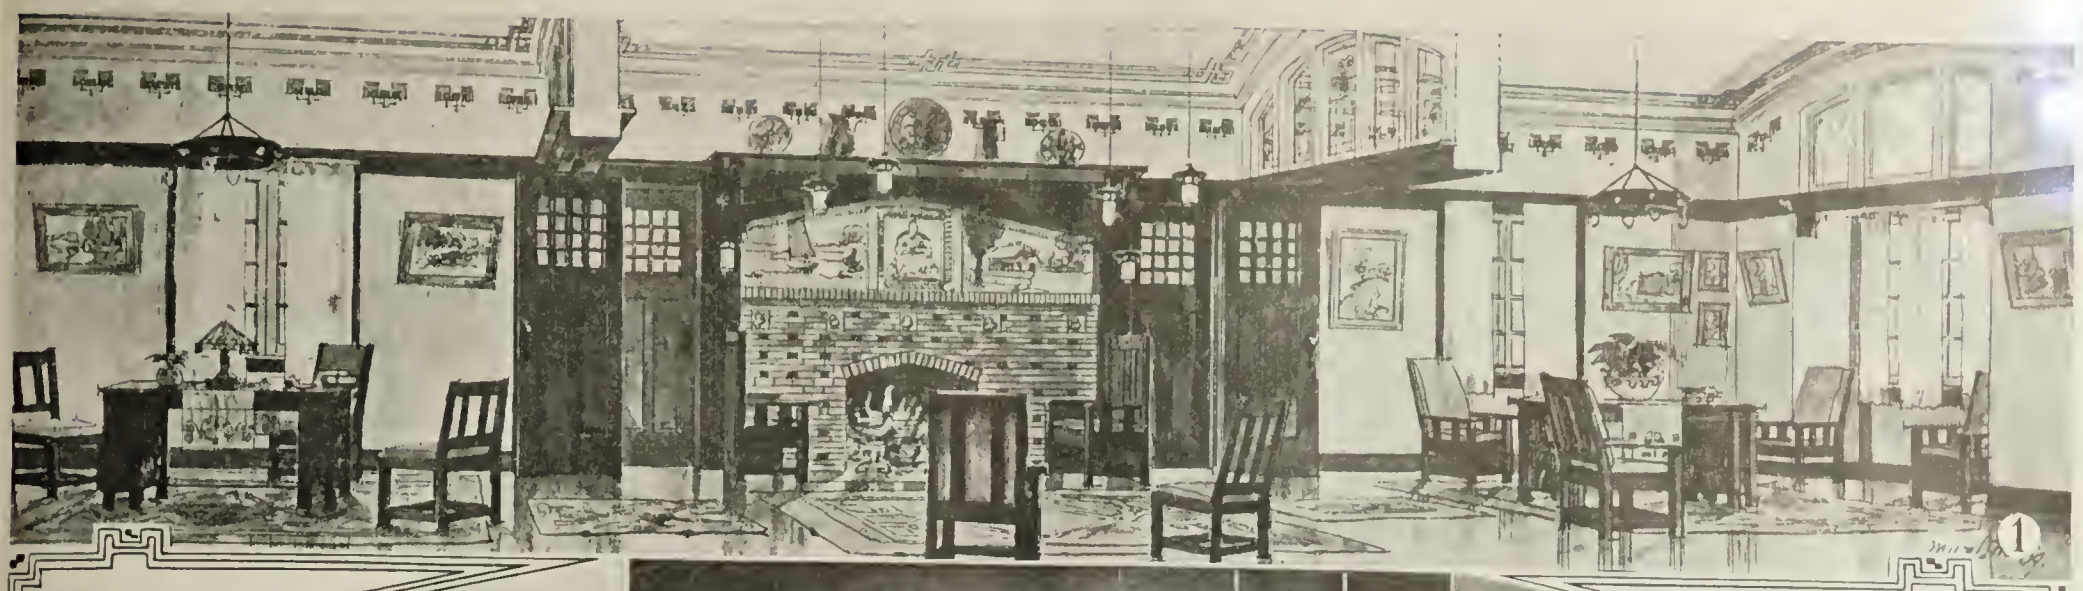
While every member of The League has an equal life right and privilege in all its institutions, advantages and opportunities, yet its governing body is composed of one member in ten of its membership, the first hundred thousand out of the proposed million members, who shall first comply with the single requirement of membership, the securing or payment for as gifts, of the required $52 in subscriptions. The whole plan of The League is founded upon and supported by a simple form of business co-operation and mutual organization between the several publications and the individual member. It is purely a business plan and makes no pretense of being anything else. The vast sums expended yearly by great journals, in securing separately new and renewal subscriptions, are, by this plan, paid instead into a national subscription organization and become the source of annual revenue of The League. It is estimated that the available income from subscriptions to journals of general circulation exceeds $60,000,000 per annum. With the spread and organization of The League it will acquire largely a monopoly of the subscription business throughout the country because of the operation of the same business principles which are taken advantage of by the great industrial organizations or trusts.

The organization of a local chapter creates a powerful local subscription force, because of the requirement for membership which each member must meet. The erection of the local chapter house establishes a permanent local renewal agency, while the general and rural memberships complete the national sales organization of both city and country.

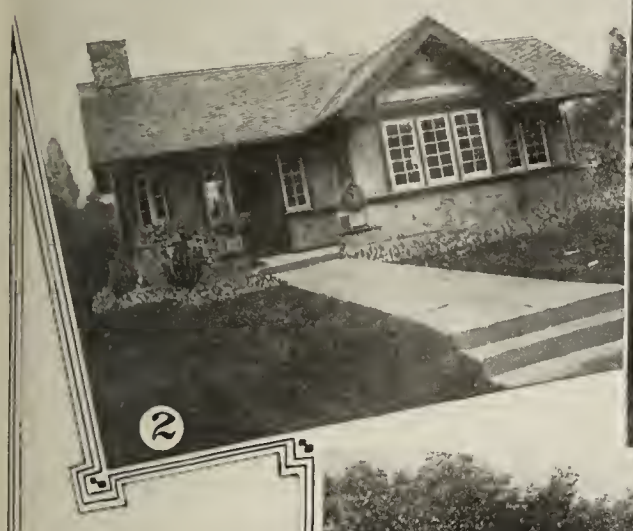
Such an organization can more effectually and economically secure and maintain circulation for all journals co-operating with it than those journals can possibly do it for themselves separately. Each journal is required to pay to The League 50% of its subscription revenue, the subscriptions being first secured by the members and renewed thereafter by The League organization. The income therefore available to The League, as its organization is completed, would be between twenty and thirty millions of dollars per annum, with scarcely any expense of securing it, so that whatever its income, it is available for the benefit, service and advantage of the whole membership.

In the creation of any such organization the heaviest burden is in the beginning in the national campaign of education and enlistment of members necessary. Now that many local chapter houses are actually completed, or in course of erection throughout the country, the great University and Art Schools about to open their doors in another month and many other benefits and advantages already in full operation, the membership is spreading with increasing rapidity of its own force.

It is on those who take the lead in any new plan, the pioneers, that the burden falls.



THE FOUNDERS' CHAPTER



It is perfectly understood that no new idea and plan such as that of The League can be put forward without exciting ridicule, malice and unreasoning opposition; otherwise it would be for the first time in human history. This test of the right to live, the inertia and opposition of those who know and care to know little or nothing of any new idea, the fact that it is new being sufficient to excite their opposition, entitles those who take the lead to special privilege over those who follow.

With the rapid growth of The League, two institutions of an industrial character are automatically enriched to an extraordinary extent—The Lewis Publishing Company and the People's Savings Trust Company, the former not only because its publications receive the greater part of the subscriptions from the membership, but also on account of the vast amount of publishing and printing required for The League itself and its Correspondence University. The Trust Company, as the trustee and administrator of the endowment found of The League, will have a large and constantly increasing fund as a permanent deposit, and also enjoy a national savings patronage from the membership. It is a part of the plan that, in addition to its daily, weekly and monthly journals of general circulation, The Lewis Publishing Company will purchase from time to time, as opportunity offers, leading daily newspapers in the principal cities until a national, fearless, clean public press, covering cities and rural districts alike from coast to coast, has been established largely under the control of the women of the country. The first of these metropolitan newspapers to be purchased was the St. Louis Star. Several other leading newspapers are under negotiation in other pricipal cities. Such a power of both the public press and what will undoubtedly become one of the greatest banking institutions in the country means more to the women of the land than even the right to vote. The Publishing Company has approximately 20,000 stockholders, and the Trust Company will probably have a far greater number, as no one person is permitted to subscribe over ten shares of its capital. Realizing that those who FIRST displayed the independence, ability, foresight and energy to grasp the full effect and power of such a national institution as is being created in The League will mean more to its complete and quick success than those who follow after it has become firmly established—that the one in ten with the

(8) Class V Chapter House. (9) Class IV. (10) Class III Chapter House

of leadership is more important to the organization than the nine [illegible] Now—and with a full appreciation of the vast power and scope of [illegible]ing that is being created, a special endowment is provided for a [illegible]' Chapter, to be composed of the first 100,000 members who completed [illegible]membership requirement (provided they did so within one year of sending [illegible] membership application), consisting of $1,000,000 of the capital stock of The Lewis Publishing Company and a like amount of the stock of the People's Savings Trust Company, the income of this $2,000,000 special endowment in the stock of these two institutions to be paid each year for life to the members of the Founders' Chapter as an annuity. The membership of the Founders' Chapter is rapidly filling up. Once completed, its members will occupy an unique position of special honor, privilege and income, as both institutions are steadily enriched by the development of The League organization. It is also to be provided that the members of the Founders' Chapter shall alone have the right to vote in the election of the president of The League, who will in turn vote these immense holdings in the Publishing Company and Trust Company, thereby placing the management of both the Publishing Company and banking institution perpetually in the hands of the Founders' Chapter through its power to elect the president, who would also become the president of both institutions.

While the income to the individual member of the Founders' Chapter will be small at first, it should rapidly increase with the growth of The League until it becomes a respectable annual source of income to each member. Membership in the Founders' Chapter is for life and not transferable. Vacancies in its ranks will be replenished from the regular membership.

"THE LEWIS PUBLISHING COMPANY"

The three-year battle of The Lewis Publishing Company and its journals with special interests, which had made of our national postal system largely a private cinch, has become a part of our national history. It has no parallel. Waged at a cost to it of over $2,000,000, yet such a public nation-wide support was given it that even when, in the desperate effort to silence its journals, they were arbitrarily suppressed for nine months, it came out of the ordeal stronger than at the start.

Publishing as it does to-day—a year after its final victory—approximately 10,000,000 copies per month of its several journals, with the largest and finest publishing plant and equipment in the world, yet it was in its darkest hours that the plan of the American Woman's League was conceived. The very conditions it was compelled to overcome in re-establishing its business, together with the national support and prestige it had gained, made possible and gave birth to The League plan. Having acquired a leadership, active and aggressive, in the battle for better conditions, honesty and lawfulness in the postal service, with victory came the necessity of putting its power, prestige and leadership to good and permanent use. During the midst of its battles more than 20,000 American families had come to its aid with $2,000,000, and with the re-establishment of its vast business they were made active stockholders in proportionate return for their contributions during its dark hours.

It was out of a great national struggle against arbitrary and unreviewable power, having no place in our form of government, that The League was first conceived and the tremendous potentialities of organized effort on the part of the WOMEN of this country fully realized.

The publishing plants and equipment of The Lewis Publishing Company alone represent an investment of $1,500,000, while its capital is $3,500,000, and its journals circulate through every post-office in America where at least 50 English-speaking families receive their mail. Its payroll is approximately $800,000 per annum, and it is a part of its fixed plan to acquire additional metropolitan newspaper properties until, under its organization and ownership has been brought a national, fearless, clean press covering both the principal cities and the country from coast to coast.

In September, 1908, the St. Louis Daily Star and Chronicle was purchased, and in eight months following was made the second in circulation and first in popular good will of the metropolitan daily newspapers of St. Louis, with the assistance of the local League organization.

The Lewis Publishing Company, as the founder and sponsor and principal factor in The League plan, retains in its hands not alone the full responsibility, but the entire direction, organization and control of The League plan until the completion of its organization and the formal ratification by The League membership of the final plans, charter and trust agreement, by which it will thereafter be governed. So rapid has the growth of The League become that it was found advisable early in 1909 to invite into the plan, so far as the subscription part was concerned, a number of other leading publications of classes not produced by it. The equipment, facilities and organization of such an institution are a prime factor to The League plan in the conduct of its great correspondence university and schools, and the production of the vast volume of printed matter, which must constantly increase, as well as of such special art and other journals as will be required. Manifestly, this Publishing Company, with its wide range and wonderful organization and equipment, offers in itself the highest opportunities in journalism to members taking those courses, as well as being a constant seeker after such ability.

Its journals are:

THE WOMAN'S NATIONAL DAILY
THE JOURNAL OF AGRICULTURE
THE ST. LOUIS DAILY AND SUNDAY STAR
THE WOMAN'S FARM JOURNAL
THE WOMAN'S MAGAZINE
BEAUTIFUL HOMES

Of its $3,500,000 capital stock, $1,000,000 becomes a part of the special endowment of the Founders' Chapter through the Founders' gift, while the remainder of its stock is already held by some 20,000 stockholders, the great majority of whom have become members of the Founders' Chapter also; hence the control of this great publishing institution and its journals of national circulation may be said to rest permanently in the Founders' Chapter of The League. The League plan is rapidly making it the richest and most useful publishing concern in the world.

THE PEOPLE'S SAVINGS TRUST COMPANY

The People's Savings Trust Company was formally opened for business in all its departments January 2, 1909, with a preliminary authorized capital of $400,000, of which $300,000 is paid up, together with a surplus of $150,000, and which is to be further increased to a capital of $5,000,000 and a surplus of $3,000,000. Subscriptions to its capital being limited to ten shares to any one person. It already numbers its patrons in nearly every state in the Union and in several foreign countries. The long experience of its officers in dealing for many years with hundreds of thousands of people in every section of America by mail to the extent of many millions of dollars enables it to offer all the best features of a great metropolitan banking institution, especially organized and adapted to the requirements of those heretofore denied such facilities through the United States mails.

This institution accepts only accounts by mail and offers through the mails every safety, convenience and accommodation of conservative, careful banking to its customers, no matter how remotely located.

It is not a bank of ordinary commercial or discount business, being more a savings institution and central reserve bank of rediscount for other banks, yet its low expense rate, estimated at but 15% of that of other banking institutions doing the same volume of business over the counter, together with the long-time average of its deposits, gives it special advantages and safety from runs and panics, with the highest earning power consistent with conservative methods.

In addition to affording to members of The League a great mail central savings and trust institution, rendering valuable assistance in the building up of University City through its ability to provide first mortgage building loans on adequate security and good interest, The People's Savings Trust Company becomes under the trust agreement of The League the trustee for all its real property and its endowment or reserve. Pending the organization of The League, a detail statement and accounting of all disbursements and income on account of The League is rendered to the Board of Directors of the Trust Company at regular periods. With the accumulation of a reserve or surplus by The League, these funds become trust funds, to be administered and invested by the Board of Directors of the Trust Company as trustees for The League members, who become the beneficiaries under the terms of the trust agreement.

The Trust Company, as the central fiduciary institution, renders a wide service to members in many departments, constitutes a powerful monetary force, able to render to the whole organization the necessary financial machinery, and to return ample compensation in the form of deposits, rediscounts, and other services to local banking institutions which the local chapter membership may desire to favor. Its business is primarily as a savings institution, although its system of small universal exchange at par, payable at leading banks in the principal cities throughout the country, provides its customers and members of The League with special advantages, and enables it to make local banking institutions agents or issuing centers, to their profit and advantage. The necessity of such an institution, as well as the power, safety and profit of its position, all tend to make it one of the greatest banking concerns in America, a bank of and for the people and owned by them.

MRS. PEARL ADAMS SPAULDING
In charge of Pacific Coast Organization

As the organization of The League progresses, one-eighth of the Trust Company's capital and surplus becomes a part of the special endowment of the Founders' Chapter, the income thereof, as well as that from the $1,000,000 of stock in the Publishing Company, being paid annually to the members of the chapter.

Its Board of Directors are:

L. B. TEBBETS, Chairman
Director National Bank of Commerce, St. Louis
Vice-Pres. Commonwealth Trust Co., St. Louis
L. B. Tebbetts & Son Carriage Co., St., Louis

CAPT. JAS. F. COYLE

E. G. LEWIS
President The Lewis Publishing Company
Mayor of University City

who, as Directors of the Trust Company, constitute also the first Board of Trustees of The American Woman's League.

Membership in The League can not be purchased and is only acquired by securing or paying for as gifts a total of $52 in subscriptions to the publications which, under the plan, permit The American Woman's League to solicit subscriptions for them. The subscriptions to these publications are in themselves a full return for every dollar paid, so that the membership may be said to cost nothing but a slight personal effort. This single requirement complied with, the membership is for life without dues or fees, the member becoming a life beneficiary under the trust created, and entitled to every right and benefit of the whole organization. Men may become Honorary Members, the requirement being $20 in subscriptions, which entitles the Honorary Member to the free use of all courses in the University, but not to vote or to the loan and relief fund. Membership in the Founders' Chapter has no different requirement from ordinary membership, excepting that the $52 in subscriptions shall be sent in within one year. Founders' Chapter members, in addition to all rights of membership in The League, share in the annual profits of both the publishing institution and the banking institution through the special endowment provided for the Founders' Chapter of $1,000,000 of the capital stock of each. In next month's Collier's The League's work in the rural districts will be gone into in detail.

The book of The League will be sent on request to any one desiring it, giving the full particulars of its many advantages and benefits, by addressing

More than Merely "Guaranteed Hose"

True Everwear Hose are the guaranteed kind—six pairs are guaranteed to wear six months or new hose will be given free.

But Everwear Hose are made for more than merely long wear. Fit, style, and comfort are considered with just as much care.

Everwear Hose hug the ankle and foot snugly. They are light enough to be comfortable—the heel and toe are given extra strength but not extra thickness.

They are made in all fashionable shades—the colors will not fade or grow dingy.

In fact, Everwear Hose have just those little touches of superiority that make them the equal of the most expensive kinds.

And all this in addition to the long-wear guarantee. So there is really more satisfaction in Everwear than any other hose.

Order six pairs today and the hose will prove our every claim. Remember the name **EVERWEAR** and look for it on the hose and box. Write for free booklet "An Everwear Yarn."

If your dealer doesn't keep Everwear, write to us, stating size, color and kind desired and we will express them prepaid.

The Utmost in 6% Bonds

Irrigation Bonds, when properly issued, form ideal investments. No other large class of bonds, based on equal security, pays *six per cent.*

Irrigation Bonds are secured by first liens on the most fertile farm lands in America. The loan will not average one-fourth the land's value.

They are additionally secured by a first mortgage on all that the Irrigation Company owns. Some are municipal obligations—in each case a *tax lien* on all the property in the district.

Where else can one find such ideal security behind bonds that net six per cent?

These are serial bonds, so one may make short-time or long-time investments. And every bond paid off increases the security back of the rest.

The bonds are issued in denominations as low as $100, so they appeal to both small investors and large.

We are the largest dealers in Reclamation Bonds. During the past fifteen years we have sold seventy such issues. Not a dollar of loss has resulted to any investor.

We have written a book based on all this experience—the best book of the kind ever published. Every investor, small or large, owes to himself its perusal. Everyone in these days should know Irrigation Bonds. The book is free. Please send this coupon today for it.

10 DAYS' FREE TRIAL

We will ship you a "RANGER" BICYCLE on approval, freight prepaid to any place in the United States *without a cent deposit in advance*, and allow ten days' free trial from the day you receive it. If it does not suit you in every way and is not all or more than we claim for it and a better bicycle than you can get anywhere else regardless of price, or if for any reason whatever you do not wish to keep it, ship it back to us at our expense for freight and you will *not be out one cent.*

LOW FACTORY PRICES We sell the highest grade bicycles direct from factory to rider at lower prices than any other house. We save you $10 to $25 middlemen's profit on every bicycle—highest grade models with Puncture-Proof tires, Imported Roller chains, pedals, etc., at prices no higher than cheap mail order bicycles; also reliable medium grade models at unheard of low prices.

RIDER AGENTS WANTED in each town and district to ride and exhibit a sample 1910 Ranger Bicycle furnished by us. You will be astonished at the *wonderfully low prices* and the liberal propositions and special offers we will give on the first 1910 sample going to your town. Write at once for our *special offer.*

DO NOT BUY a bicycle or a pair of tires from *anyone* at *any price* until you receive our catalogue and learn our low prices and liberal terms. BICYCLE DEALERS: you can sell our bicycles under your own name plate at double our prices. Orders filled the day received. SECOND HAND BICYCLES—a limited number taken in trade by our Chicago retail stores will be closed out at once, at $3 to $8 each. Descriptive bargain list mailed free.

TIRES, COASTER BRAKES, single wheels, inner tubes, lamps, cyclometers, parts, repairs and everything in the bicycle line at half the usual prices.

DO NOT WAIT but write today for our *Large Catalog* beautifully illustrated and containing a great fund of interesting matter and useful information. It only costs a postal to get everything. Write it now.

MEAD CYCLE COMPANY, Dept. R-54, CHICAGO, ILL.

HOW YOU CAN EARN $300 OR MORE A MONTH

One box ball alley costing $150, took in $513 the first fifty-one days at Sullivan, Indiana. Two other alleys costing $365, took in $1,372.95 in five months. Four large alleys costing $840, took in $1,845.20 in fifty-nine days, more than $900 a month. Why not start in this business in your own town? Both men and women go wild with enthusiasm; bring their friends, form clubs and play for hours. Players set pins with lever—no pin boy to employ. Alleys can be set up or taken down quickly. Write for illustrated booklet explaining EASY PAYMENT PLAN. Send for it today.

AMERICAN BOX BALL CO., 309 Van Buren Street, Indianapolis, Indiana

NEW-SKIN
TRADE-MARK

Instead of Court Plaster

WHEN anything happens to damage your skin, the simplest way, the quickest way, the safest and most scientific way to treat it, is to "paint it with *New-Skin.*"

It is painted on in a second—no fuss *and it stays on.*

New-Skin dries immediately in a tough film. The film is transparent and almost invisible, so that it is not a blemish like court plaster.

New-Skin is waterproof and you can wash over it freely.

Court plaster won't do at all for a large scrape or a long scratch, and bandages are a nuisance for small wounds, but *New-Skin* can be used everywhere—every time.

Keep it around the house—the children need it constantly. Have it in the workshop—it saves time. By protecting a wound against infection it may save you from blood poisoning.

Be sure to get the genuine

AUGUST 28 1909

The "Loose-Leaf" Principle Applied to Heating

"Sectional boilers" is merely a term of the heating trade. It means that boilers are *made* in sections; but as commonly used, it does not mean that you, the user, get the benefit of the sectional construction.

We have perfected a *truly sectional* boiler —as truly sectional as a loose-leaf ledger or a sectional bookcase.

A boiler so truly sectional that you can add sections and take away sections; you can cut out sections, without tearing down, without a day's delay or loss of heat.

"RICHMOND"

Boilers — Radiators

There are many reasons why other so-called sectional boilers are not truly "sectional."

In the first place, these so-called sectional boilers are sectional only *above* the ashpit. The sections are perched on a separate base, which is *not* sectional.

To add sections or to take them away, you must get a new base—you must rebuild the whole boiler from the ground up.

The "RICHMOND" boiler is sectional from bottom to top.

It needs no separate base, because each section extends clear to the ground.

You can add sections, replace sections, or take them away without tearing down the boiler or buying new base or ashpit parts.

The sections of a "RICHMOND" boiler are *screwed together*.

While the sections of so-called sectional boilers are joined with push nipples.

If a boiler with push nipple joints gives out you take out the fire and tear down the boiler.

There is no alternative. There can be no heat while new sections are being shipped.

Cutting Out Sections

But with the "RICHMOND" sectional boiler, you can plug up the damaged section—*and keep on heating.*

We know of many cases where sections of "RICHMOND" boilers have for one reason or another been "cut out" and plugged and the boiler made to give service, day and night, till the summer came.

The "RICHMOND" sectional boiler is stronger than other sectional boilers, without adding weight—just as a single casting must always be stronger, more rigid, than two castings joined together.

Yet the sectional feature is but one of countless superiorities which you will find embodied in the "RICHMOND" system.

Write for this Book

If you are interested in heating any building, large or small, write us. Ask for catalog 194. Learn for yourself about this perfect system which is so economical of fuel that it saves its own cost and pays its own maintenance.

Chalmers-Detroit "30"
1910 Model—$1500

Touring Car
Pony Tonneau
Roadster
Limousine
Coupe (*Inside Drive*)
Landaulet

Dealers Bought Our Whole 1910 Output Before July 1, 1909

Last spring, 800 people who wanted the Chalmers-Detroit "30" had to be disappointed. We turned away orders to the extent of $1,200,000 after our output was sold.

Then we started building a new factory, increasing our capacity to 4,000 cars for next year. Yet, dealers had taken the entire output before the first car was delivered.

They were sold to dealers—to the men who know cars best. To the men whose whole business depends on getting what buyers want.

Such facts show how the automobile world has awakened to these amazing cars.

Our New $1500 Car

We show above one 1910 model of the Chalmers-Detroit "30." We call it new, yet the vital features have not been altered at all. The 2,500 cars in use have shown us no weakness whatever.

We have increased the wheel base to 115 inches and have added more power. The wheels are now 34 inches.

The tonneau has been made larger and roomier; and the hood, to correspond, has been made longer and higher. In style and beauty, the car now equals the costliest car that is made.

We have done all this out of the saving made by increasing our output. We are making 1,000 more cars this year, without adding to overhead expense. And without buying new tools, for the cars are not altered mechanically.

Every cent of this saving has gone into the car—into size and room and beauty. Our profit remains the same as last year—exactly nine per cent.

Last season you wondered how we gave so much for the money. Then what do you think of the car of this year?

Reductions on Extras

This "30" of ours, when fully equipped, will cost even less than last season. We are going to sell extras, as we sell the cars, on the lowest possible margin.

We will fit our $1,500 car with a Bosch magneto, a Prest-O-Lite gas tank, and two new style gas lamps, all for $100 extra. The cost of these extras at regular prices would be $175.

We will fit our "30" with a Lenox mohair top for $75. This is the best top we can buy—the sort of top all should have; and the regular price is $125. Thus we give you the advantage of our quantity buying—buying for 4,000 cars.

That Indiana Trophy

All America wondered when this $1,500 car won the Indiana Trophy at Crown Point, June 18. Every car entered against it was a higher-priced car, save one, and all save one had bigger motors.

Yet the Chalmers-Detroit "30" out-classed and out-speeded them all. It made the 232 miles that day at an average speed of *51.5 miles per hour*. Next day, when the big cars raced—many with motors twice as powerful—the average speed of the winner was *49.6 miles per hour*.

That was a stock car race. The "30" that won it is exactly the same as the "30" we'll sell to you.

On July 10th, 100,000 people saw a "30" win the light car race over the Santa Monica, California, course and the average speed for 200 miles was 55.2 miles per hour.

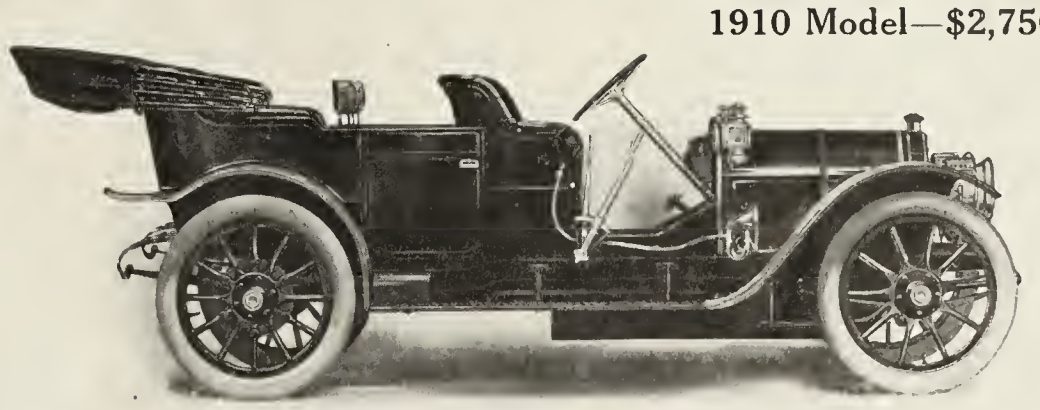
One of these cars has made endurance records which no other car ever equaled. One of them, in an Economy Test, went 25.7 miles on one gallon of gasoline.

One of them made that remarkable path-finding trip between Denver and Mexico City, where the way lay through oceans of sand.

But another record is the best of all, for it proves our main claim—the low cost of upkeep. For the year ending June 1, owners paid us for repairs exactly $2.44 per car in use.

No Car Like This

Nearly everyone knows now that the Chalmers-Detroit "30" has no real competition—that it is the best car in the world at the price.



Scores of the best engineers in America have selected this car for their personal use. With hundreds our "30" has taken the place of other and costlier cars.

Now the new models are out—the large, roomy, luxurious cars of 1910—still $1,500. Dealers everywhere are making deliveries.

To get one now means several months' use before the calendar year begins. You get that much ahead of the man who buys next spring. Write us today for our catalog.

Chalmers-Detroit "Forty"
1910 Model—$2,750

Touring Car
Pony Tonneau
Roadster

This car, like our "30," has been greatly improved. We have increased the wheel base to 122 inches, and given it 36-inch wheels. It is upholstered this season in hand-buffed leather. And note the exquisite lines.

Our "Forty" is now a 7-passenger car, with all the size, style, finish and appearance of the costliest cars that are sold.

The Bosch magneto and the lamps on this car are included in the price. We will fit it with a Newport mohair top—a $150 top—for $125. And the two extra seats cost but $75.

The day is over when our "Forty" needs argument. For four years it has held the topmost place among medium-priced cars in America.

This is the utmost car that one can buy, save those who want excessive power.

Now we send to prospective buyers the names of all owners in their vicinity. And we let them judge our "Forty" solely by what owners say.

ADVERTISING BULLETIN

NO. 18

HOW ADVERTISING HELPS THE WORLD MOVE

IF it were not for the advertising columns of the magazines and newspapers the world would be, industrially, decades behind where it is now. Not a day passes without a score—perhaps a hundred—new things, of value to the people at large, being thought out or perfected.

The time came when a bright man worked out a practical washing-machine that could be run by a little motor attached to the faucet at the kitchen sink. Another man perfected a vacuum cleaner that would suck the dust and dirt from carpets, rugs, hangings, and pretty much everything it touched.

Those two devices alone have saved the time and lightened the labor of the world's housekeeping to an incalculable extent.

Their value to the human race was infinitely greater than to their inventor. Yet how could the people ever have been told about these things, except through advertising?

Without advertising how many people would know about—and be using—oil stoves, steam cookers, acetylene gas; breakfast cereals, bottles that keep things hot or cold. Now how many homes would have piano-players, or phonographs?

It is so with thousands of things that have come, through daily use, to be considered necessities. Without the advertising columns—the news of the world's production—it would have taken twenty years to introduce the Safety Razor. The Open Door to a market, provided by Advertising, has encouraged more inventions of value to the people than all other forces combined.

In this week's, and every week's, issue of Collier's you will find scores of articles advertised, which have added incalculably to the world's sum of convenience, comfort and pleasure—and not one of which could have been brought to the general knowledge but for advertising.

E. L. Patterson.
Manager Advertising Department

IN NEXT WEEK'S BULLETIN—"The Time Element in Advertising"

PENNSYLVANIA RAILROAD

Bulletin

908 MILES IN 1080 MINUTES

The "Pennsylvania Special" is the climax of development in railroad transportation. It is operated primarily in behalf of the busy man.

Under the train is the finest roadbed. Above the rails is the most completely equipped train. On the train is a picked crew. Alongside the tracks is the best Signal System. This combination makes for speed, regularity, safety and utter comfort.

The "Pennsylvania Special" has made good for many years. It is an asset to the business man. He can recreate on it or work as humor or necessity dictates, but he is using the minimum of time in meeting his engagements.

Three quarters of the circumference of the clock-dial, all in the off hours, is its daily deed.

The "Pennsylvania Special," the pioneer 18 hour train between New York and Chicago, leaves New York every day at 3.55 P. M. and arrives in Chicago 8.55 A. M. Returning it leaves Chicago 2.45 P. M. and arrives in New York at 9.45 A. M.

2 IN 1 SHOE POLISH

Better Why? Because it does not contain Turpentine or Acid. Adds to the life of all leathers and gives a brilliant shine that won't rub off. 10 Cents At all dealers

For Home Work or Shop Work

If you have made a failure of home work, look at your tools. Are they the kind an experienced carpenter would use, or are they "any old kind"? The success of any work depends largely upon the tools

How could you make a neat joint for a picture frame unless you had a fine true saw and mitre box to guide it? You couldn't use the same saw you would use to cut a two-inch plank.

KEEN KUTTER
Quality Tools

are for home work or shop work.

Every tool is the very best that can be made in quality, temper and adjustment. No others hold their edges so long nor are so accurately set, balanced and adjusted. With Keen Kutter tools, home work becomes a pleasure and many conveniences and improvements may be made.

Every Keen Kutter Tool is guaranteed.

Look for the name and trademark on each tool.

Keen Kutter Tools include Saws, Chisels, Bits, Drills, Gimlets, Awls, Planes, Hammers, Hatchets, Axes, Drawing-knives, Screwdrivers, Files, Pliers. Also a full line of Scissors and Shears, Pocketknives, Razors and Table Cutlery.
Keen Kutter Tools have been sold for nearly 40 years under this motto:

"The Recollection of Quality Remains Long After the Price is Forgotten." E. C. Simmons

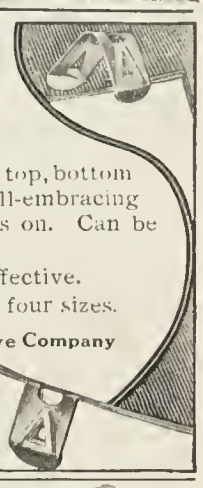
EASILY DIGESTED BY THE MOST DELICATE

A Successful Sales Manager defines salesmanship as being "nothing more nor less than making the other fellow feel as you do about what you have to sell." That's comparatively easy to a clever salesman, possessing personal magnetism and a cheerful countenance, backed by a good story and a fragrant cigar. Meeting "the other fellow" in that manner in his own office and at his ease, accounts for many a sale—



BUT—**you can't meet every prospective purchaser;** it costs too much and you haven't the time.

You can however, make your catalog, booklet, magazine and newspaper advertising as effective as personal salesmanship by the use of clever illustrations and engravings that bring out the selling features of your goods. Write for samples. They are free.

Ballinger Should Go

DON'T MIX UP BALLINGER and the President. Many newspapers, statesmen, and others will assure you that those two gentlemen stand for law, whereas Mr. GIFFORD PINCHOT, Mr. NEWELL, Mr. GARFIELD and Mr. THEODORE ROOSEVELT represent lawless impatience. Mr. TAFT does in reality care for legal impartiality and calm. Mr. BALLINGER, wearing that cloak, cares somewhat too much for "business interests." The contest between him and Mr. PINCHOT should not be side-tracked on some irrelevant side issue. Mr. PINCHOT is not a master of safe legal statement, but everybody who desires to do so can readily understand his actual meaning. Nobody proposes to violate the law, even to benefit the public. The question is merely how to use the discretion which is left to men in power. Let us see how BALLINGER has used his.
